Any failure by the USA to impose sanctions could be claimed as a 'victory' by the Iranian authorities. In combination with other factors, the 'Iran-Libya sanctions act' began to have the perverse effect of isolating the USA rather than Iran. This was nowhere more apparent than at the eighth summit meeting of the OIC, held in Teheran in early December 1997: the attendance of the leaders of many of the USA's erstwhile Arab allies appeared to undermine the USA's credibility in the region, primarily owing to its failure to promote any progress in the Middle East peace process. The presence of so many Arab leaders at the meeting was in stark contrast to the US-sponsored Middle East and North Africa economic conference in Doha, Qatar, the previous month. Both Ayatollah Khamenei and President Khatami addressed the inaugural session of the OIC summit meeting, in dramatically differing tones. While Khamenei lambasted the pernicious, corrupting influence of the West, on which he fixed the blame for the 'calamitous condition' of the Islamic world, Khatami spoke of the accomplishments of Western civilization and their potential role in the development of the Islamic world. Later in December, at a press conference in Teheran, President Khatami expressed his hope for a 'thoughtful dialogue' with the 'great American people'. Such a gesture, unprecedented in the recent history of US–Iranian relations, appeared to perturb the US authorities, triggering in some official quarters the stock reaction that Iran remained a sponsor of terrorism, a manufacturer of weapons of mass destruction and a potential saboteur of the Middle East peace process. However, the response of the US President was unexpectedly warm, expressing a cautious willingness to discuss relevant issues.

In late April 1998 the US Department of State identified Iran as the most active state sponsor of terrorism, alleging that during the past year Iranian agents had perpetrated at least 13 assassinations and noting the continued support of the Iranian Government for 'extremist' groups, such as Hezbollah and Hamas. On 19 June, however, the USA demonstrated readiness to improve relations with Iran, when, in a speech in New York, the US Secretary of State, Madeleine Albright, indicated US willingness to grant Iran a role in regional security provided that it abided by 'international standards of behaviour'.

The election of President Khatami and the appointment, in August 1997, of a new Minister of Foreign Affairs apparently led to a relaxation of tensions in EU–Iranian relations (see above), and in November a compromise arrangement was finally reached allowing the return to Iran of all ambassadors from EU countries. The EU's policy of 'critical dialogue' remained in suspension, however, and the new Iranian regime was initially apparently either unwilling or unable to make the compromises which might facilitate a resolution of the Rushdie affair. In late September 1998, however, following intensive negotiations between the British Secretary of State for Foreign and Commonwealth Affairs, Robin Cook, and the Iranian Minister of Foreign Affairs, Kamal Kharrazi, it was announced that the British Government had secured oral assurances from the Iranian Government that it would not support the bounty on Rushdie's head, although the 1989 *fatwa* could not be formally revoked. In January 1998 Germany's troubled relations with Iran were further complicated when an Iranian court sentenced to death a German businessman whom it had found guilty of illicit sexual relations with a Muslim woman. In late February the EU revoked its ban on high-level ministerial contacts between member states and Iran, stating that it wished to encourage moderate political forces in the Islamic Republic. Shortly afterwards, in March, the Italian Minister of Foreign Affairs, Lamberto Dini, visited Teheran, where he asserted that Iran was not engaged in terrorist activities and that its weapons programmes posed no threat. Commentators in the Italian media suggested that, in addition to wishing to support moderate political forces, Dini's remarks might also have been aimed at furthering Italy's commercial interests. The Rushdie affair and the Iran-Libya sanctions act notwithstanding, European companies were actively pursuing opportunities in the energy industries of the Caspian Basin and in Iran.

The 'active and fresh presence' in the sphere of foreign relations to which President Khatami referred in August 1997 had, by mid-1998, yielded results in the field of Iranian–Arab relations. To the declared openness of the new Iranian regime, there now corresponded a growing perception, even among the most 'conservative', US-aligned Arab states, that the (perhaps irremediably) obstructed Middle East peace process was nurturing a popular backlash which improved relations with the Islamic Republic might help to forestall. Syria was reported to have played an important background role in effecting this *rapprochement*, exploiting a shared suspicion in the Arab world of closer relations between Turkey and Israel.

In late 1998 Iran played an active role in reducing tensions between Turkey and Syria over alleged Syrian support for Kurdish rebels. Kharrazi visited Damascus and Ankara in October for talks with his Syrian and Turkish counterparts and with the President of each country. These efforts were interpreted as an indication of a new feeling of confidence in Teheran following improvements in its relations with Europe, particularly the United Kingdom, and also resulting from its leadership of the OIC.

The OIC summit meeting held in Teheran in December 1997 illustrated how far the Arab position had shifted towards Iran. Saudi Arabia, long the target of Iranian criticism for the style of its guardianship of the holy cities of Mecca and Medina and its dependence on the USA for its security, was represented at the OIC summit meeting by Crown Prince Abdullah ibn Abd al-Aziz as-Sa'ud and by its Minister of Foreign Affairs. Their attendance was considered to represent a significant further stage in the process of reconciliation, which had begun with the visit of a Saudi Arabian ministerial delegation to Iran in July, and culminated, in February 1998, in an official visit by former Iranian President Hashemi Rafsanjani to Saudi Arabia. This was the first visit by an Iranian leader of such seniority since the Revolution in 1979, and its aims transcended the largely symbolic nature of earlier contacts to address pressing economic issues. Iran was reported to be seeking Saudi Arabian support for a reallocation of OPEC production quotas; it also sought to persuade Saudi Arabia to take fuller advantage of Iranian infrastructure to transport its exports to Central Asia; and to make greater use of surplus Iranian labour. It was also reported that Iran would raise the issue of a regional security alliance incorporating all of the states bordering the Persian (Arabian) Gulf. In May 1998 Iran and Saudi Arabia concluded a comprehensive co-operation agreement, the scope of which extended from key economic areas to culture and sports.

In May 1999 President Khatami embarked on a tour of Arab capitals, visiting first Syria, where he reaffirmed the alliance with President Assad. He then proceeded to Saudi Arabia, on a visit that marked the culmination of the steady improvement in relations between these two countries. Discussions during Khatami's five-day visit were extensive, and ranged from Gulf security, to efforts to bring about higher oil prices, to the situation in Iraq, and to developing a common approach to regional issues. The Saudi authorities, encouraged by the partial détente between Iran and the USA, showed themselves to be particularly keen to co-operate with Khatami.

Since the election of President Khatami there have also been signs of an improvement in relations with Iraq. In September 1997 Iraq opened its border with Iran in order to allow Iranian pilgrims access to its Shi'ite shrines for the first time in 17 years. At the end of the month, however, Iranian aircraft violated the air exclusion zone over southern Iraq in order to bomb two bases of the Mujahidin-e-Khalq in that country (prompting Iraqi aircraft also to enter the zone, in pursuit of the Iranian bombers). The Iraqi Vice-President, Taha Yassin Ramadan, attending the eighth summit meeting of the OIC in December, was the most senior Iraqi official to visit Iran since 1979. Following the summit, President Khatami expressed the hope that problems between the two countries could be resolved 'through negotiation and understanding'. In April 1998 Iran was reported to have released more than 5,000 Iraqi prisoners of war in recent weeks, while Iraq had released 319 Iranian prisoners of war.

Iran's relations with the UAE (see above) deteriorated further in 1996, after Iran opened an airport on Abu Musa in March and a power-station on Greater Tunb in April. In January and February 1997 the UAE protested that Iran was repeatedly violating the UAE's territorial waters. Talks held in March were inconclusive, and in June the UAE protested to Iran and the UN about Iran's construction of a pier on Greater Tunb. Following a meeting with the UAE's Minister of Foreign Affairs at the time of the December 1997 OIC summit, President Khatami emphasized his willingness to discuss bilateral issues directly with President Zayed bin Sultan an-Nahyan of the UAE. Although the latter was reported to be cautious about Iran's attempts at *rapprochement*, in the following month authorities in the UAE and Iran stated that the UAE was willing to enter into negotiations. None the less, both countries continued to assert their sovereignty over the three disputed islands (see above). In March 1998 Iran pre-empted an expected demand by the GCC member states that it should resolve its dispute with the UAE as a condition for a general improvement in relations by organizing a conference in Teheran for its own diplomatic representatives to those countries. At the conference, the Iranian Minister of Foreign Affairs was reported to have emphasized the importance that Iran attached to its relations with the GCC states, while making no mention of the dispute with the UAE. The Minister's address was also reported to contain implicit criticism of the GCC's support for the US military presence in the Gulf region. Observers noted the relative isolation of the UAE in its dispute with Iran. Oman and Qatar had maintained good relations with Iran, while Iran's relations with Saudi Arabia, Kuwait and Bahrain continued to improve.

The apparent *rapprochement* between Iran and Saudi Arabia during 1999 caused a bitter crisis within the GCC. In June a meeting of GCC ministers responsible for foreign affairs was unable to agree a common stand on the UAE's dispute with Teheran over the three Gulf islands. The result of the GCC meeting was interpreted in Teheran as evidence of Saudi Arabia's desire to pursue closer relations with Iran.

A major priority of Iran's economic policy under President Khatami is the increased development of its reserves of natural gas, and it is also seeking to exploit its potential as a principal transit point for the export of hydrocarbons from the Central Asian republics of the former USSR. These two factors have, moreover, hindered US-led attempts to isolate Iran by means of economic sanctions (see above). In December 1997 a pipeline was inaugurated to transport natural gas from Turkmenistan to northern Iran and it was anticipated that the project would subsequently be extended to Turkey and, ultimately, to western Europe. (For Turkmenistan the project was of equal significance because Russia had hitherto controlled all export outlets for energy from Turkmenistan, Kazakhstan and Azerbaijan.) In May 1998 Iran issued an international tender for the construction of a pipeline to carry oil from the Caspian Basin to Teheran; the first stage of a project which aims, eventually, to transport oil to Iran's Kharg terminal in the Gulf.

In September 1997 the Taliban leadership in Afghanistan accused Iran of providing military assistance to its opponents and threatened retaliatory action. In late 1997 it was reported that, since the election of President Khatami, Iran had begun to participate in meetings at the UN with (among others) US officials in an attempt to identify ways of ending the Afghan civil war. Iran's principal concerns with regard to Afghanistan are to contain any instability resulting from the conflict there, and to remove the strain placed on its domestic resources by the presence of large numbers of Afghan refugees. Eleven Iranian diplomats and more than 30 other Iranian nationals were among those allegedly captured by Taliban forces during a renewed offensive in Afghanistan during August 1998. This development prompted warnings from the Iranian leadership that retaliatory action would be undertaken if the hostages were not released unharmed. In early September, following Taliban denials that they were holding the diplomats hostage, the Iranian Government organized large-scale military exercises (involving some 70,000 troops) near the border with Afghanistan. Tensions continued to escalate in mid-September, following the discovery, in Afghanistan, of the bodies of several of the missing diplomats, and the situation was exacerbated by further territorial gains made by Taliban forces and reports that thousands of Afghanistan's Shi'a Muslim population were being slaughtered as a result. Relations remained tense in late September, as the number of Iranian troops in the border region was increased to some 250,000 and Ayatollah Khamenei announced that the country's armed forces should be placed on full alert. Overt military conflict with Afghanistan was averted. Although Iran maintained some 200,000 troops on the border, the situation became calmer. Iran's relations with Pakistan, however, were adversely affected by the Afghan crisis. The Iranian Ministry of Foreign Affairs took the view that, although Taliban had some social base, the fundamentalists would not have advanced so successfully without logistical support from Pakistan and without Saudi finance, and that Iran's regional interests had been ignored. Iran continued to hope for the emergence of a regime in Afghanistan that would not in Iran's view, be subservient to foreign powers, particularly Pakistan.

Economy

Revised for this edition by ALAN J. DAY

Traditionally an agricultural country, Iran has benefited in the twentieth century from the exploitation of its large oil and gas reserves, exports of which have been its major source of revenue since the Second World War. Under successive five-year plans since 1947, oil revenues have been used to finance balanced economic development, including non-oil industrialization and the maintenance of a substantial agricultural sector. The Islamic Revolution of 1979 represented a major watershed, not only politically but also economically. The new regime declared its determination to end Iran's large degree of dependence on the West, the resultant dislocation being compounded by the 1980–88 war with Iraq. Since that conflict, efforts to resume broad economic development and diversification have been hindered by volatile world oil prices, by internal structural weaknesses and rampant inflation, and by persistent political tensions with the West, especially with the USA. Although the oil sector has accounted for a diminishing share of gross domestic product (GDP) in recent years, the Government remains heavily dependent on oil revenues in its quest to improve the living standards of Iran's large population

At the census of November 1966 the population of Iran was recorded as 25,788,722. Of this total, about 9.8m. were urban residents. The November 1976 census enumerated a total population of 33,708,744, and the October 1986 census recorded 49,445,010 inhabitants (including 2.6m. refugees), of whom 26,844,561 resided in urban areas, an increase of 70% since 1976. In early 1992 the Statistical Centre of Iran reported that the population had increased by almost 40% since 1979, to more than 58m. The rate of growth in urban areas was twice that recorded in rural areas. The population of Teheran was reported to have more than doubled since the late 1970s, exceeding 10m. According to the 1996 census, the population of Iran (in October of that year) was 60,055,488, of whom 61.3% were urban dwellers. Iran's average annual population growth rate has decreased from 2.5% during 1986–92 to 1.5% during 1992–97. The population was officially estimated at 60,694,000 at mid-1997. It was estimated that by 2025 some three-quarters of Iran's population would be living in cities. Much of the Iranian population is concentrated in the fertile northern areas of the country, while the central desert lands are sparsely populated.

Major refugee influxes in the 1980s included the arrival of up to 3m. Afghans and over 1m. Iraqi Kurds and Shi'as. By mid-1990 a large proportion of the Afghan refugees had returned home, whereas Iran continued to be a haven for many oppressed Iraqi groups as well as a number of Azerbaijani refugees.

Government officials have cited Iran's expanding population as a major constraint on economic development. In July 1992 the head of the Population and Family Planning Department of the Ministry of Health stated that if the population continued to grow at a rapid rate, 600,000 new jobs would have to be created each year, and 40,000 classrooms and 500,000 houses constructed. The country's farmers would not be able to meet the demand for food and half the population would face starvation. Unemployment in 1991 was officially estimated at about 11% of the labour force, although other sources had suggested as recently as the previous year that the rate of unemployment might in fact be as high as 20%. Only 2.2m. new jobs were created between 1980 and 1990: an inadequate total, in view of the rising demand for employment. According to official sources, unemployment at the end of the 1996/97 Iranian year (running from 21 March to 20 March) had fallen to 9.1%, compared with 10.0% a year earlier. According to preliminary data for 1997–98, however, unemployment increased to 13.1% in that year. The size of the nomadic population, estimated at 248,463 in October 1986, has declined dramatically since the 1940s (it was estimated to be 641,937 at the 1966 census), as a result of government settlement programmes.

In 1978, the last year of the Shah's reign, per caput income was calculated at about US $2,500, up from about $200 in 1963. During the period of the Fourth Development Plan (1968–73), Iran's gross national product (GNP) rose at an annual average of 11.2% in real terms. Over the period of the 1973–78 Plan, GNP rose in real terms from $17,000m. to $55,300m. The growth rate of GNP, which was as much as 41% in 1974/75, slowed to about 17% in the following year, owing to declining revenues from petroleum (which provided about 40% of the total GNP). In real terms, GDP was estimated to have grown by as little as 2.6% in 1975/76. In 1976/77 GDP grew at over 14% in real terms, but during 1977 the economy showed signs of further deceleration. Total GDP for 1977/78 was estimated at $56,500m., representing growth in real terms of about 10% over the previous year.

The revolutionary Government that followed the Shah's downfall reassessed nearly all of Iran's economic and social strategies. The new leaders announced that priority would be given to low growth rates, a concentration on small-scale projects in industry, emphasis on traditional agriculture and stringent control of petroleum exports. Three years after the Revolution, however, Iran's economy was in deep crisis. The war with Iraq, loss of forecast petroleum revenues in mid-1980 as the world went into economic recession, and the failure of public utilities (mainly electricity) were among the problems advanced to account for a deteriorating economic situation. The war had indeed taken its toll of physical damage to infrastructure in the south. However, political conflicts and confusion over the management of the economy aggravated these problems and resulted in contradictions in policy and economic mismanagement.

In early 1981 the then President, Bani-Sadr, reported that agricultural output remained static, industrial production had declined dramatically and even the minimum petroleum output that Iran required for national survival was not being attained. The disappointing performance of the major economic sectors had resulted in declines in real GDP of 13% in 1979/80 and 10% in 1980/81, and in a further fall in 1981/82. At the same time, Ayatollah Khomeini warned Iranians that there would be 10 years of austerity ahead before the country became productive enough to fulfil its needs from domestic sources.

Some real growth in the economy did take place as a result of developments in the construction sector and some expansion in industrial output. However, as both were at low base levels, real gains were small. In reality it was the petroleum sector which was responsible for the improvement in the country's economic prospects in 1982 and 1983. An increase in sales of crude petroleum during 1982, by means of discounts and special incentives to purchasers, resulted in rising revenues, which, in turn, stimulated economic activity. The Iranian economy remained petroleum-based, and the pattern of growth reflected the performance of that sector. The oil sector fared badly in 1984, with production down by 13% in a deteriorating market oversupplied with oil and subject to falling world prices. Production costs have always been higher for Iran than for its regional competitors, and the situation was aggravated by the escalation of the conflict with Iraq, with the consequent rise in the costs of insurance, storage and transport. As a result of the continuing decline in international prices for crude petroleum, government income was seriously reduced during 1986, and income from oil exports totalled US $6,600m. in 1986/87, according to OPEC. This downward trend was halted in early 1987, when the volume of exports of oil increased and prices rose. In 1987/88 the value of oil exports was estimated at $8,000m.–$9,000m., with a further $1,100m. in earnings from rising non-oil exports.

From September 1980 until the August 1988 cease-fire, the war with Iraq dominated all economic and political life in Iran. War needs dictated planning priorities, distorting the economy and forcing long-term objectives to be sacrificed to expediency. It has been estimated that annual expenditure of foreign exchange on the war was US $5,000m.–$9,000m. After the announcement of the cease-fire, attempts were made to assess the extent of the damage inflicted on the Iranian economy during the war and widely diverging figures were quoted for the cost of reconstruction. The cost of repairing industrial plant alone was estimated at $40,000m. Positive leadership often

appeared to be lacking, resulting in the inability or unwillingness to resolve fundamental issues of principle. One crucial issue affecting the economy after the Revolution was disagreement over the degree of government involvement in business. After 1981 the Government appeared to favour an increase in state control, particularly the nationalization of foreign trade. However, conservative religious leaders, businessmen, the Council of Guardians (which ensures that legislation conforms with Islamic precepts) and many members of the Majlis maintained that the Government should play a minimal role. Although new appointments to the Council of Ministers and the changing character of the Majlis (Consultative Asembly) strengthened those elements in government favouring more control of the economy by the state (in particular more land reform, nationalization of trade and the spread of collective organization among the industrial work-force), the conservative elements in government (in particular, the Council of Guardians) succeeded in delaying radical reform. In a vigorous press campaign at the end of 1985 the radicals alleged that the courts were overturning revolutionary measures and allowing expropriated industries to be returned to their former owners. In January 1988 Ayatollah Khomeini decreed that government policies could overrule Islamic law where this was in the interest of the state. In the following month a 13-member Committee to Determine the Expediency of the Islamic Order was appointed to settle disputes by majority vote whenever the Majlis and the Council of Guardians could not agree on the direction of policy. However, despite the strength of the radicals in the third Majlis, the Committee proceeded cautiously, seeking to maintain a consensus between conservatives and radicals.

In the agricultural sector, the problem of rights of ownership has affected about 1.2m. ha, or one-quarter of Iran's prime cultivable land, since the Revolution, and government plans for land reform were consistently obstructed by the Council of Guardians, making long-term planning difficult. As a result, the technocrats in government have concentrated on industry and other areas of the economy where quick results were easier to obtain. In February 1989 the Minister of Oil, Gholamreza Aqazadeh, announced the end of a six-month debate concerning the future structure of the Iranian economy. The Council of Ministers had decided, he reported, to approve a limited number of foreign loans for infrastructural schemes, and to encourage private enterprise. In May 1989 the Minister of Planning and Budget, Massoud Roghani Zanjani, outlined the Government's plans for the economy over the next five years. He confirmed that they included 'privatization' of non-strategic state-owned industries. It was also revealed that Imam Khomeini had approved foreign borrowing to finance major projects if it did not result in political dependence. Foreign-financed projects should lead to savings in convertible currency or generate new revenue in convertible currency.

On his election to the Presidency on 28 July 1989, Ali Akbar Hashemi Rafsanjani announced that his immediate economic aims would be to combat inflation and unemployment by increasing industrial output. Existing factories would receive more foreign exchange to raise production, which was running at only 40% of capacity; and, in an attempt to generate more productive investment, the private sector was to be given a bigger role in the economy. In the long term, Rafsanjani indicated, his Government would concentrate on developing energy, transport and basic industrial and educational resources. Some experts suggested that, in order to achieve a rapid economic recovery, Rafsanjani would have to resort to large-scale foreign financing. However, this would have exposed the President to accusations of compromising Iran's revolutionary ideology and independence. In August 1989 it was announced that the Government had allocated $4,800m. for imports of food and consumer goods during the following year, to improve standards in the short term. Other short-term measures to revive the economy included the privatization of state enterprises, the reopening of the Teheran stock exchange and the liberalization of regulations controlling the availability of foreign exchange. The introduction of a new Five-Year Development Plan, in January 1990, was expected to help to revive the economy. The new Plan, together with the announcement of the annual budget in March 1990, strengthened economic activity, resulting in increased imports of raw materials, equipment and spares.

As a consequence of Iraq's invasion of Kuwait in August 1990, Iran's economic prospects improved briefly. According to official sources, earnings from exports of petroleum rose to US $18,400m. in 1990–91 as a result of an increase in volume and price triggered by the conflict over Kuwait. With his leadership strengthened, President Rafsanjani took advantage of extra oil revenues to accelerate the implementation of economic reforms which resulted in the rapid dismantling of the state-controlled economy created during the years of war with Iraq. The private sector expanded and came to play a significant role in trade and investment. Imports by the private sector rose, non-petroleum exports doubled and considerable investment occurred in housing construction and industry after the deregulation of price and trade controls. However, his reforms to revive the economy caused widespread hardship and contributed to the riots and urban unrest in mid-1992. Moreover, the economy remained excessively dependent on oil, while bureaucratic inefficiency and a serious shortage of skilled workers and managers continued to obstruct the realization of optimistic aims.

At the start of his second term of office in August 1993, President Rafsanjani vowed to proceed with economic reforms so that Iran would no longer be dependent on other countries for their markets and products. He stated that during his first term of office the old state economy had been transformed, production had increased and unemployment had fallen from 16% to 10%–11%. Outlining his policies for the next four years to the Majlis, Rafsanjani declared that his Government would not embark on adventures abroad but would concentrate on reforming and rebuilding the economy. He stressed that costly state subsidies had to be reduced but promised that this would be done gradually so as not to disrupt peoples' lives. In the Majlis and the press, however, there was strong criticism of the Government for mishandling the economy and allowing the country to accumulate some US $20,000m. in external debts. Furthermore, the Majlis refused to approve the reappointment of Mohsen Nourbakhsh as Minister of the Economy. *Jomhuri Eslami,* the Persian language daily, accused the Government's economic team of being 'deceived by liberal Western economic theories', argued that the reforms had been introduced too rapidly and urged the reintroduction of some state controls. Since mid-1992 Iran had faced problems in paying its external debts as low oil prices resulted in falling oil revenues. Much of the short-term debt resulted from high levels of imports in the early 1990s. Oil revenues for 1993/94 were projected at around $18,000m., but in August 1993 the Minister of Oil informed the Majlis that they would probably reach only $16,500m. By January 1994 officals estimated that revenues would not exceed $12,000m. Oil revenues were projected at only $10,150m. for 1994/95. By the end of 1993 at least $7,000m. of debt payments were in arrears. Acute shortages of some essential imports occurred as foreign companies held back deliveries when Iranian banks fell behind with their payments. It was reported that some factories had been forced to close and others to cut production and lay off workers. Prices and unemployment rose rapidly. During the final quarter of 1993 the rial's free market value fell by about one-third owing to reduced supplies of foreign exchange to importers. Growth in GDP, which had been projected at 6%–7%, was 4.9% in 1993/94.

In response to these criticisms, in August the Bank Markazi (central bank) relaxed some import restrictions to ease pressures on industry and consumers. However, Rafsanjani rejected calls in the Majlis to postpone the second Five-Year Plan until 1996 because of the economic crisis. The President presented the plan document to the Majlis on 21 December and sought approval for higher spending based on increased domestic revenues. The day before, Ayatollah Khamenei had announced new guide-lines for economic and social planning, urging a reduction in the country's dependence on foreign finance and special efforts to settle outstanding obligations. He also urged caution in privatizing state enterprises and emphasized that privatization should promote economic development and conform with the Constitution of the Islamic Republic. He stressed that social equity should be central to the Government's development policy. Deprived regions should receive more attention and development policies should benefit those who had worked hard for the Revolution. Priority should be given to promoting domestic production, particularly agriculture, in order to satisfy

the basic needs of the people. Imports of consumer goods should be reduced and non-oil exports increased. Corruption should be eliminated and waste and extravagance discouraged. At the same time Khamenei gave his support to the President and attempted to underplay the scale of the country's economic problems.

In early January 1994 Rafsanjani declared that the Iranian economy was no longer totally dependent on oil revenues and could survive even if oil exports were completely cut off; falling oil prices would not hurt Iran so much as other oil exporters. He pointed to Iran's success in increasing its non-oil exports, which he estimated would earn US $5,000m. in 1993/94, nearly one-third of total hard currency revenues. In contrast, Mohammad Reza Bahonar, a member of the Majlis economy and finance committee, argued that Iran must free itself from its dependence on oil revenues during the next few years because low oil prices and a rapidly growing population had resulted in a fall in per caput oil income to about $15 a month. Rafsanjani also repeated accusations made by other Iranian officials that the 30% fall in oil prices during 1993 had been orchestrated by hostile countries, principally the USA, because they were alarmed by Iran's economic recovery. Later in the year Khamenei accused Saudi Arabia of helping 'international thieves' to keep oil prices low. In March 1994 the Majlis reduced projected revenue and expenditure before approving the Government's 1994/95 budget because of concern over low oil prices and the high level of foreign debt. Announcing the decision, Ali Akbar Nateq Nouri, the Speaker of the Majlis, stated that economic reforms, including the reduction of subsidies, should be slowed down to protect the vulnerable strata of society. Yet despite opposition from within the Majlis, in April Rafsanjani renewed his attack on some state subsidies which he stated cost the country $15,000m. every year. He declared that energy subsidies alone cost $11,000m. a year, more than projected oil revenues for 1994/95. He argued that subsidies for agriculture and for assisting the families of those killed during the Revolution and the war with Iraq were justified, whereas bread subsidies for the general population and energy subsidies were unjust and should be eliminated. This programme was a matter of urgency because subsidies were preventing the country's economic recovery. After the failure of an attempt within the Majlis in May to remove control over price-setting from the Government, Rafsanjani appeared to compromise and promised that subsidy reforms would be introduced gradually. Nothing would be done until the new Five-Year Development Plan was ready because subsidy cuts directly affected the people's standard of living and could cause resentment against the Government. The President stated that 'It needs at least 10 years for us to remove the iniquities that exist in fuel and bread consumption'. By the end of 1994 the Bank Markazi had successfully rescheduled almost $10,000m. in short-term foreign debts into medium-term obligations. By the early months of 1995 official and private reschedulings were reported to have reached $14,000m., marking the end of the immediate debt crisis which had destroyed the country's creditworthiness. Most of the rescheduling agreements provided Iran with a two-year grace period, with repayments deferred until 1996. Nevertheless, the country faced an annual foreign debt-servicing burden of between $4,000m. and $5,000m. until the end of the century, which could only aggravate the side-effects of the Government's reform programme. Despite opposition from the USA, Switzerland and Germany began once again to offer insurance cover for exports to Iran in the early part of 1995. However, poor relations with the West continued to accentuate Iran's economic difficulties. In May 1995 the USA imposed a near-total trade embargo on Iran with the aim of crippling the country's economy and urged other Western nations to follow its example. The embargo affected primarily the oil industry. US oil companies had purchased nearly a quarter of Iran's crude oil output in 1994. However, in June 1995 oil traders reported that Iran appeared to have experienced no difficulty finding alternative markets for the oil previously sold to US companies.

At the sectoral level, agriculture finally appeared to have experienced a revival by the mid-1990s after decades of decline, achieving higher farm output and greater efficiency. The Ministry of Agriculture even predicted that Iran would become a net exporter of foodstuffs by the turn of the century. Moreover, the gap between farmers' income and that of average city-dwellers closed considerably. Industry has proved more difficult to reform, with low rates of capacity utilization persisting in some branches, especially the state-owned heavy industries. The restructuring of ailing industries has experienced problems, but the Government remains committed to removing most state subsidies by 2000. Privatization plans were delayed in mid-1994, when the Majlis approved legislation giving certain groups privileged access to shares in companies being sold off. Nevertheless, in early 1995 the Minister of Industries declared that by 2000 only 10% of Iranian industry would be state-owned, compared with 45% in 1990, and that ultimately only very large industries would remain under state control. Plans to attract foreign investment in Iranian industry met with little success despite amendments to the foreign investment law. In his new year message on 21 March 1995, President Rafsanjani promised that Iran would become self-sufficient by the turn of the century and would not have to depend on foreign assistance to run the economy. He stated that reconstruction would be accelerated under the second Five-Year Plan, ending in March 2000, because the country was now less reliant on imported materials.

For ordinary Iranians rapid price rises resulting, in part, from cuts in state subsidies have been the main concern. As the Government has attempted to restructure the economy, life for the average Iranian has become harder, provoking widespread dissatisfaction. At the beginning of April 1995 the first mass protests against the Government's economic policies erupted as rioting took place in the working-class suburb of Islamshahr, close to Teheran. Demands for better water supplies escalated into a wider protest against the doubling of fuel prices introduced in March as part of the new Five-Year Plan. Less than a year before, President Rafsanjani had promised that cuts in fuel subsidies would be introduced gradually. The police quickly restored order, but the demonstrations were seen by some observers as a warning to the Government that there could be further trouble if economic conditions continued to deteriorate.

In December 1995 the World Bank released an economic memorandum on Iran in which it concluded that substantial progress had been made in macroeconomic stabilization and in implementing structural reforms over the past six years and pointed to a dramatic improvement in social indicators since the mid-1980s. However, both the World Bank and the IMF advised the Government that it would achieve a higher rate of economic growth and more success in reducing inflation if it adopted more ambitious stabilization and structural reform policies, given the extent of macroeconomic imbalances, distortions in resource allocation, and the external environment. They urged the Government to speed up the programme of economic reforms, and to improve resource mobilization and the quality of management. In discussions with the IMF, Bank Markazi officials emphasized that they were giving top priority to repaying the country's foreign debts on time, reducing inflation and strengthening the bank's external reserves. However, they insisted that the objectives of the second Five-Year Plan could be achieved by following a gradualist approach to stabilization and structural reform.

In January 1996 during the approach to legislative elections a group of senior officials, including the Governor of the Bank Markazi, Mohsen Nourbakhsh, and the Mayor of Teheran, Gholamhossein Karbaschi, all close allies of President Rafsanjani, issued a statement urging voters to support the President's tough economic policies. They argued that the main threat facing the country was not from external pressures, but from internal economic problems. Iranians should direct their efforts towards strengthening the country's economic policies and social structures. Economic issues dominated campaigning during the week before the first round of voting on 8 March, with the pro-Rafsanjani modernizers of the newly-formed Servants of Iran's Construction challenging the conservative Society of Combatant Clergy, which had used its predominance in the previous Majlis to slow down the President's economic reform programme. At the end of the first round of voting both groups claimed victory although some Iranian newspapers proclaimed that candidates of the Servants of Iran's Construction would dominate the new Majlis. Following the second round of voting, in April, it emerged that the Society of Combatant Clergy had lost overall control but remained the largest single group.

On the eve of the second round of voting in the legislative elections, the Bank Markazi declared that the economy had improved significantly as a result of the Government's successful strategy to restore financial credibility. The Government's budget proposals for 1996/97 foresaw high expenditure of hard currency, but central bank officials stressed that the country would still meet all of its debt repayments.

At the beginning of August 1996 the US Administration ceded to pressure from the Republican-dominated US Congress and President Bill Clinton signed a bill imposing penalties on non-US companies investing in oil and gas projects in Iran (see Petroleum, below). He described Iran as one of the most dangerous supporters of terrorism in the world. The US trade embargo imposed in June 1995 had had little effect on Iranian oil exports, and most observers maintained that the new sanctions were unlikely to damage the country's export capacity. Despite US pressure and the threat of legislation imposing a secondary boycott on Iran, several European oil companies continued with their investment programmes in the oil and gas sectors during the first half of 1996 and agreements on a number of important new finance lines were reached with European and Japanese banks. However, some analysts argued that the effect of the new sanctions would be indirect and psychological, and might undermine business confidence and make it more difficult for the Government to carry out its economic reforms. In April 1997, moreover, all EU governments except Greece suspended 'critical dialogue' with Iran after a German court implicated the Iranian leadership in the assassination of Iranian Kurdish dissidents in Berlin in 1992.

Between the Majlis elections in early 1996 and the presidential elections in mid-1997 there were few new economic policy initiatives and the Government concentrated on restoring economic confidence in Iran and ensuring repayments of the country's foreign debt. Higher oil prices during most of 1996 and the early months of 1997 enabled the Bank Markazi to meet annual foreign debt repayments of some US $5,000m., and allowed a modest increase in the value of imports which had been reduced since 1994.

The trade surplus increased from US $5,586m. in 1995/96 to $7,402m. in 1996/97, while the current-account surplus increased from $3,358m. to $5,232m. over the same period. The IMF acknowledged Iran's achievements in curbing inflation (by nearly 50% in 1996/97), reducing the external debt and meeting foreign debt payments, and registering GDP growth of 4.7% in 1996/97 (against an annual average of 3.8% over the previous four years), with growth in the non-oil sector increasing to 5.3%. Nevertheless the Fund warned that the reimposition of strict foreign exchange controls in 1995, while reducing inflation, had damaged non-oil exports. It also warned that the slow pace of economic restructuring meant that large sectors of the economy continued to be dependent on state subsidies, with subsequent market distortion and inefficiency.

The victory of the pro-reform Sayed Muhammad Khatami in the May 1997 presidential election heralded a more determined pursuit of economic restructuring, deregulation, and liberalization. Improved relations with the European Union (EU) persuaded the latter's ministers responsible for foreign affairs in February 1998 to rescind the ban on ministerial contacts with Iran, although there was no resumption of the previous 'critical dialogue' between the two sides. In the following month the Iranian Government announced that almost all aspects of oil and gas development would be made available to foreign investors, including onshore projects, which had been excluded from the previous opening to foreign investors in 1988. In the same month Khatami advocated a fundamental reform of Iran's economy, citing major income disparities, a preference for speculation over production, and over-dependence on oil exports as the key weaknesses. However, options for reform were reduced by a sharp fall in world oil prices from late 1997, which necessitated at least two revisions of the 1998/99 budget, as originally presented, to account for expectations of much lower oil revenue.

The further opening of the oil and gas industry to foreign investment was expedited by a US decision in mid-May 1998 not to seek to apply the 1996 Iran–Libya 'secondary' sanctions act against the EU and some other states in respect of investment in Iran. A list of 42 projects for which foreign tenders were invited was officially published at a London conference in early July; it was forecast that total investment of some US $8,000m. would be attracted from European and other sources (although not from US companies, which remained prohibited from investing in Iran under the sanctions act).

With the economy so dependent on unpredictable oil revenue, the downturn in prices in 1998 and early 1999 had a severe effect on Iran. Although GDP had risen by 2.6% in 1997/98, it was estimated that growth would be negligible in 1998/99. Similarly, the trade balance was projected to record a US $700m. deficit in 1998/99, following a $3,500m. surplus the previous year. In addition, low oil revenues caused short-term financial problems, necessitating further debt-rescheduling negotiations with Iran's principal creditors during the first half of 1999. Rising oil prices from April 1999 brought an economic upturn, but it was reported in June that the Government had asked the IMF for a credit line under the Compensatory and Contingency Financing Facility.

FIVE-YEAR DEVELOPMENT PLANS

The five-year development planning concept was introduced in 1947 by the Shah's regime, whose fifth and last plan ended in March 1978. A projected sixth plan remained unpublished at the time of the 1979 Revolution. What became known as the First Five-Year Development Plan (FFYDP) of the new Islamic Republic, drafted in 1981–82 was scheduled to begin in March 1983 but was deferred owing to the demands of the 1980–88 war with Iraq. The FFYDP was eventually introduced in January 1990, its primary objective being 'to remove the legacy of the economic burdens brought about by the Iraqi invasion of Iran.' It envisaged an annual growth rate of 8%, the creation of some 2m. new jobs, the rehabilitation and expansion of the industry, and greater decentralization and private-sector participation.

Despite various inhibiting factors, including rapid population increase and endemic inflation, the FFYDP was hailed as a success by the Government. In a review of the plan published in September 1994, Bank Markazi recorded that US $110,000m., mostly generated from oil revenues, had been disbursed among the various development sectors, compared with $128,000m. originally envisaged. The FFYDP's major achievements reportedly included the transfer of a number of public-sector industries to the private sector; average annual GDP growth of 7.3%; an increase of per caput GDP from IR 197,000 to IR 246,000; rises in private and public consumption of 7.7% and 5.5% per annum respectively; and annual growth of 5.6% in agriculture, 15% in the industrial sector, 18.9% in water, gas and electricity, and 11.9% in the transport sector. However, following rapid expansion in the five plan years, buoyed by an increase in world oil prices and the temporary lifting of OPEC quotas (resulting from Iraq's invasion of Kuwait), decreasing oil prices in 1992 and a consequent decline in imports by the Government resulted in a deceleration of economic growth. Additionally, macroeconomic imbalances emerged, including a deteriorating balance of payments and an increase in external debt arrears, while government investment continued to outpace private investment, at 14.1% and 8% respectively.

The Second Five-Year Development Plan (SFYDP) was drafted, taking into account the achievements and failures of the FFYDP with a specific objective to complete unfinished infrastructure and development projects. Covering the period March 1995 to 2000, the SFYDP envisaged an annual average GDP growth rate of 5.1% over the five years (including 1.6% for the oil sector, 4.3% for agriculture, 5.9% for industry and mining, and 3.1% for the services sector), an average annual inflation rate of 12.4% and the creation of a further 2m. new jobs. Imports were projected to increase at an average annual rate of 4.3%, oil exports at 3.4% per annum and non-oil exports at 8.4% per annum. Development and administrative expenditure was projected to total $135,500m. over the plan period, deriving principally from anticipated oil revenues of $86,500m. and tax revenues of $40,400m. The key SFYDP objectives and policies in the external sphere were that the foreign-exchange system should be based on a managed unified floating exchange rate consistent with maintaining convertibility of the rial for current international payments; and that the level of customs tariffs should take account of the need to protect domestic producers and consumers and to maintain comparative advantage for

Iranian goods in international markets. In the fiscal sector, plan objectives included increasing the share of direct taxes (excluding wage taxes) in total tax revenue; channelling oil revenue to development expenditure; and undertaking a tax system reform. In the agricultural sector, the maintenance of sustained growth was to be combined with the aim of reducing subsidies and making them more transparent in the budget. In the social sphere, the SFYDP pays special attention to the role of mothers 'in the shaping of society and its human resources', establishing as a national priority the eradication of illiteracy among young mothers.

AGRICULTURE

Of a total surface area of 165m. ha, the 1988 agricultural census reported, there were 56m. ha of cultivable farm land, of which 16.8m. ha were actually being cultivated. Cultivable land has since risen to 18.5m. ha., of which about one-half is dry-farmed, while rain-fed agriculture is important in the western provinces of Kermanshah, Kurdistan and Azerbaijan. Irrigated areas are fed from modern water-storage systems or from the ancient system of *qanat* (underground water channels), although these have fallen into disrepair in recent years. In 1986 Iran had 17 operational dams which provided irrigation for 871,200 ha of land. By 1996 a further 49 dams were under construction, the aim being to increase utilization of water resources from 70,000m. cu m to 110,000m. cu m by 2000.

The traditional dominance of agriculture was eroded by post-1945 oil and gas exploitation, which became the country's major source of export revenues as population growth obliged Iran to become a net importer of foodstuffs. The agricultural sector has nevertheless usually been the largest contributor to GDP, its share falling only slightly in the 1990s, from 23.9% in 1992/93 to 20.2% in 1996/97, when it was narrowly overtaken by the industrial sector; agriculture contributed an estimated 19.7% of GDP in 1997/98. An objective of the SFYDP was to encourage food self-sufficiency and transform Iran into a net exporter of agricultural produce. However, the latter aim remained unfulfilled half-way through the plan period, the value of agricultural exports decreasing to just $5m. in 1995/96, after increasing dramatically to $90m. in 1994/95. The chief factors limiting the size of agricultural production are: inadequate communications, which limits access to markets; poor seeds, implements and techniques of cultivation; scarcity of water and under-capitalization, chiefly the result of the low incomes of peasant households. About four-fifths of all farms have an area of less than 11 ha. Iran was self-sufficient in foodstuffs until the late 1960s but then began importing vast quantities, owing to the failure of agricultural output to keep pace with increasing domestic consumption and the failure of the Government to produce a sound agricultural policy. Natural disasters have also taken their toll. Early in 1992 nearly 5% of cultivated land, mostly in the north of the country, was damaged by floods.

A large variety of crops are cultivated in the diverse climatic regions of Iran. Grains are the chief crops, including wheat (the major staple), barley and rice. According to the 1988 agricultural census, the area sown to wheat rose to 5.3m. ha during the previous six years, while the average yield per hectare reached 1,082 kg. Under the FFYDP (introduced in January 1990), it was aimed to increase wheat production to 11m. metric tons per year by 1995. In 1991 Iran's Deputy Minister of Agriculture declared that wheat yields would rise significantly, from 1.96 tons per hectare to 3.2 tons per hectare, through the expansion of irrigation; and that by 1993 wheat production would reach 12.5m. tons, making self-sufficiency possible. However, the use of scarce water resources for the cultivation of cereals rather than of crops that would give higher yields has been questioned. Moreover, given the current trend away from wheat cultivation to more profitable cash crops, expectations regarding the achievement of self-sufficiency appear to be misplaced. According to FAO, Iranian production rose from a low of 5.79m. tons in the drought year 1989 to 7m. tons in 1990. Production was estimated at 8.9m. tons in 1991. The 1992 wheat harvest totalled 10.2m. tons, 17% more than forecast in the Plan. The Ministry of Agriculture stated that production would meet 80% of domestic requirements and that 2.5m. tons only would be imported. Under the SFYDP, which began in March 1995, annual wheat production was projected to rise by 40% to 14m. tons. According to official sources, wheat production in 1996/97 decreased to 10.0m. tons from an area of 6.3m. ha. Output remained at this level in 1997/98, but recovered to 11.9m. tons in 1998/99. Barley production reached 2.6m. tons in 1989, while the yield per hectare was 1,040 kg; production was estimated at 3.6m. tons in 1991, but fell to 2.5m. tons in 1997/98 from an area of 1.5m. ha. Output in 1998/99 was 3.3m. tons. In 1988 rice production rose to more than 1.5m. tons, although the yield per hectare improved only slightly, to 2,700 kg. After falling to 1.2m. tons in 1989, rice production rose to 1.7m. tons in 1990, declining, however, to 1.4m. tons in 1991. Production rose again, to 2.4m. tons, in 1992, falling to 2.3m. tons in 1993 but thereafter rising steadily to 2.7m. tons in 1996/97, from an area of 600,000 ha. Output was 2.4m. tons, from 563,000 ha, in 1997/98. Some farmers are reported to have shifted from grain cultivation to more profitable poultry farming and in the early 1990s, as milk prices rose, to dairy farming and commercial milk production. Production of poultry meat was expected to reach 70,000 tons in 1998/99. Between 1982 and 1988 the area sown with sugar beet declined by 65,000 ha, to 131,890 ha, but annual production remained steady at 3.4m. tons. Production was estimated at 3.4m. tons again in 1989. In 1991/92 sugar beet production rose to 5m. tons, 1.4m. tons more than in the previous year, according to the Ministry of Agriculture. Sugar beet provides 50% of Iran's sugar requirements. Production of sugar beet reached 5.5m. tons in 1995/96 (from 203,000 ha), but fell sharply in 1996/97, to 3.7m. tons from a much reduced area of 149,000 ha, before recovering to 4.8 m. tons (191,000 ha) in 1997/98. Output of cotton was 523,000 tons in 1995/96 and increased to 598,000 tons in 1996/97, from an area of 320,000 ha. in the latter year, but declined to 451,000 tons (238,000 ha) in 1997/98. Output of potatoes declined from 2.3m. tons in 1987 to an estimated 1.4m. tons in 1989, while the planted area remained almost the same, at 77,000 ha but increased sharply, reaching 3.3m. tons in 1996/97, from an area of 158,000 ha. Also of commercial importance is production of green tea (309,000 tons in 1997/98), oil seeds (267,000 tons), tobacco (24,000 tons), onions (1.2m. tons), dates (860,000 tons) and pistachio nuts (112,000 tons). Iran's status as the world's largest producer and exporter of pistachio nuts was jeopardized in September 1997 by an EU prohibition of imports from Iran after toxic substances had been found in some consignments. However, the ban was lifted in December after the Iranian industry (employing some 300,000 people) had given quality assurances. Iranian exports of pistachio nuts to EU countries declined to 40,000 tons in 1997 (from 84,000 tons in 1996).

Despite the early social and political benefits of land reform, which the Shah had vigorously pursued in the 1960s and 1970s, agriculture in general suffered under the Shah, to the point where it became one of the principal issues raised against him by his opponents. Typical of the Shah's grandiose projects were four joint ventures set up with foreign companies in 1970 on over 60,000 ha of land in Khuzestan, in the south-west, involving the removal of some 6,500 peasant families. Despite massive infusions of funds, the projects began to collapse within a few years owing to inadequate planning, a lack of skilled manpower and delays in irrigation schemes. By the time that the Revolution ousted the Shah the projects were in the process of being wound up.

Having made such an issue of agriculture in the political battle against the Shah, the victorious revolutionaries made its revival one of their priorities. Self-sufficiency in foodstuffs, above all else, became central to their economic philosophy, but the authorities have acknowledged that, unlike the former regime, they do not have the money to extend the cultivated area through building dams and irrigation schemes. Instead of spending capital, the Government has emphasized the intensification of agriculture, i.e. the improvement of farming on existing lands. To this end, the Government increased support prices for grains and other crops. The biggest subsidies have gone to wheat, the country's most important crop. The Government increased its support to IR 53 (US $0.74) per kg, compared with the pre-Revolution price of IR 18 ($0.20). Since March 1983 the Government has been providing further subsidies in kind as well as giving tax exemption for 10 years to all farmers who follow official guide-lines. For each ton of wheat produced, the Government offers 100 kg of fertilizer, four kg of cube sugar,

and one kg of tea. Farmers have also been told that they can pay for a tractor at cost price in wheat delivered to the local grains and cereals organization. Subsidies, though less generous, have been introduced for rice and other grains. However, many farmers can sell their wheat on the unofficial market for as much as IR 60–IR 70 ($0.65–$0.75). It has been estimated that the government agencies purchase less than 15% of Iran's total wheat production. Towards the end of 1991 the Government announced that it had purchased 1.82m. tons of wheat in the current farming year, and announced its intention to purchase 20% more wheat from farmers the following season in order to encourage the cultivation of the crop after the high production and modest prices of the previous season. In early 1994 President Rafsanjani stated that the $350m. spent on subsidizing the agricultural sector were justified and should be maintained. Rural projects, such as the building of schools, mosques, public baths, silos, roads and irrigation networks and the extension of electricity to villages, have been undertaken by the Ministry of Construction Jihad, which combines the roles of three agencies of the Shah's 'White Revolution', the Literacy, Health and Agricultural Extension corps. It was constituted as a Ministry at the end of 1983, and in July 1984 announced a plan to commit 1m. ha to dry farming. Delays in implementing these projects have added to rural insecurity and are an additional cause of rural-to-urban migration.

The Ministry of Construction Jihad and the Ministry of Agriculture are known to hold conflicting views on almost every aspect of policy, with the Ministry of Construction Jihad strongly in favour of more extensive land reform. Proposals for the merger of the two Ministries in 1987 encountered resistance inside both organizations. While the Ministry of Agriculture favours an essentially advisory and technical role in the agricultural sector, the Jihad promotes the creation of collective farming organizations and a reduction in the role of the private land-owner. Although the Jihad has achieved spectacular success in some villages, fears have been expressed that an extension of its authority could impede production, with ideological factors taking precedence over sound farm management.

Short-term credit to farmers has been greatly increased. In the last year of the old regime the Agricultural Bank lent some US $600m.; in 1982/83 it lent $11,900m., and in 1983/84 $2,300m. In spite of expanded credit facilities, farmers have been reluctant to start long-term, high-value cultivation of perennial crops. Instead, they have put their effort into annual crops that yield a quick return, particularly wheat. Moreover, the impact has been uneven, with big changes in the centre of the country, around Teheran, but in other areas, those disrupted by the war and those where tribe-state relations are bad, the villages have hardly been touched by the new policies. More than a decade after the Revolution, Iran was no more self-sufficient than it was in the latter days of the Shah's rule. In spite of successes claimed in increasing agricultural output, US Department of Agriculture estimates revealed that Iranian imports of foodstuffs reached $3,670m. in 1984 and were only modestly reduced in 1985. Agricultural imports reached $1,900m. in 1987/88, according to the Minister of Agriculture. The allocation for agricultural imports in 1988/89 was $2,000m. In the Iranian year 1990/91 the value of food imports through government agencies was $5,300m. (Imports by the private sector are not officially recorded.) Imports of wheat were estimated at 4.5m. tons, those of rice at 800,000 tons and those of coarse grains at 1.3m. tons. According to the International Grains Council, wheat imports reached 5m. tons in 1995/96, and an estimated 7m. tons in 1996/97 (making Iran the world's largest wheat importer). Imports declined to 3.8m. tons in 1997/98 and to 2.5m.–3m. tons in 1998/99.

Problems of land ownership and uncertainty about the Government's land reform policies have added to the difficulties affecting the agricultural sector. After the fall of the Shah, when the authority of the central Government was weak, land seizures began in many villages. The most dramatic examples occurred in Turkoman and Kurdish areas, where concentrations of large absentee land-holdings were especially pronounced, but other areas were also affected. In some cases the Government did not intervene but, where it did, it tended to oppose land seizures. The events were accompanied by mass migration from the countryside to the cities—nearly 1.5m. rural dwellers migrated to Teheran alone during the first year of the Revolution. The regime recognized the economic disaster that this migration threatened. Nearly one-quarter of the most fertile farm land awaits settlement of ownership claims between big landlords and the farmers who have taken over their lands. The redistribution of these lands is decreed by the Revolution but, according to the rules of Islam, property is sacred and the right to it absolute. The issue has been complicated by the radical element in the Government which advocates the appropriation of more land by the state. A land reform programme, prepared by the Ministry of Agriculture, was submitted to the Revolutionary Council at the end of 1979. The programme planned to limit the size of holdings to three times the average in an area. The large landowners were accused of influencing the clergy to oppose the new measures, but the necessary legislation was eventually introduced. It was approved by the Majlis in 1981, but was later rejected by the Council of Guardians as un-Islamic. The form of the land reform bill was then altered considerably. Land was to be confiscated only from former enemies of the Revolution and only if it was barren or uncultivated. After many months before the Majlis and deep controversy over the acceptability of the law in the light of Islamic principles, the bill was again rejected by the Council of Guardians. A compromise law, giving farmers, peasants and squatters rights to land (amounting to some 800,000 ha) settled by them after the Revolution, but allowing big landlords who avoided the redistribution of land to retain their estates, was approved by the Majlis in May 1985, though it was not ratified by the Council of Guardians. The law would affect about 630,000 ha of farmland belonging to some 5,300 landlords who fled the country or whose lands were appropriated. Some 800,000 ha of land, confiscated from officers and others linked with the Shah's regime, have been redistributed since the Revolution. (More than 50% of this land is uncultivable or grazing land, but 200,000 ha of cultivable land have been given to poor or landless peasants.) For more than a decade the authorities have been trying to reconcile Islamic principles with revolutionary goals and expectations, while a comprehensive settlement of the land ownership reform question is still awaited.

In early 1990 changes in government policy on the utilization of agricultural land were announced. Instead of granting confiscated and unused land to small farmers, henceforth official teams (consisting of seven members) were to grant land in blocks to groups of investors, in order to ensure its rapid development. Consequently, some 200,000 ha of land have been leased to farmers for temporary cultivation, and it is aimed to lease a further 250,000 ha under the new terms.

The war with Iraq imposed numerous constraints on agriculture. Between 1980 and 1982 10% of agricultural land fell under Iraqi occupation; a disproportionate number of volunteers for the war effort were drawn from the villages; and the heavy financial burden of the war imposed limits on spending. Since the end of the war, despite drought in the western rain-fed areas and the earthquake of 1990, which destroyed irrigation works, orchards and farms in the fertile north-western provinces of Gilan and Zanjan, the Ministry of Agriculture claims to have succeeded in reviving the agricultural sector after three decades of decline. The Ministry reported that an annual growth in farm output of 6% had been achieved under the 1990–94 FFYDP, wheat output had doubled to 11m. tons, sugar plants were now working at full capacity, agriculture had been made more viable by reducing subsidies to farmers on products such as fertilizers and pesticides, and water reservoirs had been expanded. Under the new Plan which began in March 1995, the Ministry of Agriculture projected annual growth of 5%. It is planned to build some 20 dams during the term of the SFYDP and to increase water utilization by cutting losses in irrigation canals. Subsidies on pesticides were to be phased out within three years and those on fertilizers within five years. Increased mechanization was identified as a key priority, especially in rice farming. As the average Iranian farm is small (only 5.3 ha), farmers must pool their land for successful mechanization. The Minister of Agriculture stated that the Majlis had approved the necessary legislation. Co-operatives are being encouraged and will be supplied with machinery and a guarantee that the Government will buy 70% of their production. The new Plan aimed at the expansion of food processing industries with investment mainly

from the private sector, which has shown particular interest in processing plants for vegetables and fruits and dairy products. The Minister of Agriculture stated that he welcomed foreign investment in agriculture and expected that most of it would be directed towards food processing industries. A $47m. baby food factory was set up in 1994 by Nestlé of Switzerland as a joint venture with a local firm. Special efforts were being made to improve the processing and packaging of fruit for export to markets in the Gulf and Europe and this sector was scheduled for rapid growth. The Minister forecast self-sufficiency in sugar, fodder crops, tea, meat and dairy products by 2000. Some imports would be necessary, especially of vegetable oil, of which about 85% of requirements is imported; however, a major effort was to be made to expand olive cultivation. The Minister of Agriculture also maintained that the gap between rural and urban incomes had narrowed and that within the next five years no village would be without proper roads, electricity or health facilities.

The principal products of the nomad sector of Iranian agriculture are livestock products—dairy produce, wool, hair and hides. According to the 1988 agricultural census, nomads' herds included 40.7m. sheep and lambs, of which more than one-third were in the provinces of Khorassan and east and west Azerbaijan. About 40% of sheep and goats are raised by semi-nomadic tribal herdsmen. Production is limited by the prevalence of animal pests and the apparently inevitable poor productivity of pastoral stock breeding compared with its domestic counterpart. However, account must be taken of the fact that most of the land grazed by the nomads' herds is land which could not be made economically viable in any other way. During the reign of Reza Shah (1925–41) the Iranian Government tried to enforce settlement on the nomads but the tribes rebelled. Since the early 1960s, government 'encouragement' and economic pressures have resulted in significant settlement. By contrast, the Revolutionary Government accepts the tribes as part of the social structure and is providing the nomads with support to expand meat production. Local output of red meat increased from 560,000 tons in 1989/90 to 680,000 tons in 1994/95.

About 11.5% of Iran is under forest or woodland, including the Caspian area—the main source of commercial timber—and the Zagros mountains. Forestry in an economic sense is a recent activity and it is only since the nationalization of forest land in 1963 that effective attempts have been made, under the Forestry Commission, at protection, conservation and reafforestation. Total roundwood output in 1997 was estimated at 7.5m. cu m.

Although Iran has direct access to both the Caspian Sea and the Gulf, fishing remains poorly developed in both areas. The total Iranian catch amounted to an estimated 351,700 tons in 1996. With the assistance of new investment, the Government hopes to increase the annual catch to 730,000 tons per year. The Caspian fisheries are chiefly noted for the production of caviare, mostly for export. Caviare exports in recent years have been estimated at around 100 tons; output in 1996/97 rose to 140 tons. During the 1990s prices have fallen by about one-third due to an increase in smuggling through Russia. In August 1993 Iran, Russia, Azerbaijan, Kazakhstan and Turkmenistan agreed to establish a cartel to regulate international prices of caviare, to co-ordinate exports and to protect stocks of sturgeon. Pollution and the steadily falling water-level of the Caspian Sea are two serious problems being tackled under a Soviet-Iranian agreement signed in 1973. One survey estimated that, if fully developed, Iran's southern fisheries could earn as much as US $200m. annually, chiefly from high-grade shrimps and prawns. At the end of 1982 a $1,300m. five-year plan for the development of the fishing industry was announced. The first phase of a giant fishing port at Javad al-A'emeh, in Hormozgan province, was completed in June 1986, at a cost of $3m. Under a $20m. protocol signed in August 1987, Iran agreed to buy 36 trawlers from the People's Republic of China, 18 of which were to be assembled in Iran from Chinese parts. China was also to assist in the construction of factories producing canned fish at three Iranian ports. Government expenditure of $4,520m. on the sector was planned over the period 1990–95; projects included the construction of 13 new fishing ports along the Gulf and the Sea of Oman, and the purchase or charter of fishing vessels. In May 1993 a new fishing port, which was to be equipped with cold storage facilities, opened on Hormuz Island. At the end of November 1993 a $1.4m. fish canning plant was opened in the Qeshm Island free zone, with a daily capacity of 40,000 cans. As a result of pollution caused by the war in the Gulf in 1991, Iran's shrimp catch was reported to have fallen by almost two-thirds, to 4,000 tons, in the Iranian year 1370 (1991/92).

PETROLEUM

The major economic activity in Iran is the petroleum industry. According to official figures, Iran's proven oil reserves at the end of 1998 were 90,000m. barrels, representing 9% of Middle East reserves, and were expected to last about 70 years at current production rates.

The history of commercial exploitation dates back to 1901, when W. K. D'Arcy was granted a 60-year monopoly of the right to explore for and exploit petroleum in Iran, with the exception of the five northern provinces, which fell within the sphere of Russian influence. Petroleum was eventually discovered in commercial quantities at Masjid-i-Sulaiman in 1908 and the Anglo-Persian Oil Co was formed in 1909. The Company was renamed Anglo-Iranian in 1935. A long series of disputes between the Iranian Government and Anglo-Iranian ended with the nationalization of the petroleum industry by Iran in 1951 and the replacement in 1954 of Anglo-Iranian by what became known as the Consortium until it was dissolved in March 1979. The Consortium was an amalgam of interests (British Petroleum 40%; Royal Dutch Shell 14%; Gulf Oil, Socony, Mobil, Exxon, Standard Oil of California and Texaco each with 7%; Compagnie Française des Pétroles 6%; a group of independents under the umbrella of the Iricon Agency 5%), formed to extract petroleum in the area of the old Anglo-Iranian concession as redefined in 1933. The Consortium's concession was to have lasted until 1979, with the possibility of a series of extensions under modified conditions for a further 15 years. Ownership of petroleum deposits throughout Iran and the right to exploit them, or to make arrangements for their exploitation, was vested in the National Iranian Oil Co (NIOC), an Iranian state enterprise.

Until 1973 Iran had a leasing agreement with the Consortium, but the Iranian Government then insisted that the companies should either continue under existing arrangements until 1979 and then become ordinary 'arm's-length buyers', or else negotiate an entirely new 'agency' agreement immediately. The Consortium opted for the latter plan, and on 31 July 1973 a contract was signed in Teheran under which NIOC formally took over ownership and control of the petroleum industry in the Consortium area, while the Consortium was to set up a new operating company, Oil Service Co of Iran, which would act as production contractor for NIOC. In return, the western companies were granted a 20-year supply of crude petroleum as privileged buyers, which they would take in proportion to their shareholding in the Consortium.

Strikes at the petroleum installations, halting petroleum exports, constituted one of the difficulties that forced the Shah to leave Iran in January 1979. The strikers announced that exports would not resume until the Shah left the country; Iran did not restore supplies to the rest of the world until 5 March 1979. The first shipments were sold on the spot market, fetching prices as high as US $20 per barrel, but NIOC announced that this was a temporary measure. Within a matter of weeks, three dozen long-term contracts were signed with international companies for the supply of Iranian petroleum.

NIOC cancelled the 1973 agreement to market Iranian petroleum through the Consortium, and since 5 March 1979 has sold petroleum directly to individual companies and countries. After initial resistance, the former members of the Consortium accepted the new arrangement and signed new nine-month supply agreements effective from 1 April. The role of the Consortium effectively came to an end on 1 July 1981, when Kala Ltd, a subsidiary of NIOC which had been established to undertake purchasing and service functions for Iran's petroleum industry, replaced the Iranian Oil Service Co (IROS), one of the subsidiaries of the Consortium.

Iran's greatest difficulty after November 1979, however, was finding customers willing to pay the high prices that it demanded. Supplies of about 900,000 barrels per day (b/d) to the USA were stopped in November, and by May 1980 deliveries of about 800,000 b/d to Japan and British Petroleum and Royal

Dutch Shell were also halted. The USA stopped taking delivery for political reasons in order to put pressure on Iran for the release of its hostages in the US Embassy in Teheran, taken over by Iranian students in November 1979; BP and Shell, themselves under pressure from the USA, refused to buy Iranian petroleum from 21 April, when the Ministry of Oil raised the price of its lightest crude to US $35 per barrel, retroactive from 1 April. Including surcharges and other conditions, Iran's oil was costing its customers closer to $37.50 per barrel, perhaps the highest for any member of the Organization of the Petroleum Exporting Countries (OPEC), compared with $17.17 per barrel less than a year earlier. With the (at least temporary) loss of its major Western customers, Iran began to investigate the Eastern bloc and developing countries for its principal markets.

The Government targeted average exports of crude petroleum for the Iranian year 1360 (March 1981–March 1982) at 2.5m. b/d: within the 3m. b/d ceiling which had been set after the Revolution as the optimum production level. Before the Revolution, Iran was producing 5m.–6m. b/d, of which around 800,000 b/d were required for domestic consumption. Political action in late 1978 brought production almost to a standstill but it recovered to around 3m. b/d during the following 18 months. Average production in 1979 was just over 3m. b/d, and in 1980 output declined to 1.5m. b/d, 49.5% less than the 1979 level, owing to price disputes and the crisis in relations with the West.

After the Prime Minister, Muhammad Ali Rajai, presented his April 1981 budget, with expenditure set at an ambitious US $44,000m., NIOC was apparently instructed to raise production to 2.5m. b/d to generate foreign exchange for the budget requirements. A special effort was made by NIOC to improve performance in petroleum exports by seeking contract customers as quickly as possible. By mid-1981 contracts for sales totalling 1m. b/d had been signed (207,000 b/d to Eastern bloc countries). Not all of these contracts, however, yielded foreign exchange. Crude contracts with countries of the Council for Mutual Economic Assistance (including the USSR) during the 1980s, and subsequently with other countries, including Turkey and India, were normally on a barter basis, with only the balance being made up in hard currency. In return for petroleum, these countries exported industrial goods and services, plus some food.

In October 1981, as a result of growing internal political violence and the war damage caused by Iraq, the main purchasers of Iranian petroleum announced that they would cease to lift Iranian crude. The contracts held by BP for 65,000 b/d, Mitsubishi for 40,000 b/d, Daikyo Oil for 10,000 b/d and Showa Oil for 18,000 b/d lapsed as from the end of September 1981. A group of nine Japanese firms also stopped purchases from Iran; only Shell retained its contract. In September 1981 the Government announced that all agreements and contracts signed under the Shah's regime had been abrogated. At the beginning of 1982 Japanese buyers re-entered the Iranian market.

The pricing of Iranian crude petroleum also had an adverse effect on exports, as both Iranian Light and Iranian Heavy have been priced towards the upper end of the market for similar crudes. In April 1980 the price for Light was raised from US $32.5 to $35 per barrel, with an additional premium of $2.5 per barrel. The Japanese, who had been taking 520,000 b/d, suspended purchases, while Shell and BP refused to buy until the price was below $35 per barrel. In July 1980 differentials between Iranian and similar Gulf crudes narrowed as Iraq and Kuwait raised prices up to the $32 benchmark agreed at the OPEC meeting in Algiers. In January 1981 prices were raised by $1.63 to $37 for Light and $36 for Heavy, with an additional premium of $1.8 per barrel. However, against this pricing policy, Iran was reported in early 1981 to have offered discounts of up to 20% to offset the very high insurance rates of loading in the war zone of Kharg Island and to have offered 60 days' credit instead of 30 days'.

In July and August 1981 Iran refused requests by its main customers for negotiations on prices of crude petroleum despite a difference of US $5.50 per barrel between the Saudi reference price and the $37.50 per barrel charged by Iran. After the OPEC meeting in Abu Dhabi in December 1981, Iran reduced its prices to $34.20, just 20 cents above the reference price charged by Saudi Arabia, and in February 1982, as part of its drive to increase petroleum exports, NIOC announced two price cuts, each of $1. Taking into account 30 days' credit, the NIOC prices were $32.20 for 34° API (American Petroleum Institute) crude and $30.30 for 31° API crude. These reductions made Iran's petroleum the cheapest in the Middle East.

The period April 1980 to June 1981 was, in almost every way, very poor for the Iranian petroleum industry. Apart from the factors already mentioned, the country was in a continuous state of political turmoil, which spilled over into the hydrocarbon industry. Stoppages, strikes, go-slows and sabotage seriously hindered production. The loss of foreign personnel for oilfield maintenance on the onshore fields was compounded by the sanctions imposed in May 1980 by the European Community (EC—now EU) in support of the USA over the American hostages in Iran. The EC's action prevented Iran from purchasing some of the sophisticated spares and components required for repairs and maintenance. Iran's response, however, deprived the country of some petroleum customers, since it suspended supplies to any country supporting the sanctions.

The Iraqi attack on Iran across the Shatt al-Arab in September 1980, and the consequent expanded and prolonged hostilities, further weakened the industry. Iraqi shelling of the 628,000 b/d Abadan refinery put the plant out of action. Sporadic attacks on shipping in the Gulf caused some disruption, but the movement of ultra-large cargo carriers and other vessels was virtually uninterrupted until May 1984, when Iraq began to concentrate its attacks on ships using Iran's main terminal for crude oil exports, at Kharg Island, and on the terminal itself. Only part of the terminal's export capacity was damaged, and, with an installed capacity of 6.5m. b/d, the loss of an estimated 2.5m. b/d capacity still enabled the terminal to deal effectively with Iran's levels of export in early 1983, which remained well below pre-Revolution figures. During periods of concerted Iraqi action in the Gulf, there were massive increases in insurance charges for tankers, followed by sharp falls during periods of relative military inactivity. Iraqi raids disrupted the product lines extending from Bandar Mahshahr along the length of the country, and delayed construction of the giant petrochemical complex at Bandar Khomeini, a joint Iranian-Japanese project (see Industry, below).

From the depressed levels of early 1982, Iran's output of petroleum rose significantly during the first half of 1983. In January 1983 oil rationing for domestic consumers was ended. Domestic consumption in mid-1982 was believed to be between 600,000 b/d and 700,000 b/d, of which some 300,000 b/d was being refined outside Iran, leaving exports at between 1.6m. b/d and 1.7m. b/d. In the second half of 1983 output dropped to 2.6m. b/d, compared with an OPEC production quota of 2.4m. b/d, under which exports of 1.7m. b/d were possible, after domestic consumption. Petroleum exports in June 1984 rose to 1.4m. b/d after falling below 1m. b/d in May, following Iraqi attacks on tankers in the Gulf. Japanese companies, the principal customers for Iranian crude oil, lifted more than 400,000 b/d in early 1984. Between May and July 1984 Japan banned its tankers from Kharg Island, and Iran offered lower prices to certain customers to bolster sales in the absence of its largest customer.

In 1982/83, with its oil priced at US $34 per barrel, export earnings reached $23,000m.; in 1983/84, when Iran's oil was priced at $28 per barrel, earnings totalled $21,500m., about $4,000m. more than the OPEC quota (which was reduced by 100,000 b/d, to 2.3m. b/d, in October 1984) would have allowed. Iran responded to the need to increase earnings by breaking OPEC production limits (Iran repeatedly pressed for an increase in its OPEC production quota, until the crisis of 1985–86, when prices fell precipitously in a glutted market—see below) and by energetic price-cutting policies, actions which offended its OPEC partners. It was reliably reported that Iran priced its crude petroleum in 1984 considerably below the official market level of $29 per barrel, as it was known to have done with the previous official price of $34. Some liftings were reportedly offered at approximately $26.50 per barrel in September and October 1984. Special insurance rates were made available to offset Iraqi threats to tanker traffic in the Gulf, and extended credit was also reportedly used as an incentive. Some customers, in particular Japan, began to turn to Saudi Arabia and Kuwait for their oil, as the risk of attacks on tankers and, commensurately, the rate of insurance were lower. Barter trading continued, but

there was some evidence of Iran's dissatisfaction with such arrangements, owing to the failure of partners to deliver materials which had been promised, and to supply goods according to specification. In 1985, despite its stated wish to abide by OPEC's official pricing structure, Iran continued to offer discounts on its oil, below official OPEC prices, to attract customers otherwise deterred by risks to shipping in the Gulf from Iraqi air attacks, and by the increased rates of insurance charged on vessels using the Kharg Island oil terminal. In January Iran brought its prices into line with those of OPEC by raising the price of its light crude oil by $1.11 to $29.10 per barrel. In February, when OPEC prices were reduced, Iran cut the price of its light crude by $1.05 to $28.05 per barrel. By mid-1985, however, Iran was again offering discounts on its oil. Despite efforts to remain competitive (which included rebate incentives, discounts and the shuttling of oil from Kharg Island by tanker to a safer lifting point, see below), Iran's revenue from oil exports (of 1.68m. b/d) fell to $17,000m. in 1984/85, 15% less than had been predicted. The Government blamed the war with Iraq and the OPEC decision to reduce its prices by $1.00 per barrel.

The Ministry of Oil argued publicly against the use of barter deals to stimulate oil exports while the Ministry of Foreign Affairs adopted barter and bilateral agreements as one of the main features of Iran's foreign policy. New barter deals were agreed in 1985 but their profitability was low and often fell short of the country's real needs; bartering returned to favour, however, with the appointment of a new Council of Ministers in January 1986.

A suggested long-term solution to the threat to oil exports, posed by Iraqi attacks on Kharg Island, was the construction of a new oil terminal, either at the end of a pipeline outside the Gulf area, or at Sirri Island, close to the mouth of the Gulf, 450 km south-east of Kharg Island, safer from Iraqi attack. An immediate and cheaper alternative, more a short-term solution to the problem of Iraqi air raids on Kharg, involved the establishment of a tanker shuttle service between Kharg and a makeshift floating oil terminal at Sirri Island, using tankers anchored off shore, where the oil was stored and reloaded. The Sirri facility began operating in March 1985 and proved its worth between August 1985 and January 1986, when Iraq launched a series of some 60 attacks against the Kharg Island terminal (which was still responsible for more than 80% of Iran's oil exports). The frequency and effectiveness of these attacks diminished during October, but at the beginning of the month exports were reported to be only 750,000 b/d–800,000 b/d, compared with an average of 1.5m. b/d in August and 1m. b/d in September. However, by dint of rapid repairs, employing the ample spare capacity on Kharg and exploiting alternative means of export, such as the shuttle to Sirri, Iran could claim that exports in October finally averaged 1.7m. b/d. However, further Iraqi raids were said to have reduced exports from Kharg to a trickle by January 1986. In June 1986, as a precaution against possible Iraqi attacks on the Sirri facility, a new floating terminal, called Wal-Fajr 2 (Dawn 2), was established at Larak Island, 210 km east of Sirri, using at least three of the supertankers formerly based at Sirri.

Average oil production in Iran at the end of 1985 was between 2.2m. b/d and 2.5m. b/d, while exports averaged about 1.6m. b/d. The rate of export fell from about 1.5m. b/d in January 1986 to 1.2m. b/d in February. At the end of January Iran offered to halve its oil production, and in February pressed OPEC to suspend oil exports for two weeks in an attempt to force prices up again. It was perhaps no coincidence that Iran's most vehement advocacy of production discipline within OPEC occurred at a time when the depredations of war prevented it from producing and exporting sufficient oil in excess of its OPEC quota to obviate the effects of falling prices. In fact, it could barely meet its quota in early 1986. In July prices fell below $10 per barrel (following six months of unrestrained production by OPEC in pursuit of a 'fair' market share), and in August OPEC members, at Iran's suggestion, agreed to cut output for two months from 1 September, effectively reverting to the production quotas imposed in October 1984, giving Iran a quota of 2.3m. b/d. Although Iraq refused to participate in the agreement, considering its quota of less than 1.5m. b/d to be too low, and demanding one commensurate with its production capacity or, at least, the equal of Iran's, Iran averred that military action in the Gulf would effectively restrain Iraqi oil production.

In October 1986, when the price of oil had risen to about US $15 per barrel, OPEC members agreed to increase collective production by some 200,000 b/d. In December all OPEC members (with the exception of Iraq, which, once more, since it was not expected to comply, received a notional quota) accepted a 7.25% reduction in their output, effective for the first half of 1987. It was hoped that this measure would enable the organization to support a fixed price of $18 per barrel, effective from 1 February, replacing the policy of pricing according to spot market rates, which prevailed in 1986. The reduction gave Iran a production quota of 2.26m. b/d, compared with 2.32m. b/d in November 1986–January 1987. Iran's average output of crude oil was estimated by OPEC to be 2.04m. b/d in 1986, compared with 2.19m. b/d in 1985, well below its OPEC quota. Production fluctuated during the first half of 1987 between 1.7m. b/d in February and 2.6m. b/d in June.

The OPEC production programme succeeded in sustaining the price of its oil at US $18 per barrel during the first half of 1987, and during the month of July prices on the spot market rose above $20 per barrel, in response to alarm over the growing threat to oil supplies posed by developments in the Iran–Iraq War. In June OPEC members agreed to retain the $18 per barrel benchmark, but to increase their collective production by 800,000 b/d during the second half of the year to 16.6m. b/d (including a notional quota for Iraq). Iran's quota was raised to 2.37m. b/d, an increase of 111,000 b/d. In August, however, output averaged 2.8m. b/d, according to oil industry sources, despite having counselled restraint at the June meeting. Iran had, since 1985, urged a return to a price of $28 per barrel, as OPEC's ultimate goal, in tandem with lower production—obviously with regard to its own difficulties in sustaining production levels.

In June 1987 Iraqi aircraft attacked the Kharg Island terminal for the first time since January. It was reported that, in the interim, three oil-loading berths at Kharg had been made operational again. Exports averaged 2.2m. b/d in August and 1.6m. b/d in September, according to oil industry sources, compared with an OPEC quota of 1.7m. b/d. By mid-October Iraqi attacks had reduced the number of tankers shuttling oil from Kharg to 20.

At the OPEC meeting in December 1987 Iran demanded an increase in the central reference price of at least US $2 per barrel and output reductions by members, and refused to participate in a new agreement that awarded Iraq the same quota as that given to Iran. It was finally agreed to retain the $18 per barrel reference price and the ceiling of 16.6m. b/d (15.06m. b/d excluding Iraq) on collective production for a further six months from 1 January 1988. Prices remained well below the OPEC reference level during the first half of 1988, owing to member states' flouting of their quotas, but in May OPEC decided to retain the 16.6m. b/d ceiling and the $18 reference price for a further six months. In August, when the cease-fire in the Iran–Iraq War took effect, Iran was producing at its quota level of about 2.37m. b/d, although, owing to Iraqi attacks on oil installations (including the first for five months on Larak Island in May), it had rarely been able to produce so much during the preceding six months. While Iranian representatives at OPEC meetings strongly urged reductions in output, to defend the $18 benchmark, Iran was allegedly so desperate for oil revenue that it was selling oil at less than $10 per barrel.

At a meeting of OPEC's Long-Term Strategy Committee in November 1988 (at which Iran reluctantly adopted a more flexible approach to Iraq's demand for quota parity), member states agreed a production ceiling of 18.5m. b/d for the first half of 1989. By December it was apparent that world demand for oil had surged, and prices strengthened to a level close to the US $18 per barrel reference price which remained in force. According to oil industry sources, Iranian production averaged 2.27m. b/d in 1988, while OPEC's provisional estimate of Iranian petroleum revenues in 1988 was $8,170m.

In early 1989 the agreement signed in November 1988 was undermined when Kuwait rejected the quota assigned to it within the 18.5m. b/d ceiling. By the time that the next full OPEC meeting was held, at the beginning of June 1989, prices had weakened considerably. To take account of the increased

volume of Kuwaiti production, which OPEC member states regarded as inevitable, the production ceiling was raised by only 1m. b/d, to 19.5m. b/d, thus reducing the extra volume to which other members were entitled.

At the Long-Term Strategy Committee meeting (subsequently redesignated a full-scale quota and pricing meeting) in June 1989, Iran demanded a redistribution of OPEC quotas, to favour Kuwait, the UAE, Ecuador and Gabon, within a ceiling of 21.5m. b/d. In the event, a ceiling of 20.5m. b/d was set; Kuwait duly rejected its quota of 1.149m. b/d for the final quarter of 1989, and overproduction continued to such an extent that by the end of 1989 total OPEC output had reached almost 24m. b/d. According to oil industry sources, Iranian production averaged 2.87m. b/d during 1989, while Iran's petroleum revenues were estimated at US $13,600m. At the next full OPEC meeting, held in November 1989, the production ceiling was raised to 22m. b/d, although most members regarded this as inadequate, since the *de facto* level of production was already 24m. b/d.

In early 1989 the Ministry of Oil issued a number of contracts for the construction and repair of offshore oil platforms destroyed during the Iran–Iraq War as part of a major expansion programme valued at US $2,000m. Offshore production had totalled some 500,000 b/d before the war but by 1986 it was estimated that production had fallen to 250,000 b/d. Offshore production may have fallen to 50,000 b/d by the end of the war. In April 1988 US warships severely damaged Salman, one of three rigs 150 km west of Sirri Island, feeding the Lavan Island terminals, and installations in the Nasr oilfield off Sirri. Rigs in the Reshadat and Risala'at oilfields, and the Raksh and Rostan platforms, had been destroyed by US attacks in April and October 1987.

By January 1990, prompted by optimistic demand estimates issued by OPEC and by members' closer adherence to their quotas, the price of crude petroleum had risen to its highest level for two years. Between January and May, however, prices fell steadily, as quotas were largely ignored. In May, at a meeting of OPEC's Monitoring Committee, it was agreed to reduce production by 1.445m. b/d, bringing it just within the previously agreed ceiling. A report issued by the International Energy Agency (IEA) in July, however, showed that this reduction had not been implemented.

In June 1990 it was reported that Iran had agreed to pay the US oil company Amoco US $600m. in compensation for operations which had been expropriated during the Revolution. This was the first major settlement of US corporate oil claims totalling $1,800m., and was regarded as a step towards the restoration of oil trade between Iran and the USA. In December it was announced that a US company, Atlantic Richfield, had secured compensation of $9m. from Iran for its share in the former international oil Consortium; this represented the last in a series of settlements (totalling $320m.) made by Iran to US members of the former Consortium. At the end of 1990 the USA eased the three-year ban on purchases of Iranian crude, but Iran objected to the US Administration's stipulation that all payments had to be made into a security account in The Hague, the Netherlands, for use by the special US–Iran Claims Tribunal. However, in early 1991 Iran approved two sales to US companies, Coastal Corpn and Mobil Corpn. Coastal Corpn, Chevron and Amerada Hess purchased shipments of Iranian oil for the US market in 1991. Mobil and other US oil firms also purchased Iranian crude petroleum, but for delivery outside of the USA. In August 1992 Atlantic Richfield and Sun Oil agreed to accept $130m. each in compensation for their share in the joint venture, Lavan Petroleum Company, nationalized after the Revolution. Two other US shareholders, Murphy and Union, settled in 1986.

By mid-July 1990 prices had fallen as low as US $14.40 per barrel, and both Iran and Iraq were demanding that a minimum reference price of $25 per barrel be fixed at the full OPEC meeting scheduled for the end of July. At the meeting, however, a minimum reference price of $21 per barrel was set, within a 22.5m. b/d ceiling. Nevertheless, the agreement apparently indicated a new political alliance between Iran, Iraq and Saudi Arabia, and its immediate effect was to raise prices.

Iraq's invasion and annexation of Kuwait in August 1990 gave rise to a further, dramatic rise in the price of crude petroleum. It also created serious divisions within OPEC. Iran criticized those member states, principally Saudi Arabia, which, in the aftermath of the Iraqi invasion, sought to raise OPEC production in order to compensate for the loss of Iraqi and Kuwaiti supplies, due to the economic sanctions imposed by the UN. At an emergency OPEC meeting convened in late August and attended by the oil ministers of all member states except Iraq and Libya, a draft agreement was signed which effectively allowed for a suspension of the production quotas agreed in July. Iran refused to support the agreement, however, and proposed that oil companies and industrialized countries release petroleum stocks in order to relieve pressure on prices, which had risen above $30 per barrel during August. However, it appeared likely in late August that production quotas would be ignored until a resolution of the Gulf conflict made it possible to convene an OPEC meeting in which all 13 members could participate.

In October 1990 the Iranian Ministry of Oil announced that, since August, output of crude oil had been averaging 3.2m. b/d, slightly above the OPEC quota of 3.14m. b/d. It was further reported that exports of crude oil to Japan had trebled and that exports to the Republic of Korea and the Philippines had also increased. Sales to Asian countries accounted for nearly 60% of total oil exports. For the first time, contracts in convertible currency were signed with several eastern European countries that had previously bought oil from Iran through clearing accounts linked to reciprocal purchases of goods. In addition, in late 1990 and early 1991 revenue from oil exports increased by between US $700m. and $800m. per month, as a result of the rise in prices for oil (precipitated by the crisis in the Gulf region).

Sustainable output of crude oil from both onshore and offshore fields was estimated at 3.5m. b/d in mid-1991. Domestic consumption had risen rapidly, and in mid-1991 it was reported to exceed 1m. b/d. In January 1991 the Ministry of Oil announced a revision of long-term investment plans for the sector, including additional investment of $2,000m. over two years, aimed at increasing output from the southern fields on the mainland. Under the FFYDP (introduced in January 1990), projected onshore output was set at 3.5m. b/d–3.7m. b/d, but was later revised to between 4.1m. b/d and 4.6m. b/d. The Ministry projected a combined onshore and offshore capacity of some 5m. b/d by the end of the Plan's term. However, some Western experts believed that such a significant increase in capacity was not technically feasible. NIOC has emphasized that its ambitious development plans can only be achieved through major inputs of technology, funding and personnel from abroad, and has stressed the scope it offers for joint ventures and foreign technical co-operation. In August 1992 the head of the Southern oil fields stated that the crude output expansion programme required the drilling of nearly 300 new wells. Most of the wells had been drilled during the previous 12 months, and when the programme was completed there would be a total of 600 wells in 47 fields. He estimated onshore production capacity at 3.4m. b/d, compared with 2.4m. b/d at the end of the Iran–Iraq War, with a further 250,000 b/d in offshore capacity, to be raised to more than 500,000 b/d in 1993. Loading capacity at Kharg Island was reduced to 2.5m. b/d as a result of Iraqi air attacks, but in August 1992 it was reported that capacity would be restored to 5m. b/d within two years. It was also reported that storage capacity at the terminal had been restored to nearly 50% of its pre-war level of 22m. barrels and further reconstruction would raise capacity to 16m. barrels. Reconstruction of the main oil export terminal at Kharg Island was being undertaken by French, Italian and South Korean companies.

Iran's production of crude petroleum in 1991 is reported to have averaged 3,238m. b/d, with exports averaging 2.41m. b/d, of which 2.35m. b/d were from onshore fields and 65,000 b/d from offshore fields. Iran's production capacity was estimated to have increased from 3.5m. b/d in 1991 to almost 4m. b/d in 1992. On 20 January 1992 the Ministry of Oil announced that it was reducing petroleum production by 50,000 b/d in an attempt to increase the international price of crude petroleum. In March the Ministry stated that, as of 1 March, oil production had been reduced to 3.184m. b/d in line with new OPEC quota allocations.

When NIOC began to negotiate prepaid sales in order to raise short-term finance, a ceiling of US $2,000m. was placed on these sales, but in 1991 the Minister of Oil announced that this

limit had been removed. This appeared to indicate a return to significant prepaid sales of crude petroleum which, in the past, have involved payment up to 18 months in advance of delivery. It has been argued that prepaid, or usance, sales are inefficient and that they can undermine future sales prospects; but for Iran they are more acceptable, ideologically, than raising direct foreign loans. Four Japanese trading houses arranged prepaid packages worth $600m. in 1991, and in November of that year it was announced that a group of more than 25 banks, led by Banque Nationale de Paris and Crédit Lyonnais, had concluded a similar package involving several supply contracts between NIOC and international oil companies, worth $1,000m.

Early in 1992 repairs to the offshore Nasr platform were completed and initial production of 35,000 b/d was due to rise to 85,000 b/d after the installation of new pumps. The rebuilt Salman platform was due to commence production at an initial rate of 180,000 b/d in mid-1992. Offshore production was scheduled to rise to 500,000 b/d by early 1993, although some sources considered this projection to be over-optimistic. It was reported that in 1993 the Lavan Island facilities, with a capacity of 220,000 b/d, became fully operational and would export crude oil piped from the Salman offshore field. In October 1992 the head of the Iran Offshore Oil Co announced that agreements were being negotiated with several international oil companies for the development of a number of offshore fields, Balal, and Sirri E and A fields, and for new installations at the Abuzar field, which would together add about 300,000 b/d to national production. Bids were also to be invited for the exploration and development of the Hormuz reservoir at the mouth of the Gulf, following the withdrawal of the Japanese consortium, Japex. However, little progress was made, largely due to financial and political problems.

According to Gholamreza Aqazadeh, the Minister of Oil, oil production was officially raised to 3.5m. b/d–3.6m. b/d from 23 September 1992, following divisions within OPEC over production policy. In mid-October oil production was temporarily raised to 4m. b/d to demonstrate Iran's improved capacity and to establish Iran's position as OPEC's biggest producer after Saudi Arabia, and to support its claims for a larger share of OPEC's market. The well-publicized increase in output, 3.6m. b/d from onshore fields and 400,000 b/d from offshore fields, was maintained for a week. Normal production in previous months had averaged about 3.5m. b/d with about 1m. b/d designated for domestic consumption. Officials stated that production capacity would be raised to 4.5m. b/d in March 1993—equivalent to about 50% of Saudi Arabia's capacity—although actual production would be in line with OPEC quotas. Observers argued that export capacity would be limited to about 2.5m. b/d until work on the reconstruction of the Kharg Island terminal was completed in 1994. In December 1992 the Minister of Oil announced that crude oil production would average 3.5m. b/d from 1 December 1992 to 31 March 1993, representing a cutback of 400,000 b/d from the November level of 3.9m. b/d. Oil exports during the Iranian year beginning March 1993 were forecast at 2.7m. b/d, about 10% higher than in the previous year. In March 1993 the Minister of Oil announced that output had been cut to 3.34m. b/d on 1 March in line with OPEC's new quota, but explained that the reduction would be compensated for by higher prices. About 2.4m. b/d would be available for export. A Plan and Budget Organization report released in April 1993 revealed that oil exports during the first nine months of 1992/93 averaged 2.386m. b/d, 448,000 b/d less than the budget level and 265,000 b/d less than the Ministry of Oil's export timetable. Observers estimated oil revenues for the Iranian year ending 20 March 1993 at $14,500m., $2,000m. below the budget projection. At a conference in April 1993, Mehdi Hossaini, an adviser to the Minister of Oil, presented figures citing maximum 1993 capacity as 4.2m. b/d, 300,000 b/d below the 4.5m. b/d target. He indicated that capacity would be raised to 4.6m. b/d in 1994, and 5m. b/d in 1995, rising to above 5.5m. b/d in 2000. Some Western experts doubted that the 4.2m. b/d capacity could be sustained because of the poor condition of the Southern oilfields, and argued that Iran could only achieve higher targets with the involvement of the international oil companies in field maintenance and secondary recovery programmes.

Following the OPEC meeting at Geneva, Switzerland, in September 1993 the Minister of Oil announced that from 1 October Iran's quota would be 3.6m.b/d, 240,000 b/d more than the previous level, allowing exports to rise to 2.6m. b/d. However, international traders stated that actual exports had averaged 2.7m. tons in 1993, with production estimated at some 200,000 b/d more than Iran's earlier OPEC quota of 3.34m. b/d. Aqazadeh reiterated previous claims that output was scheduled to rise to 4.6m. b/d in 1994, with a further rise to 5.5m.–6m. b/d by 2000. It is interesting to note that this was the level of production before the Revolution. He also stated that Iran planned to produce an average of 4.5m. b/d during the SFYDP, due to begin in March 1994. In January 1994 Mostafa Khoee, managing director of the Iranian Offshore Oil Co, stated that crude capacity was 4.2m. b/d; 3.8m. b/d on shore and 400,000 b/d off shore. He did not indicate whether these figures were sustainable. Actual output during 1993 averaged 3.6m. b/d. Defending his record as Minister of Oil before the Majlis in August 1993, Aqazadeh stated that during the first 52 months of the FFYDP, oil revenues totalled US $61,720m., slightly higher than the Plan's target. He predicted that high sales would raise total annual revenues for 1993/94 to about $16,500m., about 10% below the target of $18,000m. By January 1994 these figures had been revised downwards because of low oil prices and ministry officials estimated that revenues would not exceed $12,000m. The budget for 1994/95 projected oil revenues at only $10,150m.

Early in 1994 the Minister of Oil announced that 9,530m. barrels of oil, worth US $45,000m. had been discovered during the term of the FFYDP. In January 1994 it was reported that production of 5,000 b/d had begun at the Qal-e Nar oilfield near Andimeshk, and was scheduled to increase to 15,000 b/d. During the debate in the Majlis on the draft of the new Plan, to begin in 1994, Aqazadeh stated that oil revenues during the plan period were projected at $64,000m. This figure was $13,600m. lower than that given in mid-November 1993, when the Council of Ministers reviewed the draft plan. The projections, based on oil prices of between $14 and $16 per barrel over the plan period, were criticized in the Majlis as too optimistic. Aqazadeh also stated that domestic fuel subsidies would be reduced over the following five years because an increase in fuel prices was needed to help finance the ministry's development projects. However, in May 1994 it appeared that Rafsanjani, faced with opposition in the Majlis to his plans to cut subsidies, had been forced to compromise and to promise that the phasing out of energy subsidies would now take place over a much longer period. During the SFYDP the Ministry of Oil declared that it hoped to invest $16,600m. of government funds and $9,000m. in foreign credits in the country's oil industry, together with an additional $3,800m. in government funds in gas, in order to increase production. However, officials admitted that the programme might be delayed because of low oil prices.

Rebuilding of oil-loading jetties and storage tanks at Kharg Island was completed in December 1994. The repairs were carried out by local contractors, ETPM Entrepose of France and Ssangyong of South Korea. The terminal's export capacity is estimated at 5m. b/d. In September 1994 it was reported that an official of NIOC had stated that the company's work on gas reinjection schemes at the Bibi Hakimeh, Kupal and Ramsahir oilfields would not be completed until 1999. In early 1995 NIOC announced the discovery of a new oilfield named Shur, south of Gachsaran in Khuzistan province, with recoverable reserves estimated at 100m. barrels. Production was 10,000 b/d and output was due to rise to 30,000 b/d when two more wells came on stream.

Independent observers stated that Iran had been producing crude at or near 3.6m. b/d from early 1993, and that at the end of 1994 sustained production capacity was at least 3.8m. b/d and perhaps 3.9m. b/d. In May 1995 NIOC ordered a 500,000 b/d increase in oil production for one week. NIOC officials stated that by boosting production Iran was demonstrating its potential following the US embargo on direct oil purchases (see below) and proving that it could produce well above its OPEC quota of 3.6m. b/d. Nevertheless, speculation remained that, owing to shortages of equipment and technical problems, Iran would not be able to maintain higher production trends. It was reported that considerable drilling of new wells and recovery work on its existing fields was necessary to achieve its crude capacity expansion plans. In January 1996 the Ministry of Oil denied

Western press reports that output of crude petroleum had fallen sharply at the end of 1995, and stated that output was 3.6m. b/d, Iran's agreed OPEC quota. At a meeting in June 1996 OPEC ministers agreed that production quotas would remain unchanged until the end of the year. Iran criticized countries which regularly exceeded their quotas and the Minister of Oil was appointed to chair a ministerial monitoring committee on quota observance. Aqazadeh warned members that if they persisted in violating their quotas, Iran would respond by setting its own production levels. Existing OPEC quotas were renewed in November for a further six months. Average Iranian production in 1996 was 3.66m. b/d, compared with 3.57m. b/d in 1995. The dramatic decrease in world oil prices from late 1997, to below early 1973 levels in real terms, prompted OPEC to decree that its members should reduce production from 1 April 1998 in an effort to boost prices. Iran's allotted cut was 140,000 b/d, so that its quota became 3.942m. b/d. This action failed to bring about the desired effect; OPEC thus implemented further cuts on 1 July, whereby Iran agreed to reduce its output by 300,000 b/d (although Iran maintained that its reduction should be taken from a baseline of 3.9m. b/d, rather than 3.6m. b/d, which had the effect of undermining the OPEC deal). However, in March 1999, as OPEC agreed a new round of output reductions, Iran accepted that the benchmark for its future production cuts would be 3.6m. b/d. Under this arrangement Iran agreed to reduce its output by 7.3%. In September it was agreed that, despite the improvement in international petroleum prices, the reduced quotas would be retained.

In early 1994 a number of international oil companies showed renewed interest in Iran's offshore fields in the Gulf. In March 1994 the Minister of Oil confirmed that talks were being held with several US companies and that Conoco of Houston had submitted a proposal to develop the offshore Sirri E crude oilfield. An agreement between Conoco and NIOC to develop the Sirri A and E offshore fields, which have combined reserves estimated at nearly 500m. barrels, was finally concluded at the beginning of March 1995. The $600m. scheme was to have been financed through a buy-back agreement. However, on 14 March the US Administration announced that President Clinton would shortly issue an executive order banning US companies from developing Iran's oil. Conoco subsequently announced that it was withdrawing from the agreement, the first oilfield development scheme awarded to a foreign company since 1979. The intervention by the US Administration was part of an intensive campaign aimed at isolating and crippling Iran economically. President Clinton's executive order of 8 May 1995 formally imposing an economic embargo against Iran (see below) prevents US oil companies from work in developing Iran's oil and gas resources for the foreseeable future. Some observers argued that by granting the contract to Conoco, rather than to French companies, Iran was making a political gesture to the USA. President Rafsanjani confirmed this in a US television interview on 15 May. However, Conoco also had advantages over other companies in that it was already operating in the region and would have been able to take associated gas from Sirri for use in its operations in Dubai. In May the Ministry of Oil announced that it was negotiating with Total of France and the Royal Dutch Shell Group to develop the Sirri oilfields. In July 1995 NIOC announced that the contract had been awarded to Total, which had been involved in three years of negotiations for work in Iran (see also below). Earlier, on 16 March, the Ministry of Oil had announced that a Dutch-German consortium, John Brown Engineers and Constructors and Ingenieurbetrieb Anlagenbau (IAB) Leipzig, had agreed to renovate the offshore Abuzar oilfield. The Minister of Oil declared that Iran did not need US companies and that Europe welcomed oil co-operation with Iran. The Abuzar project involved the reconstruction of the war-damaged platform in the northern Gulf and expansion of capacity to 150,000 b/d–200,000 b/d.

In January 1996 the Minister of Oil announced that a $68m. drilling rig, built at a facility set up on the Caspian Sea, with assistance from Rauma-Repola of Finland, was being transferred to a drilling site at the Meysam-1 oilfield, 30 km off shore. If oil and gas were found there in commercial quantities a refinery would be built in the north. In May 1996 the local Iran Sadra Marine Industries Co reported that it had completed more than one-third of reconstruction work on the Abuzar oil platform which was expected to be back in operation by March 1997. The Iran Sadra Marine Industries Co also began repair work in early 1996 on the Salman platform, west of Lavan Island, which had been destroyed during the Iran–Iraq War. In March 1996 it was reported that the offshore Now Ruz oilfield, which was also damaged during the Iran–Iraq War, had been partially repaired and was producing at a rate of 5,500 b/d. It was intended to raise production to 60,000 b/d by 2000. At a press conference held at the end of January 1996 the Chairman of Total stated that the company was having no problems finding partners to share the work and cost of developing the Sirri A and E fields, in spite of the USA's plans to extend the sanctions in force against Iran's oil and gas industries. Total awarded a drilling contract for the Sirri field to Dublin-based Momentum Engineering in early 1996, and in April National Petroleum Construction of Abu Dhabi, Technip, ETPM Entrepose and Bouygues of France were among the firms that submitted bids for a $300m. contract for engineering, construction and procurement for platforms in the two offshore fields. Several other French firms were reported to be involved in negotiations to develop other oil and gas resources. In February 1996, when the French Minister of Transport visited Teheran, President Rafsanjani told him that Iran appreciated France's principled stand against a trade and investment ban on Iran. Earlier, in December 1995 the US Senate had approved legislation for a secondary economic boycott of Iran, and in early August 1996, under pressure from the Republican-dominated Congress, US President Clinton finally endorsed legislation penalizing non-US companies that invested US $40m. ($20m. from August 1997) or more in oil and gas projects in Iran and Libya. Contracts already signed were exempt from the new legislation. The USA's attempt to extend its domestic legislation abroad was strongly criticized by the EU and Russia. Iran stated that it did not believe that European companies would be deterred by the new legislation and pointed out that existing US sanctions had harmed US companies, which had lost business to their European competitors. Independent observers argued that the US trade embargo imposed in June 1995 had not damaged Iran's oil exports, and that even a total freeze on foreign investment in the Iranian oil industry would not reduce Iran's export capacity until beyond the year 2000. They predicted that Iran's main trading partners were unlikely to take any action that would make it more difficult for Iran to repay its substantial foreign debts.

In August 1996 Total announced that Petronas of Malaysia had agreed to purchase a 30% stake in its development of the Sirri A and E offshore fields and that the partnership deal had been approved by the Iranian authorities. The Sirri A field began producing in October 1998, and the Sirri E in February 1999. Ouput was due to increase to 120,000 b/d in mid-1999. NIOC plans to increase total offshore output to 1m. b/d by 2000, and has sought foreign partners to develop other fields on similar terms to the Sirri agreement with Total. In March 1999 Elf Aquitaine of France and Italy's Agip signed a US $1,000m. buy-back deal to upgrade and develop the Doroud offshore field, with the aim of increasing output from 90,000 b/d to 220,000 b/d. In the following month it was announced that a Franco-Canadian consortium (comprising Elf Petroleum Iran and Bow Valley Energy) had been awarded the contract for developing the Balal offshore field. The project will cost an estimated $300m., and crude output is planned at 40,000 b/d beginning in 2001. US sanctions do not appear to have prevented NIOC from proceeding with its programme to expand offshore production, but production at some of its fields may have been affected due to problems in obtaining spare parts for equipment already supplied by US companies.

At the end of 1998 NIOC awarded a US $19m. contract to the British LASMO and the Royal Dutch Shell Group to explore for oil in the Caspian Sea (the first upstream contract since the 1979 revolution). For NIOC, the deal was the first exploration contract awarded from a list of nearly 50 projects (including 20 exploration permits) offered to foreign investors on a buy-back basis in 1998. In June 1999 NIOC invited bids for seven oil and gas exploration projects offshore in the Gulf and on the mainland.

In early August 1994 the Majlis approved the outline of the SFYDP, including cuts in fuel and energy subsidies which cost

the country US $11,000m. per year. In mid-August the Minister of Oil recommended that domestic petrol prices be raised by 400% in 1995, emphasizing that if Iran adopted prices for oil products similar to those in other Gulf countries, domestic consumption of 1m. b/d–1.3m. b/d could be reduced by 200,000 b/d–300,000 b/d. Oil ministry officials warned that, at present rates of consumption, Iran would be unable to export any crude by 2010. In November 1994 the Majlis approved a doubling of fuel prices, beginning in March 1995, and further, smaller annual increases until the end of the decade. Under the new Plan, the Government was required to reduce the annual growth in consumption of oil products from 6% to 3% in order to conserve resources. During a debate in the Majlis on this issue, the Minister of Oil stressed that, in addition to the need to conserve resources, his ministry needed extra funds for major development projects in the hydrocarbons sector. In December President Rafsanjani welcomed the Majlis' decision as 'a good beginning', but stated that it was not enough to curb rising domestic fuel consumption, which was 167m. litres a day, an increase of more than 6% compared with 1993. In April 1996 a significant increase was applied to domestic fuel prices. The price of premium gasoline went up by 20%, that of regular gasoline by 30%, and that of kerosene and diesel fuel by 50%. The price of motor oil rose more than threefold. Price increases effected in 1995 had contributed to riots in southern Teheran, but this time there were no reports of any disturbances. Despite these increases, Iranian fuel prices remain among the lowest in the world, and the Government maintains that this encourages waste and smuggling to neighbouring countries. The Ministry of Oil stated that price rises effected since 1995 helped to reduce domestic consumption by some 10% but a further reduction was still necessary. The Minister of Oil claimed that domestic fuel consumption had fallen by 100,000 b/d in 1995/96 and that it was expected to fall by a further 70,000 b/d in 1996/97. In 1996 domestic fuel consumption was 1.1m. b/d, leading to speculation by some officials that government attempts to reduce domestic use had been unsuccessful and that new measures were needed to address the problem. In April 1997 domestic fuel prices were increased again: supergasoline rose from IR 130/litre to IR 160/litre, premium gasoline from IR 180/litre to IR 220/litre, gas oil and kerosene from IR 20/litre to IR 40/litre and fuel oil from IR 15/litre to IR 20/litre.

In October 1994 the Minister of Oil announced that oil revenues during the first half of 1994/95 had exceeded the official budget projection by 20% and that this trend was expected to continue for the remainder of the year. No figures were released, but analysts predicted that oil revenues should reach US $12,000m. and possibly rise to $14,000m. following the recovery in the international market in May 1994. Presenting the draft budget for 1995/96 to the Majlis in December 1994, President Rafsanjani stated that oil exports would contribute 61% of the Government's total revenue of $23,000m., implying a rise in oil revenues to $14,300m. Rafsanjani confirmed that oil production capacity had risen to 4.2m. b/d and would remain at that level until March 1996. Crude production was 3.6m. b/d, the ceiling set by OPEC. He pointed out that oil exports were falling and that whereas they averaged 2.34m. b/d in the first-half of 1994, the average would fall to 2.23m. b/d in 1995. In March 1995, when the Majlis finally approved the 1995/96 budget, oil revenues were projected at $13,500m., based on a crude oil price of $15 per barrel. In late June 1995 the Minister of Oil stated that oil revenues during the first quarter of the Iranian year beginning 21 March 1995 had been $500m. higher than forecast in the state budget. During that period the price of Iranian oil averaged $17 per barrel. He predicted total oil revenues of $16,000m. in 1995/96. According to the head of the Majlis plan and budget committee, $1,230m. in hard currency was to be spent on developing the oil and gas industry in 1995/96. During 1996 the price of Iranian oil averaged nearly $19 per barrel. The hydrocarbons sector accounted for 15.2% of GDP in 1996/97 (against 16.0% in 1994/95). Crude oil production averaged about 3.6m. b/d in 1996/97, during which a modest increase in domestic consumption, combined with a decline in exports of refined products, served to maintain crude oil exports at an annual average level of 2.44m. b/d. The average price of exported Iranian crude oil in 1996/97 was approximately $20 (some $4 higher than the average over the previous three years), yielding a 27% increase in oil export earnings, reaching $19,300m. Owing to the sharp decline in oil prices from the end of 1997, Iran's income from this source fell by almost 40%, to $5,000m., in the first half of the year beginning March 1998.

The executive order issued by US President Clinton in early May 1995, imposing a near total economic embargo against Iran, affected primarily the oil industry. US oil companies and their foreign subsidiaries were banned from buying Iranian oil. US companies have been prohibited from importing Iranian oil into the USA since the late 1980s, but in 1994 they purchased 610,000 b/d for third countries, worth an estimated US $3,000m.–$4,000m., nearly one-quarter of the total value of Iran's exports of crude. Japanese companies purchased 440,000 b/d in 1994, 17% of total production. US companies were allowed one month to terminate their business affairs in Iran, and it was reported that most US oil companies had ended their activities by 6 June 1995. There was little disruption to the country's oil exports, however, and NIOC increased the volumes of crude purchased by Asian and European companies. Average crude oil exports increased to 2.56m. b/d in 1996, compared with 2.51m. in 1995. Oil purchases by Asian companies grew from 791,000 b/d in 1995 to 1m. b/d in 1996, while liftings by European companies grew from 380,000 b/d to 495,000 b/d. Since the departure of US companies, Japanese oil companies have become the largest overseas purchasers of Iranian crude.

In November 1994 Iran took a 5% share in an international consortium formed to develop three oilfields in the Republic of Azerbaijan. The consortium is led by British Petroleum and includes Norwegian, US, Saudi Arabian, Turkish and Russian companies. Iran was brought into the US $7,000m. scheme by the Azeri state oil company (SOCAR), which was unable to contribute its portion of the financing and agreed to give Iran a quarter of its 20% share in return for some $350m. to help Azerbaijan finance energy projects. Iran has encouraged states in the Caspian Sea basin to export their oil through its territory, and in September the consortium had indicated that it hoped to use Iranian facilities to export some of its initial output from the offshore oilfields in the Caspian Sea. Iran offered to help the consortium export up to 260,000 b/d of Azeri oil through oil-swap deals. Azeri oil would be delivered to Iran for use in its northern refineries and an equivalent amount of Iranian crude would be delivered to the consortium's customers from the Gulf. Iran also sought to promote the use of an Iranian route for an export pipeline, connecting, eventually, with a Turkish terminal on the Mediterranean coast. However, the Azeri decision to bring Iran into the consortium was strongly opposed by the USA, and in March 1995 the consortium vetoed Iranian participation. In April it was disclosed that, under US pressure, Azerbaijan had withdrawn its offer to Iran, whose 5% share had been transferred to the Exxon Corpn of the USA. In response, Iran questioned the legality of the consortium agreement. For some years Iran has been discussing a treaty with Russia, Azerbaijan, Kazakhstan and Turkmenistan that would make any development of energy resources in the Caspian Sea basin subject to approval from other member states. In May the President of Azerbaijan stated that he wished to avoid any further deterioration in relations with Iran and that the construction of an export pipeline through Turkey, via Iran, had not been ruled out. When imposing an oil and trade embargo on Iran in early May, President Clinton exempted from the embargo US companies wishing to conclude swap deals of the kind described above with Iran, in order to supply crude oil from their operations in Azerbaijan, Kazakhstan and Turkmenistan to outside markets. However, Iran warned that it might reject such deals involving US companies in Azerbaijan unless the USA abandoned its opposition to Iranian participation in the consortium developing the Azeri oilfields. Iranian officials stated that it was unfair of the consortium to reject Iran's participation and, at the same time, expect Iranian help in exporting Azeri oil. An official at the Ministry of Oil was reported to have stated that Iran still considered its agreement with Azerbaijan to be valid, arguing that the consortium was dependent on Iran to export its oil, the first shipments of which were due in 1995. Alternative export routes through Georgia, Armenia and Russia present serious political and economic problems. Nevertheless, in June the chairman of US McDermott International stated that the consortium was not considering

proposals for pipelines through Iran, but that agreement was close to build two pipelines, one through Russia and the other through Georgia. In January 1996 it was reported that the National Iranian Drilling Co and SOCAR had agreed in principle to establish a joint-venture drilling company to explore for oil in the Iranian sector of the Caspian Sea. In May Oil Industries Engineering & Construction, partly owned by NIOC, agreed to take a 10% stake in Azerbaijan's Shakh-Deniz oilfield in the Caspian Sea, which is being developed by a consortium comprising SOCAR, British Petroleum, Statoil of Norway and TPAO of Turkey. The field is estimated to contain some 1,800m. barrels of oil, light oil condensates and gas, and the total cost of development is estimated at about $4,000m. Azerbaijan was reported to have offered Iran a share in the Shakh-Deniz field after withdrawing its earlier offer of a share in Azerbaijan International Operating Consortium (see above). After some seven months of negotiations, Iran and Kazakhstan signed an oil swap agreement in May 1996. The agreement was regarded as a breakthrough for Iran's economic and political ambitions in the Central Asian region. Swap deals with Iran involving US oil companies operating in the area of the former USSR were exempted from the US trade and investment embargo imposed on Iran in June 1995. However the agreement with Kazakhstan was not implemented until January 1997, partly because both countries wished to circumvent possible difficulties caused by US sanctions. The contract lasts 10 years, with average deliveries scheduled to rise from 40,000 b/d during the first two years to 120,000 b/d by the sixth year. Crude from Kazakhstan's Tengiz oil field will be delivered to the Iranian port of Neka on the Caspian Sea and an equivalent amount of Iranian crude will be lifted at Iran's Gulf terminal at Kharg Island. The Kazakh crude involved in the swap deal will come from supplies owned by the Kazakh Government and not from the US companies Mobil and Chevron which are partners in the development of the Tengiz oilfield. The first deliveries of Kazakh crude to northern Iran took place in January 1997, but problems arose because of the oil's inferior quality and it was not until May that the first lifting of Iranian crude from the Gulf began. In December 1996 Iran and Russia announced that they had formed a joint company to explore for oil under the Caspian Sea. In May 1997 it was reported that Oil Industries Engineering and Construction had obtained a 10% stake in the Lenkoran-Talyush Deniz offshore oilfield in Azerbaijan being developed by Elf-Aquitaine and Total of France, Deminex of Germany, Agip of Italy and Azerbaijan's SOCAR. A contract for the construction of the proposed 400-km crude oil pipeline from the Caspian Sea (Neka) to Teheran was being finalized in mid-1999 between the state-owned Iran Power Plant Projects Management Company (Mapna) and a Chinese consortium (comprising China National Petroleum Co and Sinopec). Costing US $350m., the pipeline would carry up to 370,000 b/d from Kazakhstan and Turkmenistan. The project, on a build-operate-transfer basis, is scheduled to begin operating within about two years.

The loss of the Abadan refinery, destroyed in the early stages of the war with Iraq, with a production capacity which had reached 628,000 b/d, affected the already difficult situation in Iran for oil products. Iran has traditionally imported some refined products, such as kerosene in winter, and has had shortages in the middle distillates range (diesel oil, kerosene and heating oil). The loss of Abadan denied Iran the flexibility of changing product volumes to meet market or seasonal variations of demand. Abadan was a highly sophisticated and flexible refinery, capable of substantial product conversion. It was also one of the main sources of aviation fuel and gasoline. With the Abadan refinery destroyed, Iran's refining capacity stood at 555,000 b/d in 1980; this had risen to 574,000 b/d by mid-1985, produced at Isfahan (200,000 b/d), Teheran (254,000 b/d), Tabriz (80,000 b/d) and Shiraz (40,000 b/d). However, Iran succeeded in raising its refinery output to levels far above rated capacity. Refinery output was 642,000 b/d in 1983/84 and 685,310 b/d in 1984/85, and at the end of 1985 it was reported that the refineries were operating at 31% above design capacity, giving a total output of 728,000 b/d. The refineries at Isfahan (its capacity increased to 380,000 b/d by 1986) and Shiraz were said to be producing at 50% and 35% above their respective capacities. However, Iraqi air attacks were believed to have reduced capacity to about 500,000 b/d by 1988, resulting in the reimposition of petrol rationing and the need to import some petroleum products.

Following the 1998 cease-fire, the Government started to rebuild its oil facilities. The Abadan oil refinery is symbolic of this reconstruction, and the first phase was completed in April 1989, allowing production of 130,000 b/d. The second phase was completed in April 1991, bringing the plant's capacity to 250,000 b/d. In early 1996 the refinery was reported to be operating at 300,000 b/d, about one-half of its pre-war capacity. In March 1996 the refinery began producing jet fuel, with a daily output of 1.33m. litres, saving Iran an estimated US $200,000 per day in hard currency previously spent on imports. The reconstruction of the Abadan refinery brought the total output of domestic refineries to about 800,000 b/d. It was reported in May 1999 that the National Iranian Oil Refining and Distribution Company (NIORDC) had invited bids for a $300m. upgrading of the main Abadan refinery.

In April 1993 President Rafsanjani stated that imports of petroleum products amounting to 300,000 b/d were a wasteful expenditure, costing up to $1,800m. a year. He predicted that the newly installed refinery capacity would allow the country to stop importing refined products by early 1994. The Minister of Oil told a press conference held in April 1993 that Iran's refining capacity would reach 1,285m. b/d in early 1994, and could be raised to 1.6m. b/d in emergencies. He stated that 1993 was the last year in which refined products would have to be imported. In May 1995, however, the Ministry of Oil projected that oil product imports would average 70,000 b/d during 1995/96 and that they had been as high as 100,000 b/d during the winter months.

In April 1995 it was reported that Iran's exports of liquefied petroleum gas (LPG) would rise by about 10% in 1995 to 850,000 tons, and to 1m. tons in 1997; thereafter exports would rise only slightly because of a 20% annual increase in domestic demand. In 1994 Finland purchased 250,000 tons of LPG and South Korea 100,000–200,000 tons.

In September 1989 it was announced that the reconstruction of the Tabriz and Isfahan oil refineries was complete and that they were supplying almost 50% of Iran's domestic oil requirements. Expansion work at the Teheran and Kermanshah refineries was also reported to be progressing. Bids for a continuous catalytic reforming unit for the Teheran refinery commenced in April 1992. In September 1994 a new furnace was commissioned at the Shiraz oil refinery which, together with other work, raised capacity there from 45,000 b/d to 55,000 b/d. In early 1995 it was reported that the Tabriz and Teheran refineries together could process more than 300,000 b/d and the Isfahan refinery 300,000 b/d. The construction of new refineries at Bandar Abbas, Bandar Taheri and Arak, and the expansion of the Isfahan refinery, were designated priority projects by NIOC, but the programme experienced considerable delays. The contract for the 150,000-b/d Arak refinery was awarded to an Italian-Japanese consortium in May 1989. The $1,100m.-refinery was inaugurated by President Rafsanjani in September 1993, and in April 1994 it was reported to be producing 165,000 b/d, 10% more than its nominal capacity. Construction of the export refinery at Bandar Abbas should have been completed in 1993, but financial problems delayed work on the project. The contract had originally been awarded to Snamprogetti of Italy and Chiyoda Corpn of Japan, but when the partnership had financing problems the NIOC handed over the project to local contractors working under the supervision of Snamprogetti and Chiyoda. The plant has a crude refining capacity of 232,000 b/d, and can process 12,000 b/d of condensates from the nearby Sarkhun fields. In March 1994 the Director-General of the National Iranian Tanker Co announced that six 80,000-ton tankers would be purchased in order to supply the Bandar Abbas refinery. A $10m. jetty, near Bandar Abbas port, for handling tankers bringing crude oil from the Kharg Island terminal to the Bandar Abbas refinery, was due to open in March 1996. The Bandar Abbas refinery received its first cargo of crude oil in May 1997 and was officially opened on 26 July 1997. NIOC received bids in November 1998 for the construction of a 35,000-b/d condensates refining facility at the Bandar Abbas refinery. The scheme is a reduced version of a 70,000–80,000 b/d condensates refinery originally planned at Bandar Taheri. The facility was resited and retendered in 1995, but NIOC decided to reduce its

capacity in 1997 and integrate it into Bandar Abbas. A new isomax unit came on stream at Bandar Abbas in February 1999. In March 1995 the Minister of Oil stated that Iran planned to increase refinery capacity from 1.1m. b/d to 1.7m. b/d by 2000. In October 1996 the oil ministry announced that the country's refinery capacity had reached 1.24m. b/d: Abadan (400,000 b/d), Isfahan (265,000 b/d), Teheran (225,000 b/d), Arak (150,000 b/d), Tabriz (112,000 b/d), Shiraz (40,000 b/d), Kermanshah (30,000 b/d), Lavan (20,000 b/d). In June 1995 it was reported that the Daewoo Corpn of South Korea was to build five 300,000-dwt oil tankers for the National Iranian Tanker Co, to be delivered in 1996. A $490m. loan had been arranged from a banking consortium led by South Korean institutions. With the increase in domestic refinery capacity, petrol rationing was ended in February 1991. Three years after the end of the war with Iraq NIOC's inability to meet growing domestic demand for petroleum products provoked strong criticism. Iran continued to experience fuel shortages during the winter months of most years because of insufficient refinery capacity and transportation problems. In January 1994 the Minister of Oil stated that there was a stockpile of some 1,700m. litres of fuel so that no serious shortages were envisaged that year. It was also reported that Iran expected to resume oil supplies to the Sasolburg refinery in South Africa, in which NIOC has had a 17.5% share since 1970. Until 1979, when oil supplies were suspended, Iran was supplying 70% of the refinery's crude oil under a 20 year-agreement. NIOC has retained its shareholding despite the suspension in oil supplies. Negotiations between Iran and South Africa began early in 1994 for South African refineries to resume purchases of Iranian crude after the multi-racial elections in April. Iran was South Africa's major supplier of crude until 1979. During a visit to Teheran in April 1996, South Africa's Minister of Foreign Affairs stated that an agreement negotiated in 1995 for storage facilities for Iranian crude at Saldanha Bay, near Cape Town (to improve Iranian access to African, and possibly transatlantic, markets) was pending resolution of technical problems unrelated to politics. He reaffirmed that, in spite of US pressure, South Africa would continue to co-operate with Iran in oil, gas and mining. Since the end of apartheid, Iran has supplied almost three-quarters of South Africa's crude oil imports. When President Rafsanjani visited South Africa in September 1996 he advocated greater co-operation between the two countries' oil industries, but indicated that Iran would not be making use of the Saldanha Bay facility immediately because it had insufficient supplies of crude petroleum available.

The country's internal pipeline network currently handles 1.2m. b/d of crude and oil products for domestic use. A 14-in pipeline is being constructed between the Teheran refinery and Tabriz and another line is to be built from the new Bandar Abbas refinery to cities such as Rafsanjan, Kerman and Yazd. In early 1988 the Government revived the Moharram pipeline project, which had been abandoned in mid-1986. However, only one of two planned 320-km export pipelines, running from the Gurreh pumping station on the mainland, just north of the main Kharg Island export terminal, to export facilities at Taheri, near the central Gulf, was to be built. The project was intended to provide a safer alternative to the Kharg terminal.

NATURAL GAS

With proven reserves of 21,000,000m. cu m, Iran is the world's second richest country in gas resources after Russia, with 12.6% of the global total and 15% of the Middle East regional total. According to a statement by the Minister of Oil in February 1994, 3,200,000m. barrels of gas, worth US $200,000m, were discovered during the term of the FFYDP ending in March 1994. In August 1988 it was announced that a large reservoir of natural gas had been discovered near Asaluyeh on the Gulf coast, 70 km south-east of Kangan. NIOC has announced a $1,000m. scheme to develop the Aghar Dalan fields, 120 km north-east of Kangan, and plans have been announced to construct a gas refinery there at a cost of $900m. Gas discoveries have also been made in the Caspian Sea area. The first phase of the $1,000m. Nar-Kangan gas treatment plant, 260 km east of Bushehr, began operating in June 1989 producing 34m. cu m per day, and the second phase, which began production in May 1990, was expected to increase output to 80m. cu m per day by exploiting the nearby Kangan field, whose reserves are estimated at 820,000m. cu m. Gas from the Nar-Kangan field will be piped north to Teheran via the IGAT-2 trunkline. Plans to quadruple gas-refining capacity, and to lay 3,000 km of gas pipeline by 1994, were announced in order to reduce consumption of petroleum products and make more crude petroleum available for export. It was planned to raise gas-refining capacity from just over 10,000m. cu m in 1990 to 46,000m. cu m by 1994 and, eventually, to 80,000m. cu m. In March 1995 the Minister of Oil stated that annual natural gas production was projected to increase from 56,000m. cu m to 82,000m. cu m by 2000. In March 1996 President Rafsanjani opened the Sarkhun-2 gas refinery near Bandar Abbas, built by the National Iranian Gas Co and local contractors. The refinery was reported to be treating about 11m. cu m per a day of natural gas from the Sarkhun field, and the plant will eventually process about 14m. cu m per day. The processed gas will supply the Bandar Abbas power station, the new steel plant at Hormuzgan, a power plant at Sarcheshmeh and also residential and industrial users. In early May 1996 the first phase of the Aghar Dalan gas treatment plant was opened. The plant will produce 17m. cu m per day, eventually rising to 40m. cu m per day. The gas is carried by a 330-km pipeline to the Marun oilfield, where it is used to maintain sustainable output at 600,000 b/d. According to the Ministry of Oil, the project will permit the recovery of an extra 3,000m. barrels of crude from the field, valued at $50,000m.

The main gas pipeline projects concern the extension of the IGAT-2 trunkline from Nar-Kangan to Teheran and the west; the extension of the third trunkline from Khangiran to the west along the Caspian coast; and the laying of a pipeline from Sarkhun northwards to Rafsanjan.

In 1980 Iran suspended daily deliveries of some 30m. cu m of natural gas to the USSR, from the Nar and Kangan fields, via the IGAT-1 gas trunkline, which had been carrying natural gas from the southern oilfields to northern Iran and the USSR, a total distance of 1,130 km. In 1983 Iran's Ministry of Oil announced that it was no longer interested in gas export projects, in spite of the country's huge resources, and indicated that the gas industry would seek to satisfy the rapidly growing energy requirements of the industrial, commercial and residential markets within Iran. In August 1986 the Ministry announced that gas exports to the USSR would resume before the end of the year but, in November, the date for their resumption was postponed to mid-1987. Plans to convert IGAT-1 to carry 700,000 b/d of oil appear also to have been abandoned, and the pipeline is used to satisfy domestic demand only. Only the southern section of the 56-in diameter IGAT-2 natural gas pipeline, which was started before the Revolution, also to supply gas to the USSR, has been completed, and extends only as far as Isfahan. The 632-km pipeline from Kangan to Isfahan, costing US $200m., was completed at the end of 1985 by the Italian contractors Saipem, who have also been involved in the construction of a $1,000m. gas-gathering complex at Kangan and the smaller neighbouring gas field of Nar (with combined reserves of 720,000m. cu m), which will supply IGAT-2. In November 1989 an agreement was concluded to resume natural gas exports to the USSR, and the first supplies were piped in April 1990. Some 3,000m. cu m per year were to be supplied via the IGAT-1 trunkline, rising eventually to the pre-Revolution level of 10,000m. cu m. The agreement also permitted Iranian gas to be exported to eastern Europe via the Soviet pipeline system. Revenues from these exports, estimated at about $300m. annually, were to be used to pay for nine Soviet-assisted projects in the Iranian power, gas, mining and metallurgy sectors. In October 1990 a further agreement was reached with the USSR to export natural gas to eastern Europe, starting in 1991. Under the scheme, the capacity of IGAT-1 was to be increased and the possible completion of the IGAT-2 trunkline was also envisaged. In return for the supply of Iranian gas to the southern Soviet republics, the USSR was to deliver an equivalent quantity of gas to eastern European countries, using its own pipeline system. In October 1991 Iran's Minister of Oil stated that exports of gas would be restricted to the USSR, which was purchasing some $200m.-worth annually; and that gas exports would not become a significant source of foreign currency until the second half of the 1990s. He announced that by 2000 Iran expected to be exporting some 50,000m. cu m of gas annually, if pipeline projects then envisaged were realized. More than half of the exports

would be to Europe and the remainder to Pakistan. Exports of LNG have been resumed and reports suggest that some 400,000 tons were exported in 1991/92. Since the disintegration of the USSR, Iran has established economic agreements with the newly-independent former Soviet republics. In February 1992 the Iranian Minister of Oil announced details of an agreement, signed in January, to supply gas to the Ukraine via Azerbaijan. Some 3,000m. cu m of gas were to be supplied during 1992 through the existing IGAT-1 pipeline. Over the four years covered by the agreement gas exports were to total 75,000m. cu m. In February 1993 Iran and Ukraine agreed to build a gas pipeline from Iran to Ukraine through Azerbaijan and Russia, with a capacity of 25,000m. cu m a year. In March 1993 it was reported that the gas project had failed to gain formal consent from Russia. In November 1992 an agreement was signed with Azerbaijan for Iran to supply 300m. cu m of gas a year in exchange for 100,000 tons of gas-oil. Gas was to be supplied through the IGAT-1 trunkline. Gas-oil from Azerbaijan would supply Iran's northwestern provinces to make up for shortages in domestic distribution. In August 1994 an agreement was announced on the supply of Iranian gas to the Azeri Republic of Nakhichevan and to Georgia. It was reported that the gas exports would be taken from the IGAT-1 trunkline during off-peak months, as most of the throughput supplies Iranian domestic users. Georgia would be supplied with 5m. cu m per day, starting in 1994, using an existing pipeline through the Republic of Azerbaijan; and an 80-km pipeline was to be built to Nakhichevan to carry 1m. cu m of gas starting in 1996. Also in August 1994 Iran and Turkmenistan agreed to co-operate in the construction of a gas pipeline to Europe, a project that would take six years to complete and cost an estimated $7,000m. The pipeline would be 4,000 km long, with some 1,450 km passing through Iran. The cost of the Iranian section was estimated at $3,500m., but no details were given about how the scheme would be financed. Iran would earn transit fees for Turkmen gas passing through the pipeline. According to the Ministry of Oil, the pipeline would carry up to 15,000m. cu m of gas a year in the first phase, with throughput eventually almost doubling to 28,000m. cu m. The proposed pipeline provoked opposition from the USA, which urged Turkmenistan to seek alternative routes. In September 1995 it was reported that Iran and Turkmenistan had agreed on a $190m. project to build a gas pipeline across their common border.

In January 1994 officials of the Iranian Institute for Political and International Studies announced that they had proposed a major gas pipeline loop system around Iran from which spurs could be constructed to India, the Central Asian republics, Turkey and, eventually, Europe through Turkey. They had named it PEACE: 'Pipeline extending from Asian Countries to Europe'. More than half of the loop was already in existence. One of the officials commented that LNG schemes were not economical while oil prices remained below US $20 per barrel. In spite of the resumption of gas exports, the use of gas is still being encouraged for domestic purposes, in order to save oil and to reduce pollution. More than 13,000 km of gas distribution lines have been built in cities since 1979, but implementation of the residential gas programme has been delayed by a shortage of regulators. The SFYDP, which began in March 1995, proposes greater domestic use of gas resources in order to allow more oil to be exported.

In October 1990 NIOC announced a joint study with Gaz de France to assess the cost of transporting natural gas to France and other European countries. In April 1993 it was reported that Ruhrgas of Germany, Austria's ÖNV and Enagas of Spain would take part in the consortium with Gaz de France. If the plans proceed, central and eastern European countries could be supplied first by pipeline, but for western Europe it remained unclear whether transport by pipeline or ship would be preferred. In November 1993 Iran and India signed a memorandum of understanding regarding a gas pipeline from Bandar Abbas to the Indian state of Gujarat. During a visit to New Delhi in April 1995 by President Rafsanjani, India and Iran agreed on wide-ranging co-operation in the oil and gas sectors, which included the completion, in 1995, of the feasibility study for a 2,200-km gas pipeline from southern Iran to the west coast of India, a project estimated to cost US $5,000m. Iran was reported to favour a route through Pakistan, but India preferred an underwater route off the Pakistan coast. The pipeline would have a capacity of 50m. cu m a day and could be commissioned by the turn of the century. In September 1994 Iran agreed to participate in a $3,200m. project, initiated by the UAE-based Crescent Petroleum Co, to build a 1,600-km pipeline to carry gas from Qatar to Pakistan. Under the agreement Iran would allow the pipeline to go through Iranian coastal waters and have the option of using the line for its own gas exports, but would have no financial involvement. The pipeline was to have a capacity of 45m. cu m a day by 1999 and its capacity could be doubled by increasing the number of compressors in the line. Discussions have been taking place between Iran and Pakistan for some time about a possible overland gas pipeline linking the two countries, and in January 1995 it was reported that Iran and Pakistan had reached an agreement to set up a consortium to build a gas pipeline from Bandar Asaluyeh to Karachi. As a number of US companies are involved in the Qatar gas line, the future of Iranian participation may be questioned as a result of the US trade embargo on Iran introduced in May 1995. In February 1996 the National Iranian Gas Co announced that construction work would begin in July on a joint natural gas pipeline with Pakistan, following completion of a feasibility study. The pipeline, taking four years to construct, would have a capacity of about 45m. cu m per day and would cost $2,000m.

In mid-November 1994 a team from Ente Nazionale Idrocarburi (ENI) of Italy had visited Teheran for talks on participation in gas, pipeline and energy projects in Iran, Central Asia and the Caucasus. ENI stated that it wished to participate in the proposed $7,000m. gas pipeline project from Turkmenistan to Europe via Iran and Turkey and had discussed Iran's own gas export pipeline scheme to Europe.

In August 1996 Iran signed an agreement worth US $20,000m. to supply gas to Turkey over a 22-year period. The contract was worded so that the Turkish state oil company, Botas, would not incur US sanctions for its involvement in the project. Nevertheless, several members of the US Congress condemned the accord and demanded sanctions against Botas. US officials visited Ankara but failed to persuade the Turkish Government to withdraw from the project: they insisted that the agreement was a necessary element of their plans to diversify the country's energy sources. The project involves the construction of a 42-in. pipeline, 1,420-km long, from Tabriz in Iran to Erzurum in Turkey. An extension of the Turkish section of the pipeline from Erzurum to the capital, Ankara, is planned at a later stage. Under the original schedule the pipeline was to have been completed by 1999, with initial deliveries of gas rising from 3,000m. cu m per day to 10,000m. cu m per day in 2005. However, after a visit to Turkey by the Iranian Minister of Oil in November 1996, the timetable was revised to allow deliveries to begin a year early. Each country is responsible for financing the section of the pipeline in its own territory. Botas invited tenders for the Turkish section of the pipeline in December, and work was due to begin in May 1997. At the end of December 1996 Iran's Minister of Oil signed a memorandum of understanding with the Turkish oil minister and the Deputy Prime Minister of Turkmenistan for the delivery of Turkmen gas to Turkey via the Iranian pipeline system after the completion of the Turkish-Iranian gas pipeline. At the end of July 1997 the US Administration announced that it would not oppose the construction of a $1,600m. pipeline to carry natural gas from land-locked Turkmenistan to Turkey across a 788-km stretch of northern Iran because the project did not technically violate the 1996 secondary sanctions law. It was reported that Iran had agreed to finance and build the section of the pipeline passing through its territory. Turkey signed an agreement in May 1997 to purchase Turkmen gas, and US officials maintained that agreement would ensure Turkey's reliance on Turkmen rather than Iranian gas. However an oil industry source stated that under the agreement Turkmen gas would be pumped into the Iranian pipeline system and that Iran would send an equivalent amount of gas to Turkey.

The FFYDP sought some US $3,400m. in foreign funding to be allocated to the development of the Pars and South Pars fields for export to Japan or Europe. In 1992 NIOC awarded the $17,000m. contract to develop the gas reserves of the offshore South Pars field to a consortium led by TPL of Italy and including Saipam of Italy, Machinoimport of Russia and Mitsub-

ishi Corpn of Japan. This was the largest offshore gas project awarded since the Revolution. The South Pars field is an extension into Iranian waters of Qatar's North Field, the largest gas field in the world. By the end of 1993, when the consortium had completed nearly all the basic engineering and had drilled two wells in the field, NIOC announced that it was suspending the project because of cash shortages. Payment arrears on Iran's external debt appear to have made foreign banks reluctant to finance the project. In late 1994 the development of the South Pars gas field was awarded to the newly-created NIOC subsidiary, Petroleum Development and Engineering Co (Petco), in an attempt to reduce the hard currency costs of the project. Petco estimated that the work would cost $900m., of which one-half would be in hard currency. The contract originally awarded to the consortium led by TPL would have cost Iran $1,700m. In March 1995 the Ministry of Oil announced that a Dutch-German consortium, John Brown Engineers and Constructors and IAB Leipzig, had agreed to help finance and develop the South Pars gas field. The consortium's involvement was reported to be for the project's initial phase. It was reported that separate negotiations, which had begun in 1994, were continuing with Royal Dutch Shell on developing the field. In March 1996 Petco reported that first-phase design work on the South Pars field was on schedule and would be completed by the end of 1996. In early 1996, despite US legislation imposing penalties on non-US firms investing in the development of Iran's oil and gas reserves (see above), the Royal Dutch Shell Group was reported to be continuing talks concerning the second phase of the South Pars gas field development scheme. In early April 1996 US Senator Alfonse D'Amato, a leading supporter of additional sanctions against Iran, claimed that he had received assurances from JGC Corpn of Japan and Australia's BHP Petroleum that they would not participate in either gas field or gas pipeline projects in Iran. Senator D'Amato had warned both companies that the proposed new sanctions against Iran might be made retroactive. JGC had been among 50 foreign firms that attended a NIOC briefing in November 1995 about an international tender for 10 onshore and offshore energy projects, and had indicated its interest in investing some $380m. in three onshore gas projects known as Amak, NGL 1200 and NGL 1300. In late February 1996 JGC's manager in Teheran told the press that the company was still interested in participating in the three projects and indicated that talks would begin soon. However, in March JGC's Chairman informed Senator D'Amato that the company's participation in the projects would not be possible because of lack of finance and the 'current economic and political situation surrounding Iran'. At the beginning of 1997 the first phase of the development of the South Pars field was being implemented by Petco, and negotiations had been taking place since mid-1996 between Total and NIOC for the second stage of the project, which was expected to cost $850m. Studies also indicated that the South Pars field in Iran could be even bigger than the Qatari section of the field. In 1997 Total (leading a consortium including Gazprom of Russia and Petronas of Malaysia) signed an agreement for the development of the second and third phases of the South Pars project. It was reported in May 1999 that Hyundai of South Korea had been awarded a contract to build onshore gas treatment facilities needed for these two phases.

In April 1993 preliminary discussions began between the National Iranian Gas Co and a number of foreign companies on the development of the offshore Pars field, often referred to as North Pars, as distinct from South Pars. Plans to develop the field, based on exports of LNG, were first discussed in the 1970s, but were abandoned after the Revolution. Under the revised scheme gas would be treated for domestic use only. In January 1994 it was reported that negotiations were under way with Royal Dutch Shell for an agreement on engineering studies for the North Pars field. Shell appeared to be insisting on equity participation in the project, but foreign ownership of national hydrocarbon resources is not permitted under the Iranian constitution. However, in March it was reported that the Majlis had authorized NIOC to raise up to US $3,500m. in foreign finance on a buy-back basis in order to develop oil and gas fields together with two refineries. There was speculation that this decision might lead to a compromise with Shell over financing arrangements for the North Pars field. In November 1994 the Minister of Oil stated that negotiations between NIOC and Royal Dutch Shell about developing the North Pars gas field were continuing, but that there were differences between the rate of return requested by Shell and that which Iran had agreed to give. The Minister said that Shell was considering exporting gas from the field to Pakistan. Shell officials confirmed that differences over the level of remuneration remained, but that negotiations were continuing because both sides were keen to reach an agreement. In early 1994 the Minister of Oil announced the discovery of a new offshore gas field 50 km west of the South Pars field and 180 km south-east of Bushehr, estimated to contain 566,000m. cu m of gas and 1,000m. barrels of condensate. In February 1995 it was reported that Iran and Oman had agreed on the joint development of the Hengam-Khasib gas field near the Iranian island of Hengam in the Strait of Hormuz. The field has reserves of 28,300m. cu m and could be brought into production within three years according to NIOC. Negotiations between the two countries were concluded in January 1997, and Iran was expected to tender the development of the field under a buy-back deal at a later date.

Production of natural gas increased by 8% in 1996/97 to a level of 64,200,000m. cu m, the bulk of which was consumed domestically in line with the Government's policy of substituting gas for petroleum production for the purposes of home consumption.

OTHER MINERALS

According to the Minister of Mines and Metals, in June 1988 there were 780 producing mines in Iran, employing 73,500 people. Some 870 exploration permits were awarded during 1990/91. Deposits of lead-zinc ore are mined at Bafq near Yazd, at Khomeini, west of Isfahan, and at Ravanj near Qom, with a combined potential of 600 tons of concentrates daily, though current plans for development are limited to Bafq. In June 1992 a German-Canadian consortium won a US $250m. contract to build a zinc plant in Zanjan province. However, the facility was eventually built by local firms and opened in April 1997. The plant has a capacity of 7,000 tons of zinc sheets per year, and there are plans to double output. Iran Zinc Mines Development Co issued a tender in February 1999 for the construction of a zinc ingot plant, with an annual production capacity of 30,000 tons, to be located in Zanjan province. Iran's largest lead mine is at Nakhlak, near Isfahan. Chromium from the Elburz mountains and near Bandar Abbas, red oxide from Hormuz in the Persian Gulf and turquoise from Nishapur are all produced for export. Sulphur and salt are produced on the coast of the Gulf, near Bandar Abbas, and Iran exported 105,000 tons in the year 1985/86. Iran is also the second largest exporter of strontium, after Mexico, and during the second half of 1985/86 and the first half of 1986/87 exported 25,000 tons, valued at $2.9m. Strontium reserves are estimated at 1.1m. tons. In 1986 Iran's phosphate resources were calculated at 220m. tons. Annual imports of phosphate fertilizers total 1m. tons, worth $300m., so a major portion of domestic demand would be met by developing the country's phosphate reserves. In July 1992 it was announced that the country's largest phosphate deposit, with reserves of 400m. tons, had been discovered in Charam in the southern province of Yasuj.

The major iron ore deposits are in Kerman province in south-east Iran, in particular at Bafq, where proven reserves total 911m. tons of ore, and at Chadormelo mine, in Yazd province, which has proven reserves of 500m. tons. In February 1992 it was reported that Bafq was producing 4m. tons a year. In December 1991 a Japanese consortium signed a contract to build an ore concentrator at Chadormelo, with a projected annual production rate of 5m. tons, to supply the Mobarakeh steel complex at Isfahan. In late 1991 the Ministry of Mines and Metals invited bids to expand the existing Chogart iron ore complex near Yazd. After lengthy negotiations the US $100m. contract was eventually offered to a European consortium led by Voest Alpine of Austria in October 1994. The consortium was to supply two concentrators, each with an annual capacity of 1.6m. tons and would also carry out engineering work, supervision of erection and the commissioning of the facility. Output at the mine was scheduled to rise from 3m. tons to 6m. tons a year. The ore from Bafq was to be carried 540 km by a specially developed railway to the $4,700m. Mobarakeh steel plant. The

Gol-e-Gohar iron ore mining complex in Kerman province, originally planned before the Revolution, was officially opened in March 1994 by President Rafsanjani. Production at the $114m. complex began in December 1993. Output of 2.5m. tons of concentrate will be used to supply the Mobarakeh steel plant at Isfahan. Production will eventually be expanded to 5m. tons per year.

Coal reserves are estimated at 6,000m. tons, of which about one-third are capable of exploitation. The main mines are around Kerman and in Mazandaran, Semnan and Tabas, where output is to be expanded. An 85-km railway is being built from Kerman, the major mining area, to supply coal shale to the Zarand refinery. The Shahroud mines in Semnan supply 15% of the requirements of the Isfahan steel mill. In 1987/88 Iran produced 95,706 tons of melted cast iron and 1,471,699 tons of steel. Coal production in 1985 recovered to the pre-Revolutionary level of 900,000 tons per year, but remained insufficient for domestic consumption, requiring imports of around 400,000 tons per year. Production declined to 722,000 tons in 1986, and was 791,000 tons in 1987.

Deposits of copper ore have been found in Azerbaijan, Kerman and in the Yazd and Anarak areas. A number of very important deposits have been discovered since 1967 in the Kerman area, the most important being at Sar Cheshmeh. The reserves at Sar Cheshmeh are estimated at 1,200m. tons (the second largest deposit in the world), including perhaps 600m. tons of 1.12% copper content, with another 600m. tons of lower grade beneath. The project includes the construction of road and rail links to connect the mine with Bandar Abbas 400 km away on the Gulf, a training school, and a new town for the families of the work-force. The construction of a large smelter/refinery and associated rolling mill and two continuous casting mills was halted during the Revolution. The mine was officially opened in May 1982. Initially the plant operated at substantially below its capacity of 158,000 tons of refined copper per year but, since production began in mid-1984, output rose to 40,000 tons in 1985/86, and to 50,000 tons in 1986/87. Following the opening of new units in February 1989, output increased to 100,000 tons per year by mid-1992. Techpro Mining and Metallurgy of the United Kingdom was appointed as general consultant by the National Iranian Copper Industries Co (NICICO) to advise on expanding production at Sar Cheshmeh. By 1994 Sar Cheshmeh had a capacity of 120,000 tons a year and there were plans eventually to expand it to 200,000 tons. A molybdenum production unit started operating at the Sar Cheshmeh copper refinery in June 1983. A copper extrusion plant was installed at the Shahid Bahonar copper complex, in Kerman, in 1987. Output of copper and copper alloy semi-finished products—tube, sheet, bar and rods from the plant, which opened in 1989, has risen from less than 10,000 tons per year to 18,000 tons per year. The plant was expected to have reached full capacity of 55,000 tons in 1996. A substantial proportion of the output is exported, mainly to Japan and other countries in the Far East. In 1986/87 28,000 tons of copper and molybdenum from Sar Cheshmeh were exported in the form of copper wire and molybdenite, and a further 6,000 tons of blister copper. A much smaller copper mine at Minakhan, developed in association with Japanese interests, has been brought under complete Iranian ownership. In September 1994 work began on a $106m. copper smelter at Khatounabad, about 40 km west of the main Sar Cheshmeh mine and complex. The smelter, which will have a capacity of 80,000 tons, will use ore from the undeveloped Meidouk mines nearby, and ore from Sungun in East Azerbaijan and Ahar mines will also be used. Output will supply the Sar Cheshmeh complex and nearby downstream facilities. The project is a joint venture between NICICO and National Non-Ferrous Metals Co of China. Originally it had been projected to cost US $300m., but in order to save hard currency about 40% of the work will be done with domestic resources. According to the Minister of Mines and Metals, national copper production increased from 74,000 tons to 100,000 tons in the Iranian year ending 21 March 1995. In 1996 the managing director of NICICO projected that copper production in 1996/97 would reach 150,000 tons, with capacity increasing to 250,000 tons within a few years. Some 30,000 tons of copper were to be exported in 1996/97. To augment production capacity, NICICO purchased an 80,000 tons-per-year smelter from the People's Republic of China which is expected to start production by 2000. Some parts of NICICO's operations had already been privatized and the company prepared to be floated on the Teheran stock market during 1997.

In March 1976 it was announced that important uranium deposits had been found in Iran's northern and western regions, and in 1978 agreements were signed with West German and French companies to carry out surveys. The scope and pace of exploration were reduced after the Revolution, but deposits of more than 5,000 tons of uranium ore were discovered in the Saghand region of Yazd in central Iran in 1984 and there were plans to develop the site. Long-term plans, proposed during the reign of the Shah, for a network of 20 nuclear power stations were abandoned because the project was too expensive, too dependent on Western technology and unnecessary in view of the availability of cheap natural gas.

In mid-1988 construction work began on a gold-processing plant at Muteh, near Isfahan, using ore from an estimated 1.2m.-ton deposit, which, it was hoped, yield 5 tons of gold.

Two rich mineral deposits were discovered in the northern provinces of Gilan and Mazandaran in the first half of 1985: one consisted of an estimated 51,000 tons of mica, and the other of 20m. tons of silica. Further discoveries of reserves of silica, limestone, granite and iron, totalling an estimated 194m. tons, were made in Gilan during the last quarter of 1985. Proven reserves of bauxite at Jafarm are estimated at 22m. tons, with an average purity of 48%. In June 1995 President Rafsanjani inaugurated work on a 20,000 ton-per-year pilot alumina extraction plant being constructed at Azarshahr, in eastern Azerbaijan province. The plant was due to be completed in two years, extracting alumina from the nepheline-syenite mines of Kolebar and Sarab which have estimated deposits of 30,000m. tons. An alumina plant at Jajarm was due to start initial production in September 1999, with a projected rise to full output capacity (280,000 tons per year) in 2001/02. An international tender for the construction of a US $600m. aluminium smelter (on a joint-venture basis) near the Jajarm facility was expected to be issued in 1999. Aluminium ingot production increased by 20%, to 109,000 tons in 1998/99.

Iran's exports of non-hydrocarbon minerals in 1985/86, mainly copper, coal, chromite and metal concentrates, were valued at US $70m., and the total was increased to $85m. in 1986/87, when, of the 50m. tons of minerals extracted, 230,000 tons were exported. Mineral exports reached 486,413 tons in 1987/88, worth $90.2m., although total mineral extraction from Iran's active mines declined to 45m. tons. During the five years to March 1993 it was planned to spend some $5,000m. in order to increase the mining sector's share of GDP from 1% to 5%. This represented the fulfilment of one of the Iranian Government's stated aims: the development of the country's non-hydrocarbon raw materials to supply the demands of the country's expanding metal manufacturing facilities. In April 1994 the Minister of Mines and Metals, announced that exports of metal concentrates and minerals had earned $1,400m. during the three years to March 1994. At the beginning of 1995 the Minister stated that, following extensive privatization in recent years, the ministry retained control over only three to four big mines which required heavy investment. The non-oil mining sector's share of GDP remained consistently at 0.5% during 1992–97. The value of exports of minerals and metals increased by nearly 50% by 1997/98, to $374m., and was projected to rise to $460m. in 1998/99.

INDUSTRY

After the Revolution, no clear policy was formulated for the industrial sector. Of the modern manufacturing plants that were established under the Shah's regime, those which remained in production (estimated at only 20% of the total by value of output) encountered serious difficulties. Raw materials were in short supply, as were spare parts and other inputs. In March 1981 the then President, Bani-Sadr, estimated that in the period March 1979–March 1980 industrial and related output declined by 34% and was still falling, possibly at an even faster rate. In 1982 some reports indicated that increased reserves of foreign exchange and larger imports of raw materials had allowed production in many factories to be expanded. They also noted that factories producing goods for the war effort were working overtime, with Iranian engineers and technicians learning to

repair, adapt and make items that had formerly been imported. Nevertheless, officials admitted that only a small number of factories were properly operational. Many factories were operating at only 30% capacity in the late 1980s, although considerable improvement has been reported in state-owned industrial producers since 1990.

After the end of the war with Iraq the FFYDP placed emphasis on the development of heavy industry, and this sector was given priority access to reserves of foreign exchange. In spite of debate about the privatization of Iranian industry, until 1991 almost all industrial projects were state-sponsored. However, in February 1991 the Minister of Economic Affairs and Finance announced that 400 state-controlled light industrial companies would be sold during the next three years as part of the Government's plans for privatization. It was also announced that heavy industry, previously monopolized by the state, would be opened to private investment. In May 1991 the Minister of Industries announced that the National Iranian Industries Organization (NIIO) was to offer shares to the value of IR 100,000m. in its companies for acquisition by the public during 1991–92. In April the Ministry of Oil invited the private sector to invest in petrochemical projects and gave an assurance that other sectors of the oil industry would be made accessible to private investors. In addition, foreign companies are now able to invest in heavy industries. There was speculation that the Government would face criticism—on purely political grounds—for opening the door to foreign capital even though the Constitution does not forbid foreign investment or ownership. In July 1992 it was reported that the International Finance Corporation (IFC) was entering the private-sector market in Iran with possible equity participation or finance for two large industrial projects. The IFC's involvement followed the return to Iran of the World Bank. Privatization of state industries appears to have made only slow progress. In March 1994 Massoud Roghani Zanjani of the Plan and Budget Organization stated that privatization through the Teheran Stock Exchange had not proved satisfactory. The Government planned to sell factories by auction or negotiation in order to speed up the privatization process. In August 1993 shares were offered on the stock exchange in Iran Khodrow, the country's largest car assembly plant. The plant was nationalized after the Revolution. Some 33% of the shares were reserved for workers, with employees at the plant offered preferential terms. Despite legal changes introduced in the 1990s allowing foreign shareholdings, only a few joint ventures with foreign investors have been agreed. One example is that between Elin Anwendung of Austria and the local company, Joyain, who propose to build a US $63m. plant at Sabezevar to make electromotors and generators. Financial arrangements were expected to be completed in 1994. Another joint venture is the al-Mahdi Aluminium Company's smelter at Bandar Abbas, the first phase of which opened in June 1997 and which was nearing completion in mid-1999. The company is a joint venture between the International Development Corporation of Dubai and local state firms, Iran Copper, Miduk Copper and Mineral Exports. There are plans to expand production capacity to 330,000 tons per year. In 1994 Nestlé of Switzerland agreed to set up a 50-50 joint venture with the local Mimas to build a $47m. baby food factory near Teheran.

Privatization plans received a set-back in mid-1994 when the Majlis passed legislation which gave selected groups, such as former prisoners of war, the war disabled, the families of those killed in the Iran–Iraq War and members of the paramilitary *bassij*, privileged access to shares. The priority goal of the privatization process was to achieve a more equitable distribution of wealth, and the new legislation required proceeds from share sales to be devoted to the country's underdeveloped regions. The aims conflicted with those of the Industrial Development and Renovation Organization (IDRO) and the NIIO, the two state organizations involved in the privatization programme, which hoped to use the sales to raise revenues, to develop the capital market and to raise the standard of industrial management. IDRO officials admitted that the new legislation had made privatization more difficult and had slowed down the process. However, they expressed the hope that the involvement of new, less affluent groups of shareholders would inject new vigour into the privatization process. In the three years to March 1994, out of a total of 130 companies scheduled for privatization, IDRO had sold 50 factories through the Teheran stock exchange and in bilateral deals, raising IR 240,000m. (US $140m.). Of the 80 remaining companies, which had an aggregate turnover of $1,000m., 10 car makers accounted for over one-half of the annual turnover. In early 1995 the Minister of Industries forecast that only 10% of Iranian industry would be state-owned by 2000, compared with 45% in 1990. Only very large industries would ultimately remain under state control. Early in 1997 it was reported that the Government was still committed to the sale of 57% of all IDRO's assets by 2000. The privatization programme had been relatively slow in 1992–96 raising only $200m., but sales rose sharply in 1996/97 when IDRO raised an estimated $260m. State-owned vehicle companies, which have undergone considerable restructuring, were likely to be targeted for privatization in 1997/98 when IDRO hoped to raise $260m. from sales of its assets. Nevertheless it will be many years before Iranian industry shifts from predominantly state to largely private ownership. More than one-half of the country's annual budget expenditure is devoted to supporting loss-making state industries and banks.

The Government's aim of restructuring ailing industries has also encountered difficulties. Much of the restructuring has been imposed by the phased currency devaluation which began in 1991, and more recent cuts in state subsidies. In early 1995 the Minister of Industries declared that his ministry was now letting market forces operate to bring about economic restructuring. He claimed that state subsidies were only applied in parts of the food manufacturing sector, to paper manufacture, to medicines and to some washing powders. He maintained that even the food and pharmaceuticals industries could survive without subsidies, but the Government retained them for social reasons. He stated that only food industries would be subsidized by 2000.

In September 1994 the Majlis approved legislation merging the Ministry of Heavy Industries with the Ministry of Industry, but rejected a proposal to include the Ministry of Metals and Minerals in the merger on the grounds that a special ministry was necessary to develop minerals as a major export item. The plan to merge the three ministries had been proposed in the Majlis three years previously, but was opposed by the Government. Both the Ministry of Industries and the Ministry of Mines and Metals have emphasized the need to encourage training in modern management and the establishment of research and development departments. Co-operation is also being encouraged between industry and the country's universities. The Minister of Industries has claimed that Iran can design in many fields and has an inward engineering capability. In addition to the private companies that have grown up around the Isfahan steel complex (see below), innovation has been notable in the car industry. An affiliate of IDRO, Sazeh Gostar Co, has redesigned and re-engineered the Renault 5 car, which used to be assembled from imported kits, and the first completely Iranian-made model was expected to be manufactured by early 1996 and on sale at half the price of its nearest equivalent. Some predict a transformation of the Iranian car industry in the coming years as more local design, engineering and manufacture develops. The country's own design and engineering capacity is being utilized increasingly through the greater involvement of local contractors in building industrial plants, reducing costs and leading to savings in hard currency.

It has been suggested that average industrial output may have risen to 60% in 1994 after falling below 50% in 1993. In early 1995 the Minister of Industries claimed that average capacity utilization was 70% in his sector. The best performance is believed to be in food, chemical and cement industries operating at 100% capacity compared with only 25% capacity utilization in state-owned heavy industries. The performance of the vast Mobarakeh steel complex and the Sar Cheshmeh copper complex have been singled out for criticism. A new strategic plan for industry was incorporated into the SFYDP, which began in March 1995; the emphasis was on the themes of restructuring, good administration, privatization, mobilizing domestic expertise and manufacturing capacity, selective foreign investment, and developing exports. It is hoped that industrial exports will eventually earn between US $2,000m. and $4,000m. annually, with food manufacturing industries registering the greatest expansion in export earnings. At present it is steel, copper and aluminium which earn the major share of export earnings. In

July 1996 the Minister of Industries stated that the Government was ensuring that the industrial sector received allocations of foreign exchange to pay for vital inputs, and that some $640m. had been allocated to fund imports for the industrial sector during 1996/97. The minister also proposed new legislation to establish a clearer framework to encourage greater private investment in the industrial sector. In November 1996 in his budget speech to the Majlis, President Rafsanjani commented on the success of the industrial sector in recent years and claimed that the value of industrial exports had increased from $150m. in 1989/90 to a projected $1,500m. in 1996/97.

Steel, petrochemicals and copper remain the country's three basic industries. Other important branches are automobile manufacture (many assembled from kits, under licence from Western and Japanese manufactures, such as Nissan), which has expanded rapidly in recent years, machine tools, construction materials, pharmaceuticals, textiles and food processing. With the exception of one major petrochemical plant and a number of textile and construction materials ventures, all these industries were nationalized after the Revolution. Annual cement production doubled between 1976 and 1986, reaching 13m. tons in the latter year. Output declined to 12.5m. tons in 1988. In early 1989 a $40m.-foreign exchange allocation was announced to equip a cement works. Two plants have been built in Kurdistan and Hormuzgan, and a 2,300 tons-per-day plant at Orumiyah commenced operations in 1989. In 1990 the Ministry of Industries announced plans to increase the total national output of cement to 33m. tons per year by the late 1990s. Some 27 new cement works were to be built, at a cost of US $800m., in the five years to 1995. In 1990 the annual capacity of the existing 15 cement plants was 17m. tons, but only 12m. tons per year was being produced, owing to shortages of foreign exchange and electricity. Production in the Iranian year ending 20 March 1993 was estimated at 16m. tons, and annual domestic demand at 20m. tons. In November 1992 the Ministry of Industries stated that 19 cement plants, costing $555m., were under construction and another 31 'in-principle' agreements had been signed. During 1993 the IFC was involved in negotiations concerning investment in or lending to at least four cement schemes and was negotiating with several European equipment suppliers as potential investors. In January 1995 it was reported that 20 new cement plants would start production within two years, raising national output to 25m. tons and allowing substantial exports. Officials stated that some 40 cement companies were producing 13.7m. tons a year. In August 1994 the Minister of Industries had stated that cement plants with a combined capacity of more than 9m. tons a year would be built during the SFYDP period, raising national capacity to 26m. tons. He also stated that the cement industry was the only sector that did not require state subsidies, but was paying the equivalent of $130m. a year to the Organization for the Protection of Consumers and Producers. In early 1995 the Chamber of Commerce and Industry reported that Iran's textile mills were operating at an average of 56% of capacity, owing to shortages of foreign exchange and raw material. In the Iranian year ending 20 March 1995 just over 24m. sq m of textiles were produced. At the beginning of 1996 the Ministry of Industries announced that output from local sugar plants had reached just under 1m. tons per year and would be sufficient to meet domestic demand within 10 years. Annual consumption of sugar was projected to rise to 2m. tons by 1998. In March 1996 the Minister of Industries stated that 80,000 passenger cars had been manufactured locally in 1995/96, and that the industry had been allowed additional hard currency for imports in order to expand production capacity to 135,000 in 1996/97.

Electricity generation was severely restricted by Iraqi attacks on power stations during the Iran–Iraq War, reducing viable capacity from 8,000 MW to 5,000 MW, according to one estimate. In December 1988 the Minister of Energy stated that the generating capacity of the national grid was deficient by 2,500 MW, owing to war damage, lack of fuel and inadequate rainfall. It was reported that electricity demand increased from 2,876 MW to 7,850 MW between 1979 and 1989. The Government planned to increase generation by 1,000 MW annually during the period 1989–94, and allocated US $7,500m. to this end. In 1989 $1,200m. in foreign exchange was set aside for the reactivation of dormant contracts and for the completion of repairs to damaged power stations. Installed capacity was reported to be 14,630 MW in 1990. In September 1994 the Minister of Energy stated that the national electricity network generated 73,400m. kWh of electricity in 1993/94, 11% more than in the previous year. Some 86.5% of electricity was produced by thermal power plants and the rest by hydroelectric stations. He reported that power generation in the first four months of Iranian 1373 (1994/95) rose by 10.3% compared with the same period in the previous year and claimed that since 1993 2,000 MW of new power generating capacity had been added to the network. It was forecast that consumption would have reached 109,000m. kWh in 1998. Residential consumption accounts for about 40% of total consumption, and industry for about one-quarter. However, industrial demand was forecast to rise dramatically and to account for almost one-half of total consumption by 1998. Two-thirds of total capacity in 1998 was to be provided by steam power and about one-fifth by hydroelectricity. By 1998 it was planned to build more than 20,000 km of transmission lines to supply electricity to 5m. new customers and 16,000 new villages. Electricity supplies were expected to reach more than two-thirds of Iran's villages by 1998. In June 1991 Kraftwerk Union AG of Germany was awarded a $1,450m. contract to construct a 2,080-MW combined-cycle plant south of Teheran, the largest single power contract to be awarded since the Revolution. The company had earlier won a $700m. contract to construct a smaller plant in Guilan. In January 1992 a Canadian-European consortium won a $770m. contract to build a 1,100-MW gas/oil-fired-power station at Arak, to be completed in 1996. Work was due to start in late 1992, but more than a year after the contract was awarded implementation of the project was still being delayed because of financing problems. In early 1992 it was also reported that repairs to the country's biggest power plant at Neka on the Caspian Sea, damaged during the war with Iraq, had been completed. In November 1992 it was reported that Bharat Heavy Electricals of India had been selected to build a 1,000-MW thermal power station in Kerman. Some of the major hydroelectric power schemes require large amounts of foreign exchange and it was unclear whether the development programme would remain on schedule. In May 1992 a consortium led by Asea Brown Boveri was awarded a $1,250m. contract to build a 3,000-MW hydroelectric dam on the Karun river, designated as Karun-3, but in June 1994 the Ministry of Energy cancelled the contract and awarded it to a local company, Sabir, a subsidiary of the Ministry of Energy, claiming that this would halve the cost of the project. Asea Brown Boveri had encountered difficulties arranging finance for the project. Construction work, to be carried out in two stages, began in early 1995. In May 1993 Japan's Overseas Economic Co-operation Fund disbursed the first tranche ($458m.) of a $1,450m. untied concessionary loan for the Godar-e-Landar hydroelectric dam on the Karun river, 160km north of Ahwaz, in Khuzistan, previously known as Karun-4. The dam, which is to be operational by 2001, will have a capacity of 1,000 MW and a further 1,000 MW will be added in the second phase. Preconstruction work started in 1992, and work on the first stage eventually began in November 1994. Japan was originally due to have disbursed the second tranche of $602m. in May 1994, but came under pressure from the USA not to make the loan. In April 1995 a $463m. contract for civil works at the dam was awarded to Daelim Industrial Co of South Korea, which has taken charge of the project. In January 1996 there was an unconfirmed report that the Japanese Government had decided to continue its freeze on loans to Iran, in particular the second tranche of the loan package for the Godar-e-Landar dam, until March 1997 in order to avoid antagonizing the USA. In March 1993 the World Bank approved a loan of $165m. to upgrade the country's power plants and distribution network, including the conversion of the Qom power station to combined cycle. The conversion would double the plant's capacity, to 600 MW. In April 1994 the contract for the conversion work was awarded to Asea Brown Boveri. The plant was expected to go into operation in late 1996. The World Bank loan also covered the cost of constructing 400-kV sub-stations and transmission lines to strengthen the country's north–south connection. Subsidiaries of Asea Brown Boveri received three equipment supply orders in mid-1995 worth nearly $40m., and in early 1996 the company's Swedish subsidiary was awarded a $60m. contract to supply instrument transformers and to help set up local

support facilities for the state-owned Iran Electric Organization. In April 1996 Tavanir invited prequalification bids for the construction of a 650-MW steam power plant in East Azerbaijan province, the first big power project for some years. Most other power generation work was linked to hydroelectricity projects and the Bushehr nuclear facility. In April 1996 the official Iranian news agency stated that a $46m. power plant had been built on the disputed Gulf island of Greater Tunb. In March 1995 the Ministry of Energy awarded a contract to Monenco AGRA of Canada to prepare a masterplan for the development of the electricity sector. The plan would assist the Ministry in preparing a comprehensive strategy, including the evaluation of energy resources, pricing strategies, environmental impact assessments and recommendations for training, research and development. The project was also included in the World Bank loan.

In October 1994 the Ministry of Energy awarded a $700m.-contract to build a dam on the Karkheh river in Khuzistan to the Islamic Revolutionary Guards, in line with the Government's new policy of involving more local organizations and companies in construction to reduce costs. The Karkheh dam would generate 400 MW of electricity and irrigate 220,000 ha in Khuzistan province. As part of an agreement signed in May 1995 the People's Republic of China was to co-operate in the building of the combined cycle power plant at Arak, and to take part in the construction of the Karun-3 and Karkheh dams. The Ministry of Energy stated in April 1995 that Godar-e-Landar and Karun were among 30 large dams under construction. Two of these dams, Shahid Abbaspur and Barun, were due to be completed by March 1996, while a number of others, including Tanguyeh in Kerman, Alavian and Nahand in Khorassan, Raysar-Delvari in Bushehr and Salman Farsi, Kavar and Hanna in Fars, were to be completed later. The Ministry also reported that two large tunnels, Kuhrang and Gavmishan, were being completed to take water from the Karun river in Khuzistan to the Zayandehrud river in Isfahan. In May 1996 the Iran Water and Power Resources Development Co, an affiliate of the Ministry of Energy, invited international power generation companies to submit prequalification bids for the construction of four hydroelectric power plants: a 1-GW plant in Gotvand and a 750-MW plant on the Karun dam (Karun-4), both in Khuzestan, a 320-MW plant in Hini and a 250-MW plant in Sazbon, both in Ilam province. Companies submitting bids would also be required to arrange financing for the projects. In September 1992 it was announced that the Government planned to extend the privatization programme to electricity generation plants. Most power stations would be run as independent companies, and 51% of shares in power plants were to be transferred to the staff. In mid-1998 Iran had an installed capacity of about 24,000 MW, with another 4,600 MW coming from private generators. It is planned to increase the capacity of the national network to 96,000 MW by 2022. Power plants currently under construction, and due for completion by 2002, will add about 13,000 MW to the national grid. Some 8,000 MW of this will come from hydroelectric dams (although the proportion of hydroelectricity will fall in subsequent years). The balance of 5,000 MW under construction comes from gas-fuelled plants and from combined-cycle facilities. An agreement worth about US $1,000m. was signed in May 1999 between state-owned Mapna and Ansaldo Energia of Italy for the supply of 30 gas turbines (with an aggregate capacity of 4,700 MW) for power plants in the south of Iran.

In May 1987 Iran and Argentina signed a nuclear power co-operation agreement, the details of which were not disclosed, but were thought to include an Argentine letter of intent to supply a US $5.5m. reactor core and enriched uranium for a nuclear research centre to be established in Teheran University. Kraftwerk Union AG of the Federal Republic of Germany (FRG—West Germany) began building a 2,400-MW twin reactor nuclear plant at Bushehr before the Revolution; most of the work on the plant had been completed by the time of the outbreak of the Iran–Iraq War. After several Iraqi air attacks on the plant, however, the company withdrew its staff in 1987. The FRG Government refused to issue export licences for machinery and equipment until a peace agreement had been signed between Iran and Iraq. More than $3,700m. has already been spent on the plant. Iran wishes to complete at least one of the 1,200-MW reactors and has estimated the cost of this at about $1,000m. Independent sources, however, have argued that the true cost is more likely to be $3,000m. and have advised against proceeding. The Ministry of Energy does not have responsibility for the Bushehr nuclear facility, and a decision to complete what could be one of Iran's largest power plants could divert scarce financial resources from other parts of the country's ambitious energy programme. Iran is believed to have received technical advice and training for its atomic engineers from Pakistan. In November 1989 the head of the Atomic Energy Organization of Iran (AEOI) announced that work on the Bushehr nuclear power plant had recommenced, and it is thought that vital equipment, placed in storage during the Iran–Iraq War, has been reinstalled. In January 1992 it was reported that Brazil had offered to resell to Iran equipment purchased from the FRG for the construction of its third nuclear plant, which had been delayed as a result of financial problems. Such equipment could be used in the construction of the Bushehr plant. On 15 February 1993, during a tour of the facility, President Rafsanjani stated that the Bushehr plant would be completed, whatever the cost. In August 1992 the AEOI announced that it had filed international suits against Siemens of Germany (Kraftwerk Union AG's parent company), for breaking the contract to complete the Bushehr reactor. Kraftwerk Union maintained that it was unable to do so because of a German government ban on the export of sensitive equipment. For some years negotiations with Indian, Russian and other suppliers ended in failure because of opposition from the USA (which suspects that Iran is trying to develop a nuclear weapon). However, in December 1993 the Russian ambassador to Iran stated that Russia had agreed in principle, to complete the Bushehr plant and to build a conventional power plant at Bushehr. A spokesman for Siemens stated that the main building at Bushehr would not be suitable for a Russian-designed reactor, and there was speculation that Iran may be planning to use some of the facilities at Bushehr to reduce the cost of the Russian reactor. In 1993 Iran signed an agreement with the People's Republic of China for at least one 300-MW nuclear reactor, and, despite pressure from the USA, China has indicated that it plans to proceed with the agreement. Teams from the International Atomic Energy Agency (IAEA) visited nuclear sites in Iran in February 1992 and November 1993, reporting that they had found no evidence that Iran was developing nuclear weapons. In January 1995 Russia signed a US $800m. contract to build a 1,000-MW pressurized light-water-cooled VVER-100 reactor at Bushehr on the base of the reactor left unfinished by Siemens. Russia was also believed to have options on building three other reactors. The USA reiterated its opposition to any nuclear co-operation with Iran by Russia, asserting that the deal would help Iran accelerate a secret programme to develop nuclear weapons. However, Russian officials expressed their determination to proceed with the deal and to sell nuclear reactors to Iran, and denied that work on the Bushehr project was in any way connected with the development of nuclear weapons. In March the head of the AEOI stated that some 200 Russian and 500 Iranian experts and technicians were co-operating on the construction of the Bushehr reactor. In June 1996 the Russian Government indicated that it would invest $60m. in the Bushehr project during 1996. A Russian intelligence agency issued a report in early 1995 supporting the IAEA's assertion that there was no evidence of a military nuclear programme in Iran. In April 1995 China also rejected US appeals not to sell nuclear reactors to Iran, and Chinese officials maintained that negotiations with Iran to supply two 300-MW nuclear reactors did not pose a threat to the Nuclear Non-Proliferation Treaty (NPT). The USA stated that nuclear co-operation and the transfer of technology to Iran was dangerous as it was open to abuse. Iran appears to be aiming at a nuclear programme of 3,000 MW–5,000 MW, compared with the Shah's ambitious programme of 24,000 MW. The AEOI argues that it needs to familiarize itself with nuclear technology in order to carry out medical and other civilian research and to place greater reliance on renewable sources of energy so that its hydrocarbon resources are available for export. At a nuclear safety summit meeting held in Moscow in April 1996 the Russian Minister of Nuclear Energy refused to discuss the Bushehr reactor, but insisted that the facility would use too little nuclear

material to allow Iran to develop nuclear weapons. He added that IAEA officials had visited the plant and that Russia was adhering to the NPT. The USA continued to oppose the involvement of Russian companies in the project. In July 1997 the announcement that Russia was to assist Iran to complete the nuclear power plant at Bushehr prompted the USA to reiterate its concern that Iran might seek to exploit civilian nuclear technology for the development of nuclear weapons. In September the US Vice-President announced that US investigators had concluded that Iran was engaged in a 'vigorous effort' to obtain technology for the manufacture of nuclear weapons and ballistic missiles capable of transporting them. (Earlier in September the Russian authorities had stated that they would be willing to allow the USA to monitor the Bushehr nuclear plant.) In the same month it was reported that Israel was attempting to persuade the Clinton administration to impose sanctions on Russian organizations and companies involved in supplying missile technology to Iran. In October China announced an end to the sale of nuclear technology, as well as of conventional weaponry, to Iran. After allegations by both the USA and Israel that Iran had a secret nuclear plant at Neka, on the Caspian Sea coast, the IAEA stated in April 1996 that it had inspected all suspected nuclear sites in Iran and it had not discovered any nuclear facilities at Neka. In June 1995 President Rafsanjani opened the first section of a nuclear research centre in East Azerbaijan province to enable experiments with preserving fresh fruit and vegetables by irradiation. A 5-kV solar power plant, built by the AEOI, opened in Ardakan, near Teheran, in November 1993.

It was reported in October 1993 that new funds would be allocated to research into solar energy during the SFYDP. In May 1994 President Rafsanjani stated that there should be greater investment in new sources of energy in order to reduce dependence on oil. Iran's first wind-powered electricity plant is being constructed at Manjil, in the north-west of the country. In January 1996 President Rafsanjani, on a visit to a facility run by the AEOI to carry out nuclear, solar, tidal, geothermal and wind energy research, stated that Iran would continue with research on fusion and other alternative energy sources despite opposition from the USA. Iranian radio reported that the AEOI had set up four solar and wind-powered power plants. In February 1996 it was announced that Iran, together with Russia, China and India, had agreed to establish the Asiatic Fund for Thermonuclear Research to explore the possibility of harnessing thermonuclear power for commercial purposes. It was planned to construct an experimental reactor by 1998.

In 1996/97 the industrial sector continued to be dominated by relatively few state enterprises accounting for 70% of manufacturing value added. Real growth in 1996/97 reached 6.3% while the share of industry in total value added increased to 21.0% (from 19.7% in 1995/96 and 18.6% in 1994/95). The most dynamic industrial sub-sector in 1996/97 was construction, which expanded by 10.6% (compared with 4.5% the previous year).

Steel

Government policies, like those of the Shah, are directed towards achieving self-sufficiency in steel production and ending dependence on imports. In 1980 steel accounted for almost one-sixth of total imports. Consumption was estimated at 6m. metric tons per year in mid-1981 and was expected to rise to 10m. tons by 1983. Domestic production and development plans were severely affected by the Revolution and the war with Iraq. By early 1983, output had been raised to 58,000 tons per month, equivalent to about 700,000 tons per year, produced by an old-fashioned coal-fired steel mill which was built by the USSR in Isfahan (formerly known as the Aryamehr Steel Mill), where installed capacity before the Revolution was claimed to be 1.1m. tons per year. Built under a $286m. credit arrangement which had been concluded with the USSR in 1965, the mill came into operation in March 1973. Subsequently, however, the mill has been beset by technical and production problems. For some time output was running at about 50% of its design capacity of 1.9m. tons a year. Agreements with the former USSR to expand the obsolete facility appear to have been abandoned and in January 1992 Danieli of Italy won a $600m.-contract to expand steel-making and rolling capacity at the plant. In October 1994 it was reported that the plant was producing at 2m. tons a year, slightly above design capacity, and was no longer receiving state subsidies. A $470m.-expansion plan was under way to raise output to 2.4m. tons a year in 1997. In December 1994 Danieli was reported to have renegotiated its contract at the plant and was to expand capacity at the existing Isfahan Steel Co complex to 3.2m. tons a year by adding a line for nearly 800,000 tons of flat products. Negotiations were also reported with a number of European firms for a complete change of instrumentation at the complex. Management of the plant was reported to have improved greatly, although it still suffered from overmanning despite a reduction of the work-force by one-third to 19,000. Further cuts were to be made to reduce the work-force to 12,000 by 1998. The Isfahan steel mill has become a centre for new technological developments in steel. At the end of 1994 Isfahan Steel Co's managing director, Ahmad Sadeqi, claimed to have developed a commercially viable new direct-reduction process in steel manufacture at a pilot plant in Isfahan which is being patented under the name of Tahre Qaem. Sadeqi has stated that he plans to convert the Isfahan steel mill from the coke-burning technology introduced by the former Soviet Union to direct reduction, using natural gas. The cost of the new technology is projected at one-half of that of the Midrex direct-reduction modules installed at Mobarakeh. A private firm, one of 30 companies set up by former managers and employees at the Isfahan Steel Co to provide services ranging from transport to engineering, has commissioned a ferrosilicon pilot plant with a capacity of 3,000 tons a year, which is now supplying about one-third of the steel plant's requirements for ferrosilicon. A 30,000-tons-a-year ferro-manganese plant at the Isfahan industrial estate was due to be completed in 1995. The plant will supply both the Isfahan and Mobarakeh steel complexes. Hylsa of Mexico has a contract at Iran's second largest production facility, the Ahwaz steel plant, to expand the unit's capacity to 1.1m. tons a year and, eventually, to 1.7m. tons a year. The National Iranian Steel Co (NISCO) reported that the plant produced 805,000 tons of steel in the Iranian year ending 20 March 1993, an increase of 54% over the previous year. In December 1993 it was reported that production at the plant had improved and that it was now producing quality steel for export. In December 1994 it was reported that Danieli had been contracted to carry out work worth $100m. to improve flexibility in semi-finished products at Ahwaz, but some uncertainty was expressed over whether the project would go ahead. In June Kudremukh Iron Ore Co of India signed an agreement with the NISCO to provide technical services for the Ahwaz steel plant. By 1996 the Ahwaz complex was producing 1.5m. tons a year. Furnace capacity was being increased by 3.2m. tons a year and there were plans for a new sheet mill with a capacity of 3.8m. tons a year. Another direct-reduction plant with a capacity of 700,000 tons a year using the new Iranian technology developed at Isfahan was planned to begin production in 1998. The Ahwaz Steel Company is to set up a $400m. turnkey flat products steel mill with a production capacity of 700,000 tons of wide plates per year, rising to 1.05m. t/y. International steel manufacturers bidding for the project (bids were opened in March 1999) include Danieli and Japan's Nippon Steel. In September 1991 President Rafsanjani opened the first stage of the Mobarakeh steel mill in Isfahan, one of the most modern steel mills in the world. However, the plant was reported to have encountered problems achieving the target annual production capacity of 2.4m. tons and in 1995 production capacity was only 1.6m. tons a year. NISCO planned to expand capacity to 3.2m. tons a year by March 1998. A reheating furnace was to be built at the complex and NISCO has indicated that it may extend the hot and cold rolling mills to raise capacity to almost 5m. tons a year. In June 1989 the construction of a $192m. steel-rolling complex at Miyaneh, in East Azerbaijan province, was announced. In February 1992 a Japanese-Italian consortium won a $550m.-contract to build a steel plant near Yazd, which was inaugurated by President Rafsanjani in June 1997. In March 1993 it was announced that Italy's Simimpianti had won a $112m.-contract to supply equipment, supervision, expertise and training for a specialized steel mill near Mashad which will have an annual capacity of 250,000 tons. In late 1994 Danieli of Italy was awarded a contract to build the steel-rolling mill at Miyaneh and a second new mill at Neishabur in Khorassan province. The Miyaneh mill was to have a capacity

of 350,000 tons and would process slabs imported from the CIS republics on the western side of the Caspian Sea. The $160m.-Neishabur complex would have an initial capacity of 600,000 tons per year with production rising to 1.8m. tons. In mid-1996 it was reported that NISCO had secured a $561m.-loan from Japanese and European banks to finance the renovation and upgrading of steel plants at Ahwaz, Khorassan and Miyaneh to be carried out by Danieli of Italy. The NISCO was also reported to be engaged in negotiations with foreign companies for the construction of a 1m.-tons-per-year integrated steel mill in Hormuzgan, near the Strait of Hormuz, and a 1.2m.-ton mill in Kerman. Financial difficulties may delay these projects until state insurance agencies resume cover for Iran. Hormuzgan is also the site of a ferro-alloy plant built with Chinese assistance. The $39m.-plant became operational in early 1995 producing 15,000 tons a year of ferro-chrome and 20,000 tons a year of ferro-manganese. Some 5,000 tons were exported to Japan in April 1995 and the plant is expected to earn some $10m. a year in export sales. Between 1981 and 1986 Iranian steel production officially totalled 5.3m. tons, of which 1.2m. tons were produced in 1986. According to the Ministry of Mines and Metals, Iran's steel production in the year ending March 1989 totalled 1.4m. tons and rose to 3.8m. tons in 1992/93. Output for 1993/94 was projected at 4.5m. tons The Ministry of Mines and Metals had earlier forecast an expansion in output to 5.5m. tons a year by March 1994 when the first Five-Year Plan ended. Actual output was well below target even according to the Ministry's own figures. As part of its plan to increase production, Japan's Nippon Steel Co was awarded a $1.8m.-contract in May 1993 to improve the management of the NISCO. According to the Ministry of Mines and Metals, steel output rose to 4.6m. tons in the Iranian year ending 20 March 1995. According to the NISCO, steel output would reach 6m. tons in the Iranian year beginning March 1996. In 1996 NISCO announced a development plan to expand steel production capacity by 1m. tons a year until 2006 when total capacity is projected to reach 17.5m. tons a year. The deputy minister for mines and metals was reported to have indicated that NISCO could be privatized within the next five years. In October 1992 it was reported that the International Institute of Iron and Steel had accepted Iran as a full member, as its raw steel production exceeded 2m. tons a year. For many years Iran has been a major purchaser of steel on the world market, and imports, principally from Spain and Japan, have averaged 2m.–5m. tons a year. Domestic consumption of steel was estimated at 3.5m. tons a year in early 1989 and was projected to rise to 7m. tons annually as post-war reconstruction got under way. In January 1994 the Ministry of Mines and Metals announced that 1.35m. tons of steel had been exported during the first nine months of the Iranian year beginning March 1993. Total exports for 1994 were estimated at 1.5m. tons. Despite its emergence as a steel exporter, Iran is still a net importer of steel. Raw steel production in 1998/99 was 5.7m. tons.

Petrochemicals

The Shah had planned a huge petrochemical sector that would not only meet local demand, but also provide $2,000m.-worth of exports by 1983. Development of the industry was paralysed after the Revolution. However, in 1983 the Ministry of Oil announced that it would place greater emphasis on further development and expansion of the petrochemicals industry. Several new plants were to be built with the aim of making Iran not only self-sufficient, but also an exporter of surplus nitrogenous fertilizer, plastics and other products; indeed, Iran intended to become a leading world producer of petrochemicals during the 1990s. At that time the sector comprised the following major ventures: the Iran Fertilizer Co, the Razi Chemical Co (formerly Shahpour), the Abadan Petrochemical Co, the Kharg Chemical Co, the Iran Carbon Co, the Iran Nippon Chemical Co, Aliaf Co and Polyacryl Corpn. All these companies were nationalized in 1979 and were administered by the National Petrochemical Co (NPC) under the Ministry of Oil.

Under the Shah the cornerstone of the petrochemical industry, was the Iran-Japan petrochemical complex at Bandar Khomeini, which had a planned capacity of 300,000 tons per year of olefins and aromatics. This began in 1973 as a joint venture shared equally between the NIOC and a Mitsui-led consortium, the Iran Chemical Development Co (ICDC). It was originally projected to cost $300m., but this estimate had increased to $3,000m. by 1979. The immense 13-unit complex was 85% finished at the time of the Revolution. Work was resumed briefly in the summer of 1980, but was halted again after Iraqi bombers attacked the plant several times in late September and early October. Disputes between the NPC and its Japanese partners were numerous. In mid-1984 Iran suspended a $10.8m.-interest payment on a loan because the Japanese consortium, concerned with safety in the war zone, had withdrawn its technicians from the site. After renewed Iraqi bombings in September 1984, the ICDC again withdrew all of its technicians. In February 1986 Iran decided to end all repayments on credits and loans received from Japan. In the late 1980s Mitsui estimated that it would cost at least $2,000m. to complete the scheme, taking into account extensive war damage and the fact that some of the original units were obsolete. Iran disputed these estimates. The Japanese consortium expressed its desire to withdraw from the scheme, but Iran stated that it wished to complete the project and claimed that the Japanese estimates were pessimistic and that the cost would be about $1,000m. In November 1989, after prolonged negotiations, the Japanese consortium agreed to dissolve the $4,500m.-partnership for the complex, and in February 1990, as part of the agreement, it paid the Iranian Government $910m. Dutch and German companies were contracted to help the NPC to reconstruct some of the complex's 13 units. In November 1990 the Daelim Industrial Co, a South Korean venture, secured a $150m.-contract to reconstruct the olefins plant. In April 1994 the head of the NPC stated that test production would start that month on the second phase of the complex which would treble annual production capacity to 3m. tons. Three-quarters of the plant's output had been sold in advance to German, French and Finnish companies to help finance its construction. The complex is the country's biggest petrochemical plant. Its second phase opened in August 1994 and in September the head of the NPC stated that 500,000 tons of liquefied petroleum gas would be exported to South Korea in 1995. This represented part of the $900m. of the plant's production which had been sold in advance to fund construction. Under the second Five-Year Plan, which began in March 1995, the annual capacity of the olefin unit of the complex is to be doubled. In November 1994 it was announced that the port of Bandar Khomeini and the nearby petrochemical complexes, the Bandar Khomeini complex and the Razi fertilizer complex, would be declared a protected industrial zone in early 1995. Freezone regulations would apply to the region in order to promote joint ventures and attract foreign investment in petrochemicals. The NPC was trying to interest private investors in the construction of a methyl tertiary butyl ether plant at the Bandar Khomeini complex. In March 1995 the official news agency reported that the polyvinyl chloride unit at the complex had started production with an annual capacity of 175,000 tons. The aromatics unit was due to open later in 1995. In May 1996 the NPC announced plans to build a paraxylene plant with an annual capacity of 150,000 tons at the Bandar Khomeini petrochemical plant. In mid-1999 NPC was finalising tender documents for an olefins plant, to be sited in the Bandar Khomeini special zone. The facility is scheduled to produce annually 700,000 tons of polyethylene, 300,000 tons of polypropylene and 105,000 tons of propylene.

The expanded Shiraz petrochemical complex, located next to a smaller 20-year-old unit at Marvdasht, 50 km from the city, was opened in February 1986. The plant's daily output has been increased nearly tenfold to produce 1,200 tons of ammonia, 1,500 tons of urea, 100 tons of nitric acid and 750 tons of ammonium nitrate. The initial capacity of the Shiraz plant was 500,000 tons per year, rising to 850,000 tons in 1987. A chloro-alkali unit with a capacity of 60,000 tons per year was completed in February 1989 at Shiraz, and the Shiraz methanol plant commenced production in May 1990. Contracts worth $33m. were awarded to expand a dense soda ash plant and the ammonia plant. In September 1993 NPC officials reported that the Razi fertilizer complex near Bandar Khomeini was operating at only three-quarters of its planned capacity of 2m. tons a year. In October 1994 it was announced that the war-damaged sulphuric acid unit at the Razi complex had resumed production at 1,320 tons a day. As part of the NPC's ambitious petrochem-

icals expansion programme a $2,200m.-complex has been constructed at Arak using feedstocks from the Isfahan refinery and the new Arak refinery. The first phase of the complex was opened in July 1993 and planned output is 550,000 tons of products a year. Another project was the petrochemicals complex at Isfahan to produce benzene and toluene as well as polyethylene, polystyrene and polyols. In April 1994 it was reported that the Ministry of Heavy Industry had taken over responsibility for a $1,900m.-olefins petrochemical complex at Isfahan from the NPC. The project would be financed by a buy-back arrangement. In October 1993 it was reported that the benzene plant would start production in March 1994 with an annual capacity of 50,000 tons. Japan's Kawasaki Corpn and MW Kellog Co of the USA have built a petrochemical complex in Khorassan in the north-east of the country. Work on the plant, which is designed to produce 330,000-tons a year of ammonia and 495,000-tons a year of urea, began in 1988 and production was scheduled to start in March 1995. A $1,000m.-petrochemical complex was also being built at Tabriz, near to the Tabriz refinery, and was due to become operational in March 1995. A $80m.-private sector petrochemical plant was also to be built at Tabriz, producing 50,000 tons of polypropylene, half of which would be exported. In October 1993 two German companies, Lurgi and BASF, were awarded the contract to set up and equip the plant for Polynar, a subsidiary of Narhan, a private consulting firm involved in local petrochemical and oil industries. The financial package was to be concluded in 1994 and construction was due to be completed in three years. Polynar was given the concession in 1992 by the NPC as part of its programme to encourage more private sector investment in petrochemicals. The Tabriz plant is reported to be one of nine petrochemical projects handed over to the private sector, including a 660,000-ton-a-year methanol plant and a 500,000-ton-a-year methyl tertiary butyl ether facility. In September 1994 the head of the NPC stated that as part of the state company's privatization programme, production units were being leased to the newly-established Petrochemical Investment Co as an intermediate step towards their flotation on the stock market. No further details were given. In October 1994 the NPC approached Lurgi of Germany to carry out basic engineering for a major new methanol plant on Kharg Island with construction, carried out by local firms, beginning in 1995. The complex would use gases from a petrochemical plant on the island and when operational would produce 660,000 tons a year of methanol and 50,000 tons a year of acetic acid. Some two-thirds of the methanol output would be destined for export, with the balance fed to the new methyl tertiary butyl ether plant to be built at Bandar Khomeini (see above). In February 1996 it was reported that Belleli of Italy had been awarded a $7.5m.-contract to supply two 250-ton petrochemical reactors early in 1997 for use in the methanol plant on Kharg Island. This plant is one of five petrochemical projects to be given priority during the second Five-Year Plan which began in March 1995. The other projects include the expansion of the olefins unit at Bandar Khomeini, a methyl tertiary butyl ether plant in the south to manufacture additives for 500,000 tons of unleaded gasoline a year, and two plastics plants. The five projects are estimated to require government investment of $1,800m.

The total import bill for petrochemicals was $1,500m. in 1987. During the 1990s Iran has sought to satisfy internal demands and have a surplus output to export a range of products. Output has risen steadily since the end of the war with Iraq, reaching 2.1m. tons in 1989/90 and more than 3.5m. tons in 1990/91. Output in 1991/92 totalled 4.3m. tons, according to the NPC, and 970,000 tons of petrochemicals were exported, worth $100m. About 5.4m. tons of petrochemicals were produced in 1992/93. In February 1994 the head of the NPC stated that annual production had reached 5.5m. tons, well below the target figure of 9m. tons planned for March 1994. However, in January 1995 he claimed that petrochemical output had increased by almost 40% in 1994, to 7.5m. tons, and would rise to 9m. tons in 1995 and to 14.5m. tons by 2000. There were conflicting figures from other sources. In March the Minister of Oil claimed that Iran's annual output of petrochemical products was 9m. tons and would rise to 15.5m. tons by 2000. In late September 1994 the Minister of Economy and Finance claimed that annual production of petrochemicals had increased twentyfold since 1989, to about 8m. tons per year. NPC reported that output in 1995/96 rose by 1.2m. tons to 8.6m. tons, and that 2.4m. tons were exported. Other sources claimed that production at the end of 1996 was around 10m. tons per year and that annual capacity would be increased to 15.5m. tons by 2000, with a higher proportion of output destined for export. NPC predicted that petrochemical production would reach 11.8m. tons in 1998/99, compared with 10.8m. tons in the previous year. In August 1993 the head of the NPC urged the Majlis to approve new incentives to encourage private and foreign investment in petrochemical projects during the term of the second Five-Year Plan. He reported that 14 projects which commenced under the Five-Year Plan which ended in March 1994 had been delayed because of the shortage of funds. Foreign finance and expertise were urgently needed if the petrochemical sector was to be developed successfully over the next five years. The NPC was seeking approval from the Majlis to guarantee foreign loans and secure concessionary domestic credit for private projects from March 1994. In October 1994 the head of the NPC stated that no private local or foreign investors had expressed interest in petrochemical ventures. He was reported to have asked to Majlis to allow foreign investors to take 100% ownership in projects instead of the 49% currently permitted. In 1996 officials reported increased interest in the petrochemicals sector from private investors. In 1992 around 1.5m. tons of petrochemicals were exported, earning $150m. Nevertheless, the head of the NPC stated in September 1993 that Iran was still spending $3,000m. a year on petrochemical imports. The NPC stated that annual production in 1993/94 was worth $1,000m. and was expected to rise to $1,800m. in 1994/95. Petrochemical exports were estimated to have earned $200m. in 1993/94, and according to NPC earned $408m. in 1995/96. Exports in 1996/97 were $506m., and increased to $560m. in 1997/98. In the first half of 1998/99 exports were $265m. According to the NPC, more than 650,000 tons of sulphur, from total production of 880,000 tons, was exported in the Iranian year ending 20 March 1994, making Iran the sixth biggest sulphur exporter in that period. The NPC stated in January 1995 that Iran was meeting 85% of its petrochemical needs from domestic production.

NPC's five-phase strategic development plan for petrochemicals in the period 1997–2013 (announced in 1997 and revised in early 1999) envisages total output rising to 30m. tons a year (t/y). The plan will require investment of $20,600m. (phases three to five being open to foreign investors on a buy-back basis). The first two phases are in progress. Phase three (comprising four large complexes to be sited at a new special zone at Bandar Asaluyeh and one at Bandar Khomeini special zone, with a projected combined capacity of more than 6.7m. t/y) is in the tendering stage for construction between 2001 and 2005.

TRADE AND COMMUNICATIONS

Iran's exports of crude petroleum or petroleum products account for the major part of the country's export revenue. Non-oil exports rose from $283.7m. in 1982/83 to $1,002m. in 1986/87, and $1,158m. in 1987/88 (a record $485m. of which accrued from sales of carpets), but fell to $1,021m. in 1988/89. In 1984/85 (the Iranian year runs from 21 March to 20 March) oil exports of 1.68m. b/d were worth $17,000m. However, the value of oil exports declined to $13,100m. in 1985/86, and to $6,600m. in 1986/87. The value of oil exports in 1987/88 rose to $8,600m. and total earnings of foreign exchange were $9,600m. The Government's utilization, from early 1989, of pre-financed oil sales increased oil exports and raised vital foreign exchange for post-war reconstruction. Pre-financing involves the delivery of crude oil 12–18 months after payment and thus amounts, in effect, to the raising of short-term foreign credit. The value of non-military imports fell sharply, to $5,600m., in 1986/87, reflecting the decline in revenue from oil. As a result of the sharp decline in income from oil exports in 1986, the Government decided to place greater emphasis on increasing non-oil exports and thereby reduce dependence on oil. In 1986/87, according to the Governor of the Bank Markazi (Central Bank), 24% of state revenue was provided by sales of petroleum, compared with 74% in 1975/76 and 63% in 1983/84. During the same period, the proportion of revenue deriving from non-oil exports rose from 2% to 8.5%. In 1991/92 the value of non-oil exports nearly doubled to $2,500m. Earnings from carpet

exports totalled $1,000m., with most of the balance provided by pistachios, caviare and other traditional items. In the budget for the Iranian year beginning 21 March 1992 the Government set a target of $4,248m. for the value of non-oil export revenues. The value of industrial exports was projected at $2,043m., that of carpets at $1,152m. and that of agricultural exports at $660m. Figures released in December 1992 for the first eight months of the Iranian year, showed that although the value of non-oil exports rose to $1,771m. during that period, it was well below the Government's target. Carpets accounted for 40.7% of earnings. According to official sources, the value of non-oil exports in 1993/94 rose to $3,500m. Carpets and handicrafts accounted for 39% of the value of non-oil exports, industrial products for 26%, farm products for 24% and minerals and other goods for 11%. Oil revenues fell sharply in 1993 due to low oil prices and in the year 1993/94 it was estimated that they would not exceed $12,000m. Oil revenues for 1994/95 were projected at only $10,150m., but in October 1994 the Minister of Oil announced that revenues had exceeded the official budget projections by 20% and that this trend would continue until the end of the year. Observers predicted total revenues in 1994/95 of $12,000m.–$14,000m. In May 1995 the Majlis approved the 1995/96 budget, which estimated oil revenues at $13,500m., based on a crude oil price of $15 a barrel. In June 1995 the Minister of Oil forecast oil revenues of $16,000m. in 1995/96 on the basis of higher oil prices. In April 1996 the Minister of Oil confirmed that oil revenues in 1995/96 were almost $16,000m., $1,600m. above the budgeted figure. The 1996/97 budget forecast oil revenues of just under $16,000m., based on a crude oil price of $15.5 per barrel. However, in April 1996 the Minister of Oil reported that to date oil revenues were above the targeted level owing to high oil prices. Iranian heavy crude export grade was priced at slightly more than $20 per barrel in early April. Despite the enactment of US legislation in August 1996 which would penalize non-US firms investing in Iran's oil and gas industry, independent analysts argued that the country's oil export capacity was unlikely to be affected (see above). Non-oil exports earned $4,825m. in 1994/95, but their value fell sharply, to $3,200m., in 1995/96 after strict foreign exchange restrictions were imposed in May 1995, requiring exporters to repatriate all their earnings at the official exchange rate of $1 = IR3,000 (see Finance). However, a senior official of the central bank claimed that exporters had tended to under-report their earnings since the introduction of the new restrictions and argued that the main reason why earnings had fallen was the Government's ban on exports of manufactured goods, such as steel and petrochemicals, and of certain agricultural products in short supply. The ban on industrial exports may have cost the Government $500m. in foreign exchange earnings, but it was claimed that the restrictions had helped to control inflation. As a result of higher oil prices, the value of Iranian exports during the first six months of 1996/97 rose to $10,700m., compared with $9,500m. during the equivalent period for 1995/96. Oil and gas revenues rose from $7,700m. in the first half of 1995/96 to $9,300m. in the first half of 1996/97, suggesting that oil and gas exports for the whole of 1996/97 would total some $18,500m. In contrast, non-oil exports for 1996/97 decreased to about $2,800m., owing mainly to government-imposed currency restrictions. The value of Iranian exports was $18,500m. in 1997/98 ($15,464m. from oil and gas, and $3,042m. from non-oil sources), but that figure was predicted by the Bank Markazi to fall to $13,300m. in 1998/99, owing to low oil revenues. It was later reported that non-oil exports earned about $3,000m., down 2% from the previous year. Industrial exports were worth $1,600m., agricultural goods $750m., and carpets and handicrafts $700m.

After the Revolution, the Government declared that it would pursue an increase in trade with Islamic and developing countries. New trading patterns have emerged, but Iran remains heavily dependent on the advanced industrial economies.

Iran's imports in 1980/81 were valued at IR776,841m. ($10,844m.), an increase of 13.5% over the 1979/80 level, despite the imposition of sanctions by the USA, the EC and Japan, and the outbreak of war with Iraq in September 1980. This compares with a total of $14,100m. in 1978/79, the year immediately before the Revolution began to affect trade levels. Despite efforts to reduce the import bill, the value of imports rose from $11,845m. in 1982/83 to $24,200m. in 1983/84. With the tightening of import controls, the value of imports declined to $17,500m. in 1984/85 and to an estimated $15,000m. in 1985/86. Further controls, introduced in 1987, permitted the import of basic commodities only. As a result, the value of imports was reported to have fallen to $10,000m. in 1986/87. However, it rose in 1987/88 to $12,760m., considerably more than the budgeted maximum of $9,000m.

Following the seizure of the US hostages and the almost complete embargo on US sales to Iran, the value of imports from the USA plunged dramatically in 1980/81, falling to almost nothing, compared with $2,200m. in 1977/78. As a result of the suspension of US imports and the imposition of sanctions by the EC and Japan, Iran began to find new sources of supply in the Third World and among non-aligned countries in Western Europe. There was also a considerable increase in imports from East European countries such as the USSR, Romania and Bulgaria. A protocol which envisaged the development of economic relations between Iran and the USSR was signed in Moscow in September 1985. Under an economic co-operation agreement signed in October 1987, Iran was to supply 5m. tons of crude oil to the USSR annually, 2m. tons of which were to be returned as refined products. Major imports were foodstuffs, equipment and raw materials for industry, power transmission and generating equipment, and purchases of armaments and refined oil products.

During 1981/82 the USA re-emerged as a significant trading partner. The value of direct US sales rose to $300m. in 1981, making the USA the eighth highest OECD exporter to Iran in that year. However, the value of US exports to Iran in 1986 fell to $34m., compared with US purchases of Iranian goods worth $600m. In 1987 the USA became the largest purchaser of Iranian oil (with the value of exports reaching $1,592m., 14.6% of the total value of Iranian exports), closely followed by Japan (with exports worth $1,426m., 13% of market share). In October 1987 the USA placed a ban on all imports of Iranian goods, and in November imposed tighter restrictions on US exports to Iran. It had earlier been revealed that, in July, Iran had become the second largest supplier of petroleum to the USA, and that, by October, Iranian exports to the USA (valued at some $1,000m.) were already at a higher level than in any year since the Islamic Revolution, except 1983. These measures were taken by the USA as a 'direct result' of Iranian policy in the Iran–Iraq War. In support of the US measures, Japanese companies agreed not to increase their purchases of Iranian oil during the first quarter of 1988.

The sanctions that the EC imposed in 1989, as a result of the Rushdie affair (see History), were repealed in October 1990, and in early November the USA eased its three-year ban on imports of Iranian oil. The increase in oil revenues that followed Iraq's invasion of Kuwait in August 1990 precipitated a sharp rise in imports, the value of which was reported to have exceeded $20,000m. in 1990. Exports by Iran's leading suppliers increased by 50% during 1991 compared to 1990, with Germany, Italy and the USA registering the biggest increases. Germany, which remains Iran's major supplier, increased its share of the market in 1991, with the value of its exports totalling $4,000m., an increase of some 60%. Japan, the second biggest supplier, reported exports worth more than $2,500m., an increase of some 56%. The value of Italian exports increased by 64% to $1,800m. That of US sales rose from a mere $166m. in 1990 to $546m. in 1991. The value of imports and import commitments in the Iranian year ending 20 March 1991 was almost at a record high of $22,000m. Despite the Government's stated intention to set a ceiling of about $16,000m. on the value of imports in the year beginning 21 March 1991, according to the Bank Markazi, the value of imports in the Iranian year ending 20 March 1992 rose dramatically, to $28,000m. According to the Iranian Customs Office, the value of imports in the year to the end of March 1993 fell to $17,000m. though it was reported that there was still a glut of foreign products on the market, such as textiles and rice. The Bank Markazi, however, which uses a different method in its calculations, recorded the value of imports at the higher level of $23,300m. In 1993/94, as oil revenues declined sharply and Iran experienced problems servicing its external debt, the value of imports fell to $19,287m. and it was predicted that Iran would have to keep its imports at around this level for another two years in order to clear payment arrears. Early in 1994 the

Majlis voted to reduce hard currency spending on essential imports during the year beginning March 1994 and in May 1994 an advisor to the Bank Markazi stated that imports during 1994/95 would be kept at the same level as the previous year. He stated that this was necessary in order to release extra funds to repay foreign debts at a time when oil revenues were low. Imports from Iran's leading suppliers declined by about one-half in 1993. Sales by Japan experienced the greatest fall, their value falling by more than 50% to about $1,500m. The value of Iran's exports to Japan declined by 18% to $2,500m. Germany reported that the value of its exports fell by slightly less than 50% in the first 10 months of 1993 to $2,000m. The value of Iran's exports to Germany, however, rose by more than 20% to about $1,000m. The value of Italian exports to Iran declined by 20% during the first nine months of 1993 to $960m., but that of Italian imports from Iran remained at about the same level of $1,000m. The value of the United Kingdom's exports to Iran fell by only 12% to $742m., while that of its imports from Iran doubled to $365m. France was the only major supplier to record an increase in the value of its exports to Iran, which totalled $725m., an increase of 4.5%. Iranian exports to France rose by 41% in value, to $1,430m. The value of US exports to Iran fell by 18% to $616m. and that of its imports from Iran was only $200,000.

Imports were reduced severely in 1994. Germany, for example, Iran's main supplier, reported exports worth $1,600m. to Iran in 1994, down by more than one-third compared with 1993. The value of German imports from Iran fell by 2%, to $600m. during the first three-quarters of 1994. Japan, then Iran's second largest supplier, reported a 41% fall in the value of exports to Iran, to $1,000m., in 1994, with that of imports from Iran falling by 5% to $1,980m. during the first three-quarters of the year. The United Kingdom recorded a decline of nearly 42% (to $443m.) in the value of its exports to Iran in 1994, while that of imports fell by almost 46%, to $203m. Direct US exports to Iran in 1994 fell by 47%, to $329m., while the value of imports from Iran was less than $1m. However, US commodities worth an estimated $500m.–$1,000m. are believed to have reached Iran via third countries such as the UAE. The value of Italian exports was sustained at $1,160m. in January–November 1994, suggesting that the total for the whole year would be around the 1993 level of $1,250m. The value of exports from Iran to Italy, however, was down by more than 40% to $675m. France was the only leading supplier to increase the value of its exports to Iran in 1994. This rose by 8.5% to $816m., with industrial products and capital equipment marking the biggest gains. There was a decline in French exports of semi-finished goods, consumer goods and foodstuffs. The value of exports from Iran to France fell by nearly 30%, to $1,030m. French purchases of Iranian oil and foodstuffs declined, but imports of industrial and consumer goods increased. During the first three-quarters of 1994 Iran's six leading suppliers—Germany, Japan, Italy, France, the United Kingdom and the USA—exported goods with a total value of $3,300m., while their imports from Iran, mainly oil, were valued at $4,000m, the first time a trade surplus in Iran's favour had been recorded. Iran registered a trade surplus of nearly $2,000m. with the EU member states in 1994. US President Clinton imposed a near total trade embargo on Iran in early May 1995, and by early June most US oil companies and exporters had terminated their business links with Iran. The trade embargo mainly affected US oil companies, which in recent years have purchased an estimated $3,500m.-worth of Iranian crude for sale to non-US clients. Observers predicted that indirect exports to Iran, especially through ports such as Dubai in the UAE, would continue at a substantial level. Since early 1994 the Government has sharply reduced imports, imposing strict controls on purchases of non-essential goods. The value of imports in 1994 was $12,700m. Most of Iran's leading suppliers reported an average fall in the value of exports of nearly one-third in 1995, and it was estimated that the value of imports in 1995 might not exceed the figure for 1994. The value of Italian exports to Iran during the first three-quarters of 1995 showed the biggest decline, falling by 38% to $358m. However, the value of Italian imports from Iran increased by 55% to $1,180m. France reported that the value of its exports to Iran in 1995 fell by 37%, to $570m., while that of its imports from Iran rose by some 20% to $1,388m. The value of Japanese exports to Iran in 1995 fell by 35% to $628m., the lowest figure on record. The value of Japan's imports from Iran fell slightly, by about 6%, to $2,678m. The value of imports from Dubai, which had reached $1,139m. in 1994, fell to $880m. in 1995 owing to restrictions imposed on allocations of foreign exchange and a crackdown on smuggling. The value of Iranian exports to Dubai during the first half of 1995 was $118m. Germany, which remains Iran's biggest supplier, reported that the value of its exports to Iran fell by only 9% in 1995, to $1,658m., while the value of exports from Iran to Germany fell by nearly 13%, to $822m. The United Kingdom was the only leading supplier to record an increase in the value of its exports to Iran during 1995. This rose by 15%, to $520m., while Iranian imports from the United Kingdom fell by 5%, to $196m. Following the imposition of trade sanctions in June 1995, the value of US exports to Iran remained at the mid-year figure of $223m. In April 1996 the Bank Markazi stated that the Government had allocated $19,000m. to finance imports of basic goods and machinery and to service debts in 1996, indicating an easing of the reduction on imports. A trade surplus of $6,818m. was recorded in 1994/95 (after deficits in the two previous years) on the strength of exports valued at $19,435m. (of which $14,604m. was from oil and gas) and imports down to $12,617m. In 1995/96 the surplus was somewhat lower at $5,586m., from exports of $18,360m. ($15,103m. from oil and gas) and imports of $12,774m. In 1996/97 the surplus recovered to a record $7,402m. from exports of $22,391m. ($19,271m. from oil and gas) and imports of $14,989m. In 1997/98 a reduced trade surplus, of $3,511m., was recorded as a result of exports valued at $18,506m. ($15,464m. from oil and gas) and imports of $14,995m. Imports were projected by the Bank Markazi to fall to $14,000m. in 1998/99, leading to a trade deficit of $700m., given the fall in exports to $13,300m. In 1995/96 Japan remained substantially Iran's largest customer, taking 15.1% of exports by value, followed by Italy (8.6%), the United Kingdom (7.8%) and South Korea (6.0%). In the same year, Germany remained Iran's most important source of imports with 14.4% of the total, followed by Japan (7.2%), Belgium (5.4%), Argentina (4.4%), Italy (4.3%), Switzerland (4.1%) and the United Kingdom (4.1%). Japanese imports from Iran increased from $3,281m. in 1996 to $3,556m. in 1997, while the value of exports rose from $715.8m. to $884.5m. over the period. However, Italy replaced Japan as Iran's second largest supplier in 1998, exporting goods and services worth $945m. German imports from Iran fell sharply to DM 379.6m. in 1998 from DM 613m. in 1997. Exports were worth DM 1,520m. in 1997, falling to DM 1,207m. in 1998.

Increased trade led to the revival, in October 1984, of the Regional Co-operation for Development pact with Pakistan and Turkey, which had been inaugurated at the instigation of the late Shah in 1964. Under a new name, the Economic Co-operation Organization (ECO), the pact was ratified in January 1985. In February 1992 the ECO was expanded to include five Muslim republics of the former USSR: Azerbaijan, Turkmenistan, Uzbekistan, Tajikistan and Kyrgyzstan, all of which need new communication links with the outside world, access to new markets and sources of investment and expertise. A 10% cut in trade tariffs was agreed and it was planned eventually to remove all tariff and non-tariff barriers. At a summit in Teheran on 16–17 February 1992, the importance of developing transport and communications links and co-operation in the fields of energy, industry and agriculture within the ECO was stressed. Talks got under way for new rail links and ambitious gas and oil pipeline projects. In April 1992 the ECO announced the establishment of a new trade and development bank, jointly owned by Iran, Turkey and Pakistan, with capital of $320m. Under the auspices of ECO, Iran has established strong trading links with the Central Asian states. By 1996 Iran had become Azerbaijan's major trading partner and early in 1997 an oil-swap agreement with Kazakhstan was inaugurated (see above).

In December 1995 Iran signed a trade agreement with Kuwait, replacing an agreement which had been concluded in 1968. The annual value of trade between the two countries is believed to be around $100m. and consists mainly of imports from Iran. However, official figures released for Kuwait's exports to Iran probably do not include large amounts of refined oil products. In January 1996 Iran and five other Asian Clearing Union countries (India, Pakistan, Sri Lanka, Bangladesh and

Myanmar) agreed to settle their trade in dollars rather than local currencies, an arrangement that was predicted to lead to an increase in trade between them.

For several years following the Revolution, government policy concerning foreign trade favoured forms of trade other than cash payments. Straight barter—a direct exchange of goods for oil—was rare; much more common were the counter-trade triangle and the clearing account. During the early part of 1985, though, the Government urged foreign suppliers to take payment for goods in crude oil in order to maintain oil exports at a time of weak demand, and to conserve reserves of foreign exchange. The shift in policy caused argument within the establishment. The Ministry of Oil would have preferred to sell petroleum for cash, as it foresaw an improvement in the market. In the second half of April, partly owing to barter deals, oil exports reached a post-revolutionary peak of more than 2.3m. b/d and the practice of barter trading lost some of its appeal. From May, customers for bartered oil were required to refine it in their own countries and to supply it to their domestic markets alone. By 1991 existing barter arrangements, mainly with east European countries, were being progressively terminated, in favour of cash transactions.

After the Revolution, the new Government declared itself in favour of the nationalization of foreign trade, and progress was made towards its achievement. Nearly all foreign trade was channelled through government-controlled purchasing and distribution companies (PDCs), of which 13 were established during the 1980s for chemicals, electrical appliances, electronic and surgical instruments, food processing, a variety of light industrial products, machinery and spare parts, metals, plastics materials, textiles, tools and hardware, and wood and paper. Their main aim was to exercise strict controls over prices and import levels. In spite of the nationalization measures, the Government found it difficult, in practice, to exercise proper control over all aspects of imports and distribution. Consequently, by 1991 the PDCs were being progressively dissolved, and efforts were under way to simplify regulations and to eliminate bureaucratic obstacles to international trade. The PDCs were officially abolished in August 1991. Part of the responsibility for foreign trade lay with the Ministry of Commerce and part with the Bank Markazi, which exerted considerable control over foreign trade through constraints on letters of credit and the issue of regulations. However, in April 1995 President Rafsanjani confirmed that the Ministry of Commerce now had sole responsibility for trade policy.

In September 1981 the central bank suspended the issue of all letters of credit and imposed more stringent controls on the activities of the new import centres. In January 1982 the Government, faced with a poor rate of foreign exchange earnings from petroleum exports and a deteriorating foreign reserves position, announced that restrictions on imports, other than vital commodities, would remain in force. Foodstuffs, medicines, agricultural goods and industrial supplies were permitted but all other items were classified as luxury goods and excluded. A dramatic improvement in external accounts, as a result of the aggressive petroleum pricing policy, transformed a $2,000m.-trade deficit in 1981 into a $5,000m.-surplus in 1982. It was thought that import restrictions on certain goods might be lifted but controls were tightened towards the end of 1985/86 in response to the decline in oil revenues, and further controls were introduced in 1987, which permitted the import of only basic commodities. In spite of these efforts, estimates of the trade deficit varied from $1,500m. to $4,000m. In December 1988 the Government eased restrictions on private-sector imports of several pharmaceutical products and foodstuffs. In December 1991 it was announced that some import regulations would be simplified so that a number of goods, including electrical and electronic equipment, tools and construction items and other tools for industrial use, could be imported without a foreign exchange licence. In January 1991 some of the restrictions on foreign currency transactions were removed, as a result of which convertible currency could be legally exchanged by foreign visitors at the 'floating' free-market rate. Iran's non-oil exports were also expected to benefit from the ending of restrictions. After January 1991 the 12 exchange rates were reduced to three: the official rate of $1 = IR70 for food, defence and other strategic imports; the competitive rate of $1 = IR600 for imports of raw materials and spares; and the free floating rate of about $1 = IR1,350 for other imports and exports and for travellers. According to official sources, private importers were no longer required to obtain hard currency from government sources, or special permits for their imports, but instead simply paid 10% of the value of the goods to the Government as trading profit. In October 1991 the Governor of the Bank Markazi announced that the official exchange rate was being phased out and that only the competitive and free-floating rates would apply to all transactions until the final unification of the two exchange rates. On 13 April 1993 the central bank declared the rial fully convertible. The Governor of the Bank Markazi, Muhammad Hossain Adeli, announced that all those who needed foreign currency should refer to the banking system for their various needs. Importers of authorized goods and services could open letters of credit and buy foreign exchange without limitations from state banks. Some 32 bank branches in Teheran would sell up to $5,000 to anyone who asked, without requiring any documents. These measures were reversed in November 1993 when the Government imposed limits on hard currency sales by state banks in order to stabilize the rial and conserve foreign exchange. Under these new regulations state banks could only sell hard currency to importers, travellers, students and government personnel on missions abroad. Before their goods could be released from customs, importers had to prove that they had obtained hard currency from banks and not on the open market. Further restrictions on the availability of hard currency for imports were announced by Bank Markazi in February 1994 (see Finance).

In July 1993 Bank Markazi relaxed restrictions on imports of primary raw materials and spare parts and at the same time restrictions were tightened on cheap consumer imports through the country's free zones. These measures were designed to assist local industry, following complaints from industrialists. However, the Governor of the Bank urged industrialists to restrict their cash imports to the most urgent commodities and to use medium-term rather than short-term credit facilities. The new measures were welcomed by industrialists, but they also increased the demand for foreign exchange resulting in a fall in the rial's free-market value. In October 1993 it was reported that the Majlis had authorized the Government to increase customs tariffs to help protect local industry from cheap imports. The devaluation of the rial by 95% in March 1993 effectively cut import duties. The import tax on primary raw materials for industry, together with machinery and spare parts that could not be manufactured locally, was not to be raised. It was expected to take some months to prepare the necessary export-import legislation. In March 1994 the Government made the Ministry of Commerce responsible for the administration of export-import regulations. In October 1994 the Ministry of Commerce imposed restrictions on exports of raw materials in order to counteract shortages in supplies to domestic factories and shops. The new policy began with a temporary ban on food exports, but also affected a wide range of raw materials including petrochemicals and steel and was predicted to slow down the high rate of growth of non-oil export earnings. Under the new regulations the internal market must be saturated with a particular raw material before an export licence is issued for it. The restrictions were extended to cover the Iranian year beginning 21 March 1995. In May strict foreign exchange restrictions were imposed, requiring exporters to repatriate all their earnings at the official exchange rate of $1 = IR3,000 (see Finance). In June the Minister of Economy and Finance stated that the Government would probably decide to apply for membership of the General Agreement on Tariffs and Trade (GATT) as the country's imports and exports were becoming more balanced. In 1996 Iran applied to join the World Trade Organization but the application was blocked by the USA. There were also differences within the Iranian leadership over the application. President Rafsanjani and his supporters were keen to promote the liberalization of trade and therefore favoured membership, but they were opposed by conservative clergy and traditional merchants who feared that their control over the country's trade would be weakened.

Since the late 1980s Qeshm and Kish Islands in the Gulf have been developed as free-trade and industrial zones. Kish Island was designated a free zone before the Revolution. The

port of Chahbahar has also been designated a free zone and is being promoted as the gateway to the newly independent states of Central Asia. In addition there are three special trade zones for transit trade in Sirjan, Sarakhs and Bandar Enzeli. After a prolonged debate and amendments demanded by the Council of Constitutional Guardians, the legislation confirming the special status of the free zones was ratified in September 1993, but it was another year before basic regulations governing investment in the free zones was completed. The free zones are intended to act as centres of production, export and tourism attracting foreign investment and promoting non-oil exports. They are exempt from most restrictions in force on the mainland. All foreign investments in these zones are guaranteed, profits can be repatriated and disputes taken to international arbitration. Foreign ownership is allowed up to 100%. Foreign banks and foreign credit institutions are also allowed to set up branches in the free zones where the exchange rate will be determined by the free market. In 1993, however, there was criticism that the free zones were using their special status to import some $1,500m. of finished consumer products into Iran every year. In July 1993 business people and government agencies were banned from purchasing individual travellers' rights to bring in goods from the free zones to form large-scale commercial import operations. In November 1993 the amount of goods travellers can bring into Iran from the free zones was reduced from $700 to $200 from Kish and $80 from Qeshm. In December 1993 it was reported that President Rafsanjani had sacked the heads of the country's free zones and there was speculation that this action was taken because of their opposition to these new restrictions. According to the General Secretary of the High Council of Free-Trade Zones, Morteza Alviri, in a statement at the beginning of 1995, Qeshm had attracted most attention from potential investors because it offers discounted natural gas to energy-intensive industries. Negotiations were under way with the Ministry of Oil so that the free zone could offer gas at prices competitive with other Gulf free zones. In early February 1995 the High Council approved a proposal by the Daewoo Corpn of South Korea to build a petrochemical plant on Qeshm, and Sun-Lin of Singapore signed a memorandum of understanding for a 180,000 b/d oil refinery there. Kobe Steel of Japan was negotiating to set up a hot-briquetted iron plant, and INDCONS of India proposed building a $350m.-fertilizer plant to produce urea and ammonia. Alviri admitted that infrastructure was still inadequate at Qeshm, but stated that an international airport would be opened later in 1995. In March 1996 the head of the Qeshm Free Zone Authority reported that the free zone had attracted $4,000m. from 541 investors and that many projects had been carried out, including the construction of a ferro-manganese plant and an aluminium smelter. The island's population was reported to have increased by 40%, to 75,000, in recent years and was expected to exceed 400,000 within 10 years. The aluminium smelter on Qeshm is a joint venture between Prime International, a UK-registered Iranian company, and the Qeshm Free Zone Authority. A 33,000-ton-a-year potline has been purchased from ZSNP of Slovakia. Production at the $30m.-plant, known as Qeshm Alum, was scheduled to begin in early 1997. Most of the raw materials will come from domestic sources, but production will be mainly for export. There are plans to expand the smelter's capacity to 150,000 tons a year, with a possible further expansion to 200,000 tons a year. Qeshm Alum is Iran's first privately-owned aluminium smelter. There is a state-owned smelter at Arak, which produces some 120,000 tons a year, and another, with a capacity of 110,000 tons a year, near Bandar Abbas which was due to start production from 1997 (see above). In April 1996 the Majlis approved legislation to relax foreign exchange rules in the free-trade zones. Under the new rules, exchange dealings are allowed at a free market rate and branches of foreign banks in the zone are placed under international regulations. The new legislation also permitted the free transfer of hard currency from the free trade zones abroad and into Iran. Transfers into the zones from the rest of the country remain strictly controlled by the state. Later in the year the Majlis amended the legislation at the insistence of the Council of Guardians so that the established IR3,000 = $1 export rate would apply to the free zones. Proposed legislation (initiated in October 1998) that would allow private banks to set up operations in Iran's free zones and for foreign firms to hold majority stakes (rather than the 49% ceiling) in companies in these areas has been approved by the Majlis but, as of June 1999, was awaiting endorsement by Iran's Expediency Council (which arbitrates between the Majlis and Council of Constitutional Guardians).

The threat of a US naval embargo in the Gulf at the time of the hostage crisis in 1980 focused attention on land supply lines through the USSR and Turkey and air routes from Pakistan. A protocol with the USSR, including arrangements for land supply lines across the border, was approved by the Islamic Revolutionary Council in May 1980. However, after the Revolution, there was little investment in the transport and communication sector, and in many areas the low level of maintenance of roads and railways led to the reduction in the efficiency of existing routes. Conflicts of interest over resource allocation affected the planning of new roads, and there was pressure to give priority to improving transport in rural areas. Ministry officials criticized the annual allocation of $150m. for road construction as inadequate. They argued that two-thirds of the $30,000m. spent on transporting goods within the country is wasted because of inadequate transport facilities and poor co-ordination. This situation appeared to be changing, however, and in 1990 the Ministry of Roads and Transport announced that expenditure on the transport system during the 1990–1994 Development Plan's term would total some $16,000m., including $4,300m. in convertible currency. In August 1993 it was reported that the Government planned to denationalize a wide range of transport activities and that a detailed plan would be completed by the Ministry of Roads and Transport early in 1994. The involvement of the private sector in the country's transportation system has been encouraged by the Government since 1991 and a number of projects have already been offered to the private sector. These include the new Teheran international airport, the motorway from Teheran to the Caspian Sea and a railway line from Mashad to Bafq. The Supreme Administrative Council wants to reduce state expenditure on transport in the future by involving the private and co-operative sectors in developing and maintaining all parts of the transport network. In December 1992 the Ministry of Roads and Transport stated that more than 1,400 km of roads had been repaired since March and that another 11,000 km were under construction. In November 1993 it was reported that the Ministry of Roads and Transport had approved the $800m.-motorway from Teheran to Chalus on the Caspian Sea and that the private sector had been invited to participate in its construction.

The State Railways Organization is extending and upgrading the country's 6,000-km rail network with the assistance of several international firms. The major improvement since the Revolution has been the opening of the final section of electrified track on the 146-km link between Tabriz and Djulfa, used to bring imports from the former USSR. Priority was given to completing a 730-km line connecting Bandar Abbas to Bafq and the national network, and to constructing a 560-km line from Kerman to Zahedan, providing a link with Pakistan. In August 1992 Iran and Pakistan agreed to establish a joint venture to lay track between Bafq and Bandar Abbas. In September 1992 Pakistan Railways engineers were due to visit Teheran in order to discuss the rehabilitation of the 540-km Kerman–Zahedan and the 500-km Kerman–Bandar Abbas lines. The 112-km line from Bandar Khomeini to Ahwaz was to be double-tracked, in order to reduce congestion at the port, and long-term projects included double-tracking the line from Teheran to Ahwaz and the construction of new lines. The first phase of construction of a 175-km line from Mashad to Sarakhs by the Engineering Corps of the Islamic Revolutionary Guards Corps began in May 1992. Since the disintegration of the USSR the line now forms part of a plan to link the rail systems of the newly independent Central Asian republics to the Iranian national network and the Gulf, thus establishing Iran as the gateway to Central Asia. In March 1995 President Rafsanjani opened the 730-km Bafq–Bandar Abbas railway at a ceremony attended by the Presidents of Turkmenistan, Kyrgyzstan, Armenia and Afghanistan. The new rail link, which cost nearly $900m. and took 13 years to build, links Iran's main port, Bandar Abbas, with the national network, which in turn connects with the Turkish railway system. In the north west, the national network runs to the Azerbaijan border and in the north east local contractors

are completing a 140-km link to the Turkmen border at Sarakhs. At the opening ceremony President Rafsanjani stated that the new rail link was important for the newly-independent states of Central Asia and the Caucasus, providing them with the option of another link to the world, removing the monopoly of only one route. He invited Arab Gulf states to use the line for access to areas north of Iran. In April 1995 it was reported that the Indian Railway Construction Co (Ircon) might participate in building a 780-km rail link between Mashad and Bafq. The scheme would cost $400m. and would provide direct access from Bandar Abbas to the Turkmen border at Sarakhs. Ircon was asked to submit offers for track and signalling work for sections of the Kerman–Zahedan railway link and was awarded a $25m.-contract to install signalling equipment on the Ahvaz–Bandar Khomeini line. The 110-km line from Ahwaz to Khorramshahr reopened in July 1989. Under the first Five-Year Development Plan $6,800m. was allocated to the State Railways Organization. It was aimed to increase annual transport capacity to 10m. passengers and 25m. tons of freight. About 1,000 km of new track were to be completed by 1995 and 1,750 km of existing track were to be renovated during the same period. In February 1994 the deputy director of the State Railways Organization stated that the railways carried 9m. passengers a year and 19m. tons of freight. During preliminary discussions about the second Five-Year Plan the Minister of Roads and Transport stated that the allocation to railways should be doubled to $17,700m. It was reported in May 1999 that European railway equipment manufacturers were trying to organize $500m. of finance for construction of a high-speed railway line between Qom and Isfahan. The 250-km line is part of the 400-km Teheran-Isfahan scheme started some years ago and completed up to Qom. An underground railway project for Teheran began in the late 1970s, but work stopped for some 10 years after the Revolution. Construction began again in the late 1980s, but negotiations with foreign suppliers were not completed because of financing problems. Only a few contracts were awarded, including a $52m.-deal for a maintenance workshop with HMT International of India. However, in May 1995 the Teheran Urban and Suburban Railway Co signed the last of three contracts with Chinese companies to supply equipment for two underground railway lines, including rolling stock, locomotives, and signalling equipment, and for a rapid transit line west of the capital. Together the contracts are worth $573m. Some 80% of the civil engineering work on the two underground lines had already been completed. One 32-km line will link north and south Teheran, and a second 20-km line will run east-west across the city. The original plan envisaged five lines, but officials indicated that a decision on the remaining three lines would only be taken if the first phase of the project proved successful. The third contract is for a 43-km electrified railway from Teheran to the western suburb of Karaj. There was some criticism that Chinese companies had been awarded the work. According to some experts, the People's Republic of China is inexperienced in such projects and has awarded its own underground railway schemes to European companies. Financial reasons appear to have determined the choice of Chinese companies as Teheran encountered financial difficulties in its discussions with European contractors. In March 1996 it was reported that the Teheran Urban and Suburban Railway Co had arranged for two letters of credit, worth $230m., to be opened in favour of the Chinese companies providing equipment for the Teheran underground railway system, with a third, worth $4,270m., to be opened in the Iranian year beginning 21 March 1996. The three Chinese companies involved in the project are China North Industries Corpn, China National Technology Import and Export and China International Trust and Investment Corp. The first underground line was due to start operating in February 1997. It was reported in December 1998 that China had started shipping underground railway trains ordered by Iran, under a $138m. contract to supply 217 trains by early 2001. In May 1996 a 300-km railway line was opened linking the Iranian national network with that of the former Soviet Union and allowing Turkmenistan access to Iran's Gulf ports. As part of an accord signed in February 1996, France is to assist in the construction of an express rail link between Teheran and Isfahan.

In the ports sector a decision was taken in September 1981 to complete work on a major extension of Bandar Abbas, a project designed before the Revolution but scaled down after the fall of the Shah. Because of war damage at the traditional seaports of Bandar Khomeini and Khorramshahr, Iran became heavily dependent on Bandar Abbas for its sea-borne imports. A new port, Bandar Shahid Rajai, was inaugurated in 1983, handling 9m. tons of the total of 12m. tons of cargo passing through Iran's Persian Gulf ports every year. Work on the port development at Bandar Abbas began in February 1985. However, only two of the original three phases of the project have been completed. There are plans to build a new jetty at the port for mineral exports, at a cost of $770m. The jetty will have a handling capacity of 10m. tons per year. Two new ports at Chah Bahar (the first called Shahid Beheshti, costing $37m.) were opened in February 1984 and September 1988, respectively, while Bushehr port is being expanded. The Ganaveh oil export port, with an export capacity of 2m. b/d, was opened in August 1988. Before the cease-fire in the Iran–Iraq War was announced, in preparation for a possible international economic embargo and closure of the Gulf to shipping, Iran made arrangements to use ports and oil refineries in neighbouring countries. Agreements were signed with Pakistan, Turkey and the USSR. Pakistan agreed in October 1987 to permit Iran's use of Karachi and Qasim ports to import up to 2m. tons of goods. In August 1992 it was announced that the port of Khorramshahr, destroyed in the Iran–Iraq War, had been reopened to freight traffic. In November 1994 it was reported that four new jetties were to be built at Bandar Anzali port on the Caspian Sea as part of a $2.2m.-expansion project. The tonnage of goods handled by the port increased by almost one-third in 1994 compared with the previous year. In January 1996 it was reported that Iran was building a harbour on the disputed Gulf island of Abu Musa and that the first of two port jetties would be operational in March.

One of Iran's major transport projects is the construction of the Imam Khomeini international airport south-west of Teheran. When the first phase was completed in 1997 the airport was reportedly capable of handling 12m. passengers a year, and it will eventually have a capacity of 30m. passengers a year. It was hoped that the new airport would replace Mehrabad Airport for all international flights and would be linked to Teheran by a special underground railway system. In July 1992 it was announced that some $800m. in foreign credits had been allocated towards the cost of completing Imam Khomeini International Airport, and another $350m. to other airports. Some IR30,000m. was spent on airport modernization during 1991/92. Abadan airport reopened in 1991 and started handling international traffic in January 1994. The Civil Aviation Organization announced in early 1995 that 56 airports would be built under the second Five-Year Plan and another 43 airport projects undertaken in subsequent years. In December 1995 Aéroport de Paris won the design contract for the terminal at Imam Khomeini international airport, and in February 1996 an agreement was signed under the terms of which France would assist in establishing repair facilities and other services at the new international airport. In March 1996 it was reported that in order to improve the country's air transport the Supreme Economic Council had allocated $164m. for 10 radar units, $17m. for compass units and additional sums for new equipment for the control towers of Teheran and Shiraz airports and to pay for the leasing of 10 passenger aircraft. In recent years the national carrier, Iran Air, which uses Boeing and Airbus aircraft, has experienced problems obtaining more aircraft from the USA and Europe owing to economic sanctions. Although Iran took delivery of two Airbus passenger jets in 1994/95, restrictions on further purchases from the West prompted it to charter Russian aircraft to meet the shortfall in capacity. Iran also entered into a joint venture with the Ukrainian aircraft manufacturer Antonov for the construction at Isfahan of up to 10 An-140 passenger jets per year, with production scheduled to begin in 1999. It was announced in May 1999 that Iran Air (with a current fleet of 32 aircraft) had received government approval to buy four Airbus aircraft. This would raise the airline's Airbus fleet to 11, suggesting that the Iranian aviation industry is planning a long-term shift away from reliance on US to European suppliers. According to IATA figures Iran Air

carried 907,000 international and 6,238,000 domestic passengers in 1997.

FINANCE

The first post-revolutionary budget, for the Iranian year 1979/80, was set at $34,000m., a little more than one-half of the target that was set during the previous year by the Shah's regime. The following year's budget (1980/81) was set at $40,000m., including provisions for a deficit of $6,500m. In fact, the deficit amounted to almost $12,000m., mainly because of the fall in the Government's petroleum revenues from an estimated $23,000m. to $11,900m. For 1981/82 the budget was set at $44,000m. and it was forecast that there would be no deficit, the entire expenditure plan being financed through petroleum revenues and taxes, and petroleum production being boosted to the point where sufficient revenue was earned. However, the Governor of the Bank Markazi criticized the use of non-replenishable resources to finance excessive current expenditures, as a matter of principle, and also stressed that, with the world glut of oil, it would be practically impossible to raise enough money from petroleum. Many members of the Majlis also attacked the budget strongly. In July 1981 the Majlis reduced total allocations to $37,000m. Some $2,500m. was subtracted from defence expenditure, and $3,100m. from the Development Plan. An overall reduction of 5% in expenditure by government departments was also demanded. Even so, a deficit of $8,500m. was forecast.

For the year March 1982 to March 1983 the Government presented a budget of $39,050m. for approval by the Majlis. Revenues were estimated at $31,902m., leaving a deficit of $7,150m. Priority for expenditure was given to the reconstruction of war-damaged areas in the south, and great emphasis was placed on restoring the existing agricultural and industrial base in order to create employment, to reduce dependency on petroleum and to limit imports. A supplementary budget of $4,856m. was approved on 13 October 1982, the principal increases being allocated to the war effort and reconstruction projects ($1,820m.), current government expenditure ($1,200m.), and the remainder mostly to power, road and port construction, government building and other infrastructural projects.

According to the then Prime Minister, Hossein Moussavi, some 30% of the 1983/84 budget, totalling an estimated IR3,600,000m. ($42,400m.), was spent on the war effort. A budget of $48,300m. for the fiscal year beginning in March 1984 was presented to the Majlis. Budgeted expenditure was about 14% higher than in 1983/84, and allowed for a deficit of $3,600m. The Prime Minister stated that government revenues were projected at $44,600m., of which more than one-half ($23,400m.) would come from sales of petroleum. The war effort was given a direct budget of $4,000m., but war-related allocations accounted for some 31% of total budgeted expenditure. Planned current expenditure by the Government accounted for $30,000m. of the total. Education was the largest single item of expenditure. Development expenditure was set at $15,200m. The Ministry of Construction Jihad was allocated more than $2,500m. However, before it was approved by the Majlis, which traditionally considers government spending to be excessive and inflationary, proposed expenditure had to be reduced by 15%.

A budget of $42,000m. for the year 1985/86 was presented to the Majlis. It envisaged a 25% reduction in the deficit, compared with the level ($10,000m.) projected for 1984/85. Of total projected expenditure, 30.6% was devoted to the war effort and war-related costs, with education receiving the second largest sectoral allocation. The Plan and Budget Committee of the Majlis cut the budget to $38,300m., almost the entire reduction being made in current expenditure, to bring it in line with the expected decline in revenue from oil sales. The Majlis approved the revised budget at the end of February 1985.

The budget for 1986/87 was presented to the Majlis in December 1985. With total expenditure set at IR4,049,700m. ($50,600m.), it provided for an increase of 12.5% in defence spending, while allocations to all other sectors were set at lower levels than in 1985/86. In a debate in February 1986 the Government was criticized for not taking full account of the rapid decline in oil prices, and for overestimating oil revenues in its preparation of the budget. An additional problem was the accumulated deficit on foreign exchange receipts and payments from 1985/86, when oil revenues, budgeted at $19,700m., actually amounted to only $13,000m.–$15,000m. Contrary to expectations, however, in March 1986 the Majlis increased planned expenditure under the 1986/87 budget to IR4,249,700m. ($53,100m.). Projected oil revenues were revised downwards to IR1,500,000m. ($18,600m.), but even this proved to be an appreciable overestimate, with actual revenue failing to reach one-half of that figure.

In March 1987 the Majlis approved a budget of IR4,000,000m. ($55,555m.) for 1987/88 (an increase of 15% compared with 1986/87), of which IR3,000,000m. ($41,670m.) were allocated to current expenditure and IR704,700m. ($9,788m.) to development. The rise in current expenditure reflected the demands of the war effort and was at the expense of domestic development. War-related expenditure was budgeted to absorb IR700,000m. ($9,722m.), or 24% of current expenditure. The Government had originally allocated IR430,000m. ($5,972m.) to the war effort, but the Majlis Plan and Budget Committee increased the figure to IR660,000m. ($9,167m.), and a further IR118,000m. ($1,639m.) was allocated from the development budget. In the late 1980s actual expenditure on the war effort was much greater than forecast. For 1987/88 a budget deficit of some $13,820m. was predicted, mainly as a result of the low level of foreign exchange earnings, with oil revenues projected at only $11,740m. It was reported in early 1989 that the deficit had been as high as $18,200m. in 1987/88. Expenditure of $57,000m. for the year 1988/89 was approved in March 1988, and proposals for expenditure of $55,000m. in 1989/90 were presented to the Majlis in December 1988. After a long debate and much criticism of the Government for its lack of direction in economic affairs, the Assembly approved a budget of $70,000m., including $9,814m. in foreign exchange for export earnings. A detailed analysis of planned expenditure was not disclosed, but there appeared to be provision for a high level of domestic borrowing to finance a deficit of as much as $20,000m. Approval for foreign credit of as much as $2,500m. was given. Allocations for annual defence spending were not revealed, but it was reported informally in Teheran that they had been almost halved, from $10,000m. to $5,850m.

The budget for 1990/91, approved by the Majlis in March 1990, projected overall expenditure of $79,900m. and revenue of $57,300m., leaving a deficit of $22,600m. An additional $21,000m. was to be invested by state enterprises. Major projects were allocated $5,400m. in foreign credits. In July 1990 the Majlis authorized an amendment to the annual budget, whereby the allocations for disaster relief and post-war reconstruction were doubled; in addition, it approved a $300m.-emergency fund for provinces devastated by the earthquake of 21 June 1990; the cost of damage to the provinces of Gilan and Zanjan was believed to exceed $7,000m. In March 1991 the World Bank approved an emergency loan of $250m. for reconstruction projects to repair damage caused by the earthquake. A supplementary budget was introduced in November 1990 to cover the remaining five months of the year; the revised estimates assumed higher revenues than had previously been forecast. Total government revenue in the period March–September 1990 was reported to have amounted to $37,700m., and expenditure to $46,400m., leaving a deficit of $8,700m. Oil and gas revenues over the same period were estimated at $8,000m. With oil and gas revenues expected to rise (owing to increases in both prices and output), the 1991/92 budget forecast total government revenue of IR7,300,000m. and expenditure of IR8,640,000m. (an increase of 54% compared with 1990/91), leaving a deficit of IR1,340,000m. A further budget of IR11,440,000m. was agreed for state-owned companies, bringing overall planned expenditure in the general budget for 1991/92 to IR20,080,000m. The budget in convertible currency, set at $24,000m., was the highest ever introduced. On 30 January 1992 the Majlis approved the budget law for 1992/93 despite criticism by deputies of its inflationary aspects. The general budget remained at the level requested by the Government, IR28,800,000m., but within it, the Government budget was increased from around IR10,000,000m. to IR12,400,000m. Deficit financing remained unchanged at IR623,000m. The Majlis increased the proportion of revenues from taxation in order to reduce dependence on oil revenues. In addition it reduced the proportion of current

spending (i.e. that on education, health and social security) and increased that of development expenditure to one-third of the total. In October 1992 the Minister of Economy and Finance forecast that the budget deficit for 1992/93 would amount to $10,570m. The Government's budget proposals for 1993/94 finally received approval by the Majlis on 2 February 1993. The general budget was set at IR54,400,000m. and the Government's budget at IR25,400,000m. Efforts by the Majlis to reduce expenditure by 10% appeared to have been unsuccessful. The Government set aside $3,800m. at the existing official exchange rate of about $1 = IR70 in order to subsidize essential imports and prices. Subsidies included $1,200m. for oil product imports, the same amount for basic food items, $452m. for medicine and baby food, $80m. for Iranian students abroad and $850m. for defence. The Majlis authorized the NIOC to use up to $2,600m. in foreign finance in order to build and expand the Bandar Abbas oil refinery and its lubricants unit, and for five offshore oil fields in the Gulf.

The Majlis, concerned about low oil prices and debt repayment problems, secured cuts in both projected expenditure and revenue before the Government's budget for the year beginning March 1994 was approved. Projected revenue was reduced by 10% and expenditure by 7%–13% in various sectors. Revenue was projected at IR30,700,000m. ($17,700m.), including oil revenues of $10,150m. The overall budget was set at IR69,800,000m. ($36,900m.), of which government expenditure accounted for IR32,300,000m. ($18,500m.), with the balance to state banks and companies. Despite the reductions secured by the Majlis, the overall budget was still substantially higher than the level approved for the year 1993/94. The Government's proposal to reduce subsidies on fuel prices in order to raise revenues was rejected by the Majlis.

In December 1994 President Rafsanjani presented the draft budget for the year commencing 21 March 1995 to the Majlis. On the basis of higher oil revenues the President requested approval for spending of IR95,300,000m. ($54,500m.), 37% higher than the 1994/95 level. In March 1995 the Majlis approved a nominally balanced budget which was slightly higher than the draft proposal, at IR96,100,000m. ($54,900m.). However, it imposed new controls on the Government instead of granting its request to be allowed greater flexibility. Oil revenues for 1995/96 were projected at $13,500m., based on a crude oil price of $17 a barrel. Some IR2,180,000m. ($1,240m.) was allocated for defence, and $1,750m. for essential imports, including medicine and powdered milk for babies. A further $1,100m. in foreign exchange was allocated to the Ministry of Oil, but with the requirement that spending must be justified on a monthly basis. No new state firms could be established and existing ones were required to make their accounts available at the request of the Majlis. State enterprises were also forbidden to purchase goods abroad if equivalents were available locally.

In January 1996 the Majlis approved the budget for the year beginning 21 March 1996 after making only minor amendments. The budget proposed total expenditure of IR55,780,000m. ($31,870m.), of which $16,000m. was to be provided by oil revenues, based on an oil price of $15.5 per barrel. The contribution of earnings from oil to total revenue was forecast to fall by 9% compared with the year beginning 21 March 1995—one of the lowest contributions since the Revolution. The budget made no reference to non-oil exports, which declined sharply in 1995/96. Total expenditure was forecast at IR137,120,000m. ($78,370m. at the official exchange rate), about $400m. less than the original draft had requested. It was reported that about 60% of total expenditure would be allocated to subsidize loss-making state industries and banks. State subsidies for basic food items were increased by $212m. to $1,460m. in hard currency allocations. A further $388m. was allocated for subsidies for medicine and powdered milk. The Government was also required, under the new budget legislation, to reduce the country's debt by $1,640m. in 1996/97. The allocation to the Ministry of Defence was increased slightly, from $1,250m. to $1,260m., although it was reported that the total defence budget had been increased by almost one-third to $3,310m. The Majlis also approved a special fund of some $20m. to counter a proposal before the US Congress to establish a covert action fund to destabilize the Iranian Government. Iran had threatened to begin proceedings against the USA at the ICJ if the US Congress approved the proposal. In April 1996 the Government announced that it was committed to higher expenditure of hard currency in 1996/97 and that it had allocated $19,000m. to finance imports of basic goods and machinery and to service debts. Non-oil revenues were projected at a conservative $3,000m. Officials of the Bank Markazi insisted that higher targeted expenditure would not affect the country's ability to service its external debts.

In November 1996 President Rafsanjani presented the draft budget for the year beginning 21 March 1997 to the Majlis. He emphasized that his Government remained committed to strict controls over spending but would maintain its efforts to protect low-income groups. Overall budget expenditure was set at IR188,149,000m. which analysts believed to be about 10% higher, in real terms, than the level set in 1996/97. Some IR117,960,000m. was allocated for state-owned industries and IR81,287,000m. for the general government budget. IR29,100,000m. of the general government budget was allocated to development projects including the oil sector, water and electricity. Of the general budget revenue projected at IR75,909,000m., IR30,713,000m. was to come from oil revenues and IR18,727,000m. from taxation. Oil revenues were projected on the basis of an average export price for Iranian oil of $17.5 per barrel.

As tabled in late November 1997, the first version of the 1998/99 budget was based on the Government's assumption of an average oil price of $17.50 per barrel and provided for a balance between expenditure and income at IR233,700,000m. However, sharply falling world prices from late 1997 necessitated two successive revisions of the budget, the first in 1998 based on a $16 per barrel price assumption and the second in April on $12 per barrel. It was officially stated that the latest version was a 'temporary' budget that would be amended again if oil prices increased later in the year. However, a further decrease in the Gulf crude price to under $10 per barrel by mid-1998 again undermined the feasibility of the final 1998/99 budget.

In January 1999 the Majlis approved a $92,000m. budget for the year beginning 21 March 1999. About 60% of that amount was to support loss-making state industries and banks, with the balance of $36,670m. making up the Government's spending budget for the ministries. Deficit financing of about $6,000m. was predicted. Revenue from crude oil exports was projected at $10,600m. (based on a price of $11.80 per barrel). The budget projected increased tax revenue, and reduced energy subsidies resulting in price rises of up to 75% for some grades of petrol and other products.

Inflation has become a persistent problem for the economy. Import controls have tended to increase inflation in a situation of growing shortages and especially in view of a policy favouring wage increases for the lower paid without increases in productivity. The annual rate of inflation officially fell from 32.5% in 1980/81 to 17% in 1983/84, and in May 1985 the central bank reported that wholesale prices had risen by only 7.6% in 1984/85 (year to 20 March). IMF figures suggest that inflation for the year ended September 1984 was approximately 13%–14%. In October 1985 the Government continued to maintain that inflation was falling, and that the annual rate was a mere 5.5%. In the first half of 1987, when the annual rate of inflation was unofficially estimated at 30%–50%, the Government appeared tacitly to admit the seriousness of the problem by announcing that, henceforth, the prices of 22 basic commodities would be controlled in order to check inflation. In an interview in November 1991 the Governor of the Bank Markazi stated that inflation was running at 15%. Given the reconstruction and development programmes and the adjustment of a war-stricken economy that were taking place, he regarded the level of inflation as a matter of minor concern. According to the central bank, the rate of inflation rose to 22% in 1993/94 when the rial was devalued and oil prices fell sharply. A year of 'monetary discipline' was declared in 1994/95 and it was predicted that a tight monetary policy would reduce inflation to less than 20%. The Majlis was reported to have imposed a 15% ceiling on the growth of liquidity in 1994/95 in order to control inflation, while the rates charged by state banks on loans to various sectors were to remain unchanged. In October 1994 President Rafsanjani announced an anti-profiteering campaign after a surge in infla-

tion to about 40%. In its first phase price controls were applied to government-controlled goods, such as sugar, flour, primary dairy products, red meat, washing powder, domestically-produced paper and tyres, fodder, chemical fertilizers and ironware. There were temporary shortages as traders withheld goods, but the Government subsequently saturated the market with emergency imports sold through co-operatives and state stores in order to undermine the merchants. The Government also announced that in 1995 it was opening a chain of 1,000 publicly-owned stores selling goods at low prices, a move aimed at breaking the hold of the bazaar merchants. The campaign against inflation was reinforced in January 1995 when the list of goods subject to price controls was extended. Since the beginning of 1995 price controls have been applied to hundreds of items, including cars, household appliances, medicines, cigarettes, foodstuffs, construction materials and beverages. Some 1,000 centres were set up across the country in order to investigate public complaints and to prosecute offenders. There were official raids on some warehouses where merchants were hoarding goods. According to the central bank, the annual rate of inflation rose to a record 58.8% in April/May 1995 following a substantial decline in the value of the rial which forced the Government to fix the exchange rate at $1 = IR3,000 and to impose strict hard currency controls in May. Prices of many goods were reported to have fallen in the second half of June. At the beginning of 1996 the Ministry of Justice announced that some 280,000 rulings had been issued by the special courts to enforce state prices since they were established in October 1994; and that fines totalling IR32,000m. ($11m.) had been imposed. Potatoes were added to the list of goods subject to price controls after their price doubled at the end of 1995. The special courts were criticized in the media, however: it was claimed that they were not effective and that the anti-inflation measures had merely created a thriving black market. After rising to 49.4% in the 1995/96 Iranian year, the annual inflation rate was halved to 23.3% in 1996/97 and then further reduced to 17.3% in 1997/98. However, due to renewed inflationary pressures, the annual rate for 1998/99 was projected by the Bank Markazi to rise again to around 25%.

The state offers a wide range of subsidies on basic foodstuffs. In an interview in November 1991 the Minister of Economic Affairs and Finance stated that the Government would continue to subsidize essential goods, notably foodstuffs, such as bread, rice, cooking oil and sugar, and medicines, until 1994. Other subsidies would gradually be reduced. Figures produced by the Consumer and Producer Protection Organization indicated that prices of local goods were rising much faster than claimed by the central bank. Rising prices in the extensive 'black market' in goods are not taken into account in official price indices, while rents in the housing market have increased substantially in urban areas throughout the country. At the beginning of his second term of office in August 1993, President Rafsanjani warned the country to expect a gradual reduction of some state subsidies and the elimination of others, particularly those on fuel and electricity. He stated that subsidies were wasting public funds, distorting the economy and preventing the growth of a healthy private sector. Furthermore, he believed that the system of subsidies was unjust. The rich were the main beneficiaries because of their high level of consumption. The result was that the majority of Iranians were in effect subsidizing the living standards of the richest 10% of the population. Some subsidies had been removed during 1992/93, but a comprehensive programme to phase them out was incorporated into the draft second Five-Year Plan. These proposals met with strong opposition in the Majlis, largely because of the political risks involved. In February 1994 the Majlis rejected proposed price increases for petroleum products and domestic gas supplies. Nevertheless, the President renewed his attack on subsidies in April 1994, stating that energy subsidies alone cost the Government $11,000m. a year, which was more than projected oil revenues for 1994/95. He estimated that the total cost of subsidies was $15,000m. a year. He acknowledged that some subsidies were justified; these included the $360m. for agriculture, and $230m. for assistance to families of those killed in the Revolution and the Iran–Iraq War. However, he condemned bread and energy subsidies as unjust because the rich benefited most from them. In April some deputies proposed legislation to cancel all price rises announced since 21 March and to transfer price-setting powers from the Supreme Economic Council, which is headed by the President, to the Majlis. Since February 1994 the Supreme Economic Council had authorized increases in telephone charges, postal rates and domestic air fares, while there were also increases in inter-city bus and train fares. The motion was postponed indefinitely as other deputies supported the Government, but at the end of May Rafsanjani announced that the Government would act cautiously on subsidies and indicated that those on bread and fuel would not be removed during the next five years. However, in November 1994, under pressure from the Government, the Majlis approved the doubling of fuel prices from March 1995 and annual increases of 20% until the end of the decade. However, in April 1996 domestic fuel prices were increased by more than 20% (see Petroleum). In December 1995 the IMF had recommended that domestic fuel prices should be increased in stages to international levels by 2000. In April 1997 domestic fuel prices were again substantially increased, but again the overall impact was negligible because of the effect of inflation. In April 1998 the IMF estimated that the 'implicit subsidies' arising from the underpricing of domestic petroleum products were equivalent to nearly 10% of GDP, the largest share being attributed to gas-oil, the domestic price of which was about one-fourteenth of the prevailing world price. Hard currency allocations for state subsidies on basic food items were increased by $212m. to $1,460m. in the 1996/97 budget, but were reduced slightly to $1,420m. in the 1997/98 budget. Subsidies to cover the cost of medicines and other goods rose from $338m. in 1996/97 to a projected $500m. in 1997/98.

In June 1990, under pressure to reduce inflation, the Government enacted major reforms of the foreign exchange market and import-export regulations. Foreign currency dealings outside authorized money-changing houses became illegal and restrictions on importers and exporters were relaxed. A new rate for the rial against the US dollar was intended to encourage exports by giving industrialists access to hard currency for raw materials and machinery. In February 1993 the Minister of Economy and Finance announced that the Government would use a variety of financial instruments, including forward selling, to keep the rial stable after the planned currency devaluation on 21 March. Public sector demand for hard currency would be controlled in order to create a hard currency surplus to support the rial in the free market. The rial was declared fully convertible by the central bank on 13 April 1993. After devaluing the rial by more than 96% in April 1993, the central bank responded to downward market pressure by further devaluing its floating rate. The value of the rial fell to record lows from late 1993. After April 1994, when new restrictions were introduced requiring nearly all importers to use limited official supplies of hard currency earned from non-oil exports, the rial's value on the open market plunged dramatically. On 7 May 1994 the central bank introduced a new currency exchange rate, known as the import-against-export rate, which was applied to most imports. The rate announced on 7 May was $1=IR2,585, compared with a floating rate of $1=IR1,748. The central bank stated that the new rate would be IR50 below the open market rate which had fluctuated between IR2,500–IR2,800. The new rate effectively devalued the rial by 32%. A bank official stated that very limited funds had been allocated by the Government to some ministries for essential imports, such as machinery and medicine, but that most goods would have to be imported at the new rate.

Following his appointment as Governor of the Bank Markazi in September 1994, Mohsen Nourbakhsh stated that he would work to introduce a single foreign exchange rate and moved quickly to tighten supervision of hard currency transactions. At the beginning of October police arrested at least 30 money dealers operating in Teheran, but by January 1995 many were back in action using motorcycles to deliver foreign currency directly to their customers. By late January the free market value of the rial had fallen to an all-time low of $1 =IR4,000. However, the rial recovered somewhat when the central bank announced that it was easing some import restrictions so that exporters would be able to use half of their hard currency earnings to purchase goods from abroad; and increasing the supply of gold coins sought by investors. The Governor of the Bank Markazi informed the Majlis that the fall in the value of the rial was due to a lack of investment opportunities which

encouraged the public to engage in speculative activities. New export-import regulations became effective from 4 February 1995. Exporters were once again permitted to sell up to half of their hard currency earnings to importers, on condition that they repatriated the other half of their earnings from abroad. There had been speculation that much of Iran's hard currency earnings from non-oil exports in 1993/94 had been kept abroad. In April 1995, in a move aimed at encouraging exporters to repatriate their hard currency earnings, the central bank effectively devalued the rial by 43%. The export exchange rate was changed from $1 = IR2,340 to $1 = IR4,123 in late April. The official floating rate of $1 = IR1,750 continued to apply for essential imports. The value of the rial against the US dollar fell sharply in April and May, with the biggest losses occurring after President Clinton announced a trade embargo on Iran. The rial fell to $1 = IR6,300 in early May, losing about one-third of its value in only two weeks. President Rafsanjani blamed 'speculators and profiteers' for the sharp fall in the rial and threatened resolute action against them. There was further criticism of the central bank which was accused in the local press of having lost control over the foreign exchange market. On 17 May the Government revalued the rial and imposed strict foreign exchange controls. The new regulations, which took effect on 21 May, set a fixed rate of $1 = IR 3,000. This was initially valid until March 1996, but was subsequently extended. All other rates were eliminated except the official rate of $1 = IR1,750, used for imports of essential commodities. All hard currency transactions had to be carried out through state banks—an allocation system was to be introduced giving priority to imports of raw materials and spare parts for industry—and exporters had to repatriate all their hard currency earnings from abroad. A new government crackdown on illegal exchange dealers was reported to have begun. However, there was speculation that the Government would not be able to maintain the new fixed rate for more than two months. Some observers argued that the new regulations requiring exporters to repatriate all their hard currency earnings within six months could damage non-oil exports, but central bank officials claimed that non-oil exports would become more competitive. In late 1995 the IMF, as part of its economic programme for Iran, recommended that the unification of exchange rates should take place by 21 March 1996, with market-related management of rates to continue after unification. However, the central bank indicated that it preferred to continue with a more gradualist approach, with currency reforms proceeding in sequence and the stringent foreign exchange restrictions imposed in May 1995 to be dismantled last of all. The central bank's Deputy Governor stated that the Government would continue its campaign against the currency black market and smuggling for the foreseeable future; and insisted that the Government's intervention in the foreign currency market in May 1995 and the stabilization of the rial had had a positive effect on inflation. Early in 1997 the Governor of the Bank Markazi indicated that the exchange rate system was unlikely to be unified until mid-1999. He also acknowledged that reimposing strict exchange controls had resulted in some negative effects, notably the reappearance of an active parallel currency market. By the end of the 1996/97 financial year, according to the IMF, the rial had appreciated by about 80% in real terms against the official 'export' rate of $1 = IR3,000, although this appreciation was partly offset by the effective depreciation of the weighted average exchange rate resulting from the shifting of transaction from the more appreciated 'floating' rate to the 'export' rate. Accordingly, on a weighted average basis, the real effective appreciation amounted to only about 16% in 1996/97 (for current account transactions). The Bank Markazi stated in October 1998 that the rial would be subject to fixed exchange rates until at least March 2000 (the end of the second five-year plan).

Following the June 1979 nationalization of banking and insurance, in 1980 the Government announced the establishment of an Islamic banking system, which officially came into force on 21 March 1984. Interest on loans (*riba*, which is prohibited under Islamic law) was replaced by a commission—4% per year, compared with the traditional 14%—and interest on deposits was replaced with profits—estimated at a minimum 7%–8.5% per year. The banks would become temporary shareholders in major industrial enterprises to which they lent money. On 21 March 1985 all bank loans and advances were Islamized.

In March 1980 the 22 small commercial banks were merged into two major new institutions, Bank Tejarat and Bank Mellat. Other large institutions in the Iranian commercial banking system are: Bank Keshavarzi, Bank Mellat, Bank Melli Iran, Bank Refah Kargaran, Bank Saderat Iran, Bank Sepah, Bank Tejarat, the Islamic Economy Organization, Bank Sanat va Madan and the Export Development Bank of Iran.

In 1992 rumours that state banks might be privatized were strongly denied by the central bank. Nevertheless, in recent years the state banks have been encouraged to operate on more commercial lines and competition between them for customers is now intense. In May 1994 the Council of Ministers authorized the establishment of private savings and loan associations which were described by the Governor of the Bank Markazi as 'non-banking credit associations' which would be allowed to take deposits and make loans, but would not be permitted to offer current accounts. He stated that the aim of these associations was to encourage savings by providing a range of institutions able to take deposits. It was not clear whether the interest-free Islamic banking law would be applied to the new associations. For some years there has been pressure, mainly from business and industry, for the reintroduction of a private commercial banking system along international lines. The existing system is regarded as an impediment to developing business and industry. Some officials are believed to acknowledge that the banking system needs to be changed, but this would pose serious constitutional and religious obstacles. However, in September 1998 the Majlis approved legislation allowing co-operatives to set up banks, potentially opening the way for a competitive commercial banking system.

No official information regarding Iran's reserves of foreign exchange was released between 1982 and 1994. In 1982 reserves were recorded at $5,700m. (excluding gold), representing less than 50% of the level prevailing before the Revolution. In March 1984 the Majlis approved legislation preventing the Government from spending more than it earned. As a result, drawings on foreign reserves were believed to have been limited in 1984 and 1985. About $3,000m. were withdrawn by the Government during 1986, when the price of oil collapsed, but there followed a steady improvement in reserve holdings. In mid-1988 Iran's foreign exchange reserves were estimated at $6,000m.–$7,000m. (including gold holdings) compared with $3,000m.–$4,000m. in mid-1986. In June 1991 the Bank for International Settlements (BIS) reported that the value of Iranian assets had fallen by 25% during the previous 12 months to $5,019m., while, during the same period, the extent of Iran's liabilities had risen to $3,784m. The BIS reported that liabilities to OECD commercial banks were at an all-time high of $9,105m. in March 1993, when Iranian deposits with the same banks were estimated at $5,935m. By the final quarter of 1993 the BIS reported that liabilities to foreign banks and other financial institutions were $8,553m., with Iran's assets standing at $5,561m. In the second half of 1994 the BIS reported that Iranian deposits in commercial banks in OECD countries rose by about $1,000m. to $6,492m. and in December 1994 they had returned to the same level as in early 1991. Sources in Teheran reported that the central bank intended to add another $1,000m.–$2,000m. to reserves in 1995, raising the total to about $8,000m., the highest level since the mid-1980s. This increase in reserves was being achieved by reducing expenditure and imports and was an attempt by Iran to improve its international creditworthiness and to guarantee the repayment of foreign debts due in 1996. According to the BIS, Iran's liabilities to commercial banks in OECD countries rose by $1,700m. to $9,910m. in the third quarter of 1994. In the third quarter of 1995 Iranian deposits in commercial banks in OECD countries rose by $458m. to the record level of $8,398m., according to the BIS. Iran's liabilities to these banks rose by $290m. to $11,660m. According to Bank Markazi, net repayment of foreign debt resulted in a $2,115m. decrease in exchange reserves in the first half of the 1997/98 financial year; no figure for the remaining reserves was given, but Western estimates put them at $5,000m.–$6,000m. at the end of the year. The Bank's Governor stressed that reserves were not allowed to drop below six months' import cover and that all foreign obligations would continue to be met on time.

According to the BIS, Iran's deposits in commercial banks in OECD countries had fallen to $7,457m. by September 1997, against total liabilities of $8,613m. Iran reportedly depleted its foreign exchange reserves by $533m. in the second quarter of 1998 to compensate for falling oil revenues. The reduction followed drawdowns totalling $3,705m. in the previous 12 months. Foreign exchange reserves had fallen from $10,917m. in March 1997 to $6,750m. in March 1998, according to the BIS. According to Bank Markazi estimates, reserves in March 1999 stood at $6,500m.

According to the World Bank, reporting for the first time since 1979, Iran's total external debt had risen to just over $9,000m. by December 1990, of which one-fifth consisted of long-term commitments. Figures from the BIS and the OECD indicated that Iran's external debt rose from $5,560m. in December 1989 to $6,469m. in June 1990, and to $10,000m. by the end of that year. According to the BIS, external debts rose rapidly in 1991, reaching an estimated $13,653m. by December. By June 1992 they had increased to about $15,000m. A lower figure of $11,500m. was reported by the World Bank for December 1991. The World Bank estimate showed a $2,500m.-increase compared to December 1990, and a $5,000m.-increase compared to December 1989. According to the World Bank, $8,775m. of the total external debt consisted of short-term debts and $2,775m. of long-term debts. However, in February 1993 the Chairman of the Majlis Plan and Budget Committee declared that Iran had accumulated about $30,000m. in short-term external debts by March1992—the first official acknowledgement of the country's high external indebtedness. He reported that $18,000m. had been added to the external debt since 1989. The World Bank reported a lower estimate of $14,166m. in December 1992, of which $11,102m. consisted of short-term debts. The Bank estimated that the total cost of debt servicing was $810m. The BIS estimated Iran's total external debt at $16,107m. in mid-1993, consisting of $8,826m. in external bank claims and $7,281m. of non-bank credits.

By the end of the 1993/94 Iranian year, Iran's total external debt had reached $23,000m., of which $17,600m. was in the form of short-term credits accumulated during the early years of President Rafsanjani's first term of office, when government spending was at a high level. From mid-1992 Iran experienced problems paying its external debts as oil revenues declined. During 1993 Western creditors became increasingly concerned about arrears on repayments, which are believed to have risen as high as $10,000m. until the massive reschedulings of 1994 (see below). In early 1993 a series of rescheduling agreements were concluded regarding letters of credit payments not covered by export guarantee organizations. In April 1993 German, French and Japanese banks holding more than $2,000m. in Iranian letters of credit agreed to defer payment for one year to allow Iran time to bring its short-term debt repayments back on schedule. Belgian creditors followed and by the end of the year agreement had been reached to reschedule debts totalling $3,000m. In November 1993 Iran's total payment arrears were estimated to have reached at least $7,000m. Early in 1994 it was rumoured that Iran was exploring the possibility of bilateral government-to-government deals with Germany and France in order to avoid a 'Paris Club' rescheduling, the implications of which would be politically unacceptable to the Iranian Government. Despite opposition from the USA, agreements of bilateral rescheduling were concluded with several European creditors and with Japan during the first half of 1994. In February Germany agreed to restructure about $2,400m. of short-term debts into medium-term ones. Similar agreements followed with Japan, Austria, Switzerland, Denmark, Spain, Belgium, Italy and France. The package included a two-year grace period, with payments spread over four years starting in 1996. The agreements reached with Italy and France in June 1994 brought the amount of debt rescheduled to about $8,000m. A central bank official stated in May that the refinancing deals had been arranged so that annual repayments beginning in 1996 would not exceed 25% of projected government revenue. In September 1994 the Bank Markazi reported that it had signed 75 agreements with various creditors to reschedule arrears. It estimated Iran's total foreign debt at $18,000m.–$20,000m. and described the 21% ratio of foreign debt to GDP as relatively low when compared with similar economies. In the second half of 1994 rescheduling agreements were signed with Finland, and with German creditors without state insurance cover, raising German debt reschedulings to more than $3,000m.; and with Swiss creditors without state insurance cover. After some technical and political problems with the rescheduling of debts to Italian creditors, for which an in-principle agreement had been reached in July 1994, a rescheduling package for $1,000m. owed to official creditors was finalized in early 1995 and another agreement for $400m. for private Italian creditors was due to be signed in March 1995. In February it was reported that Crédit Suisse had been instructed to organize and administer the repayment of Iranian debts to UK creditors without official insurance cover. A five-year rescheduling package of up to $500m. was expected to be finalized in March. The agreements with private creditors included the immediate settlement of some small claims, or a percentage payment with the balance to be paid in instalments. In January 1995 a central bank official stated that official and private reschedulings totalled about $12,000m. and would cover $14,000m. by March. The Bank Markazi was reported to be determined to ensure that all new payment commitments were honoured. All letters of credit opened by the Bank since March 1994 were being paid on time, together with interest payments and small claims related to the debt reschedulings. In April 1995 the central bank reported that foreign loans and letters of credit due in the Iranian year ending 20 March 1995 had been paid on time and although no figures were released, experts suggested that they totalled at least $10,000m., with about $3,500m. devoted to the repayment of rescheduled debts. In January 1995 the Swiss export credit guarantee agency, ERG, became the first Western agency to resume insurance cover for exports to Iran following the rescheduling of most of Iran's foreign debts. Germany, which had initiated the process of rescheduling Iran's foreign debts, began to offer limited insurance cover in February, despite opposition from the USA.

At the end of December 1995 creditor nations which had rescheduled some $14,000m. of Iran's foreign debt since 1993 received their first payment of principal. In February 1996 the central bank reported that the total principal foreign debt stood at $23,412m. on 22 September 1995. Of this, $20,145m. was classified as long- and medium-term debt and $3,267m. as short-term debt. The Bank Markazi's, figures indicated that total debt stocks, including principal and interest obligations, were $30,600m. In April 1996 the Bank Markazi reported that repayments of rescheduled short-term debt and medium-term obligations had totalled $5,660m. in the year ending 20 March 1996, a substantially higher amount than the central bank's earlier projection of $4,300m. and than an independent estimate of $4,800m. Announcing a rise in hard currency spending in April 1996, the central bank insisted that the country's ability to service its external debts would not be affected, and independent observers appeared confident that Iran would repay its debts on time in order to try to regain its international creditworthiness. The Government is obliged by law to reduce its foreign debt by $1,640m. each year and new borrowing is illegal. Debt repayments were expected to account for more than one-quarter of the country's oil revenues in 1996/97. In January 1996 Iran's ambassador to Russia stated that a $700m.-agreement with Russia for the supply of aircraft would increase Iran's debts to Russia to $1,200m. This was to be repaid in annual installments of $250m. until 1999. In mid-February 1996 the Russian Ministry of Foreign Economic Relations reported that Iran had agreed to settle debts to Russia in $230m.-worth of oil and $150m. in cash in order to improve trade relations between the two countries. In October 1995 Berliner Handels und Frankfurter (BHF), a German bank, agreed to provide medium- and long-term financing facilities totalling DM 1,000m. ($676m.) for five Iranian banks (Bank Melli, Bank Mellat, Bank Tejarat, Bank Saderat and Bank Sepah). The agreement, which came into force in December, provides for financing over 5–12 years, depending on the projects for which it is requested, and on approval by the German state insurance agency, Hermes. In May it was reported that AKA Ausfuhrkredit-Gesellschaft, set up by 42 German banks to provide export credits, had reached an agreement with 10 Iranian banks under which it would provide unlimited amounts of long-term loans for projects approved under the second Five-Year Plan. The financing is for

a maximum of 10 years. This agreement was regarded as a significant breakthrough for Iran in its efforts to secure international finance. Despite the opposition of the USA, Iran has succeeded in securing long-term finance facilities from other foreign banks. In February 1996 a syndicate of 10 European and Japanese banks granted a $560m.-loan to finance a contract awarded to Danieli and Co of Italy by the NISCO (see Steel). In the same month there was speculation that the French state insurance agency, Coface, would restore cover following French government support for rail and airport projects in Iran. In 1996 the Governor of the Bank Markazi stated that Iran had repaid $15,400m. of debt between March 1992 and March 1996 ($6,800m. of rescheduled debt and $8,600m. of non-rescheduled debt) and that the remaining debt would be paid off in five years. Further progress was achieved in 1996/97 in reducing the outstanding stock of external debt and improving its maturity structure. Total outstanding external debt declined from $21,900m. in March 1996 to $16,800m. by March 1997, of which about $12,000m. was medium- and long-term debt (down from $16,000m. at the end of 1994/95.) Concurrently, the outstanding short-term debt dropped substantially to $4,800m. by March 1997 and external arrears were virtually eliminated. By March 1998 total external debt had been further reduced to $11,700m., of which $5,300m. consisted of rescheduled debts. From mid-1998 Iran experienced serious liquidity shortages due to the slump in oil prices and corresponding decline in revenues, its debt stock having reached $11,949m. in September ($8,391m. in medium- and long-term exposure and $3,558m. in short-term obligations). Further debt refinancing facilities worth a total of $2,000m.-$3,000m. (in particular with German and Italian creditors) were reported to have been concluded by April 1999.

Early in 1994 the USA succeeded in its campaign to stop further World Bank loans to Iran, and in April the Bank's lending programme was frozen at $850m. A $150m.-loan proposal to develop livestock and arable land and a $125m.-proposal to develop basic education were shelved indefinitely. Earlier, in September 1993, Iran had been told to seek alternative sources of funding for two proposals for gas flaring reduction and rail and ports rehabilitation because the Bank considered them to be controversial. However, in December 1996 the Bank agreed to extend a 25-year credit facility worth $600m. to Iran to fund infrastructure and health projects. Moreover, a resumption of full participation in the World Bank appeared more feasible as US–Iranian relations began to thaw in the first half of 1998. In April the Bank Markazi Governor led an Iranian delegation to the spring meeting of the Bank and the IMF in Washington, reportedly with the aim of securing support to rescind the 1994 ban. In 1996 Iran stated that it would take legal action to secure the release of Iranian assets which remain 'frozen' in the USA. The Iranian Government claimed that these assets total $12,000m. but independent sources suggest that they are probably between $3,500m. and $5,000m. It was reported in May 1999 that the World Bank might shortly resume lending to Iran.

Statistical Survey

The Iranian year runs from 21 March to 20 March.

OTHER PRODUCTS (year ending 20 March)*

	1994/95	1995/96	1996/97
Refined sugar ('000 metric tons)	1,052	1,151	1,597
Cigarettes (million)	7,939	9,787	11,860
Paints ('000 metric tons)	36	32	33
Cement ('000 metric tons)	16,250	16,904	17,426
Refrigerators ('000)	629	638	887
Gas stoves ('000)	215	243	n.a.
Telephone sets ('000)	218	161	89
Radios and recorders ('000)	138	33	48
Television receivers ('000)	360	253	433
Motor vehicles (assembled) ('000)	69	92	n.a.
Footwear (million pairs)	17.6	15.8	16.1
Carpets and rugs ('000 sq m)	28,064	25,369	28,970

* Figures refer to production in large-scale manufacturing establishments with 50 workers or more.

Source: mainly UN, *Industrial Commodity Statistics Yearbook*.

Production of Electricity (million kWh, year ending 20 March): *Ministry of Energy:* 71,335 in 1993/94; 77,086 in 1994/95; 80,044 in 1995/96; 85,825 in 1996/97; 92,310 in 1997/98; 97,862 in 1998/99. *Private Sector:* 4,679 in 1993/94; 4,933 in 1994/95; 4,925 in 1995/96; 5,026 in 1996/97; 5,434 in 1997/98.

Finance

CURRENCY AND EXCHANGE RATES

Monetary Units

100 dinars = 1 Iranian rial (IR).

Sterling, Dollar and Euro Equivalents (30 April 1999)

£1 sterling = 2,823.4 rials;
US \$1 = 1,751.0 rials;
€1 = 1,855.5 rials;
10,000 Iranian rials = £3.542 = \$5.711 = €5.389.

Average Exchange Rate (rials per US \$)

1996	1,750.76
1997	1,752.92
1998	1,751.86

Note: In March 1993 the multiple exchange rate system was unified, and since then the exchange rate of the rial has been market-determined. The foregoing information refers to the base rate, applicable to receipts from exports of petroleum and gas, payments for imports of essential goods and services, debt-servicing costs and imports related to large national projects. There is also an export rate, set at a mid-point of US \$ = 3,007.5 rials in May 1995, which applies to receipts from non-petroleum exports and to all other official current account transactions not effected at the base rate.

BUDGET ('000 million rials, year ending 20 March)*

Revenue	1996/97	1997/98	1998/99†
Oil and gas revenues	38,153	37,493	22,979

Directory

The Constitution

A draft constitution for the Islamic Republic of Iran was published on 18 June 1979. It was submitted to a 'Council of Experts', elected by popular vote on 3 August 1979, to debate the various clauses and to propose amendments. The amended Constitution was approved by a referendum on 2–3 December 1979. A further 45 amendments to the Constitution were approved by a referendum on 28 July 1989.

The Constitution states that the form of government of Iran is that of an Islamic Republic, and that the spirituality and ethics of Islam are to be the basis for political, social and economic relations. Persians, Turks, Kurds, Arabs, Balochis, Turkomans and others will enjoy completely equal rights.

The Constitution provides for a President to act as chief executive. The President is elected by universal adult suffrage for a term of four years. Legislative power is held by the Majlis (Islamic Consultative Assembly), with 270 members who are similarly elected for a four-year term. Provision is made for the representation of Zoroastrians, Jews and Christians.

All legislation passed by the Islamic Consultative Assembly must be sent to the Council for the Protection of the Constitution (Article 94), which will ensure that it is in accordance with the Constitution and Islamic legislation. The Council for the Protection of the Constitution consists of six religious lawyers appointed by the Faqih (see below) and six lawyers appointed by the High Council of the Judiciary and approved by the Islamic Consultative Assembly. Articles 19–42 deal with the basic rights of individuals, and provide for equality of men and women before the law and for equal human, political, economic, social and cultural rights for both sexes.

The press is free, except in matters that are contrary to public morality or insult religious belief. The formation of religious, political and professional parties, associations and societies is free, provided they do not negate the principles of independence, freedom, sovereignty and national unity, or the basis of Islam.

The Constitution provides for a Wali Faqih (religious leader) who, in the absence of the Imam Mehdi (the hidden Twelfth Imam), carries the burden of leadership. The amendments to the Constitution that were approved in July 1989 increased the powers of the Presidency by abolishing the post of Prime Minister, formerly the Chief Executive of the Government.

The Government

WALI FAQIH (RELIGIOUS LEADER)

Ayatollah SAYED ALI KHAMENEI.

HEAD OF STATE

President: Hojatoleslam Dr SAYED MUHAMMAD KHATAMI (assumed office 3 August 1997).

Vice-President in charge of Executive Affairs: MUHAMMAD HASHEMI RAFSANJANI.

Vice-President in charge of Legal and Parliamentary Affairs: Hojatoleslam MUHAMMAD ALI SADUQI.

Vice-President in charge of Development and Social Affairs: ABDOLLAH NURI.

Vice-President and Head of the Organization for the Protection of the Environment: MA'SUMEH EBTEKAR.

Vice-President and Head of the Plan and Budget Organization: MUHAMMAD ALI NAJAFI.

Vice-President and Head of the Physical Education Organization: SAYED MOSTAFA HASHEMI-TABA.

Vice-President and Secretary General of the Organization for Administrative and Employment Affairs: MUHAMMAD BAQERIAN.

COUNCIL OF MINISTERS
(September 1999)

Minister of Foreign Affairs: KAMAL KHARRAZI.

Minister of Education: HOSSEIN MOZAFAR.

Minister of Culture and Islamic Guidance: ATA'OLLAH MOHAJERANI.

Minister of Information: Hojatoleslam ALI YUNESI.

Minister of Commerce: MUHAMMAD SHARI'ATMADARI.

Minister of Health: MUHAMMAD FARHADI.

Minister of Posts, Telegraphs and Telephones: MUHAMMAD REZA AREF.

Minister of Justice: MUHAMMAD ISMAIL SHOUSHTARI.

Minister of Defence and Logistics: ALI SHAMKHANI.

Minister of Roads and Transport: MAHMUD HOJJATI.

Minister of Industries: GHOLAMREZA SHAFE'I.

Minister of Higher Education: MOSTAFA MO'IN.

Minister of Mines and Metals: ESHAQ JAHANGIRI.

Minister of Labour and Social Affairs: HOSSEIN KAMALI.

Minister of the Interior: Hojatoleslam SAYED ABDOLVAHED MUSAVI-LARI.

Minister of Agriculture: ISA KALANTARI.

Minister of Housing and Urban Development: ALI ABD AL-ALIZADEH.

Minister of Energy: HABIBOLLAH BITARAF.

Minister of Oil: BIZAM NAMDAR-ZANGENEH.

Minister of Economic Affairs and Finance: HOSSEIN NAMAZI.

Minister of Construction Jihad: MUHAMMAD SA'IDI-KIA.

Minister of Co-operatives: MORTEZA HAJI.

MINISTRIES

All ministries are in Teheran.

Ministry of Co-operatives: 16 Bozorgmehr St, Vali-e-Asr Ave, Teheran 14169; tel. (21) 6400938; fax (21) 6417041.

Ministry of Health and Medical Education: POB 15655-415, 371 Shariati Ave, Averezi Station, Teheran 16139; tel. (21) 767631; fax (21) 7676733.

Ministry of Mines and Metals: 248 Somayeh Ave, Teheran; tel. (21) 836051; telex 212718.

Ministry of Roads and Transport: 49 Taleghani Ave, Teheran; tel. (21) 661034; telex 213381.

President and Legislature

PRESIDENT

Election, 23 May 1997

Candidates	Votes	%
SAYED MUHAMMAD KHATAMI	20,088,338	69.1
ALI AKBAR NATEQ NOURI	7,233,568	24.9
SAYED REZA ZAVAREI	771,463	2.7
MUHAMMAD MUHAMMADI REYSHAHRI	742,599	2.6
Spoilt votes	240,994	0.8
Total	29,076,962	100.0

MAJLIS-E-SHURA E ISLAMI—ISLAMIC CONSULTATIVE ASSEMBLY

Voting in the first round of elections to the fifth Majlis took place on 8 March 1996. It was reported that 145 candidates had gained a sufficiently large proportion (at least one-third in single-member constituencies, or selection by at least one-third of voters in multi-member constituencies where electors cast multiple votes) of the total votes cast in their constituencies to take up seats in the 270-member Majlis. About 77% of the approximately 32m. eligible voters were reported to have participated in the first round of the election. A second round of voting to the 125 seats which remained unfilled took place on 19 April. In May the Council of Constitutional Guardians, charged with monitoring the elections, declared the results of polling in 19 constituencies to be null and void. By-elections to the 19 vacant seats were held in April 1997.

Speaker: ALI AKBAR NATEQ NOURI.

Deputy Speakers: Hojatoleslam HOSSEIN HASHEMIAN, ASADOLLAH BAYAT.

SHURA-YE ALI-YE AMNIYYAT-E MELLI—SUPREME COUNCIL FOR NATIONAL SECURITY

Formed in July 1989 to co-ordinate defence and national security policies, the political programme and intelligence reports, and social, cultural and economic activities related to defence and security. The Council is chaired by the President and includes two representatives of the Wali Faqih, the Head of the Judiciary, the Speaker of the Majlis, the Chief of Staff, the General Command of the Armed Forces, the Minister of Foreign Affairs, the Minister of the Interior, the Minister of Information and the Head of the Plan and Budget Organization.

MAJLIS-E KHOBREGAN—COUNCIL OF EXPERTS

Elections were held on 10 December 1982 to appoint a Council of Experts which was to choose an eventual successor to the Wali Faqih (then Ayatollah Khomeini) after his death. The Constitution provides for a three- or five-man body to assume the leadership of the country if there is no recognized successor on the death of the Wali Faqih. The Council comprises 86 clerics. Elections to a third term of the Council were held on 23 October 1998.

Speaker: Ayatollah ALI MESHKINI.

First Deputy Speaker: Hojatoleslam ALI AKBAR HASHEMI RAFSANJANI.

Second Deputy Speaker: Ayatollah IBRAHIM AMINI.

Secretaries: Hojatoleslam HASSAN TAHERI-KHORRAMABADI, Ayatollah QORBANALI DORRI NAJAFABADI.

SHURA-E-NIGAHBAN—COUNCIL OF GUARDIANS

The Council of Guardians, composed of six qualified Muslim jurists appointed by Ayatollah Khomeini and six lay Muslim lawyers, appointed by the Majlis from among candidates nominated by the Head of the Judiciary, was established in 1980 to supervise elections and to examine legislation adopted by the Majlis, ensuring that it accords with the Constitution and with Islamic precepts.

Chairman: Ayatollah MUHAMMAD MUHAMMADI GUILANI.

SHURA-YE TASHKHIS-E MASLAHAT-E NEZAM—COMMITTEE TO DETERMINE THE EXPEDIENCY OF THE ISLAMIC ORDER

Formed in February 1988, by order of Ayatollah Khomeini, to arbitrate on legal and theological questions in legislation passed by the Majlis, in the event of a dispute between the latter and the supervisory Council of Guardians. Its permanent members, defined in March 1997, are Heads of the Legislative, Judiciary and Executive Powers, the jurist members of the Council of Guardians and the Minister or head of organization concerned with the pertinent arbitration.

Chairman: Hojatoleslam ALI AKBAR HASHEMI RAFSANJANI.

HEY'AT-E PEYGIRI-YE QANUN ASASI VA NEZARAT BAR AN—COMMITTEE FOR ENSURING AND SUPERVISING THE IMPLEMENTATION OF THE CONSTITUTION

Formed by President Khatami in November 1997; members are appointed for a four-year term.

Members: Dr GUDARZ EFTEKHAR-JAHROMI; MUHAMMAD ISMAÏL SHOUSHTARI; SAYED ABDOLVAHED MUSAVI-LARI; Dr HOSSEIN MEHRPUR; Dr MUHAMMAD HOSSEIN HASHEMI.

Political Organizations

The Islamic Republican Party (IRP) was founded in 1978 to bring about the Islamic Revolution under the leadership of AYATOLLAH KHOMEINI. After the Revolution the IRP became the ruling party in what was effectively a one-party state. In June 1987 AYATOLLAH KHOMEINI officially disbanded the IRP at the request of party leaders, who said that it had achieved its purpose and might only 'provide an excuse for discord and factionalism' if it were not dissolved. Of the parties listed below, only the Nehzat-Azadi (Liberation Movement of Iran) has been afforded a degree of official recognition and been allowed to participate in elections.

Ansar-e Hezbollah: f. 1995; seeks to gain access to the political process for religious militants.

Democratic Party of Iranian Kurdistan: f. 1945; seeks autonomy for Kurdish area; mem. of the National Council of Resistance; 54,000 mems; Sec.-Gen. MUSTAPHA HASSANZADEH.

Fedayin-e-Khalq (Warriors of the People): urban Marxist guerrillas; Spokesman FARRAKH NEGAHDAR.

Fraksion-e Hezbollah: f. 1996 by deputies in the Majlis who had contested the 1996 legislative elections as a loose coalition known as the Society of Combatant Clergy; Leader ALI AKBAR HOSSAINI.

Hezb-e-Komunist Iran (Communist Party of Iran): f. 1979 on grounds that Tudeh Party was Moscow-controlled; Sec.-Gen. 'AZARYUN'.

Komala: f. 1969; Kurdish wing of the Communist Party of Iran; Marxist-Leninist; Leader IBRAHIM ALIZADEH.

Majma-e Hezbollah: f. 1996 by deputies in the Majlis who supported President Rafsanjani and who had contested the 1996 legislative elections as a loose coalition known as the **Servants of Iran's Construction** (f. as a political organization of this name in 1998; Sec.-Gen. GHOLAMHOSSEIN KARBASCHI; acting leader HOSSEIN MARASHI); Leader ABDOLLAH NURI.

Mujahidin-e-Khalq (Holy Warriors of the People): Islamic guerrilla group; since June 1987 comprising the National Liberation Army; mem. of the National Council of Resistance; Leaders MASSOUD RAJAVI and MARYAM RAJAVI (in Baghdad, 1986–).

National Democratic Front: f. March 1979; Leader HEDAYATOLLAH MATINE-DAFTARI (in Paris, January 1982–).

National Front (Union of National Front Forces): comprises Iran Nationalist Party, Iranian Party, and Society of Iranian Students; Leader Dr KARIM SANJABI (in Paris, August 1978–).

Nehzat-Azadi (Liberation Movement of Iran): f. 1961; emphasis on basic human rights as defined by Islam; Gen. Sec. Dr IBRAHIM YAZDI; Principal Officers Prof. SAHABI, S. SADR, Dr SADR, Eng. SABAGHIAN, Eng. TAVASSOLI.

Pan-Iranist Party: extreme right-wing; calls for a Greater Persia; Leader Dr MOHSEN PEZESHKPOUR.

Sazmane Peykar dar Rahe Azadieh Tabaqe Kargar (Organization Struggling for the Freedom of the Working Class): Marxist-Leninist.

Tudeh Party (Communist): f. 1941; declared illegal 1949; came into open 1979, banned again April 1983; First Sec. Cen. Cttee ALI KHAVARI.

The National Council of Resistance (NCR) was formed in Paris in October 1981 by former President ABOLHASAN BANI-SADR and the Council's current leader, MASSOUD RAJAVI, the leader of the Mujahidin-e-Khalq in Iran. In 1984 the Council comprised 15 opposition groups, operating either clandestinely in Iran or from exile abroad. BANI-SADR left the Council in 1984 because of his objection to RAJAVI's growing links with the Iraqi Government. The French Government asked RAJAVI to leave Paris in June 1986 and he is now based in Baghdad, Iraq. On 20 June 1987 RAJAVI, Secretary of the NCR, announced the formation of a National Liberation Army (10,000–15,000-strong) as the military wing of the Mujahidin-e-Khalq. There is also a National Movement of Iranian Resistance, based in Paris. Dissident members of the Tudeh Party founded the Democratic Party of the Iranian People in Paris in February 1988.

Judicial System

In August 1982 the Supreme Court revoked all laws dating from the previous regime which did not conform with Islam. In October 1982 all courts set up prior to the Islamic Revolution were abolished. In June 1987 Ayatollah Khomeini ordered the creation of clerical courts to try members of the clergy opposed to government policy. A new system of *qisas* (retribution) was established, placing the emphasis on speedy justice. Islamic codes of correction were introduced in 1983, including the dismembering of a hand for theft, flogging for fornication and violations of the strict code of dress for women, and stoning for adultery. In 1984 there was a total of 2,200 judges. The Supreme Court has 16 branches.

Head of the Judiciary: Ayatollah SAYED MAHMOUD YASHEMI-SHAHRUDI.

SUPREME COURT

Chief Justice: Hojatoleslam MUHAMMAD MUHAMMADI GUILANI.

Prosecutor-General: Hojatoleslam MORTEZA MOQTADAI.

Religion

According to the 1979 constitution, the official religion is Islam of the Ja'fari sect (Shi'ite), but other Islamic sects, including Zeydi, Hanafi, Maleki, Shafe'i and Hanbali, are valid and will be respected. Zoroastrians, Jews and Christians will be recognized as official religious minorities. According to the 1976 census, there were then 310,000 Christians (mainly Armenian), 80,000 Jews and 30,000 Zoroastrians.

ISLAM

The great majority of the Iranian people are Shi'a Muslims, but there is a minority of Sunni Muslims. Persians and Azerbaijanis are mainly Shi'i, while the other ethnic groups are mainly Sunni.

CHRISTIANITY

The Roman Catholic Church

At 31 December 1997 there were an estimated 12,750 adherents in Iran, comprising 6,250 of the Chaldean Rite, 2,500 of the Armenian Rite and 4,000 of the Latin Rite.

Armenian Rite

Bishop of Isfahan: Dr VARTAN TÉKÉYAN, Armenian Catholic Bishopric, Khiaban Ghazzali 22, Teheran; tel. (21) 677204; fax (21) 8715191.

Chaldean Rite

Archbishop of Ahwaz: HANNA ZORA, Archbishop's House, POB 61956, Naderi St, Ahwaz; tel. (61) 24890.

Archbishop of Teheran: (vacant), Archevêché, Forsat Ave 91, Teheran 15819; tel. (21) 8823549.

Archbishop of Urmia (Rezayeh) and Bishop of Salmas (Shahpour): THOMAS MERAM, Khalifagari Kaldani Katholiq, POB 338, Orumiyeh 57135; tel. (441) 22739.

Latin Rite

Archbishop of Isfahan: IGNAZIO BEDINI, Consolata Church, POB 11365-445, 75 Neauphle-le-Château Ave, Teheran; tel. (21) 673210; fax (21) 6494749.

The Anglican Communion

Anglicans in Iran are adherents of the Episcopal Church in Jerusalem and the Middle East, formally inaugurated in January 1976. The Rt Rev. HASSAN DEHQANI-TAFTI, the Bishop in Iran from 1961 to 1990, was President-Bishop of the Church from 1976 to 1986. He was succeeded by the Bishop of Jerusalem during 1986–96 and the Bishop of Egypt from 1996 onwards.

Bishop in Iran: Rt Rev. IRAJ KALIMI MOTTAHEDEH, St Luke's Church, Abbas-abad, POB 81465-135, Isfahan; tel. (31) 234675; diocese founded 1912.

Presbyterian Church

Synod of the Evangelical (Presbyterian) Church in Iran: Assyrian Evangelical Church, Khiaban-i Hanifnejad, Khiaban-i Aramanch, Teheran; Moderator Rev. ADEL NAKHOSTEEN.

ZOROASTRIANS

There are about 30,000 Zoroastrians, a remnant of a once widespread sect. Their religious leader is MOUBAD.

OTHER COMMUNITIES

Communities of Armenians, and somewhat smaller numbers of Jews (an estimated 30,000 in 1986), Assyrians, Greek Orthodox Christians, Uniates and Latin Christians are also found as officially recognized faiths. The Bahá'í faith, which originated in Iran, has about 300,000 Iranian adherents, although at least 10,000 are believed to have fled since 1979 in order to escape persecution. The Government banned all Bahá'í institutions in August 1983.

The Press

Teheran dominates the media, as many of the daily papers are published there, and the bi-weekly, weekly and less frequent publications in the provinces generally depend on the major metropolitan dailies as a source of news. A press law announced in August 1979 required all newspapers and magazines to be licensed and imposed penalties of imprisonment for insulting senior religious figures. Offences against the Act will be tried in the criminal courts. Under the Constitution the press is free, except in matters that are contrary to public morality, insult religious belief or slander the honour and reputation of individuals.

Finance

(cap. = capital; res = reserves; dep. = deposits; brs = branches; m. = million; amounts in rials)

BANKING

Banks were nationalized in June 1979 and a revised commercial banking system was introduced consisting of nine banks (subsequently expanded to 10). Three banks were reorganized, two (Bank Tejarat and Bank Mellat) resulted from mergers of 22 existing small banks, three specialize in industry and agriculture and one, the Islamic Bank (now Islamic Economy Organization), set up in May 1979, was exempt from nationalization. The tenth bank, the Export Development Bank, specializes in the promotion of exports. A change-over to an Islamic banking system, with interest (forbidden under Islamic law) being replaced by a 4% commission on loans, began on 21 March 1984. All short- and medium-term private deposits and all bank loans and advances are subject to Islamic rules.

Although the number of foreign banks operating in Iran has fallen dramatically since the Revolution, some 30 are still represented.

Central Bank

Bank Markazi Jomhouri Islami Iran (Central Bank): POB 11365-8551, Ferdowsi Ave, Teheran; tel. (21) 3110231; telex 212359; fax (21) 3115674; f. 1960; Bank Markazi Iran until Dec. 1983; issuing bank, government banking; cap. 250,000m., res 183,119m., dep. 56,669,441m. (March 1998); Gov. Dr MOHSEN NOURBAKHSH.

Commercial Banks

Bank Keshavarzi (Agricultural Bank): POB 14155-6395, 129 Patrice Lumumba Ave, Jalal al-Ahmad Expressway, Teheran; tel. MILANI; 1,580 brs in Iran, 3 abroad.

Islamic Economy Organization (formerly Islamic Bank of Iran): Ferdowsi Ave, Teheran; f. February 1980; cap. 2,000m.; provides interest-free loans and investment in small industry.

Development Banks

Bank Sanat va Madan (Bank of Industry and Mines): POB 15875-4456, 593 Hafiz Ave, Teheran; tel. (21) 893271; telex 212816; fax (21) 895052; f. 1979 as merger of the following: Industrial Credit Bank (ICB), Industrial and Mining Development Bank of Iran (IMDBI), Development and Investment Bank of Iran (DIBI), Iranian Bankers Investment Company (IBICO); cap. 1,280,000m., res 36,257m., total assets 2,447,396m. (1996); Man. Dir MOJTABA HARATI NIK.

Export Development Bank of Iran: POB 15875-5964, 129 Khaled Eslambouli St, Teheran 15139; tel. (21) 8716607; telex 226895; fax (21) 8716979; e-mail edbi@dci.iran.com; cap. 100,000m., res. 4,482m., dep. 446,450m. (March 1996); Chair and Man. Dir Dr NOWROUZ KOHZADI; 17 brs.

Housing Bank

Bank Maskan (Housing Bank): Ferdowsi Ave, Teheran; tel. (21) 675021; telex 226871; f. 1980; state-owned; cap. 42,663.8m., dep. 221,153.4m., total assets 3,594,364m. (June 1985); provides mortgage and housing finance; 187 brs; Chair. and Man. Dir AHMAD FARSHCHIAN.

Regulatory Authority

Supreme Council of Banks: Teheran; comprises two bankers and five ministerial appointees; regulates internal affairs of all Iranian banks; Chair. Dr HOSSEIN NEMAZI.

STOCK EXCHANGE

Teheran Stock Exchange: 228 Hafez Ave, Teheran 11389; tel. (21) 670155; telex 223282; fax (21) 672524; f. 1966; Sec.-Gen. AHMAD MIRMOTAHARI.

INSURANCE

The nationalization of insurance companies was announced in June 1979.

Bimeh Alborz (Alborz Insurance Co): POB 4489-15875, Alborz Bldg, 234 Sepahboad Garani Ave, Teheran; tel. (21) 8803773; fax (21) 8803771; f. 1959; state-owned insurance company; all types of insurance; Man. Dir ALI FATHALI.

Bimeh Asia (Asia Insurance Co): POB 15815-1885, Asia Insurance Bldg, 297-299 Taleghani Ave, Teheran; tel. (21) 8898110; telex 224278; fax (21) 8898113; all types of insurance; Man. Dir MASOUM ZAMIRI.

Bimeh Dana (Dana Insurance Co): 25 Fifteenth Ave, Gandi St, Teheran; tel. (21) 8770971; fax 8770812; life, personal accident and health insurance; Chair. and Man. Dir. ALI FARHANDI.

Bimeh Iran (Iran Insurance Co): POB 11365-9153, Saadi Ave, Teheran; tel. (21) 304026; telex 212782; fax (21) 313510; all types of insurance; Man. Dir ALI MOSAREZA.

Bimeh Markazi Iran (Central Insurance of Iran): POB 19395-5588, 72 Africa Ave, Teheran 19157; tel. (21) 2050001; telex 212888; fax (21) 2054099; e-mail cent-ir@kanoon.net; supervises the insurance market and tariffs for new types of insurance cover; the sole state reinsurer for domestic insurance companies, which are obliged to reinsure 50% of their direct business in life insurance and 25% of business in non-life insurance with Bimeh Markazi Iran; Pres. ABDOLNASSER HEMMATI.

Trade and Industry

CHAMBER OF COMMERCE

Iran Chamber of Commerce, Industries and Mines: 254 Taleghani Ave, Teheran; tel. (21) 8846031; fax (21) 8825111; supervises the affiliated 32 Chambers in the provinces; Pres. ALINAQI KHAMOUSHI.

INDUSTRIAL AND TRADE ASSOCIATIONS

National Iranian Industries Organization (NIIO): POB 14155-3579, 133 Dr Fatemi Ave, Teheran; tel. (21) 656031-40; telex 214176; fax (21) 658070; f. 1979; owns 400 factories in Iran.

National Iranian Industries Organization Export Co (NECO): POB 14335-589, No. 8, 2nd St, Ahmad Ghasir Ave, Teheran 15944; tel. (21) 8733564; telex 212429; fax (21) 8732586.

STATE HYDROCARBONS COMPANIES

Iranian Offshore Oil Co (IOOC): POB 15875-4546, 339 Dr Beheshti Ave, Teheran; tel. (21) 8714102; telex 212707; fax (21) 8717420; wholly owned subsidiary of NIOC; f. 1980; development, exploitation and production of crude petroleum, natural gas and other hydrocarbons in all offshore areas of Iran in the Persian Gulf and the Caspian Sea; Chair. M. AGAZADEH; Dir S. A. JALILIAN.

National Iranian Gas Co (NIGC): Man. Dir MUHAMMAD MUHAMMADNEZHAD.

National Iranian Oil Co (NIOC): POB 1863, Taleghani Ave, Teheran; tel. (21) 6151; telex 212514; a state organization controlling all 'upstream' activities in the petroleum and natural gas industries; incorporated April 1951 on nationalization of petroleum industry to engage in all phases of petroleum operations; in February 1979 it was announced that, in future, Iran would sell petroleum direct to the petroleum companies, and in September 1979 the Ministry of Oil assumed control of the National Iranian Oil Company, and the Minister of Oil took over as Chairman and Managing Director; Chair. of Board and Gen. Man. Dir BIZAM NAMDAR-ZANGENEH (Minister of Oil).

National Refining and Distribution Co (NRDC): f. 1992 to assume responsibility for refining, pipeline distribution, engineering, construction and research in the petroleum industry from NIOC; Chair. and Man. Dir GHOLAMREZA AQAZADEH.

CO-OPERATIVES

Central Organization for Co-operatives of Iran: Ministry of Co-operatives, 16 Bozorgmehr St, Vali-e-Asr Ave, Teheran 14169; tel. (21) 6400938; fax (21) 6417041; f. 1993; 9m. mems in 48,000 co-operative societies.

Central Organization for Rural Co-operatives of Iran (CORC): Teheran; Man. Dir SAYED HASSAN MOTEVALLI-ZADEH.

The CORC was founded in 1963, and the Islamic Government of Iran has pledged that it will continue its educational, technical, commercial and credit assistance to rural co-operative societies and unions. At the end of the Iranian year 1363 (1984/85) there were 3,104 Rural Co-operative Societies with a total membership of 3,925,000 and share capital of 25,900m. rials. There were 181 Rural Co-operative Unions with 3,097 members and capital of 7,890m. rials.

Transport

RAILWAYS

Iranian Islamic Republic Railways: POB 13185-1498, Shahid Kalantari Bldg, Railway Sq., Teheran; tel. (21) 5641686; fax (21) 5647086; e-mail rail-rai@neda.net; f. 1934; affiliated with Ministry of Roads and Transport; Pres. Deputy Minister of Roads and Transport; Man. Dir Eng. MAHMOUD RAHMATI.

In 1999 the Iranian railway system comprised 6,300 km of standard 1,435 mm gauge, 146 km of electrified lines, and 94 km of wide 1,676 mm gauge. The system includes the following main routes:

Trans-Iranian Railway runs 1,392 km from Bandar Turkman on the Caspian Sea in the north, through Teheran, and south to Bandar Imam Khomeini on the Persian Gulf.

Southern Line links Teheran to Khorramshahr via Qom, Arak, Dorood, Andimeshk and Ahwaz; 937 km.

Northern Line links Teheran to Gorgan via Garmsar, Firooz Kooh and Sari; 499 km.

Teheran–Kerman Line via Kashan, Yazd and Zarand; 1,106 km.

Teheran–Tabriz Line linking with the Azerbaijan Railway; 736 km.

Tabriz–Djulfa Electric Line: 146 km.

Garmsar–Meshed Line connects Teheran with Meshed via Semnan, Damghan, Shahrud and Nishabur; 812 km. A line is under construction to link Meshed with Sarakhs on the Turkmen border. A 768-km line linking Meshed with Bafq is also under construction.

Qom–Zahedan Line when completed will be an intercontinental line linking Europe and Turkey, through Iran, with India. Zahedan is situated 91.7 km west of the Baluchistan frontier, and is the end of the Pakistani broad gauge railway. The section at present links Qom to Kerman via Kashan, Sistan, Yazd, Bafq and Zarand; 1,005 km. A branch line from Sistan was opened in 1971 via Isfahan to the steel mill at Zarrin Shahr; 112 km. A broad-gauge (1,976-mm) track connects Zahedan and Mirjaveh, on the border with Pakistan; 94 km.

Zahedan–Quetta (Pakistan) Line: 685km; not linked to national network.

Ahwaz–Bandar Khomeini Line connects Bandar Khomeini with the Trans-Iranian railway at Ahwaz; this line is due to be double-tracked; 112 km.

Azerbaijan Railway extends from Tabriz to Djulfa (146.5 km), meeting the Caucasian railways at the Azerbaijani frontier. Electrification works for this section have been completed and the electrified line was opened in April 1982. A standard gauge railway line (139 km) extends from Tabriz (via Sharaf–Khaneh) to the Turkish frontier at Razi.

Bandar Abbas–Bafq: construction of a 730-km double-track line to link Bandar Abbas and Bafq commenced in 1982. The first phase, linking Bafq to Sirjan (260 km), was opened in May 1990, and the second phase was opened in March 1995. The line provides access to the copper mines at Sarcheshmeh and the iron ore mines at Gole-Gohar.

Bafq–Chadormalou: a 130-km line connecting Bafq to the Chadormalou iron-ore mines is under construction.

Chadormalou–Tabas: a 220-km line is under construction.

Underground Railway

In May 1995 the Teheran Urban and Suburban Railway Co concluded agreements with three Chinese companies for the completion of the Teheran underground railway, on which work had originally commenced in 1977. It was reported that about 80% of the work on two lines (one, 34 km in length, running north to south, and a second, 20 km in length, running east to west) had been completed. A 31-km suburban line, linking Teheran with the satellite city of Karaj, was inaugurated in February 1999, while phased sections of the urban lines were to enter service from the end of that year.

Teheran Urban and Suburban Railway Co: POB 4661, 37 Mir Emad St, Teheran 15875; tel. (21) 8740144; telex 215676; fax (21) 8740114; e-mail tusrc@dpi-net-ir; Chair. and Man. Dir MOHSEN HASHEMI.

ROADS

In 1996 there were an estimated 162,000 km of roads, including 470 km of motorways, 22,900 km of highways, main or national roads and 43,500 km of secondary or regional roads; about 50% of the road network was paved. There is a paved highway (A1, 2,089 km) from Bazargan on the Turkish border to the Afghanistan border. The A2 highway runs 2,473 km from the Iraqi border to Mir Javeh on the Pakistan border.

Ministry of Roads and Transport: 49 Taleghani Ave, Teheran; tel. (21) 661034; telex 213381.

INLAND WATERWAYS

Principal waterways:

Lake Rezaiyeh (Lake Urmia): 80 km west of Tabriz in North-West Iran; and Karun river flowing south through the oilfields into the Shatt al-Arab, thence to the head of the Persian Gulf near Abadan.

Lake Rezaiyeh: From Sharafkhaneh to Golmankhaneh there is a twice-weekly service of tugs and barges for transport of passengers and goods.

Karun River: Regular cargo service is operated by the Mesopotamia-Iran Corpn Ltd. Iranian firms also operate daily motor-boat services for passengers and goods.

SHIPPING

Persian Gulf: The main oil terminal is at Kharg Island. The principal commercial non-oil ports are Bandar Shahid Rajai (which was officially inaugurated in 1983 and handles 9m. of the 12m. tons of cargo passing annually through Iran's Persian Gulf ports), Bandar Khomeini, Bushehr, Bandar Abbas and Chah Bahar. A project to develop Bandar Abbas port, which predates the Islamic Revolution and was originally to cost IR 1,900,000m., is now in progress. Khorramshahr, Iran's biggest port, was disabled in the war with Iraq, and Bushehr and Bandar Khomeini also sustained war damage, which has restricted their use. In August 1988 the Iranian news agency (IRNA) announced that Iran was to spend US $200m. on the construction of six 'multi-purpose' ports on the Arabian and Caspian Seas, while ports which had been damaged in the war were to be repaired.

Caspian Sea: Principal ports Bandar Anzali (formerly Bandar Pahlavi) and Bandar Nowshahr.

Ports and Shipping Organization: 751 Enghelab Ave, Teheran; tel. (21) 8809280; telex 212271; fax (21) 8804100; affiliated with Ministry of Roads and Transport; Man. Dir MOKHTAR KALANTARY.

Principal Shipping Companies

Irano–Hind Shipping Co: POB 15875-4647, Sedaghat St, Vali Asr Ave, Teheran; tel. (21) 2058095; telex 215233; fax (21) 2057739;

joint venture between the Islamic Republic of Iran and the Shipping Corpn of India; Chair. Capt. P. P. RADHAKRISHNAN.

Islamic Republic of Iran Shipping Lines (IRISL): POB 15875-4646, 675 North East Corner of Vali Asr Sq., Teheran; tel. (21) 8893801; telex 212286; fax (21) 889413; internet http:www.irisl.net; f. 1967; affiliated with the Ministry of Commerce; liner services between the Persian (Arabian) Gulf and Europe, the Far East and South America and between the Caspian Sea and Central Asia; Chair. and Man. Dir AHAD MUHAMMADI.

National Iranian Tanker Co: POB 16765-947, 67–8 Atefis St, Africa Ave, Teheran; tel. (21) 2229093; telex 213543; fax (21) 2223011; Chair. and Man. Dir MUHAMMAD SOURI.

CIVIL AVIATION

The two main international airports are Mehrabad (Teheran) and Abadan. An international airport was opened at Isfahan in July 1984 and the first international flight took place in March 1986. Work on a new international airport, 40 km south of Teheran, abandoned in 1979, resumed in the mid-1980s, and work on three others, at Tabas, Ardebil and Ilam was under way in mid-1990. The airports at Urumiyeh, Ahwaz, Bakhtaran, Sanandaz, Abadan, Hamadan and Shiraz were to be modernized and smaller ones constructed at Lar, Lamard, Rajsanjan, Barm, Kashan, Maragheh, Khoy, Sirjan and Abadeh. In early 1995 the Economic Co-operation Organization (ECO) agreed to establish a regional airline (Eco Air), based in Teheran. Construction of Imam Khomeini airport in Teheran, anticipated to be one of the largest airports in the world, was due to begin in 1998.

Civil Aviation Organization (CAO): Teheran; affiliated with Ministry of Roads and Transport; Head BEHZAD MAZAHERI.

Iran Air (Airline of the Islamic Republic of Iran): POB 13185-755, Iran Air Bldg, Mehrabad Airport, Teheran; tel. (21) 979111; telex 212795; fax (21) 6003248; f. 1962; serves the Middle East and Persian (Arabian) Gulf area, Europe, Asia and the Far East; Man. Dir AHMAD REZA KAZEMI.

Iran Air Tours: 191 Motahari Ave, Dr Moffateh Rd, Teheran 15879; tel. (21) 8708390; fax (21) 8555884; f. 1992; serves Middle East; Chair. A. M. KHALILI.

Iran Asseman Airlines: POB 141748, Mehrabad Airport, Teheran 13145-1476; tel. (21) 6484198; telex 212575; fax (21) 6404318; f. after Islamic Revolution as result of merger of Air Taxi Co (f. 1958), Pars Air (f. 1969), Air Service Co (f. 1962) and Hoor Asseman; Man. Dir ALI ABEDZADEH; domestic routes and charter services.

Kish Air: POB 19395-4639, 215 Africa Highway, Teheran 19697; tel. (21) 8778547; telex 226124; fax (21) 8776630; f. 1991 under the auspices of the Kish Development Organization; serves Persian Gulf area, Frankfurt, London and Paris; Pres. Capt. Y. KHALILI.

Saha Airline: POB 13445-956, Teheran 13873; tel. (21) 6696200; fax (21) 6698016; f. 1990; operates passenger and cargo charter domestic flights and services to Europe, Asia and Africa; Man. Dir Capt. A. SAEDI.

Tourism

Tourism was adversely affected by political upheaval following the Revolution. Iran's chief attraction for tourists is its wealth of historical sites, notably Isfahan, Rasht, Tabriz, Susa and Persepolis. Some 362,000 international tourist arrivals were recorded in 1994, compared with 153,615 in 1990. Receipts from tourism in 1994 totalled US $153m. Tourism centres are currently administered by the State, through the Ministry of Culture and Islamic Guidance, although in late 1997 the ministry indicated its intention to transfer all tourism affairs to the private sector.

Iran National Tourist Organization (INTO): Teheran; internet http://www.iran-tourism.com; f. 1979; affiliated with Ministry of Culture and Islamic Guidance; Man. Dir. ABDOLLAH HOSSEINI.

Defence

Budgeted defence expenditure (1998): 10,100,000m. rials (US $5,800m.).

Chairman of the Supreme Defence Council: Ayatollah SAYED ALI KHAMENEI.

Chief of Staff of the Armed Forces and Commander of the Gendarmerie: Brig.-Gen. ALI SHAHBAZI.

Commander of the Army: Brig.-Gen. ALI SHAHBAZI.

Commander of the Air Force: Gen. SHAHRAM ROSTAMI (acting)

Commander of the Navy: Rear-Adm. ABBAS MOHTAJ.

Chief of Staff of the Revolutionary Guards Corps (Pasdaran): ALI-REZA AFSHAR.

Commander of the Islamic Revolutionary Guards Corps: Lt-Gen. SAYED YAHYA RAHIM-SAFAVI.

Commander of Basij (Mobilization) War Volunteers Corps: MUHAMMAD ALI RAHMANI.

Military service: 24 months.

Total armed forces: At the beginning of the Iran–Iraq War in September 1980 Iran's army was estimated to total between 120,000 and 150,000 men, and the navy to total 30,000. In August 1998 it was estimated that the armed forces totalled 540,000–545,600 men (not including 350,000 reserves): army 350,000 men; navy 20,600; air force 45,000–50,000; revolutionary guard corps (*Pasdaran*, which has its own land, navy and marine units) 125,000.

Education

PRIMARY AND SECONDARY EDUCATION

Primary education, beginning at age six and lasting for five years, is compulsory for all children and is provided free of charge. Secondary education may last for a further seven years, divided into two cycles; one of three, and another of four, years. In 1996 the total enrolment at primary and secondary schools was equivalent to 81% of the school-age population (85% of boys; 77% of girls), compared with 63% in 1980 (75% of boys; 50% of girls). In 1996 primary enrolment included 82% of children in the relevant age-group (83% of boys; 81% of girls).

According to the Government, 24,000 schools were built between the Revolution in 1979 and 1984.

HIGHER EDUCATION

Iran has 36 universities of various types, including 15 in Teheran. Universities were closed by the government in 1980 but have been reopened gradually since 1983. According to official sources, 625,380 students were enrolled at Iran's public colleges and universities in the 1997/98 academic year. Apart from Teheran, there are universities in Bakhtaran, Isfahan, Hamadan, Tabriz, Ahwaz, Babolsar, Meshed, Kermanshah, Rasht, Shiraz, Zahedan, Kerman, Shahrekord, Urmia and Yazd. There are c. 50 colleges of higher education, c. 40 technological institutes, c. 20 teacher training colleges, several colleges of advanced technology, and colleges of agriculture in Hamadan, Zanjan, Sari and Abadan. Vocational training schools also exist in Teheran, Ahwaz, Meshed, Shiraz and other cities. In addition, the Islamic Azad University had 659,278 students enrolled in 1997/98.

In 1997/98, according to national estimates, the rate of illiteracy among the population aged 15 years and over was 20.3% for males and 34.1% for females. According to preliminary figures, expenditure on education by the central Government in 1997/98 was IR 12,075,000m. (equivalent to 15.6% of total expenditure and net lending).

IRAQ

Physical and Social Geography

W. B. FISHER

Iraq is bounded on the north by Turkey, on the east by Iran, on the south by Kuwait and the Persian Gulf, on the south-west by Saudi Arabia and Jordan, and on the north-west by Syria. The actual frontier lines present one or two unusual features. In the first place, there exists between Iraq, Kuwait, and Saudi Arabia a 'neutral zone', rhomboidal in shape, which was devised to facilitate the migrations of pastoral nomads, who cover great distances each year in search of pasture for their animals and who move regularly between several countries. Hence the stabilization or closing of a frontier could be for them a matter of life and death. Secondly, the frontier with Iran in its extreme southern portion, below Basra, follows the course of the Shatt al-Arab channel (the confluence of the Tigris and Euphrates), which flows into the Persian Gulf, but from 1936 until March 1975 the frontier was at the left (east) bank, placing the whole of the river within Iraq. This situation had become increasingly unacceptable to Iran, and under the Algiers Agreement of March 1975 the border was restored to the Thalweg Line in the middle of the deepest shipping channel in the Shatt al-Arab estuary. The dispute over the precise position of this border was one of the causes of the war with Iran which began in 1980. Thirdly, the inclusion of the northern province of Mosul within Iraq was agreed only in 1926. Because of its petroleum deposits, this territory was in dispute between Turkey, Syria and Iraq. Again, the presence of large numbers of migratory nomads, journeying each season between Iran, Turkey, Syria and Iraq, was a further complicating factor. In March 1984 a treaty was signed by Jordan and Iraq which finally demarcated the border between the two countries and under which Iraq ceded some 50 sq km to Jordan.

PHYSICAL FEATURES

The old name of Iraq (Mesopotamia = land between the rivers) indicates the main physical aspect of the country—the presence of the two river valleys of the Tigris and Euphrates, which merge in their lower courses. On the eastern side of this double valley the Zagros Mountains appear as an abrupt wall, overhanging the riverine lowlands, particularly in the south, below Baghdad. North of the latitude of Baghdad the rise to the mountains is more gradual, with several intervening hill ranges, such as the Jebel Hamrin. These ranges are fairly low and narrow at first, with separating lowlands, but towards the main Zagros topography becomes more imposing, and summits over 3,000 m in height occur. This region, lying north and east of Baghdad, is the ancient land of Assyria; nowadays the higher hill ranges lying in the extreme east are known as Iraqi Kurdistan, since many Kurdish tribes inhabit them.

On the western side of the river valley the land rises gradually to form the plateau which continues into Syria, Jordan, and Saudi Arabia, and its maximum height in Iraq is about 1,000 m. In places it is possible to trace a cliff formation, where a more resistant bed of rock stands out prominently, and from this the name of the country is said to be derived (Iraq = cliff). There is no sharp geographical break between Iraq and its western neighbours comparable with that between Iraq and Iran; the frontier lines are artificial.

THE RIVERS

The Tigris, 1,850 km (1,150 miles) in length, rises in Turkey, and is joined by numerous and often large tributaries both in Turkey and Iraq. The Euphrates, 2,350 km (1,460 miles) in length, also rises in Turkey and flows first through Syria and then Iraq, joining the Tigris in its lower course at Qurna, to form the stream known as the Shatt al-Arab (or Arvand river, as it is called by the Iranians), which is 185 km (115 miles) in length. Unlike the Tigris, the Euphrates receives no tributaries during its passage of Iraq. Above the region of Baghdad both rivers flow in well-defined channels, with retaining valley walls. Below Baghdad, however, the vestiges of a retaining valley disappear, and the rivers meander over a vast open plain with only a slight drop in level—in places merely 1.5 m or 2 m in 100 km. Here the rivers are raised on great levees, or banks of silt and mud (which they themselves have laid down), and now lie several feet above the level of the surrounding plain. One remarkable feature is the change in relative level of the two river beds—water can be led from one to the other according to the actual district, and this possibility, utilized by irrigation engineers for many centuries, still remains the basic principle of present-day development. Old river channels, fully or partially abandoned by the river, are also a feature of the Mesopotamian lowland, associated with wide areas of swamp, lakes, and sand-bars. The Tigris, though narrower than the Euphrates, is swifter, and carries far more water.

As the sources of both rivers lie in the mountains of Turkey, the current is very fast, and upstream navigation is difficult in the middle and upper reaches. In spring, following the melting of snows in Asia Minor, both rivers begin to rise, reaching a maximum in April (Tigris) and May (Euphrates). During the season floods of 3.6 m to 6.0 m occur, and 10 m is known—this in a region where the land may fall only 4 m or less in level over 100 km. Immense areas are regularly inundated, levees often collapse, and villages and roads, where these exist, must be built on high embankments. The Tigris is particularly liable to sudden flooding, and can rise at the rate of one foot per hour. In lower Iraq wide expanses are inundated every year. Construction of the Wadi Tharthar control scheme has, however, greatly reduced the incidence of severe flooding, particularly along the Tigris, and continued expansion of irrigation schemes (which has been a feature of Iraq since the late 1960s) is having a further effect.

Roads were formerly difficult to maintain because of floods, and the rail system was of different gauges. New standard-gauge rail links have now been constructed: north-south from Mosul to Basra via Baghdad; various cross-country lines; and an extension along the Euphrates valley towards north-eastern Syria.

Because of the former difficulties in communication, many communities of differing cultures and ways of life have persisted. Minority groups have thus been a feature in Iraq.

CLIMATE AND ECONOMIC ACTIVITY

The summers are overwhelmingly hot, with shade temperatures of over 43°C. Winters may be surprisingly cold: frost, though very rare in the south, can be severe in the north. Sudden hot spells during winter are another feature in the centre and south of Iraq. Rainfall is scanty over all of the country, except for the north-east (Assyria), where annual falls of 400 mm–600 mm occur—enough to grow crops without irrigation. Elsewhere farming is entirely dependent upon irrigation from river water. The great extent of standing water in many parts of Iraq leads to an unduly high air humidity, which explains the notorious reputation of the Mesopotamian summer.

The unusual physical conditions outlined present a number of obstacles to human activity. The flood waters are rather less 'manageable' than in Egypt, for example, and there is less of the regular deposition of thick, rich silt that is such a feature of the Nile. The effects of this are strikingly visible in the

relatively small extent of land actually cultivated—at most, only one-sixth of the potentially cultivable territory and 3% of the total area of the country. Because of the easy availability of agricultural land, wasteful, 'extensive' farming methods are often followed, giving a low yield. On the whole, Iraq is under-populated, and could support larger numbers of inhabitants.

The unusual physical conditions have greatly restricted movement and the development of communications of all kinds. In the upper reaches of the rivers, boat journeys can only be made downstream, whilst nearer the sea the rivers are wider and slower but often very shallow. Roads and railways are difficult to maintain because of the floods.

THE PEOPLE

In the marshes of the extreme south there are a number of boat-and raft-based Arab communities. Other important minorities live in, or close to, the hill country of the north: the Kurds, who number an estimated 3.5m. and migrate extensively into Syria, Turkey and Iran (see History); the Yazidis of the Jebel Sinjar; the Assyrian Christians (the name refers to their geographical location, and has no historical connection); and various communities of Uniate and Orthodox Christians. In addition, there were important groups of Jews—more than in most other Muslim countries—though, since the establishment of the State of Israel, much emigration has taken place. It should be noted that, while the majority of the Muslims follow Shi'a rites, the wealthier Muslims have tended to be of Sunni adherence.

Ethnically, the position is very complicated. The northern and eastern hill districts contain many racial elements—Turki, Persian, and proto-Nordic, with Armenoid strains predominating. The pastoral nomads of western Iraq are, as might be expected, of fairly unmixed Mediterranean ancestry, like the nomads of Syria, Jordan, and Saudi Arabia; but the population of the riverine districts of Iraq displays a mixture of Armenoid and Mediterranean elements. North of the Baghdad district the Armenoid strain is dominant, but to the south, it is less important, though still present.

Arabic is the official and most widely used language, Kurdish and dialects of Turkish are current in the north, whilst variants of Persian are spoken by tribes in the east. An estimate, probably over-generous to the Arabic speakers, puts the relative proportions at: Arabic 79%, Kurdish 16%, Persian 3%, and Turkish 2% of the total population.

History

Revised for this edition by RICHARD I. LAWLESS

EARLY HISTORY

By the advent of Islam in the seventh century AD Iraq had already experienced more than 3,500 years of civilization. The Sumerians were, in turn, succeeded by the Elamites, the Amorites, the Mittani, the Hittites, and the Assyrians, until in 612 BC the subject peoples rose and sacked Nineveh. Iraq then became the centre of a neo-Babylonian state, which, under Nebuchadnezzar (604–538 BC), included much of the Fertile Crescent (from the Euphrates to the Nile Valley), but soon fell to the Persians, who seized Babylon in 539–538 BC.

Iraq then became a province of the Achaemenid Empire until the military successes of Alexander the Great in 334–327 BC. After about 100 years of Seleucid rule Iraq became a frontier province of the Parthian Empire against the might of Rome. Between AD 113 and 117 Trajan conquered much of Iraq but his successor Hadrian withdrew. Roman reoccupation later took place. Parthian rule eventually gave way before the emergence of the Sasanid regime in the second century AD. Frontier wars with Rome broke out from time to time, but by the seventh century both Persia and Byzantium were exhausted, and the way was open to conquest from the south.

THE RISE OF ISLAM

The spectacular birth and growth of Islam in the first quarter of the seventh century set the Arabs on the path of conquest outside Arabia. In 637, at the battle of Jalula, the Arabs virtually ended Sasanid power in Iraq. There immediately followed a period of struggle between Ali, the son-in-law of the Prophet, and Mu'awiya, who had been governor of Syria. Ali fell in battle, however, in 661, making way for the Umaiyad dynasty, under Syrian hegemony, until 750. A movement arose known as the Shi'atu Ali (i.e. the party of Ali) and most new converts gave their allegiance to the Shi'a, partly as an expression of their social and political grievance against the established order. In 750 Umaiyad rule was replaced by that of the Abbasid dynasty, with Iraq becoming the dominant and most prosperous part of the empire. The second Abbasid, al-Mansour (754–775), quickly abandoned the Shi'ite extremists who had brought the Abbasids to power. Abbasid power waned, and Baghdad fell under the rule of the Shi'ite Buwaihids from the middle of the 10th to the middle of the 11th century, when effective power passed to the Seljuq Turks, although the Abbasid Caliph was, in name, the head of state.

MONGOL INVASIONS

In 1253 Hulagu, a grandson of Chinghiz (Jenghiz) Khan, moved westward in force, captured Baghdad in 1258 and thus made an end of the Abbasid Caliphate. Now subordinate to the Mongol Khan of Persia, Iraq became a mere frontier province. After the death of the Mongol Khan Abu Sa'id in 1335, Iraq passed to the Jala'irids who ruled until the early years of the 15th century. Iraq then passed successively under the power of two rival Turcoman confederations (the Black Sheep and the White Sheep) until, in the years 1499–1508, the White Sheep regime was destroyed by the Safavid Ismail, who made himself Shah of Persia. The Sunni Ottoman Turks considered the Shi'ite Ismail to be a threat, and the Sultan Suleyman, in the course of his campaign against Persia, conquered Baghdad in 1534–35.

OTTOMAN IRAQ

Although Persian control was restored for a brief period between 1623 and 1638, Iraq was to remain, at least nominally, under Turkish control until the First World War. A series of Mamluk pashas in the 18th century engaged in wars with Persia, and, towards the end of the century, had to contend with Kurdish insurrection in the north and raids by Wahhabi tribesmen from the south. In the early 19th century the Ottoman Sultan decided to regain direct possession of Iraq and end the Mamluk system. Sultan Mahmoud II sent Ali Ridha Pasha to perform this task in 1831. A severe outbreak of plague hampered the Mamluks, Da'ud Pasha was deposed, and the Mamluk regiments were exterminated.

WESTERN INFLUENCE

Although some of the European nations had long been in contact with Iraq through their commercial interests in the Persian Gulf, Western influences were slow to penetrate into the province. By 1800 there was a British Resident at Basra and two years later a British Consulate at Baghdad. France also maintained agents in these cities. French and Italian religious orders had settlements in the land. It was not, however, until after 1831 that signs of more rapid European penetration became visible, such as steamboats on the rivers of Iraq in 1836, telegraph lines from 1861 and a number of proposals for railways, none of which was to materialize for a long time to come. The Ottoman Government did much in the period between 1831 and 1850 to impose direct control over Kurdistan and the mountainous areas close to the Persian border, but the introduc-

tion of reforms was not, in fact, begun until 1869, when Midhat Pasha arrived at Baghdad. Although much of his work, performed in the brief space of three years, proved to be superficial and ill-considered, achievements, however imperfect, such as a newspaper, military factories, a hospital, an alms-house, schools, a tramway, conscription for the army, municipal and administrative councils, comparative security on the main routes and a reasoned policy of settling tribes on the land did bear solid witness to the vigour of his rule. After his departure in 1872, reform and European influence continued to advance, although slowly. Postal services were much developed, a railway from Baghdad to Samarra was completed in 1914 (part of the projected *Baghdad-bahn* which betokened the rapid growth of German interest in the Ottoman Empire) and the important Hindiya Barrage on the Euphrates was rebuilt between 1910 and 1913. The measures of reform and improvement introduced between 1831 and 1914 must indeed be judged as belated and inadequate—the Iraq of 1900 differed little from that of 1500—yet a process of fundamental change had begun.

In November 1914 Britain and the Ottoman Empire were at war. British troops occupied the Shatt al-Arab region and, through the necessity of war, transformed Basra into an efficient and well-equipped port. A premature advance on Baghdad in 1915 ended in the retreat of the British forces to Kut, their prolonged defence of that town and, when all attempts to relieve it had failed, the capitulation to the Ottomans in April 1916. A new offensive launched from Basra in the autumn of that year brought about the capture of Baghdad in March 1917. Kirkuk was taken in 1918, but, before the Allies could seize Mosul, the Ottoman Government sought and obtained an armistice in October. For two years, until the winter of 1920, the Commander-in-Chief of the British Forces, acting through a civil commissioner, continued to be responsible for the administration of Iraq from Basra to Mosul, all the apparatus of a modern system of rule being created at Baghdad—e.g. departments of land, posts and telegraphs, agriculture, irrigation, police, customs, finance, etc. The new regime was Christian, foreign and strange; resented by reason of its very efficiency, feared and distrusted no less by those whose loyalties were Muslim and Ottoman than by important elements who desired self-determination for Iraq.

The last phase of Ottoman domination in Iraq, especially during the years after the Young Turk Revolution in 1908, had witnessed a marked growth of Arab nationalist sentiment. Local circles in Iraq now made contact with the Ottoman Decentralization Party at Cairo, founded in 1912, and with the Young Arab Society, which moved from Paris to Beirut in 1913. Basra, in particular, became a centre of Arab aspirations and took the lead in demanding from Istanbul a measure of autonomy for Iraq. A secret organization, al-'Ahd (the Covenant), included a number of Iraqi officers serving in the Ottoman armies. The prospect of independence which the Allies held out to the Arabs in the course of the war strengthened and extended the nationalist movement. In April 1920 Britain received from the conference at San Remo a mandate for Iraq. This news was soon followed by a serious insurrection amongst the tribesmen of the south. The revolt, caused partly by instinctive dislike of foreign rule but also by vigorous nationalist propaganda, was not wholly suppressed until early in the next year. In October 1920 military rule was formally terminated in Iraq. An Arab Council of State, advised by British officials and responsible for the administration, now came into being and in March 1921 the Amir Faisal ibn Hussain agreed to rule as King at Baghdad. His ceremonial accession took place on 23 August 1921.

The Najdi (Saudi Arabian) frontier with Iraq was defined in the Treaty of Mohammara in May 1922. Saudi concern over loss of traditional grazing rights resulted in further talks between Ibn Saud and the British Civil Commissioner in Iraq, and a Neutral Zone of 7,000 sq km was established adjacent to the western tip of the Kuwait frontier. No military or permanent buildings were to be erected in the zone and the nomads of both countries were to have unimpeded access to its pastures and wells. A further agreement concerning the administration of this zone was signed between Iraq and Saudi Arabia in May 1938.

MODERN IRAQ

Despite the opposition of the more extreme nationalists, an Anglo-Iraqi Treaty was signed on 10 October 1922. It embodied the provisions of the mandate, safeguarded the judicial rights of foreigners and guaranteed the special interests of Britain in Iraq. An electoral law facilitated the choice of a constituent assembly, which met in March 1924 and, despite strong opposition by the nationalists, ratified the treaty with Britain. It accepted, too, an organic law declaring Iraq to be a sovereign state with a constitutional hereditary monarchy and a representative system of government. In 1925 the League of Nations recommended that the *wilaya* (administrative district) of Mosul, to which the Turks had laid claim, be incorporated into the new kingdom, a decision finally implemented in the treaty of July 1926 between the interested parties: Britain, Turkey and Iraq. By 1926 a fully constituted parliament was in session at Baghdad and all the ministries, as well as most of the larger departments of the administration, were in effective control. In 1930 a new treaty was signed with Britain, which established between the two countries a close alliance for a period of 25 years and granted Britain the use of airbases at Shuaiba and Habbaniya. On 3 October 1932 Iraq entered the League of Nations as an independent power, the mandate being now terminated.

Numerous difficulties confronted the Kingdom in the period after 1932: e.g. the animosities between the Sunni Muslims and the powerful Shi'ite tribes on the Euphrates, which tended to divide and embitter political life; the problem of relations with the Kurds, some of whom wanted a separate Kurdish state, and with other minorities like the Assyrians; the complicated task of reform in land tenure and of improvement in agriculture, irrigation, flood control, public services and communications. During these years the Government was little more than a façade of democratic forms concealing faction and intrigue. The realities of the political scene were an often ill-informed and xenophobic press; 'parties' better described as cliques gathered around prominent personalities; a small ruling class of tribal sheikhs; landowners; and the intelligentsia—lawyers, students, journalists, doctors, ex-officers—frequently torn by sharp rivalries. It is not surprising, therefore, that the first years of full independence made rather halting progress towards efficient rule. The dangerous nature of domestic tensions was demonstrated by the Assyrian massacre of 1933 perpetrated by troops of the Iraqi army. Political intrigue from Baghdad was partly responsible for the outbreak of tribal revolt along the Euphrates in 1935–36. The army crushed the insurrection without much difficulty and then, under the leadership of General Bakr Sidqi, and in alliance with disappointed politicians and reformist elements, brought about a *coup d'état* in October 1936. The new regime failed to fulfil its assurances of reform; its policies alienated the tribal chieftains and gave rise to serious tensions even within the armed forces, tensions which led to the assassination of Bakr Sidqi in August 1937.

Of vast importance for Iraq was the rapid development of the petroleum industry during these years. Concessions were granted in 1925, 1932 and 1938 to the Iraq, Mosul and Basra Petroleum Cos. Oil had been discovered in the Kirkuk area in 1927 and by the end of 1934 the Iraq Petroleum Co (IPC) was exporting crude oil through two pipelines, one leading to Tripoli and the other to Haifa. Exploitation of the Mosul and Basra fields did not begin on a commercial scale until after the Second World War.

In 1937 Iraq joined Turkey, Persia and Afghanistan in the Sa'dabad Pact, which arranged for consultation in all disputes that might affect the common interests of the four states. A treaty signed with Persia in July 1937 and ratified in the following year provided for the specific acceptance of the boundary between the two countries as it had been defined in 1914. Relations with Britain deteriorated in the period after 1937, mainly because of the growth of anti-Zionist feeling and of resentment at British policy in Palestine. German influence increased very much at this time in Iraq, especially among those political and military circles associated with the army group later to be known as the Golden Square. Iraq severed its diplomatic connections with Germany at the beginning of the Second World War, but in 1941 the army commanders carried out a new *coup d'état*, establishing, under the nominal leadership of

Rashid 'Ali al-Gaylani, a regime which announced its non-belligerent intentions. A disagreement over the passage of British troops through Iraq left no doubt of the pro-German sympathies of the Gaylani Government and led to hostilities that ended with the allied occupation of Basra and Baghdad in May 1941. Thereafter, Iraq co-operated with the Allies and declared war on the Axis powers in 1943.

Iraq, during the years after the Second World War, was to experience much internal tension and unrest. Negotiations with Britain led to the signing, at Portsmouth in January 1948, of a new Anglo-Iraqi agreement designed to replace that of 1930 and incorporating substantial concessions, amongst them the British evacuation of the airbases at Shuaiba and Habbaniya and the creation of a joint board for the co-ordination of all matters relating to mutual defence. The animosities arising from the situation in Palestine provoked riots at Baghdad directed against the new agreement with Britain, which were sufficiently disturbing to oblige the Iraqi Government to repudiate the Portsmouth settlement.

ARAB–ISRAELI WAR, 1948

With anti-Jewish and anti-Western feeling so intense, it was inevitable that troops should be sent from Iraq to the Arab–Israeli war which began on 15 May 1948. The Iraqi troops shared in the hostilities for a period of just over two months, their participation terminating in a truce operative from 18 July. Their final withdrawal from Palestine did not commence, however, until April 1949. Subsequently, there was a considerable emigration of Jews from Iraq to Israel, especially in the years 1951–52.

The expense of the war against Israel, together with bad harvests and the general indigence of the people created serious tensions resulting in rioting at Baghdad in November 1952 and the imposition of martial law until October 1953. None the less, there were some favourable prospects for the future—notably a large expansion of the oil industry. New pipelines were built to Tripoli in 1949 and to Banias in Syria in 1952; the oilfields of Mosul and Basra were producing significant amounts of crude petroleum by 1951/52. A National Development Board was created in 1950 and became later, in 1953, a national ministry. An agreement of February 1952 allowed the Iraqi Government 50% of the oil companies' profits before deductions for foreign taxes. Abundant resources were thus available for development projects of national benefit (e.g. the flood control and irrigation works opened in April 1956 on the Tigris at Samarra and on the Euphrates at Ramadi).

THE BAGHDAD PACT

Iraq, in the field of foreign relations, was confronted during these years with a choice between the Western powers, eager to establish in the Middle East an organized pattern of defence, and the USSR, entering at this time into a diplomatic propaganda and economic drive to increase its influence in the Arab lands. In February 1955 Iraq made an alliance with Turkey for mutual co-operation and defence. Britain acceded to this pact in the following April, agreeing also to end the Anglo-Iraqi agreement of 1930 and to surrender its air bases at Shuaiba and Habbaniya. With the adherence of Pakistan in September and of Iran in October 1955, the so-called Baghdad Pact was completed: a defensive cordon now existed along the southern fringe of the USSR.

CONSEQUENCES OF THE SUEZ CRISIS

The outbreak of hostilities between Israel and Egypt on 29 October 1956, and the armed intervention of British and French forces against Egypt (31 October–6 November) led to a delicate situation in Iraq, where strong elements were still opposed to all connections with the Western Powers. Iraq, indeed, broke off diplomatic relations with France on 9 November and announced that, for the immediate future at least, it could give no assurance of taking part in further sessions of the Council of the Baghdad Pact, if delegates from Britain were present.

The equivocal attitude of the Baghdad Government during the Suez crisis had provoked unrest in Iraq. Disturbances at Najaf and Mosul resulted in some loss of life. Student demonstrations against the Anglo-French intervention in Egypt and the Israeli campaign in Sinai led the Iraqi Government to close colleges and schools. Martial law, imposed on 31 October 1956, was not raised until 27 May 1957.

The tension born of the Suez crisis persisted for some time to come. President Eisenhower of the USA, concerned over the flow of Soviet arms to Syria and Egypt, sought permission from Congress to deploy US armed forces to defend nations exposed to danger from countries under the influence of international communism. He also secured authorization to disburse economic and military aid to the Middle East states prepared to co-operate with the West. This programme became known as the 'Eisenhower Doctrine'.

RELATIONS WITH SYRIA AND JORDAN

At the time of the Suez crisis there had been sharp tension between Iraq and Syria. Pumping-stations located inside Syria and belonging to the IPC were sabotaged in November 1956. Iraq consequently suffered a large financial loss through the interruption in the flow of oil to the Mediterranean coast. Not until March 1957 did Syria allow the IPC to begin the repair of the pipelines.

Since the Suez crisis of 1956 troops of Iraq and Syria had been stationed in Jordan as a precaution against an Israeli advance to the east. Iraq, in December 1956, announced that its troops would be withdrawn; the Syrian forces, however, still remained in Jordan. The fear that Syria might intervene in favour of the elements in Jordan opposed to King Hussein brought about further recriminations between Baghdad and Damascus. The danger of an acute crisis receded in April 1957, when the USA declared that the independence of Jordan was a matter of vital concern and underlined this statement by sending its Sixth Fleet to the eastern Mediterranean. In February 1958 King Faisal of Iraq and King Hussein of Jordan joined together in an abortive Arab Federation.

OVERTHROW OF THE MONARCHY

King Faisal II, together with the Crown Prince of Iraq and Gen. Nouri as-Said, lost their lives in the course of a *coup d'état* begun on 14 July 1958 by units of the Iraqi army. Iraq was now to become a republic. Power was placed in the hands of a Council of Sovereignty exercising presidential authority, and of a Cabinet led by Brig. Abd al-Karim Kassem, with the rank of Prime Minister.

A power struggle developed between the two main architects of the July *coup d'état*—Brig. (later Gen.) Kassem, the Prime Minister, and Col (later Field-Marshal) Abd as-Salam Muhammad Aref, the Deputy Prime Minister and Minister of the Interior. Col Aref was associated with the influential Baath Party and had shown himself to be a supporter of union between Iraq and the United Arab Republic (UAR—the union of Egypt and Syria). In September 1958 he was dismissed from his offices and, in November, was tried on a charge of plotting against the interests of Iraq. As reconstituted in February 1959 the new regime was more hostile to the UAR and inclined to favour a form of independent nationalism with left-wing tendencies.

Gen. Kassem announced the withdrawal of Iraq from the Baghdad Pact on 24 March 1959. Since the revolution of July 1958 Iraq's adherence to the Pact had been little more than nominal. One result of this withdrawal was the termination of the special agreement existing between Britain and Iraq since 1955 under the first article of the Baghdad Pact. On 31 March it was made known that the British Royal Air Force contingent at Habbaniya would be recalled.

PROBLEMS OF THE KASSEM REGIME

Earlier in 1959 the communist elements in Iraq had been refused representation in the Government. The communists operated through a number of professional organizations and also through the so-called People's Resistance Force. Communist elements had infiltrated into the armed forces of Iraq and into the civil service. Gen. Kassem now began to introduce measures which would limit communist influence inside the Government and the administration of the country. In July 1959 fighting occurred at Kirkuk between the Kurds (supported by the People's Resistance Force) and the Turcomans, with the result that Kassem disbanded the People's Resistance Force. More

important for the Government at Baghdad was the fact that, in March 1961, a considerable section of the Kurdish population in northern Iraq rose in rebellion under Mustafa Barzani, the President of the Democratic Party of Kurdistan (DPK)—a party established in 1958 after the return of Barzani from an exile occasioned by an earlier unsuccessful revolt in 1946. The refusal of the central regime at Baghdad to grant the reiterated Kurdish demands for autonomous status had contributed greatly to bringing about the new insurrection. Mustafa Barzani in March 1961 proclaimed an independent Kurdish state. By September 1961 the rebels controlled some 250 miles of mountainous territory along the Iraqi-Turkish and Iraqi-Persian frontiers, from Zakho in the west to Sulaimaniya in the east. The Kurds were able to consolidate their hold over much of northern Iraq during the course of 1962. The Kurds used guerrilla tactics with much success to isolate and deprive the government garrisons in the north of supplies. By December 1963 Kurdish forces had advanced south towards the Khanaqin area and the main road linking Iraq with Iran. The government troops found themselves in fact confined to the larger towns such as Kirkuk, Sulaimaniya and Khanaqin. Negotiations for peace began near Sulaimaniya in January 1964 and led to a cease-fire on 10 February. The national claims of the Kurds were to be recognized in a new provisional constitution for Iraq. Moreover, a general amnesty would be granted by the Iraqi Government. The Kurdish tribes, however, refused to lay aside their arms until their political demands had been given practical effect. Despite the negotiation of this settlement it soon emerged that no final solution of the Kurdish problem was apparent.

FALL OF KASSEM

A military coup, carried out in Baghdad on 8 February 1963, overthrew the regime of Gen. Kassem, the General himself being captured and shot. The coup arose out of an alliance between nationalist army officers and the Baath Party. Col Aref was now raised to the office of President and a new Cabinet was created under Brig. Ahmad al-Bakr. The Baath Party, founded in 1941 (in Syria) and dedicated to the ideas of Arab unity, socialism and freedom, drew its main support from military elements, intellectuals and the middle classes. It was, however, divided in Iraq into a pro-Egyptian wing advocating union with the UAR and a more independent wing disinclined to accept authoritarian control from Egypt. The coup of February 1963 was followed by the arrest of pro-Kassem and communist elements, by mass trials and a number of executions, by confiscations of property and by a purge of the officer corps and of the civil service.

A number of efforts were made, during the years 1963–65, to further the cause of Arab unification, but agreements made between Syria and Iraq, and between Egypt, Syria and Iraq, had little practical effect.

MANOEUVRES OF THE BAATH PARTY

These same years saw in Iraq itself a conflict for control between the extremist and the more moderate Baath elements. At the end of September 1963 the extremists dominated the Baath Regional Council in Iraq. An international Baath conference held at Damascus in October 1963 strengthened the position of the extremists through its support of a federal union between Syria and Iraq and its approval of more radical social and economic policies. A further Baathist conference at Baghdad in November 1963 enabled the moderates to elect a new Baath Regional Council in Iraq with their own adherents in control. At this juncture the extremists attempted a *coup d'état*, in the course of which air force elements attacked the Presidential Palace and the Ministry of Defence.

On 18 November 1963 President Aref assumed full powers in Iraq, with the support of the armed forces, and a new Revolutionary Command was established at Baghdad. Sporadic fighting occurred between government troops and the pro-Baathist National Guard. A main factor in the sudden fall of the Baathists was the attitude of the professional officer class. Officers with communist, Kassemite or pro-Nasser sympathies, or with no strong political views, or of Kurdish origin, had all been removed from important commands and offices. The privileged position of the National Guard caused further resentment in the army. The long drawn-out operations against the Kurds, the known dissensions within the Baathist ranks in Iraq and the intervention of Baath politicians from abroad in Iraqi affairs also contributed to discredit the extreme elements amongst the Baathists. On 20 November 1963 a new Cabinet was formed at Baghdad, consisting of officers, moderate Baathists, independents and non-party experts.

THE ARAB SOCIALIST UNION

On 14 July 1964 President Aref announced that all political parties would be merged in a new organization known as the 'Iraqi Arab Socialist Union'. At the same time it was revealed that all banks and insurance companies, together with 32 important industrial concerns, would undergo nationalization.

In July 1965 a number of pro-Nasser ministers resigned. At the beginning of September a new administration was installed with Brig. Aref Abd ar-Razzaq as Prime Minister. The Brigadier, reputed to be pro-Nasser in his sympathies, attempted to seize full power in Iraq, but his attempted *coup d'état* failed and, on 16 September he himself, together with some of his supporters, found refuge in Cairo. On 13 April 1966 President Abd as-Salam Aref was killed in a helicopter crash. His brother Maj.-Gen. Abd ar-Rahman Aref succeeded him as President with the approval of the Cabinet and of the National Defence Council. In late June Abd ar-Razzaq led a second abortive coup, which was foiled by the prompt action of President Aref.

KURDISH NATIONALISM

The war against the Kurds, halted only for a short while by the cease-fire of February 1964, dragged out its inconclusive course during 1964–66. Some of the fighting in December 1965 occurred close to the Iraq-Iran border, leading to a number of frontier violations which exacerbated tensions between the two states during the first half of 1966. In June 1966 Dr Abd ar-Rahman al-Bazzaz, Prime Minister of Iraq since September 1965, formulated new proposals for a settlement of the conflict with the Kurds. Kurdish nationalism and language would receive legal recognition; the administration was to be decentralized, allowing the Kurds to run educational, health and municipal affairs in their own districts; the Kurds would have proportional representation in parliament and in the Cabinet and the various state services; the Kurdish armed forces (some 15,000 strong) were to be dissolved. Mustafa Barzani, the Kurdish leader, declared himself to be well disposed towards these proposals.

This entente was implemented only to a limited extent. The Cabinet formed in May 1967 contained Kurdish elements, and President Aref, after a visit to the north in late 1967, reaffirmed his intention to make available to the Kurds appointments of ministerial rank, to help with the rehabilitation of the war-affected areas in Kurdistan, and to work towards effective co-operation with the Kurds in the government of Iraq. This state of quiescence was, however, broken in the first half of 1968 by reports of dissension amongst the Kurds themselves, with open violence between the adherents of Mustafa Barzani and the supporters of Jalal Talabani, who had co-operated with the Government.

OIL DISPUTES AND THE JUNE WAR

Although the winter of 1966–67 brought an improvement in relations with Iran, it also witnessed a dispute between Syria and the Iraq Petroleum Co over alleged losses of revenue on oil from Iraq passing through Syria by pipeline. The flow of oil was halted for a time and settlement was not reached until well into 1967.

When the Arab–Israeli war was renewed in June 1967, the movement of Iraqi oil was again affected. Problems connected with its production and export constituted a major preoccupation of the Baghdad Government during the period immediately following the war. Iraq had at the outset severed diplomatic relations with the USA and Britain after Arab charges that the two states had aided Israel in the war and it also banned the export of oil to them. When, at the end of June, supplies of Iraqi oil began to be moved once more from the pipeline terminals on the Mediterranean, this embargo remained. In August Iraq, Syria and Lebanon resolved to allow the export of Iraqi oil to most of the countries of Europe, the United Kingdom being still subject, however, to the embargo.

Relations with the West improved slightly during the autumn and winter of 1967. The remaining oil embargoes were gradually removed, and in December Gen. Sabri led a military delegation to Paris. This was followed by President Aref's official visit to France in February 1968, and in April France agreed to supply Iraq with 54 *Mirage* aircraft over the period 1969–73. In May diplomatic relations with the United Kingdom were resumed.

THE 1968 COUP AND ITS AFTERMATH

Throughout the first half of 1968 the regime conspicuously lacked popular support, being commonly thought to be both corrupt and inefficient, and the sudden bloodless *coup d'état* of 17 July did not surprise many observers. Gen. Ahmad Hassan al-Bakr, a former Prime Minister, became President; the deposed President Aref went into exile and his Prime Minister, Taher Yahya, was imprisoned on corruption charges. A new Government was soon dismissed by the President, who accused it of 'reactionary tendencies'. He then appointed himself Prime Minister and Commander-in-Chief of the Armed Forces.

During the second half of 1968 the internal political situation deteriorated steadily. By November there were frequent reports of a purge directed against opponents of the new regime, and freedom of verbal political comment seemed to have disappeared. A former Minister of Foreign Affairs, Dr Nasser al-Hani, was found murdered, and a distinguished former Prime Minister, Dr al-Bazzaz, and other members of former governments were arrested as 'counter-revolutionary leaders'; most were later sentenced to long terms of imprisonment. Open hostilities with the Kurds erupted in October 1968 for the first time since the June 1966 cease-fire, and continued on an extensive scale throughout the winter. Iraqi army and air force attempts to enforce the writ of the Baghdad Government had little success; the regime claimed that the rebels were receiving aid from Iran and Israel. Fighting continued unabated through 1969, the Kurds demanding autonomy within the state and asking for UN mediation.

SETTLEMENT WITH THE KURDS

The most important event of 1970 was the settlement with the Kurds when, in March, a 15-article peace plan was announced by the Revolutionary Command Council (RCC) and the Kurdish leaders. The plan conceded that the Kurds should participate fully in government; that Kurdish officials should be appointed in areas inhabited by a Kurdish majority; that Kurdish should be the official language, along with Arabic, in Kurdish areas; that development of Kurdish areas should be implemented; and that the Provisional Constitution should be amended to incorporate the rights of the Kurds.

The agreement was generally accepted by the Kurdish community and fighting ceased immediately. The war had been very expensive for Iraq and it had seriously delayed the national development programme. The Kurdish settlement, although not entirely satisfactory, did introduce an element of stability into life in Iraq and allowed a number of reforms to be initiated. In October 1970 the state of emergency, in operation almost continuously since July 1958, was lifted. Many political detainees, including former ministers, were released. Censorship of mail was abolished at the end of the year, having lasted for over 13 years, and a month later the censorship of foreign correspondents' cables was brought to an end after a similar period.

Kurdish unity was boosted in February 1971 by the decision of the Kurdish Revolutionary Party (KRP) to merge with the DPK, led by Masoud Barzani, and in July 1971 a new Provisional Constitution was announced, which embodied many of the points contained in the 1970 settlement. The Kurds were directed by the Supreme Committee for Kurdish Affairs to surrender their arms by August 1971.

Evidence of unrest, however, was growing both in Kurdistan and in the Government itself. In July 1971 an attempted coup by army and air force officers was put down by the Government but dissatisfaction continued to be reported. The Kurds were beginning to show discontent with the delays in implementing the 1970 agreement. Their demand for participation in the RCC was refused and in September 1971 an attempt was made on Barzani's life.

THE CONTINUING KURDISH PROBLEM

During 1972, possibly because of increasing preoccupation with foreign affairs, dissension within the Government was less evident. Clashes with the Kurds, however, became more frequent and there was another plot to assassinate Barzani in July. The Baath Party's deteriorating relations with the Kurds brought a threat from the DPK to renew the civil war. One of the main Kurdish grievances was that the census agreed upon in 1970 had still not taken place. The two sides met to discuss their differences, the Kurdish side pointing to the unfulfilled provisions of the 1970 agreement and the Baath reiterating the various development projects carried out in Kurdish areas. In December 1972 divisions arose in the Kurdish ranks when it was reported that a breakaway party was to be established in opposition to Barzani's party.

FOREIGN RELATIONS 1968–71

The more radical section of the Arab world had initially viewed the July 1968 coup with disfavour and the new regime was at pains to prove itself as militant an exponent of Arab nationalism as its predecessor. The regime gradually became an accepted member of the nationalist group, but there was some Arab criticism of its policies, notably the public hangings and their effect on world opinion.

Iraq adopted an uncompromising attitude to the Palestinian problem. All peace proposals—US, Egyptian and Jordanian—were rejected. In theory, total support was given to the Palestine liberation movement. However, despite a threat to the Jordanian Government at the beginning of September 1970 to intervene in Jordan on behalf of the Palestinian guerrillas, the Iraqi forces stationed there did not take part in the fighting. In January 1971 most of Iraq's 20,000 troops withdrew from both Jordan and Syria. In March it was reported in Cairo that Iraq's monthly contribution to the Palestine Liberation Army (PLA) had ceased. Iraq's attitude to Middle East peace proposals provoked a rift with Egypt even before President Nasser's death, and Iraq's contempt for the proposed Egypt-Libya-Syria federation, as well as for any negotiated settlement with Israel, preserved its isolation from Egypt and almost all the other Arab states. In July 1971 there were signs that Iraq wished to effect a degree of reconciliation, offering to co-operate again with the Arab states if they abandoned attempts to negotiate with Israel, but the renewal of hostilities between the Jordanian Government and the guerrillas prompted a deterioration in relations with Jordan. Iraq closed the border, demanded Jordan's expulsion from the League of Arab States (Arab League) and proscribed its participation in the Eighth International Baghdad Fair.

Meanwhile, relations with Iran remained hostile. Iraq frequently accused the Iranian Government of assisting the Kurdish rebellion and in April 1969 the Shatt al-Arab waterway again caused a minor confrontation. Iraq had benefited by a 1937 treaty which gave it control of the waterway. Iran attempted to force a renegotiation of the treaty by illegally sending through vessels flying the Iranian flag. Being unwilling (or politically unable) to yield any of its sovereignty, and unable to challenge Iran militarily, Iraq was obliged to accept this situation. Iraq proposed referring the dispute to the International Court of Justice (ICJ) in The Hague, but Iran rejected the suggestion. Minor border clashes between the two sides' forces continued to occur sporadically and both Iran and Iraq accused each other of attempting to foment coups. Not surprisingly, the two countries were also divided on policy towards the Gulf states. Iraq severed diplomatic relations with Iran (and Britain) after Iran's seizure of the Tunb Islands in the Persian (Arabian) Gulf in November 1971.

Relations with the Western world, and the USA in particular, remained poor, and several people were arrested or expelled in late 1968, after having been accused of spying for the USA. Meanwhile, cordial relations with the Soviet Union remained the major factor influencing Iraq's foreign policy, particularly since the USSR was supplying the major portion of Iraq's military equipment.

THE PROBLEM OF OIL

In June 1972 Iraq nationalized the IPC's interests and agreement on outstanding points of dispute was finally reached on

28 February 1973. The company agreed to settle Iraqi claims for retrospective royalties by paying £141m., and to waive its objections to Law No. 80 under which the North Rumaila fields were seized in 1961. The Government agreed to deliver a total of 15m. tons of crude petroleum from Kirkuk, to be loaded at Eastern Mediterranean ports, to the companies as compensation. The Mosul Petroleum Co agreed to relinquish all its assets without compensation and the Basrah Petroleum Co, the only one of the group to remain operational in Iraq, undertook to increase output from 32m. tons in 1972 to 80m. tons in 1976. This agreement was regarded on the whole as a victory for the Iraqi Government, although the companies were by no means financially disadvantaged by it.

With the IPC dispute settled, Iraq showed its unwillingness to continue indefinitely with exporting oil on a barter basis to the Eastern bloc countries. The Government emphasized that it would press for a cash basis to future agreements.

FOREIGN RELATIONS 1972–73

The nationalization of the IPC brought expressions of approval from a number of countries, including Arab states and the USSR. The 15-year friendship treaty with the USSR, signed in March 1972, was ratified in July, and Iraq's relations with the Eastern bloc remained cordial. Despite this, the Government was well aware of the dangers of too close and too exclusive a relationship with the Soviet bloc. France was specifically identified as the Western country most favoured by the Arabs, and the President's fourth anniversary speech in July revealed that Iraq would not be unwilling to initiate friendly relations with Western countries. Although diplomatic relations with the USA remained severed, the USA established an 'interests section' in Baghdad.

CONSTITUTIONAL CHANGE

In July 1973 an abortive coup took place, led by the security chief, Nazim Kazzar, in which the Minister of Defence, Gen. Hammad Shehab, was killed. There was some speculation that the coup had been attempted by a civilian faction within the Baath Party in an attempt to eliminate President Bakr and the military faction. Consequences of the attempted coup included an amendment to the Constitution giving more power to the President, and the formation of a National Front between the Baath Party and the Iraqi Communist Party (ICP).

CLIMAX AND END OF KURDISH WAR

According to the agreement made between the Iraqi Government and the Kurds in March 1970 the deadline for implementation of the agreement was 11 March 1974. An uneasy peace between the Kurds and the Iraqis existed between those two dates. On expiry of the deadline, Saddam Hussain Takriti, the Vice-President of the RCC and the 'strong man' of the regime, announced the granting of autonomy to the Kurds. Barzani and his DPK felt that the Iraqi offer did not fulfil their demands for full government representation, which included membership of the RCC. A minority of Kurds, who belonged to Abd as-Satter Sharif's KRP welcomed the proposals, however. Barzani and his militia, the *peshmerga* (literally, 'those who confront death'), began armed resistance in north Iraq. In April 1974 the Iraqi Government replaced five Kurdish ministers known to support Barzani by five other Kurds who supported the government plan for giving the Kurds a measure of autonomy. Later in April the Iraqi Government appointed a Kurd, Taha Mohi ed-Din Marouf, as Vice-President of Iraq, but since he had long been a supporter of the Baghdad Government, it seemed unlikely that this would mollify the Kurds of the DPK.

By August 1974 the Kurdish war had reached a new level of intensity. The Baghdad Government was directing large military resources against the *peshmerga,* and was deploying tanks, field guns and bombers. About 130,000 Kurds, mainly women, children and old men, took refuge in Iran. The *peshmerga* were able to continue their resistance in Iraq only with the help of arms and other supplies from Iran. When, therefore, an agreement to end their border dispute was signed by Iraq and Iran at the OPEC meeting in Algiers on 6 March 1975, both countries also agreed to end 'infiltrations of a subversive character' and the Kurdish rebellion collapsed. Barzani felt that he could not continue his struggle without Iran's aid, and fled to Teheran. A cease-fire was arranged on 13 March and a series of amnesties granted to Kurds who had fled to Iran encouraged most of them to return to Iraq. By February 1976, however, it was reported that the DPK was secretly reorganizing inside Iraqi Kurdistan and preparing to resume its struggle. In March there were reports of clashes between Kurds and Iraqi security forces in the Rawanduz area, after Iraqi attempts to clear the frontier area with Iran and resettle Kurds in less sensitive areas of Iraq. A new political organization, the National Union of Kurdistan (NUK), was also established in Damascus quite separately from the DPK, which, in the opinion of the NUK, had become discredited. Renewed Kurdish activity occurred in 1976 but was not serious enough to weaken the Iraqi claim that the Kurdish problem had been solved. Reconstruction and school-building was certainly undertaken in Kurdish areas in 1977, and in April 1977 the Iraqi authorities allowed 40,000 Kurds who had been compulsorily settled in the south in 1975 to return to their homes in the north. It was also decided in April 1977, by the Executive Council of the Kurdish Autonomous Region, that Kurdish should become the official language to be used in all communications and by all government departments in the Kurdish Autonomous Region which had no connection with the central Government.

FOREIGN AFFAIRS 1973–76

At the outbreak of the October 1973 war between the Arabs and Israel, Iraq sent considerable land forces to the Syrian front and took advantage of Iran's offer to resume diplomatic relations. The Iraqi Government, however, had taken offence at President Sadat's failure to consult Iraq prior to the offensive, and, therefore, Iraqi forces were withdrawn from Syria as soon as the cease-fire went into effect, and Iraq boycotted the Arab summit meeting in Algiers in November.

Relations deteriorated with Iran in the early months of 1974, when frontier fighting broke out, and it was only after the appointment of a UN mediator in March that 'normal' relations on the frontier were restored, and they worsened again in August in spite of talks in Istanbul between Iraqi and Iranian diplomats. Further border clashes took place in December 1974, and secret talks in Istanbul between the Iraqi and Iranian Ministers of Foreign Affairs in January 1975 failed to prevent the outbreak of fresh clashes in February. It was therefore something of a surprise when, at the OPEC meeting at Algiers in March 1975, it was announced that Saddam Hussain Takriti, Vice-President of the RCC, and the Shah of Iran had signed an agreement which 'completely eliminated the conflict between the two brotherly countries'. This agreement also ended the Kurdish war (see above), and was embodied in a treaty signed between the two countries in June 1975. The frontiers were defined on the basis of the Protocol of Constantinople of 1913 and the verbal agreement on frontiers of 1914. The Shatt al-Arab frontier was defined according to the Thalweg Line, which runs down the middle of the deepest shipping channel.

THE BAATH PARTY AND RELATIONS WITH SYRIA

Iraq was one of the many Arab states which were severely critical of the second interim disengagement agreement signed between Egypt and Israel in September 1975. Iraqi reaction to the agreement was similar to that of Syria, but this condemnation was perhaps the only thing upon which the two countries agreed between 1975 and 1978. Rivalry between the two wings of the Baath party in Baghdad and Damascus, and a dispute over the sharing of the water from the Euphrates were just two areas of contention. In February 1976 Iraq was reported to be diverting much of its oil from pipelines to the Mediterranean to terminals near Basra, thus depriving Syria of valuable pipeline revenues. Iraq was also very critical of Syria's intervention in Lebanon. In addition, Syrian agents were blamed for violence which took place in the Shi'a holy cities of Najaf and Karbala in February 1977. Relations with Syria deteriorated even further in late 1977, and Iraq became somewhat isolated after President Sadat of Egypt's peace initiative in visiting Jerusalem in November 1977. At the Tripoli Conference, summoned by the states which opposed President Sadat's approach, Iraq advocated a specific rejection of UN Security Council Resolution 242 (see Documents on Palestine, p. 105). The stand taken by the

other participants—Syria, Libya, the People's Democratic Republic of Yemen (PDRY), Algeria and the Palestine Liberation Organization (PLO))—were considered too moderate by Iraq, which abandoned the conference. Iraq subsequently boycotted the Algiers conference of 'rejectionist' states in February 1978, hoping, unsuccessfully, to form its own 'steadfastness and liberation front' at a Baghdad conference.

NEW ALIGNMENTS

Iraq opposed the Camp David agreements made between Egypt and Israel in September 1978, but, continuing its policy of boycott, it did not attend the Damascus Arab summit which immediately followed the Camp David agreements. In October, however, President Assad of Syria visited Baghdad and, as a result, Iraq and Syria signed a charter outlining plans for political and economic union between the two countries. Old rivalries and animosities were set aside in an effort to form a political and military power which would constitute a sizeable counterweight to Egypt in Middle Eastern affairs. In November Iraq successfully convened a Pan-Arab summit which threatened sanctions against Egypt if a peace treaty with Israel should be signed, and in March 1979, when the peace treaty became a fact, Baghdad was the venue for the meeting of the Arab ministers of foreign and economic affairs which resolved to put into practice the threats made to Egypt in the previous November.

The plans for complete political and economic union of Iraq and Syria were pursued with enthusiasm but little real practical application by both countries until July 1979. On 16 July 1979 Saddam Hussain replaced Bakr as President of Iraq and Chairman of the RCC. A few days later, an attempted coup was reported, and several members of the RCC were sentenced to death for their alleged part in the plot. Saddam Hussain believed Syria to be implicated, in spite of Syrian denials, and the newly-formed alliance foundered. Another aspect of this political unrest in Iraq was the dissolution of the alliance between the Baath Party and the ICP. In the summer of 1978 21 army personnel were executed for conducting political activity in the armed forces. Relations with the communists continued to deteriorate; they withdrew from the National Progressive Front in March 1979, and in early 1980 President Hussain referred to them in a speech as 'a rotten, atheistic, yellow storm which has plagued Iraq'. This led to a decrease in dependence on the USSR and to tentative moves to improve relations with the West. Hussain joined in the general Arab condemnation of the Soviet invasion of Afghanistan at the end of 1979.

In February 1980 President Hussain announced his 'National Charter', which reaffirmed the principles of non-alignment, rejecting 'the existence of foreign armies, military forces, troops and bases in the Arab Homeland', and made a plea for Arab solidarity. With President Sadat of Egypt compromised by his *rapprochement* with Israel, Hussain saw himself in a position of virtual pre-eminence in the Arab world and, with the Non-aligned Summit due to take place in Baghdad in 1982, he would be in a position to present himself as the responsible leader of the non-aligned world.

Domestically, Hussain was engaged in restoring parliamentary government to Iraq. The intention had been announced some years earlier, but on 16 March 1980 laws were adopted for the election of an Iraqi National Assembly of 250 deputies for a four-year session, and also for a Legislative Council for the Autonomous Region of Kurdistan, consisting of 50 members elected for a three-year session. Elections took place on 20 June 1980, and deputies were elected by a direct, free and secret ballot. The first session of the National Assembly opened on 30 June, and one of the deputy premiers, Naim Haddad, was elected Chairman and Speaker. Elections to a 50-member Kurdish Legislative Council took place in September 1980.

WAR WITH IRAN

Although the 1975 peace agreement with Iran virtually ended the Kurdish rebellion, Iraq was dissatisfied and wanted a return to the Shatt al-Arab boundary whereby it controlled the whole waterway, and also the withdrawal of Iranian forces from Abu Musa and Tunb Islands, which Iran occupied in 1971. Conflict also became evident after the Iranian Revolution over Arab demands for autonomy in Iran's Khuzestan (termed 'Arabistan' by Arabs), which Iran accused Iraq of encouraging. In addition, Iraq's Sunni leadership was suspicious of Shi'ite Iran and fearful that the Islamic Revolution in Iran might spread to its own Shi'ites, who are in the majority in Iraq. Border fighting between Iran and Iraq frequently occurred as 1980 progressed, and open warfare began on 22 September when Iraqi forces advanced into Iran along a 300-mile front. Iran had ignored Iraqi diplomatic efforts demanding the withdrawal of Iranian forces from Zain ul-Qos on the border. Iraq maintained that this territory should have been returned by Iran under the 1975 agreement. Iraq therefore abrogated the Shatt al-Arab agreement on 16 September.

Most commentators agree that Saddam Hussain's real intention when he invaded Iran was to topple the Islamic revolutionary regime. Resistance was fiercer than he expected, however, and stalemate was soon reached along a 300-mile front, while various international peace missions sought in vain for a solution. In the spring of 1982 Iranian forces launched successful counter-offensives, one in the region of Dezful in March, and another in April which resulted in the recapture of Khorramshahr by the Iranians in May.

By late June 1982 Saddam Hussain had to acknowledge that the invasion of Iran had been a failure, and he arranged for the complete withdrawal of Iraqi troops from Iranian territory. In July the Iranian army crossed into Iraq, giving rise to the heaviest fighting of the war, thus far.

INTERNAL OPPOSITION TO SADDAM HUSSAIN

As well as the deteriorating military situation, Saddam Hussain faced a number of other threats to his position from within Iraq. The 'Iraqi Front of Revolutionary, Islamic and National Forces', consisting of Kurds, exiled Shi'ites and disaffected Baath party members, had been formed in 1981 with the backing of Syria, whose President Assad was as anxious as Ayatollah Khomeini to see the downfall of Saddam Hussain, his Baathist rival. In northern Iraq, Kurdish rebels were becoming active again and there existed the possibility that Iraq's majority Shi'ite community (55% of the population) would turn against the Sunnis (the sect of the Iraqi leadership). However, the bulk of Iraq's Shi'ites seemed to distrust the harsh fundamentalism of Khomeini's Iran. Against this background, Hussain was re-elected Chairman of the RCC and regional secretary of the Arab Baath Socialist Party, and in July 1982, having purged his administration, was apparently more firmly in control than ever.

In November 1982 new opposition arose from the Supreme Council of Iraqi Opposition Groups, under the leadership of an exiled Shi'ite leader, Hojatoleslam Muhammad Baqir Hakim, in Teheran. However, as the war with Iran degenerated into a conflict of attrition after the first Iranian advance into Iraq, the severe burden which it placed upon the country's economy emerged as the most critical concern for Hussain in 1983. Petroleum revenues had been slashed by almost 75%, following the destruction of Iraq's Gulf terminals, the closure of the pipeline across hostile Syria and the decline in oil prices. Iraq was searching for ways to avoid defaulting on payments for foreign construction contracts and was already borrowing money from friendly Gulf states.

In October 1983 there were rumours of an attempted coup in Baghdad, led by the recently dismissed head of intelligence, Barzan at-Takriti (the President's half-brother), and a number of senior army officers, who were later reported to have been executed.

An abiding problem for Iraqi governments has been the question of Kurdish autonomy within Iraq. The drain on military and financial resources, resulting from efforts to contain Kurdish secessionist forces, was of particular significance at this time, since costly equipment and manpower was being diverted from critical areas in the war with Iran. Unable to fight wars on two fronts, Hussain sought an accommodation with the Kurds. A series of talks with Jalal Talibani, leader of the Patriotic Union of Kurdistan (PUK) and of an estimated 40,000 Kurdish soldiers, began in December 1983, after a cease-fire was agreed. The PUK demanded the release of 49 Kurdish political prisoners, the return of 8,000 Kurdish families, moved from Kurdistan to southern Iraq, and the extension of the Kurdish autonomous area to include the oil town of Kirkuk. The talks could have provided only a partial solution, as they did not include the

DPK, which sought to further the cause of Kurdish autonomy by siding with Iran (and which was antipathetic towards the PUK). Thoughts of a government of national unity, including the PUK and the ICP, were short-lived. Hussain's attitude changed, possibly prompted by the greater international support for Iraq which was forthcoming in the first half of 1984, and the talks broke down in May. The dialogue between the two sides was resumed and continued on a sporadic basis, with Hussain trying to persuade the PUK to join the National Progressive Front. To win its support, Hussain would have had to make major concessions to the PUK, such as granting Kurdish control of Kirkuk province, where Iraq's main oilfields are situated, and giving the Kurds a fixed share of national oil revenues (perhaps 20%–30%), and this he was unlikely to do. Negotiations on Kurdish autonomy collapsed again in January 1985 and fighting broke out in Kurdistan between PUK guerrillas and government troops after a 14-month cease-fire. The PUK blamed the Government's continued persecution and execution of Kurds; its refusal to include consideration of the one-third of Kurdistan containing the Kirkuk oilfields in autonomy talks; and an agreement with Turkey to act jointly to quell Kurdish resistance, which had been made in October 1984. The PUK then rejected the offer of an amnesty for President Hussain's political opponents at home and abroad in February, and fighting has continued.

THE IRAN–IRAQ WAR, OCTOBER 1983–DECEMBER 1984

Beginning in October 1983, Iran launched a series of attacks across its northern border with Iraq. About 700 sq km (270 square miles) of Iraqi territory were gained, threatening the last outlet for Iraqi exports of petroleum through the Kirkuk pipeline. Iraq intensified its missile attacks and bombing raids against Iranian towns and petroleum installations. During the autumn of 1983 Iraq took delivery of five French-built *Super Etendard* fighter aircraft. With these, and with the *Exocet* missiles already in its possession, Iraq threatened to destroy Iran's petroleum export industry, centred on the Kharg Island oil terminal in the Gulf. (In fact, Iraq did not use the *Super Etendards* and *Exocet* missiles in tandem until the end of March 1984 in the Gulf.) Iran responded by promising to make the Gulf impassable to all traffic (including exports of one-sixth of the West's petroleum requirements) by blocking the Strait of Hormuz, if Iraqi military action made it impossible for Iran to export its own petroleum by that route.

Despite approaches from the UN and various governments (Egypt, Saudi Arabia and Syria among them), Iran refused to negotiate with Iraq and was adamant that nothing less than the removal of the regime of Saddam Hussain, the withdrawal of Iraqi troops from Iranian territory and the agreement to pay reparations for war damages could bring hostilities to an end.

In August 1982 Iraq declared a maritime exclusion zone in the Gulf, extending from the Khor Abdullah channel, at the mouth of the Shatt al-Arab waterway, to a point south of the Iranian port of Bushehr. This zone included the Kharg Island oil terminal. Iraq carried out sporadic attacks on shipping (not only tankers) making for Kharg or returning from it, or fired indiscriminately on ships well outside the zone. The aim was to make the export of petroleum from Iran as difficult and expensive as possible and, by the threat of military action, to deter shipping from using Iranian ports, thus starving Iran of vital oil revenues. These tactics succeeded to a limited extent. Rates of insurance for shipping using the Gulf rose dramatically, and Japan, the largest customer for Iranian oil, briefly ordered its tankers not to use Iranian ports in mid-1984. Iraq refrained, however, from implementing its threat to attack Kharg Island itself and tankers loading there until May 1984. When the attack came, it was not immediately followed up, and the sequence of isolated attacks of limited effectiveness seemed to be continuing. The dangers of the war's spreading to other Gulf states were shown when Iran retaliated by attacking Saudi Arabian and Kuwaiti tankers, and tankers using oil terminals belonging to those countries. During 1984 the conviction grew that neither Iran nor Iraq possessed the capability to give effect to its worst threats.

Iraq certainly had no shortage of financial and military supporters. Egypt is estimated to have supplied military equipment and spare parts worth more than US $2,000m.; according to *The Washington Post,* the People's Republic of China sold arms to Iraq worth $3,100m. between 1981 and 1985 (compared with sales to Iran, over the same period, worth $575m.); Brazil and Chile sold weapons to Iraq; the USSR (previously officially neutral in the war) increased its aid, following a *rapprochement* with Iraq in March 1984, and had already sold SS-12 missiles to Iraq; and the USA supplied helicopters and other heavy military equipment, though it remained officially neutral. (Both the USA and the USSR also sold arms to Iran.) Saudi Arabia and Kuwait supported Iraq with loans and the revenue from sales of up to 310,000 barrels per day (b/d) of petroleum (250,000 b/d from the neutral zone and the remainder from Saudi Arabia), sold on Iraq's behalf.

In February 1984 Iran launched an offensive in the marshlands around Majnoon Island, the site of rich oilfields in southern Iraq, near the confluence of the rivers Tigris and Euphrates. Iraq failed to regain control of this territory and was condemned for using mustard gas in the fighting. Iraq subsequently established extensive and formidable defences, including a system of dams and embankments, along the southern front, near Basra, in anticipation of a possibly decisive offensive by Iran, which massed some 500,000 men there.

In 1984 the balance of military power moved in Iraq's favour, and the USA and the USSR, both officially neutral in the war with Iran, provided aid. The USSR increased its military aid following a *rapprochement* in March between the two Governments, precipitated by Iran's anti-Soviet stance, and was responsible for supplying an estimated two-thirds of Iraq's total armaments and much of its ammunition. At the end of 1987 it was estimated that the USSR had supplied Iraq with military aid worth US $10,000m. since lifting a ban on arms sales in 1982. The USA assisted Iraq with the financing of crucial oil export pipeline projects and with an increasing allocation of commodity credits. Iraq and the USA re-established full diplomatic relations on 26 November 1984, more than 17 years after they had been broken off by Iraq following the Arab–Israeli war of 1967.

Iraq had a substantial advantage in the strength of its air force. At the end of 1984 Iraq had 580 combat aircraft and 130 armed helicopters, while Iran had 110 combat aircraft, only 50 to 60 of which were thought to be operational. On the ground, Iraq's tank force was superior in numbers and sophistication.

THE IRAN–IRAQ WAR, 1985–86

A resumption in December 1984 of Iraqi attacks on shipping in the Gulf, in particular on oil tankers using the terminal at Kharg Island caused a sharp increase in hull insurance rates. Iran's oil exports fell to a record low level in January 1985 as a result of Iraqi action but, after another lull in military activity, in a pattern which became familiar during the next four years, insurance rates were reduced and custom returned. Attacks on shipping continued but Iraq failed decisively to exploit its superiority in the air. The Kharg Island oil terminal remained operational and largely undamaged for much of 1985 and Iran was quite successful in circumventing Iraqi attempts to debilitate its oil export industry. It consistently offered oil at discount and rebate deals to attract customers deterred by the high cost of war insurance, and in February established a makeshift floating export terminal at Sirri Island, militarily a much less exposed location (journeys to which commanded lower rates of insurance), 800 km (500 miles) south-east of Kharg, from where it received its oil by tanker shuttle.

In March Iran committed an estimated 50,000 troops to an offensive on the southern front in the region of the Hawizah marshes, east of the Tigris. Iranian forces succeeded in crossing the Tigris and for a time closed the main road connecting Baghdad and Basra before being repulsed. Iraq was again accused of using chemical weapons during this engagement.

In June 1984 the UN engineered the suspension by Iran and Iraq of attacks on civilian targets. However, in March 1985, with the war on the ground at a stalemate, Iraq resorted to air raids on Iranian towns and declared Iranian airspace a war zone. Saddam Hussain's stated intention was to carry the war to every part of Iran until Ayatollah Khomeini should decide to come to the negotiating table. The first Iraqi air raid on Teheran in four years took place in March. Although Iraq initially identi-

fied its targets as industrial, government and military installations only, thousands of civilians inevitably were killed as Iraqi aircraft attacked more than 30 Iranian towns with bombs, missiles and shellfire. Iran retaliated with shelling and air raids of its own on Iraqi economic, industrial and civilian targets, and with ground-based missile attacks on Baghdad itself. In this instance, Iraq was taking full advantage of its military superiority. In March King Hussein of Jordan and President Mubarak of Egypt unexpectedly visited Baghdad to show their support for Saddam Hussain, despite the fact that full diplomatic relations had not existed between Egypt and Iraq since Egypt's signing of the peace treaty with Israel in 1979.

The UN Secretary-General, Javier Pérez de Cuéllar, visited both Teheran and Baghdad in April to try to establish a basis for peace negotiations. Iraq made it clear that it was interested only in a permanent cease-fire and immediate peace negotiations; while Iran, though placing less official emphasis on the removal of Saddam Hussain's regime as a pre-condition of peace, accepted that, if he acquiesced in the other conditions, including the payment of reparations calculated by Iran at US $350,000m. in March 1985, he would fall anyway.

Twice during 1985 (in April and June) President Saddam Hussain ordered a suspension of air raids on Iranian cities, as an inducement to Iran to begin peace negotiations. On both occasions Iran ignored the gesture and Iraqi air raids were resumed.

In response to a joint Irano-Libyan strategic alliance which was becoming more open in character, Iraq withdrew its diplomatic mission from Tripoli in June 1985 and asked the Libyans to withdraw theirs from Baghdad. Iraq had severed its diplomatic links with Libya in late 1980, accusing Col Qaddafi of assisting Iran in the war, but limited diplomatic contact was restored and Libya was said to have had diplomatic representatives in Baghdad since 1984.

Until mid-1985 Iraq had failed to launch attacks against the main Iranian oil export terminal on Kharg Island of sufficient frequency or intensity seriously to threaten the continuation of oil exports. In August, however, Iraq made the first of a concentrated series of raids on Kharg, causing a reduction in Iranian oil exports from 1.2m. b/d–1.5m. b/d, in the months leading up to the raids, to less than 1m. b/d in September. Exports from Kharg were temporarily halted during the latter half of September. During October–December the raids became progressively less frequent and less damaging in their effect, and, by dint of rapid repairs and the taking up of Kharg's ample spare capacity, the Iranian Ministry of Oil was able to claim in October, with little exaggeration, that exports of oil had risen to 1.7m. b/d. Between August and the end of 1985 some 60 attacks on Kharg Island were reported. Despite Iran's earlier success in minimizing the effect of Iraqi raids and in developing alternative means of exporting oil (such as the floating terminal at Sirri Island), by the end of 1985 exports from Kharg had reportedly been reduced to a trickle compared with its 6.5m. b/d capacity, and Iraq had turned its attention to the tankers shuttling oil to Sirri Island for transhipment.

In February 1986 Iraq announced an expansion of the area of the Gulf from which it would try to exclude Iranian shipping. Previously confined to the waters around Iran's Gulf ports, the area was broadened to include the coast of Kuwait. Attacks on tankers and other commercial vessels in the Gulf were intensified by both sides during 1986, and they totalled 105 during the year. In the first half of 1986 Iraq continued to attack Kharg Island and tankers shuttling oil to Sirri Island, and in August an Iraqi raid demonstrated that the Sirri export facility itself was vulnerable to attack, bringing about an immediate doubling of insurance rates for vessels travelling there. Iran was forced to transfer more of its oil export operations to the remoter floating terminal at Larak Island, at the mouth of the Gulf, but this, too, proved accessible to Iraqi aircraft, employing mid-air refuelling facilities, and was itself attacked in November. Loading berths, refining facilities, and several tankers docked at Iran's Lavan Island oil terminal, were destroyed or badly damaged by an Iraqi raid in September 1986.

In the land war, the next important engagements, in terms of land gained, occurred in 1986, when, on 9 February, Iran launched the Wal-Fajr (Dawn) 8 offensive. Some 85,000 Iranian troops (leaving about 400,000 uncommitted on the southern front) crossed the Shatt al-Arab waterway and, on 11 February, occupied the disused Iraqi oil port of Faw, on the Persian Gulf, and, according to Iran, about 800 sq km of the Faw peninsula. From this position, within sight of the Kuwaiti island of Bubiyan, commanding the Khor Abdullah channel between the Faw peninsula and the island, Iran threatened Iraq's only access to the Gulf and, if it could extend the offensive to the north-west, Iraq's Umm Qasr naval base. However, the marsh and then desert terrain to the west was not conducive to further Iranian gains, and the position on the Faw peninsula was defensible only with difficulty, given the problem of maintaining supply lines across the Shatt al-Arab. At the same time as the attack upon Faw, Iran began a complementary operation along the Faw–Basra road to divert Iraqi forces. When Iraq launched a counter-offensive on Faw in mid-February, Iran opened up a second front in Iraqi Kurdistan, hundreds of miles to the north, with the Wal-Fajr 9 offensive. Iranian forces drove Iraqi and counter-revolutionary Iranian Kurds out of some 40 villages in the area of Sulaimaniya.

At the end of February 1986 the UN Security Council, while urging for a cease-fire, effectively accused Iraq of starting the war. Despite heavy fighting, Iraq failed to dislodge an estimated 30,000 Iranian troops from in and around Faw. The proximity of Kuwaiti territory to the hostilities notwithstanding, Iran promised not to involve Kuwait in the war, provided that it did not allow Iraq the use of its territory (part of which, Bubiyan Island, is claimed by Iraq) for military purposes.

The Faw offensive prompted a change in tactics by Iraq. In May 1986 Iraq made its first armed incursions into Iran since withdrawing its forces from Iranian territory in 1982. An area of about 150 sq km of Iranian land was occupied, including the deserted town of Mehran (about 160 km east of Baghdad), but Iran recaptured the town in July and forced the Iraqis back across the border. Also in May, Iraqi aircraft raided Teheran for the first time since June 1985, signalling a new wave of reciprocal attacks on urban and industrial targets in Iran and Iraq that continued for the remainder of 1986. For perhaps the first time during the war, Iraq took full advantage of its aerial superiority to damage Iran's industry and to limit its oil production, with numerous attacks on oil installations and tankers shuttling oil to floating terminals near the mouth of the Gulf.

In July the ruling Arab Baath Socialist Party held an extraordinary regional conference, the first since June 1982. Three new members were elected to the party's Regional Command, increasing its number to 17. Naim Haddad, who had been a member of the Regional Command and of the ruling RCC since their formation in 1968, was not re-elected to the Regional Command and was subsequently removed from the RCC, on which he was replaced by Sa'adoun Hammadi, the Chairman, or Speaker, of the National Assembly. These changes effectively strengthened Saddam Hussain's position as leader of the party.

A meeting between the Ministers of Foreign Affairs of Iraq and Syria, scheduled for June 1986, which was heralded as the beginning of a reconciliation between the two countries, was cancelled at the last minute by President Assad of Syria. However, rumours of a *rapprochement* were revived by reports that President Hussain and President Assad had met in secret in Jordan in April 1987. Ministers from both countries met on several occasions in the ensuing weeks, and the reopening of the oil pipeline from Haditha, in Iraq, to the Syrian port of Banias, was discussed. There were, however, no public statements from either side to confirm the improvement in relations.

THE IRAN–IRAQ WAR, 1987

From mid-1986 onwards, Iran was reported to be reinforcing its army at numerous points along the Iraqi border. When an Iranian offensive (Karbala-4: after the holy Shi'ite city in Iraq) was launched on 24 December, it came, as anticipated, in the region of Basra, but failed to penetrate Iraqi defences on four islands in the Shatt al-Arab waterway. On 8 January 1987 a two-pronged attack (Karbala-5) was launched towards Basra. Iranian forces, attacking from the east, established a bridgehead inside Iraq, between the Shatt al-Arab, to the west, and the artificial water barrier, Fish Lake, to the east, and slowly advanced towards Basra, sustaining heavy casualties; while an assault from the south-east secured a group of islands in the Shatt al-Arab. (On 13 January Iran mounted the Karbala-6

offensive in north-east Iraq.) By mid-February Iranian forces from the east had advanced to within about 10 km of Basra but no further gains were made and the Karbala-5 offensive was officially terminated at the end of the month.

In January 1987, at the height of the Karbala-5 offensive, President Hussain of Iraq offered Iran a cease-fire and peace negotiations. Iran rejected the offer, and in the following months demonstrated its ability to launch attacks at several points from one end to the other of the 1,200-km war front. The Karbala-7 offensive, in March, penetrated north-eastern Iraqi territory to a depth of about 20 km in the Gerdmand heights, near Rawanduz, only some 100 km from Iraq's largest oilfields, at Kirkuk. In April, on the southern front, Iran launched the Karbala-8 offensive from the salient, 10 km east of Basra, which had been secured in Karbala-5. The Iranians claimed that the attack established a new front line about 1 km nearer Basra, west of the artificial Twin Canals water barrier, though Iraq claimed that it had been repulsed. At the same time, another offensive, Karbala-9, was mounted in the central sector of the war front, from near the Iranian border town of Qasr-e-Shirin.

Iraq announced a two-week moratorium on its bombing of Iranian towns and cities on 18 February 1987, which Iran agreed to observe in respect of its artillery and missile bombardment of Iraqi cities. In April, following new Iranian attacks east of Basra, and well after the initially stipulated two-week period had expired, Iraq said that it was no longer bound by the unofficial agreement. However, Iraqi air raids did not resume in earnest until May.

Iraq continued to attack tankers shuttling Iranian oil from Kharg Island to the floating terminals at Sirri and Larak islands during the first half of 1986. However, an apparently accidental attack in the Gulf by an Iraqi *Mirage* F-1 fighter plane on the frigate USS *Stark*, part of the US naval force, which had been deployed in the Gulf to protect shipping, created a crisis in Iraqi–US relations. The fighter fired two *Exocet* missiles at the *Stark*, only one of which exploded, killing 37 US sailors. Iraq apologized for the 'error' and desisted from attacks on tankers for the next five weeks. Although it is plausible that the attack was the result of error and inexperience on the part of the Iraqi pilot, Iraq had recently had occasion to record its displeasure at US policy regarding the war. In November 1986 it had emerged that the USA, contrary to its official policy of neutrality, and of discouraging sales of arms to Iran by other countries, had made three shipments of weapons and military spare parts to the Islamic Republic since September 1985. Then, in December, it was reported in *The Washington Post* that the USA had been supplying Iraq with detailed intelligence information for at least two years, to assist it in the war with Iran. In particular, the USA's Central Intelligence Agency (CIA) was said to have provided satellite reconnaissance data, to assist Iraq in its raids on Iranian oil installations and power plants. One month later, US intelligence sources revealed that the USA had, in fact, provided both Iran and Iraq with deliberately misleading or inaccurate information. The explanation of the apparent contradictions in US policy seemed to be that the USA had been trying to engineer a stalemate in the Iran–Iraq War, to prevent either side from gaining a decisive advantage. Iraq subsequently attributed the loss of the disused oil port of Faw in February 1986 to false intelligence reports supplied by the USA.

Tension in the Gulf escalated in May 1987 after the USA's decision to accede to a request from Kuwait for 11 Kuwaiti tankers to be re-registered under the US flag, entitling them to US naval protection. Apart from the financial aid it gave Iraq, Kuwait was a transit point for goods (including military equipment) destined for Iraq, and for exports of oil sold on Iraq's behalf. Iran warned Kuwait on several occasions of the dire consequences of its continued support for Iraq, and between October 1986 and April 1987 15 ships bound to or from Kuwait were attacked in the Gulf by Iran, and several Kuwaiti cargoes were seized. After the USA made its navy available to escort reregistered Kuwaiti tankers through the Gulf, Iran announced that it would not hesitate to sink US warships if provoked.

The possibility of a confrontation between the USA and Iran resulted in a rare display of unanimity in the UN Security Council, which, on 20 July 1987, adopted a resolution (No. 598) urging an immediate cease-fire in the Iran–Iraq War; the withdrawal of all forces to internationally recognized boundaries; and the co-operation of Iran and Iraq in mediation efforts to achieve a peace settlement. Iraq agreed to abide by the terms of the resolution if Iran did so. Iran said that the Resolution was 'unjust', and criticized it for failing to identify Iraq as the original aggressor in the war. Moreover, it maintained that the belligerent US naval presence in the Gulf, effectively in support of Iraq, rendered the Resolution null and void. However, by mid-September Iran had still not delivered an unequivocal response to the Resolution. Iraq, meanwhile, had halted its attacks on tankers in the Gulf in mid-July and Iran had exploited the lull by raising the level of its oil production and exports.

THE UN FAILS TO ENFORCE RESOLUTION 598

Contrary to advice from Western governments, Iraq resumed attacks on Iranian oil installations and industrial targets, and on tankers in the Gulf transporting Iranian oil, on 29 August 1987. Resolution 598 made provision for unspecified sanctions in the event of the failure of either or both sides to comply with its terms. However, the resumption of Iraqi attacks weakened the UN's position in its attempts to secure a cease-fire through diplomacy, and made it less likely that the USSR could be persuaded to agree to the imposition of an arms embargo, whether against Iran alone or against both protagonists.

During the remainder of the year the UN Secretary-General, Javier Pérez de Cuéllar, sought a cease-fire formula which would be acceptable to Iran. His visit to the Gulf region, for talks in Iran and Iraq, between 11 and 15 September 1987, was preceded by an intensification of Iraqi attacks on Iranian economic targets. In Teheran, Iranian leaders told Pérez de Cuéllar that they supported the provision in Resolution 598 for the establishment of an 'impartial body' to apportion responsibility for starting the war, but that Iraq's guilt in this matter had to be established before Iran would observe a cease-fire. For its part, Iraq was prepared to accept the ruling of a judicial body in determining responsibility for the war but refused to countenance any deviation from the original terms of Resolution 598, which stated that a formal cease-fire should precede the establishment of such a body.

Signs of an apparent willingness on Iran's part to modify its stand on Resolution 598 forestalled attempts by the USA, the United Kingdom and France to promote their proposal of an arms embargo against Iran, and also pre-empted the adoption of diplomatic or other sanctions by the Arab League, at its meeting in Tunis on 20 September 1987. An extraordinary session of the Arab League in Amman, Jordan, from 8–11 November, produced a final communiqué which unanimously condemned Iran for prolonging the war with Iraq and for its occupation of Arab (i.e. Iraqi) territory, and urged Iran to implement Resolution 598 without pre-conditions.

Following the summit meeting in Amman, the Iraqi Government, in common with a number of other Arab countries, re-established diplomatic relations with Egypt. During the summit, a meeting had taken place between President Hussain and President Assad, reviving speculation of a *rapprochement* between Iraq and Syria, which had supported Iran in war. President Assad, however, obstructed the League's adoption of an Iraqi proposal that member states should sever their diplomatic links with Iran, and Syria subsequently averred that its good relations with Iran were unimpaired.

On 3 November 1987 the Iranian Deputy Minister of Foreign Affairs, Muhammad Javad Larijani, stated that Iran would observe a cease-fire if the UN Security Council were to identify Iraq as the aggressor in the Iran–Iraq War. The USA and the United Kingdom interpreted this announcement as a device to forestall a change in Soviet policy on the question of an arms embargo. The USSR had persistently refused to consider an embargo, and argued that Iran should be allowed more time in which to accept Resolution 598. At the beginning of December, during further discussions with Pérez de Cuéllar in New York, Larijani made the additional condition that Iraq should agree to pay war reparations prior to the introduction of a cease-fire, and cited Iraqi intransigence and the presence of US ships in the Gulf as the principal obstacles to peace.

On 22 December the USSR itself proposed discussions within the Security Council to consider a mandatory prohibition on the sale of arms to Iran, which would take place at the same time

as discussions on the introduction of an international naval force in the Gulf, under the control of the UN, to replace the various national forces patrolling the region. Although all the five permanent members of the Security Council subsequently agreed on the need for further measures to be taken to ensure the compliance of both combatants with Resolution 598, the USSR's insistence on the withdrawal of foreign navies followed by the deployment of a UN naval force in the Gulf, and the USA's growing military involvement in the area during 1988, prevented the adoption of an arms embargo.

CEASE-FIRE IN THE IRAN–IRAQ WAR

During the first half of 1988 Iraq regained much of the territory which it had lost to Iran in previous years, taking advantage of Iranian military inefficiency and the confused aims of a divided Iranian leadership. However, the world was taken by surprise in July 1988 when, after 12 months of prevarication, Iran agreed, unconditionally, to accept Resolution 598.

In January 1988 Iran and Iraq rebuffed a Syrian initiative to engineer a diplomatic end to the war by opening a dialogue between Iran and the Gulf states. After a lull of 10 days, Iraq resumed the so-called 'tanker war', accusing Syria of violating Arab solidarity against Iran. During 1987, according to Lloyd's of London, Iranian and Iraqi attacks had damaged 178 vessels in the Gulf (including 34 in December alone), compared with 80 during 1986. (When a cease-fire was proclaimed in July, a total of 546 vessels had been hit since 1981, when the 'tanker war' began in earnest.)

At the end of February 1988 Iraq resumed the 'war of the cities' (which, apart from sporadic attacks, had been halted in early 1987), signalling the beginning of a series of reciprocal raids on civil and economic targets in the two countries which lasted for several months.

During 1987/88, for the first time in six years, owing to poor mobilization, disorganization and a shortage of volunteers, Iran was unable to launch a major winter offensive and began to lose ground to Iraqi advances along the length of the war front. However, this was not before Kurdish guerrillas, in February 1988, had advanced into government-controlled territory in Iraqi Kurdistan, where Iranian forces, with Kurdish assistance, had established bridgeheads, particularly in the Mawat region, along the Iranian border. The Kurdish part in these operations represented the largest Kurdish offensive since 1974/75, uniting forces from the DPK and the PUK, which, in November 1986, had agreed to co-ordinate their military and political activities and were in the process of forming a coalition of Kurdish nationalist groups (see below). In March 1988, in a retaliatory attack against the captured town of Halabja, Iraq is believed to have used chemical weapons, killing 4,000 Kurdish civilians. (In July Iraq admitted its use of chemical weapons during the war. A UN report compiled in April had concluded that there were victims of chemical weapons on both sides; a team of UN experts reported in August that Iraq had used mustard gas against Iranian civilians.)

After the success of the Iranian-Kurdish offensive, the following months witnessed a catalogue of Iraqi victories over Iranian forces. In March 1988 the National Liberation Army (NLA), the military wing of the Iranian resistance group, Mujahidin-e-Khalq, supported by Iraq, undertook a major offensive for the first time since its creation in 1987, attacking Iranian units in Iran's south-western province of Khuzestan. In mid-April Iraqi forces regained control of the Faw peninsula, where the Iranians, who had been unable to strike out to make further territorial gains since capturing the area in 1986, had scaled down their presence. (Iran accused Kuwait of allowing Iraqi forces to use the nearby Bubiyan Island during the Faw offensive.) Then, in May, Iraq recaptured the Shalamcheh area, south-east of Basra, driving the Iranians back across the Shatt al-Arab.

A radical military reorganization by Iran, undertaken in June and July 1988, failed to reverse the tide of defeat. Having won back more territory in the north of Iraq, near Sulaimaniya, in mid-June, Iraq recaptured Majnoon Island and the surrounding area in the al-Hawizah marshes (the site of one of the world's biggest oilfields), on the southern front, at the end of the month. Also at the end of June, and in July, Iraq expelled Iranian forces from Iraqi territory in Kurdistan, recapturing the border town of Mawat and key mountain areas to the north-east of Halabja. On 13 July, in the central sector of the front, Iraqi forces crossed into Iranian territory for the first time since 1986, and captured the Iranian border town of Dehloran. The last pockets of Iranian occupation in southern Iraq were cleared by Iraqi troops in mid-July and, on 18 July, Iran officially announced its unconditional acceptance of Resolution 598. Iraqi troops in the central sector advanced further into Iran before retiring behind the border on 24 July. However, the NLA, over which Iraq claimed to have no control, launched a three-day offensive on 25 July, penetrating as far as 150 km into Iranian territory, before being forced to withdraw. Iraq professed to have no designs on Iranian territory but it was suggested that the NLA was being used as a proxy by Iraq to prevent Iranian forces from reorganizing during a cease-fire which might prove to be only temporary. At the beginning of August, owing to uncertainty over the war, Iraq's general elections, which had been scheduled to take place at the end of the month, were postponed for six months.

The implementation of a cease-fire was delayed by an Iraqi demand for the initiation of direct peace talks with Iran, under UN auspices, prior to a cessation of hostilities. Iran protested that Resolution 598 did not require this. However, on 6 August 1988 Iraq withdrew its insistence on the necessity for direct talks to take place before a cease-fire and, on the following day, Iran agreed to direct talks following the end of hostilities. Accordingly, a cease-fire finally came into force on 20 August, monitored by a specially-created UN observer force of 350 officers, the UN Iran-Iraq Military Observer Group (UNIIMOG).

PEACE TALKS

Negotiations between Iran and Iraq for a comprehensive peace settlement, based on the full implementation of Resolution 598, began at foreign ministerial level in Geneva on 25 August 1988, under the aegis of the UN. With the question of the location of frontiers a matter of dispute, the requirement in Clause One of Resolution 598 for military forces to retire behind internationally recognized borders was causing problems before the talks began, and, once started, they soon reached stalemate. Iran insisted that the Algiers Agreement of 1975 between the two countries should be the basis for negotiations. According to the terms of the Algiers Agreement, which defined the southern border between Iran and Iraq as running along the deepest channel of the Shatt al-Arab waterway (the Thalweg Line), the two countries exercise joint sovereignty over the waterway. However, President Hussain of Iraq, who had been a signatory to the agreement, publicly rejected it immediately prior to the Iraqi invasion of Iran in 1980, claiming that it had been made under duress, and demanded full Iraqi sovereignty over the Shatt al-Arab, which Iraq held under previous agreements in 1847, 1913 and 1937. Iraq also claimed the right of navigation through the Shatt al-Arab and the Gulf during the cease-fire, unhindered by Iranian vessels. When Iran claimed to have stopped and searched an Iraqi cargo vessel which was making its way through the Strait of Hormuz into the Gulf on 20 August 1988, Iraq (though it denied the Iranian claim) threatened to resume hostilities if Iraqi vessels were harassed in this way. It also insisted that an agreement for the dredging of the Shatt al-Arab and the removal of sunken ships be finalized before the discussion of final (mainly Iraqi) troop withdrawals and the exchange of prisoners of war could proceed. Iran claimed that it was, technically, still at war with Iraq and was, therefore, entitled, under international law, to search Iraqi and other vessels for war supplies, for as long as Iraqi troops were in occupation of Iranian territory (an estimated 1,500 sq km, according to Iran).

These disputes, largely concerning issues for which there was no provision in Resolution 598, delayed the implementation of the Resolution beyond the introduction of a cease-fire. Clause Three, for example, urged the repatriation of prisoners of war. By mid-1988 the Red Cross had registered 50,182 Iraqi prisoners of war held in Iran, and 19,284 Iranians held in Iraq, although the actual figures were thought to be higher, as the Red Cross had not been allowed access to all prisoners. In November Iran and Iraq agreed to exchange all sick and wounded prisoners of war. The first exchanges took place in the same month, but the arrangements collapsed shortly afterwards, following a dispute over the number of prisoners involved. Resolution 598 also

provided for the creation of an impartial judicial body to determine where the responsibility for starting the war lay. It was generally accepted that Iraq had initiated the conflict by invading Iran on 22 September 1980. Iraq, however, maintained that the war began on 4 September with Iranian shelling of Iraqi border posts. The negotiations for a comprehensive peace settlement remained deadlocked for two years.

On 16 August 1990 President Hussain of Iraq abruptly sought an immediate, formal peace with Iran (for full details, see chapter on Iran, History) by accepting almost all of the claims that Iran had pursued since the declaration of a cease-fire in the war in August 1988. On 10 September 1990 Iran and Iraq formally agreed to resume diplomatic relations.

IRAQI SUPPRESSION OF THE KURDS

Since 1987, when the Iranian military threat began to wane, Iraq had concentrated more resources in the north of the country to deal with the Kurdish separatist movement, which claimed to control a 'liberated zone' of 10,000 sq km. It had intensified its 'scorched earth' policy, which is believed first to have been employed in Kurdistan in 1975 when, following the suppression of a Kurdish guerrilla campaign, 800 Kurdish villages along the border with Iran were razed to create a 'security belt', and Kurds were resettled inside Kurdistan or deported to the south of Iraq. The systematic depopulation of Kurdish areas, achieved by the destruction of Kurdish villages and the resettlement elsewhere in the country of those inhabitants who were not driven into more remote mountain areas, or into neighbouring Iran, was intensified in early 1988, in response to Kurdish support for new Iranian offensives in Iraqi Kurdistan. It was estimated at this time that, with the destruction of some 1,000 villages during the previous year, only about 1,000 of the 4,000 Kurdish villages which had existed before were still standing, and more than one-third of the area of Iraqi Kurdistan was completely depopulated.

In May 1988 the two principal Kurdish dissident groups, the DPK and the PUK, announced the formation of a coalition of six organizations, which would continue the struggle for Kurdish self-determination and co-operate militarily with Iran. Apart from the DPK and the PUK, the new front consisted of the Socialist Party of Kurdistan (SPK), the People's Democratic Party of Kurdistan (PDPK), the United Socialist Party of Kurdistan (USPK), and the predominantly Kurdish ICP.

The introduction of a cease-fire in the Iran–Iraq War in August 1988 allowed Iraq to divert more troops and equipment to Kurdistan, apparently in an attempt to effect a final military solution to the problem of the Kurdish separatist movement. At the end of August an estimated 60,000–70,000 Iraqi troops launched a new offensive to conquer guerrilla bases near the borders with Iran and Turkey, bombarding villages, allegedly using chemical weapons, and forcing thousands of Kurdish civilians and fighters (*peshmerga*) to escape into Iran and Turkey. By mid-September more than 100,000 Kurdish refugees were believed to have fled across the border into Turkey, while Iraqi Kurds seeking refuge in Iran joined an estimated 100,000 others from their country, some 40,000 of whom had escaped from Halabja, after the chemical attack on the city in March. The death toll from the new offensive was estimated at 15,000 in early September.

On 26 August 1988 the UN Security Council adopted a resolution (No. 620) unanimously condemning the use of chemical weapons in the Iran–Iraq War. However, Iraq was not censured by name and continued to deny that it was using chemical weapons against the Kurds, despite what the USA, in September, called 'compelling evidence' to the contrary. On 9 September the US Senate voted to impose economic sanctions against Iraq, which, if they were legally adopted, would halt US credits and exports of US goods worth $800m., prohibit US imports of Iraqi oil, and require US representatives on international financial bodies to vote against all loans and aid to Iraq. Reacting to the vote of the US Senate, an estimated 150,000 Iraqis took part, in Baghdad, in a massive anti-US demonstration.

On 6 September 1988, with its army effectively in control of the border with Turkey, the Iraqi Government offered a full amnesty to all Iraqi Kurds inside and outside the country (excluding only Jalal Talibani, the leader of the PUK), inviting those Kurds abroad to return within 30 days and promising to release all Kurds held on political grounds. The offer was generally dismissed by Kurds as a propaganda ploy, although the Government subsequently claimed that more than 60,000 Kurdish refugees had taken advantage of the amnesty to return to Iraq.

On 17 September 1988 the Government began to evacuate inhabitants of the Kurdish Autonomous Region to the interior of Iraq, as the first step towards the creation of a 30 km-wide uninhabited 'security zone' along the whole of Iraq's border with Iran and Turkey. In June 1989 Kurdish opposition groups appealed for international assistance to halt the evacuations, claiming that they were, in fact, forcible deportations of Kurds to areas more susceptible to government control, and that many of the evacuees (reported to number 300,000 by August 1989) did not reside in the border strip which was to be incorporated into the 'security zone', but in other areas of the Kurdish Autonomous Region. However, the Iraqi Government apparently remained impervious to international criticism of the 'evacuation' programme.

PROPOSED POLITICAL REFORMS

While the cease-fire in the Iran–Iraq War in August 1988, which was precipitated by Iraqi military successes, strengthened Saddam Hussain's position, it also allowed domestic conflicts to find expression again. Hussain's regime is widely regarded as one of the most autocratic in the Arab world, and in February 1989 there were reports of a further attempt by senior army officers to stage a coup. In November 1988 Hussain announced a programme of political reforms, including the introduction of a multi-party political system, and in January 1989 he declared that a committee was to be established to draft a new constitution. These developments were regarded as attempts to retain the loyalty of Iraq's Shi'ite community, which sought the liberalization of Iraqi society as a reward for its role in the war against Iran.

In April 1989 elections were held to the 250-member National Assembly for the third time since its creation in 1980. The 250 seats were reportedly contested by 911 candidates, one-quarter of whom were members of the Baath Party. The remaining candidates were reported to be either independent or members of the National Progressive Front. It was estimated that 75% of Iraq's electorate (totalling about 8m.) voted in the elections, and that more than 50% of the newly-elected deputies were members of the Baath Party. A new draft Constitution was completed in January 1990, and approved by the National Assembly in July, when its provisions were published in the Iraqi press. It allowed for a multi-party political system, and there was speculation that defunct political parties, such as the National Democratic Party (NDP), would be permitted to re-form and participate in future elections. Under the terms of the draft Constitution, a Consultative Assembly was to be established. This, together with the National Assembly, was to assume the duties of the RCC, which was to be abolished after a presidential election (to be held within two months of the draft Constitution's approval by the National Assembly) had taken place. Following its approval by the National Assembly, the draft Constitution was to be subjected to a popular referendum before ratification by the President.

FOREIGN RELATIONS

From late 1989 there was increased concern in Western countries about the scale of a military expansion programme apparently under way in Iraq; about the involvement of Western companies in the programme; and about covert attempts by Iraq to obtain advanced military technology from the West. International attention focused on Iraq in September 1989, following an explosion at an Iraqi defence industry complex which was thought to be a major installation in a missile development programme.

In March 1990 Iraq's conviction for espionage, and subsequent execution, of an Iranian-born UK journalist, Farzad Bazoft, provoked international outrage and damaged relations with the United Kingdom. The incident emphasized the sensitivity of the Iraqi Government to the question of its military capabilities: in his defence, Bazoft claimed that, as a *bona fide* journalist, he had been investigating the explosion at the Iraqi defence industry

complex in September 1989. At the end of March 1990 the British Government claimed to have thwarted attempts by Iraq to import prohibited military devices from the United Kingdom, and in April it alleged that steel tubes which Iraq had ordered from a British company were to be used to construct a 'supergun'.

In April 1990 the US President, George Bush, also urged Iraq to abandon production of chemical weapons, and in June the US media alleged that France had helped to extend the range, and improve the accuracy, of Iraqi missiles. At the end of July the US Congress voted to impose sanctions on Iraq, which formally prohibited sales of weapons and military technology to Iraq.

As its relations with the West deteriorated, Iraq's reputation in the Arab world improved. The outrage that was provoked by Iraq's execution of Farzad Bazoft, together with more general criticisms in Western media of its human rights record, elicited expressions of support for Iraq from the Arab League and from individual Arab states. In April 1990, after Saddam Hussain had referred to Iraq's chemical weapons as a deterrent against a nuclear attack by Israel, there were further expressions of support, even from Iraq's staunchest Arab rival, Syria, for Iraq's right to defend itself.

IRAQ'S INVASION OF KUWAIT

Prior to a meeting of the OPEC ministerial council in Geneva on 25 July 1990, Iraq had implied that it might take military action against countries which continued to flout their oil production quotas. It had also accused Kuwait of violating the Iraqi border in order to steal Iraqi oil resources worth US $2,400m., and suggested that Iraq's debt to Kuwait, accumulated largely during the Iran–Iraq War, should be waived. On the eve of the OPEC meeting in Geneva, Iraq stationed two armoured divisions (about 30,000 troops) on its border with Kuwait.

The Iraqi threat and military mobilization led to a sharp increase in regional tension. Before the OPEC meeting in Geneva on 25 July 1990, President Mubarak of Egypt and Chedli Klibi, the Secretary-General of the Arab League, travelled to Baghdad in an attempt to calm the situation. The USA, meanwhile, placed on alert its naval forces stationed in Bahrain. At the conclusion of the OPEC meeting, however, the threat of Iraqi military action appeared to recede: both Kuwait and the United Arab Emirates (UAE) agreed to reduce their petroleum production, while OPEC agreed to raise its 'benchmark' price of crude petroleum from US $18 to $21 per barrel.

Direct negotiations between Iraq and Kuwait commenced in Saudi Arabia at the end of July 1990, with the aim of resolving disputes over territory, oil pricing and Iraq's debt to Kuwait. Kuwait was expected to accede to Iraqi demands for early negotiations to draft a border demarcation treaty, and Iraq was expected to emphasize a claim to the strategic islands of Bubiyan and Warbah, situated at the mouth of the Shatt al-Arab. (After Kuwait obtained independence in 1961—it had formerly been under the protection of the United Kingdom—Iraq claimed sovereignty over the country. Kuwait was placed under the protection of British troops, who were later withdrawn and replaced by Arab League forces. On 4 October 1963 the Iraqi Government formally recognized Kuwait's complete independence and sovereignty within its present borders.) On 1 August, however, the talks collapsed, and on 2 August Iraq invaded Kuwait, taking control of the country and establishing a (short-lived) Provisional Free Government.

There was no evidence at all to support Iraq's claim that its forces had entered Kuwait at the invitation of insurgents who had overthrown the Kuwaiti Government. The invasion appeared more likely to have been motivated by Iraq's financial difficulties in the aftermath of the Iran–Iraq War in addition to strategic interests—Iraq had long sought the direct access to the Persian Gulf which it gained by occupying Kuwait.

The immediate response, on 2 August 1990, of the UN Security Council to the invasion of Kuwait was to convene and to adopt unanimously a resolution (No. 660), which condemned the Iraqi invasion of Kuwait; demanded the immediate and unconditional withdrawal of Iraqi forces from Kuwait; and appealed for a negotiated settlement of the conflict. On 6 August the UN Security Council convened again and adopted a further resolution (No. 661), which imposed mandatory economic sanctions on Iraq and on occupied Kuwait, affecting all commodities with the exception of medical supplies and foodstuffs 'in humani tarian circumstances'.

As early as 3 August 1990 it was feared that the economi sanctions being imposed on Iraq and Kuwait would be superseded by international military conflict. On 3 August Iraq troops began to deploy along Kuwait's border with Saudi Arabia and the USA and the United Kingdom announced that they were sending naval vessels to the Gulf. On 7 August, at the request of King Fahd of Saudi Arabia, the USA dispatched combat troops and aircraft to Saudi Arabia, in order to secure the country's border with Kuwait against a possible attack by Iraq. US troops began to occupy positions in Saudi Arabia on 9 August, one day after Iraq announced its formal annexation of Kuwait. On the same day, the UN Security Council convened and adopted a unanimous resolution (No. 662), which declared the annexation of Kuwait to be null and void, and urged all states and institutions not to recognize it.

The dispatch of US troops signified the beginning of 'Operation Desert Shield' for the defence of Saudi Arabia, in accordance with Article 51 of the UN Charter. By the end of January 1991 some 30 countries had contributed ground troops, aircraft and warships to the multinational force in Saudi Arabia and the Gulf region. By far the biggest contributor was the USA, which, it was estimated, had deployed some 500,000 military personnel. Arab countries participating in the multinational force were Egypt, Syria, Morocco and the members of the Co-operation Council for the Arab States of the Gulf (Gulf Co-operation Council—GCC, see p. 255)—Bahrain, Kuwait, Oman, Qatar, Saudi Arabia and the UAE. It was estimated that Iraq had deployed some 555,000 troops in Kuwait and southern Iraq by the end of January 1991.

Iraq's invasion and annexation of Kuwait altered the pattern of relations prevailing in the Arab world. In the immediate aftermath of the invasion, individual Arab states condemned Iraq's action, and on 3 August 1990 a hastily-convened meeting of the Arab League in Cairo agreed a resolution (endorsed by 14 of the 21 member states and opposed by Iraq, Jordan, Mauritania, Sudan, Yemen and the PLO) which condemned the invasion of Kuwait and demanded the immediate and unconditional withdrawal of Iraqi forces. At a summit meeting of Arab League Heads of State, held in Cairo on 10 August, the demand for Iraq to withdraw from Kuwait was reiterated, and 12 of the 20 members participating in the meeting voted to send an Arab deterrent force to the Gulf in support of the US-led effort to deter potential aggression against Saudi Arabia.

As the crisis in the Gulf developed, Western diplomacy strove to maintain Iraq's isolation. The invasion of Kuwait had provoked widespread popular support for Iraq, notably in Jordan, where there was a huge Palestinian population, and also in the Maghreb states. Although conducted with the approval of the UN, in pursuit of aims formulated in specific UN resolutions, and with the active support of Egypt, Syria, Morocco and the Gulf states, both 'Operation Desert Shield' and its successor, 'Operation Desert Storm', were widely perceived, in parts of the Arab world, to be US-led campaigns to secure US interests in the Gulf region.

On 12 August 1990 Saddam Hussain proposed an initiative for the resolution of the conflict in the Gulf, linking Iraq's occupation of Kuwait with other conflicts in the Middle East, in particular the continuing Israeli occupation of the West Bank of Jordan and the Gaza Strip, and the Palestinian question. This was the first explicit example of so-called 'linkage' in diplomatic efforts to resolve the crisis in the Gulf. Practically, 'linkage' would have amounted to the trading of an Iraqi withdrawal from Kuwait for, at least, the convening of an international conference on the Palestinian issue, and it was repeatedly rejected by the USA, which considered that 'linkage' would reward Iraq's aggression and enhance the country's reputation in the Arab world.

The authority for the deployment of a multinational force for the defence of Saudi Arabia was contained in Article 51 of the UN Charter, which affirms 'the inherent right of individual or collective self-defence if an armed attack occurs against a member of the United Nations, until the Security Council has taken measures necessary to maintain international peace and security'. The UN Security Council warned, however, that its authorization would be necessary for the use of force to imple-

ment the economic sanctions imposed on Iraq and Kuwait. Article 42 of the UN Charter provided for the taking of 'such action by air, sea or land forces as may be necessary to maintain international peace and security', including the use of a blockade. In order to clarify the Charter's provisions, the USA drafted a resolution which would allow the UN to use legitimately the force necessary to maintain a blockade against Iraq. On 25 August 1990 the UN Security Council adopted a resolution (No. 665) which requested, with immediate effect, member states deploying maritime forces in the area to use 'such measures commensurate to the specific circumstances as may be necessary under the authority of the Security Council to halt all inward and outward maritime shipping in order to inspect and verify the cargoes and destinations' and ensure the implementation of the mandatory economic sanctions against Iraq and Kuwait. The resolution also invited all states to co-operate, by political and diplomatic means, to ensure compliance with sanctions.

Successive diplomatic efforts to achieve a peaceful solution to the crisis in the Gulf—undertaken, at different times, by the UN and by numerous individual countries—between August 1990 and mid-January 1991 foundered, virtually without exception, on Iraq's steadfast refusal to withdraw its forces from Kuwait. Diplomacy was initially complicated by the treatment of Western citizens residing in Iraq and Kuwait. On 9 August 1990 Iraq closed its borders to foreigners, and on 13 August all US and British nationals in Kuwait were ordered to assemble at hotels prior to their removal to Iraq. Iraq subsequently announced that Westerners would be housed near military locations in order to deter an attack on Iraq by the multinational force in Saudi Arabia. On 28 August, however, Iraq announced that all foreign women and children were free to leave Iraq and Kuwait, extending this permission to all foreigners on 6 December.

On 29 November 1990 the UN Security Council convened and adopted a resolution (No. 678), drafted by the USA, which, with reference to its previous resolutions regarding Iraq's occupation of Kuwait, authorized 'all member states co-operating with the Government of Kuwait, unless Iraq on or before 15 January 1991, fully implements . . . the foregoing resolutions, to use all necessary means to uphold and implement Security Council Resolution 660 and all subsequent relevant resolutions and to restore international peace and security in the area'. Iraq denounced Resolution 678, the first UN resolution since 1950 which authorized the use of force, as a threat, and reiterated its demand for the UN Security Council to address equally all the problems of the Middle East.

'Operation Desert Storm'—in effect, war with Iraq—in pursuance of the liberation of Kuwait, as demanded by UN Resolution 660, commenced on the night of 16–17 January 1991. It was preceded by intense diplomatic activity to achieve a peaceful solution to the crisis in the Gulf, in particular a visit, on 10 January, by the UN Secretary-General, Javier Pérez de Cuéllar, to Baghdad for talks with Saddam Hussain. The failure of this mission was widely regarded as signalling the inevitability of military conflict. On 14 January Iraq's National Assembly approved a resolution which afforded the President all constitutional powers to respond to any 'US-led' attack.

The declared aim of the multinational force in Saudi Arabia, in the initial phase of 'Operation Desert Storm', was to gain air superiority, and then air supremacy, over Iraqi forces, in order to facilitate air attacks on Iraqi military and industrial installations. Hostilities commenced with air raids on Baghdad, and by late February 1991 a total of 91,000 attacking air missions were reported to have been flown over Iraq and Kuwait by the multinational air forces.

The multinational force claimed air supremacy over Iraq and Kuwait on 30 January 1991, and air attacks were refocused on the fortified positions of Iraqi ground troops in Kuwait, in preparation for a ground offensive. During the initial phase of the air campaign, the Iraqi air force appeared to have offered surprisingly little resistance. Indeed, by 8 February it was reported that more than 100 Iraqi fighter aircraft had sought refuge in Iran, and the apparent good faith of Iran's reaffirmation of its neutrality in the conflict prompted speculation that they had been directed there deliberately in an attempt to prevent the total destruction of the Iraqi air force.

Iraq's most serious response to the military campaign waged against it was attacks with *Scud* missiles on Israel. While these were of little military significance, they threatened to provoke Israeli retaliation against Iraq and the consequent disintegration of the multinational force, since it would have been politically impossible for any Arab state to fight alongside Israel against Iraq. US diplomacy, together with the installation in Israel of advanced US air defence systems, averted the threat of Israeli retaliation for the attacks by the missiles, 37 of which had been launched by late February 1991. In addition, Iraq launched 35 *Scud* missiles against Saudi Arabia.

On 6 February 1991 Iraq formally severed diplomatic relations with the USA, the United Kingdom, France, Italy, Egypt and Saudi Arabia. Between August 1990 and January 1991 many foreign embassies in Baghdad had closed, and most countries had withdrawn their diplomatic staff before the outbreak of hostilities in the Gulf.

On 15 February 1991 the Iraqi Government abruptly expressed its willingness to 'deal with' the UN Security Council resolutions pertaining to its occupation of Kuwait. However, its offer to do so was conditional upon the fulfilment of a long list of requirements (including an assurance that the as-Sabah family would not be restored to power in Kuwait) and was accordingly unacceptable to the countries contributing to the multinational force. The offer to 'deal with' the UN resolutions was nevertheless thought to indicate a new flexibility on the part of the Iraqi leadership.

Soviet diplomacy came to the fore in seeking to persuade Iraq to alter its offer to withdraw from Kuwait into one which the multinational force could accept. On 21 February 1991 Iraq agreed to an eight-point Soviet peace plan which stipulated that: Iraq should make a full and unconditional withdrawal from Kuwait; the withdrawal was to begin on the second day of a cease-fire; the withdrawal should take place within a fixed time-frame; after two-thirds of Iraq's forces had withdrawn from Kuwait, the UN-sponsored economic sanctions were to be repealed; the relevant UN Security Council resolutions should be waived following Iraq's withdrawal; all prisoners of war were to be released following a cease-fire; the withdrawal was to be monitored by observers from neutral countries following a cease-fire; other details were to be discussed at a later stage.

The eight-point Soviet peace plan remained unacceptable to the multinational force, not least because it stipulated that a cease-fire should take effect before Iraq began to withdraw from Kuwait. On 22 February 1991, in response, the USA, representing the multinational force, demanded that Iraq commence a large-scale withdrawal of its forces from Kuwait by noon (US Eastern Standard Time) on 23 February, and that the withdrawal should be completed within one week. In response to this ultimatum, the USSR proposed a further plan for peace, this time containing six points—subsequently formally approved by Iraq—in a final attempt to avert a ground war in Kuwait and Iraq. However, once again the plan was rejected by the multinational force because it did not amount to the unconditional withdrawal of Iraqi forces from Kuwait which UN Security Council Resolution 660 demanded.

During the night of 23–24 February 1991 the multinational force launched a ground offensive for the liberation of Kuwait. Iraqi troops defending Kuwait's border with Saudi Arabia were quickly defeated, offering little resistance to the multinational force. A flanking movement, far to the west, by French units and elements of the 101st US Airborne Division succeeded in severing the main road west from Basra, while the road leading north from Basra was breached by repeated bombing. Divisions of Iraq's élite Republican Guards in the Kuwait area were thus isolated to the south of the Tigris and Euphrates rivers and prevented from retreating towards Baghdad. On 28 February 1991 President Bush announced that the war to liberate Kuwait had been won, and he declared a cease-fire. Iraq had agreed to renounce its claim to Kuwait, and to release all prisoners of war. It also indicated that it would comply with the remaining relevant UN Security Council resolutions. On 3 March Iraq accepted the cease-fire terms that had been dictated, at a meeting with Iraqi military commanders, by the commander of the multinational force, Gen. Norman Schwarzkopf of the US army.

On 3 April 1991 the UN Security Council adopted a resolution (No. 687) which stipulated the terms for a full cease-fire in the Gulf. These terms were accepted on 5 April by Iraq's RCC, and on the following day by the National Assembly. A separate UN Security Council resolution (No. 689), adopted on 9 April, created a demilitarized zone between Iraq and Kuwait, to be monitored by military personnel from the five permanent members of the UN Security Council.

INTERNAL REVOLT

Following the rout of the Iraqi army by the UN-sponsored multinational force in February 1991, armed rebellion broke out among the largely Shi'ite population of southern Iraq and among the Iraqi Kurds in the Kurdish northern provinces of the country. In the south the town of Basra was the centre of the rebellion. On 4 March it was reported that suppporters of the Teheran-based Supreme Council for the Islamic Revolution in Iraq (SCIRI) had gained control of the towns of Basra, Amarah, Samawah and Nasiriyah. At a conference of Iraqi groups opposed to the Government of Saddam Hussain, in Beirut on 11–13 March, it was claimed that, despite the prominent role of the SCIRI, the uprising in the south was secular and was not an attempt to establish an Iranian-style Islamic republic in Iraq. Already, on 5 March, the assessment of US intelligence sources, that the southern rebellion lacked sufficient organization to succeed, appeared to be corroborated: armed forces loyal to the Government were reported to be regaining control of the cities which had fallen to the rebels. On the same day it was announced that Ali Hassan al-Majid had been appointed Minister of the Interior, with express instructions to suppress the southern rebellion; and on the following day the Government announced financial bonuses for certain elements of the armed forces, in order to stem disaffection. Crucially, there was no military intervention by the multinational force in support of the rebellion. In this respect there appeared to have been a fundamental shift in the policy of the US Government: claiming that actively to support the southern rebellion would constitute unjustified interference in Iraq's internal affairs, its principal aim now seemed to be to prevent the disintegration of Iraq, rather than to oust Saddam Hussain from power. By contrast, at the conference of Iraqi opposition groups held in Beirut in mid-March, it was agreed to seek the overthrow of Saddam Hussain; the abolition of the Arab Baath Socialist Party; and the establishment of a democratic system of government in Iraq.

By mid-March 1991 armed forces loyal to the Government had effectively crushed the rebellion in the south, but their deployment there had allowed a simultaneous revolt by Kurdish guerrilla groups in the Kurdish northern provinces of Iraq to gather momentum. In late March it was reported that Kurdish rebels had gained control of Kirkuk and of important oil installations to the west of the city, and in early April Kurdish leaders claimed that as many as 100,000 guerrillas were involved in hostilities against government forces. The various Kurdish factions appeared to have achieved greater unity of purpose through their alliance, in May 1988, in the Kurdistan Iraqi Front (KIF). Rather than seeking the creation of an independent Kurdish state (which would not be tolerated by the Turkish and Iranian Governments), the KIF claimed that the objective of the northern insurrection was the full implementation of the 15-article peace plan which had been concluded between Kurdish leaders and the Iraqi Government in 1970. At the same time, however, the KIF invited the leaders of other Iraqi groups opposed to the Government to join it in the newly captured areas of northern Iraq in order to establish a unified anti-government movement.

Lacking military support from the multinational force—which was denied to them for the same reasons that it had been denied to the southern insurgents—the Kurdish guerrillas were unable to resist the onslaught of the Iraqi armed forces, which were redeployed northwards as soon as they had crushed the uprising in southern Iraq. By early April 1991 government forces had recaptured Kirkuk, Arbil, Dohok and Zakho. Some 50,000 Kurds were reported to have been killed in the hostilities, and, fearing genocide, an estimated 1m.–2m. Kurds fled before the Iraqi army across the northern mountains into Turkey and Iran. On 5 April, as Saddam Hussain offered an amnesty to all Kurds with the exception of 'criminal elements', the UN Security Council adopted a resolution (No. 688) which condemned 'the repression of the Iraqi civilian population in many parts of Iraq' and demanded that the Iraqi Government permit the immediate access of international humanitarian organizations to persons in need of assistance. As relief operations were subsequently mounted, the means were sought whereby the Kurdish refugees could return to Iraq without fear of a renewed onslaught by the Iraqi armed forces.

As the 'Kurdish crisis' had developed, France, the United Kingdom and the USA had all committed troops to maintain a 'safe haven' for the Kurds in northern Iraq. On 8 April 1991 a proposal by the British Prime Minister, John Major, that a UN-supervised enclave should be created in northern Iraq, for the protection of the Kurdish population, was approved by the leaders of the member states of the EC (European Community, now European Union—EU). The US Government withheld its formal approval of the proposal, but on 10 April it warned Iraq that any interference in relief operations north of latitude 36°N would prompt military retaliation. The UN response to the proposal to create Kurdish 'safe havens' under its auspices also remained cautious. On 17 April the UN Secretary-General, Javier Pérez de Cuéllar, warned that the Iraqi Government's permission would have to be obtained before foreign troops were deployed in northern Iraq, and that the UN Security Council would need to approve the policing of the Kurdish enclave by a UN-backed force. Nevertheless, in late April UN relief agencies reported that Kurdish refugees were returning to Iraq in large numbers.

In mid-May 1991 the UN reported that progress had been achieved in the implementation of Security Council Resolution 688, and the Secretary-General announced that the UN was negotiating with the Iraqi Government over the deployment of a 'UN police force' to safeguard the Kurdish enclave. By mid-June UN agencies and other non-governmental organizations were reported to have assumed responsibility for the provision of essential services in the Kurdish enclave, and the transition from military to UN-backed security was under way.

As international diplomacy sought to create secure conditions for Iraqi Kurds within Iraq, the leaders of Kurdish groups began negotiations with the Iraqi Government on the future status of Iraqi Kurds. In late April 1991 the leader of the PUK, Jalal Talibani, announced that President Saddam Hussain had agreed in principle to implement the provisions of the Kurdish peace plan of 1970. By mid-June, however, negotiations with the Iraqi Government were reported to be in deadlock over the question of the frontiers of the Kurdish Autonomous Area, and at the end of August leaders of Kurdish groups announced their decision to suspend further negotiations with the Iraqi Government until various issues relating to an autonomy agreement had been clarified. Renewed clashes between government forces and Kurdish guerrillas in northern Iraq in September were succeeded, in late October, by the Iraqi Government's withdrawal of all services from Iraqi Kurdistan, effectively subjecting it to an economic blockade.

In the absence of a negotiated autonomy agreement with the Iraqi Government, the KIF organized elections to a 105-member Kurdish National Assembly, and for a paramount Kurdish leader. The result of the elections to the Assembly, held on 19 May 1992 and in which virtually the whole of the estimated 1.1m.-strong electorate participated, was that the DPK and the PUK were entitled to an almost equal number of seats. None of the smaller Kurdish parties achieved representation and the DPK and the PUK subsequently agreed to share equally the seats in the new Assembly. The election for an overall Kurdish leader was inconclusive, Masoud Barzani, the leader of the DPK, receiving 47.5% of the votes cast; and Jalal Talibani, the leader of the PUK, 44.9%. A run-off election was to be held at a future date. In December a member of the Kurdish Cabinet, elected by the Kurdish National Assembly in July 1992, appealed for increased Western aid for the Kurdish-controlled area of northern Iraq, and criticized the UN for its use of Saddam Hussain's regime as an intermediary in the provision of humanitarian relief. At the end of the year it was announced that relief supplies entering the Kurdish-controlled north from Turkey or central Iraq would be protected by UN forces in order to prevent the recurrence of acts of sabotage allegedly perpetrated by agents of Saddam Hussain's regime. The Iraqi

Government was reported to have agreed, in principle, to allow UN forces to escort food convoys into Kurdish-controlled areas.

DEVELOPMENTS IN THE KURDISH ENCLAVE

In March 1993 the Kurdish Cabinet elected in July 1992 was dismissed by the Kurdish National Assembly for its failure to deal effectively with the crisis in the region. A new Cabinet was appointed at the end of April. In late December armed conflict was reported to have taken place between fighters of the PUK and the Islamic League of Kurdistan (ILK, also known as the Islamic Movement of Iraqi Kurdistan—IMIK). The two parties were reported to have signed a peace agreement in February 1994 following mediation by the Iraqi National Congress (INC). More serious armed conflict, between fighters belonging to the PUK and the DPK, was reported in May to have led to the division of the northern Kurdish-controlled enclave into two zones. The two parties were reported to have concluded a peace agreement in early June, but fighting broke out again in August. In late November the PUK and the DPK were reported to have concluded another peace agreement, which provided for a census of the region and for the holding of elections in May 1995. In November 1994 it was also reported that the Kurdish Prime Minister had tendered the resignation of the Kurdish Cabinet to the Kurdish National Assembly but had been urged to continue in office in an interim capacity. A further outbreak of fighting in late December was succeeded by another short-lived peace agreement. In early January 1995 fighting erupted again, prompting Saddam Hussain to offer, on 16 January, to mediate in the dispute, and the United Kingdom to warn that the conflict might provide Iraq with a pretext to reassert control over the north. Both sides denied responsibility for a car bomb which exploded in Zakho in late February, resulting in 80 deaths. In March Turkey mounted a major operation to destroy bases of the Kurdistan Workers' Party (Partiya Karkeren Kurdistan—PKK) in the Kurdish enclave, deploying some 35,000 troops across the border. By early May, after appeals from the USA and the EU, Turkey had withdrawn its troops, but 30,000 Turkish troops were again briefly deployed across the border in July. In June the IMIK withdrew from the INC, accusing its leadership of incompetence and corruption. There was renewed fighting between PUK and DPK forces in July, prompting attempts at mediation by the USA and Iran. In the opinion of the USA, inter-Kurdish hostilities strengthened the Iraqi regime, but it was strongly opposed to Iranian mediation, fearing that this would allow Iran to exert greater influence in the Kurdish enclave. As a result of the resumption of fighting between Kurdish factions, elections to the Kurdish National Assembly were abandoned and the existing council extended its mandate for another year.

After delegations from Amnesty International had visited the Kurdish enclave during the first half of 1995, the organization reported widespread human rights abuses and urged the Kurdish leadership to end arbitrary arrests, torture and deliberate and arbitrary killings. According to information received by UNHCR staff, conditions in the enclave were worsening owing to the continuing insecurity, with serious shortages of medicine and inadequate relief supplies to the poorest families.

US-sponsored peace negotiations near Dublin, Ireland, in September 1995 made little progress. The PUK and DPK failed to agree on a common approach to the PKK, whose forces had clashed with the DPK in the Kurdish enclave; to the demilitarization of the enclave's capital, Arbil; or to the sharing of income from customs duties levied on traffic crossing the border from Turkey. Another cease-fire was, however, agreed and despite some clashes between PUK and DPK forces there was no resumption of widespread fighting. The PKK was reported to have taken advantage of the instability in the enclave to strengthen its bases there. In September, Kusrat Rasoul Ali, the Kurdish Prime Minister, survived a bomb attack in Arbil. The PUK accused the DPK of being responsible for the attack, but the DPK denied any involvement in it. In November an official from the US Department of State visited the enclave and held talks with leaders of the two principal Kurdish factions in an attempt to broker a peace agreement and to counter Iranian efforts to mediate between the warring factions. Both the USA and Turkey expressed concern at reports that the 5,000-strong Badr brigade, part of the armed wing of the pro-Iranian SCIRI, had begun to deploy inside the Kurdish enclave in November. Turkey continued to support the DPK in its efforts to expel PKK fighters from the enclave, and there were reports of fierce clashes between DPK and PKK forces. Turkish support for the DPK was believed to have encouraged the PUK to turn to Iran for support.

In February 1996 Turkey and NATO agreed to continue 'Operation Provide Comfort' under which US, British and French aircraft based in Turkey enforce the Iraqi air exclusion zone north of latitude 36°N in order to protect the Kurdish enclave. However, the operation became increasingly controversial in Turkey because of the existence of PKK bases in the enclave from which attacks were launched into Turkish territory, and the Turkish Prime Minister promised the Turkish National Assembly that the arrangement would not continue beyond June 1996. In that month the Turkish parliament extended the operation's mandate for one month and at the end of July the National Assembly agreed to a further prolongation until the end of 1996. Early in 1996 Jalal Talibani, the leader of the PUK, offered to take part in direct or indirect talks with the DPK about a peace settlement, and to participate in new elections to the Kurdish National Assembly. However, he criticized the DPK for controlling some 70% of the region's revenue and for not spending these funds fairly. Control over customs duties has been a major source of discord between the two rival groups. The DPK controls the lucrative customs duties levied on vehicles crossing the Turkish border, and while it claims to use these revenues to finance its organization and military forces, it has been alleged that some of the money is embezzled by party officials. Although the PUK levies similar duties on cross-border trade with Iran, this route is much less profitable. In February there were signs that the DPK and the PKK might settle their differences after Abdullah Ocalan, the PKK leader, met a delegation from the DPK and agreed to participate in further negotiations in the near future.

At the end of April Masoud Barzani and a DPK delegation visited Damascus for talks with the Syrian leadership concerning the situation in the enclave and in Iraq as a whole. There were reports of renewed shelling of villages in the enclave by Baghdad and by Turkey. In May the PUK and DPK held separate talks with Robert Deutsch of the US Department of State but failed to reach an agreement. Nevertheless at the end of the month the PUK announced that it had agreed with the DPK to extend the mandate of the Kurdish National Assembly for another year and that the Assembly, in which each party holds 50 seats, should seek to resolve the differences between the rival groups. Both parties agreed to examine ways of enlarging the Assembly to include members from other political groups, and independent deputies.

In the early months of 1996 a series of clandestine meetings were reported to have been held between the DPK and representatives of Saddam Hussain's administration following a visit to the enclave by Mukarem Talibani, a Kurdish official in the Baghdad Government, whose attempts to mediate between the DPK and PUK were intended to increase Baghdad's influence in the Kurdish-controlled area. Following further discussions between DPK representatives and Saddam Hussain's son, Qusai, Iraqi government experts were permitted to enter DPK-controlled areas to examine the oil pipeline from Iraq to Turkey to be used for oil exports under the 'oil-for-food' accord (see below). In late July Iranian troops were reported to have entered the enclave in pursuit of Kurdish Democratic Party of Iran (KDPI) guerrillas who had retreated to an area held by the DPK. There was some speculation that, following the DPK's refusal to grant permission to Iranian agents to continue the pursuit, the Iranian authorities had colluded in the organization of a PUK attack against DPK positions in the region. US officials, who had persisted with efforts to reconcile the two rival Kurdish factions, held private talks in London with representatives of the PUK and DPK at the end of August to discuss a new cease-fire and the creation of an observer system to monitor it. However, the talks were abandoned after Iraqi security forces invaded the enclave on 31 August, seized the administrative centre, Arbil, and advanced towards Sulaimaniya. Deputy Prime Minister Tareq Aziz announced that military action to curb Iranian activity in the enclave—in support of the PUK—had been authorized only after a formal request

for military assistance had been made by the DPK. The Iraqi assault, involving some 40,000 troops with tanks and artillery, amounted to Baghdad's largest offensive since 1991. PUK spokesmen claimed the Iraqi air force had also attacked their forces, close to Arbil, thereby flouting observance of the air exclusion zone. Jalal Talibani warned that the PUK would seek Iranian support if Iraqi forces threatened Sulaimaniya and the Western allies did not intervene. (US military forces in the region were ordered to adopt an increased state of alert.) The Turkish foreign minister warned Iraq to withdraw its forces immediately from the Kurdish enclave and also insisted that any military co-operation between Iran and the PUK must end. On 2 September there were unconfirmed reports that Iraqi forces were withdrawing from Arbil, entrusting the city to DPK control. In early September, having failed to secure the support of other Gulf War coalition partners for allied military intervention to force an Iraqi withdrawal from the enclave (largely as a result of international uncertainty regarding the extent to which such an undertaking could be justified by the terms of those UN resolutions which had prescribed the end of the Gulf War), US forces launched a series of air missile attacks (operation 'Desert Strike') against Iraqi military installations in southern Iraq. However, despite both sides' use of powerful rhetoric, and a unilateral US declaration of an expansion of the air exclusion zone north to the 33rd parallel, continuing lack of international support for the US initiative (only the United Kingdom fully endorsed the action) discouraged the US Government from engaging in more direct military confrontation. Domestic media coverage of the DPK's Government-backed capture (from the PUK) of Sulaimaniya, some days later (see below), suggested that the Iraqi Government had inflicted a severe diplomatic humiliation on the USA.

Renewed fighting was reported between PUK and DPK forces around Arbil and on 9 September 1996 the PUK-controlled city of Sulaimaniya fell to DPK forces resulting in the flight to the Iranian border of thousands of refugees. Within days some 20,000 Kurds had crossed the border into Iran, and Iranian officials expressed concern that tens of thousands more were waiting to enter the country. Following the fall of Sulaimaniya Saddam Hussain announced that amnesty was to be extended to all Kurdish opponents who had occupied the northern 'safe havens', while declaring the restoration of trade links with the northern regions and the reassertion of Iraqi sovereignty over the Kurdish Autonomous Regions. Suggestions that Kurds who had co-operated with humanitarian agencies and non-governmental organizations would be exempt from the amnesty prompted fears for the safety of such individuals, and US and EU missions prepared to evacuate some 8,000 Kurdish employees from the region. Such a large-scale evacuation would inevitably result in the collapse of the assistance programmes established in the region over the previous five years. After the public execution of nearly one hundred members of of the INC by the Iraqi army during their assault on Arbil, most of the Iraqi opposition groups based in Iraqi Kurdistan fled the region. Many observers were convinced that a major objective of Iraqi intervention in the north was the elimination of the INC.

After the capture of Sulaimaniya, the PUK leader, Jalal Talibani, pledged to continue fighting, declaring that the struggle was no longer between Kurdish factions but between the Kurds and those who had sided with the enemy of the Kurdish people. Talibani also condemned the USA and its allies for failing to honour their stated commitment to protect the Kurdish population. In late September the DPK announced that it was to lead a 16-member coalition government for the Kurdish Autonomous Regions, also comprising members of other regional ethnic groupings (but excluding the PUK). In mid-October, however, the PUK regained much of the territory they had lost in September, including Sulaimaniya. Their forces also advanced on Arbil but did not attack the city for fear of provoking renewed intervention by Baghdad. However, PUK forces took control of the Dukan dam and power station which supplies both Arbil and Sulaimaniya with water and electricity. At the end of October the US Assistant Secretary of State, Robert Pelletreau, announced that a truce had been negotiated between the two rival factions, following US mediation of a meeting in Ankara, Turkey. Both the PUK and the DPK agreed to work towards a permanent cease-fire, to avoid enlisting the help of external forces, and to accept the organization and deployment of a peace monitoring body. The agreement also proposed that all customs duties and other taxes collected should be accounted for and shared in order to benefit all the people of the region. The US brokered a new round of peace talks in November at which both factions agreed to attempt to resolve their political differences and to co-operate in re-establishing a regional administration. Nevertheless, as a technical delegation attempted to delineate the cease-fire line, each side accused the other of violating the peace. At the same time the DPK was reportedly attempting to improve its relations with Iran while the PUK was believed to be communicating privately with Baghdad. In December the Iranian authorities reported that many of the 70,000 Iraqi Kurds who had fled to Iran during fighting in August and September had started to return to their homes. In the same month the US began to evacuate 5,000 Iraqi Kurds employed by American relief organizations in the enclave who were to be granted political asylum in the USA. It was feared that their departure would impede food distribution procedures established under the terms of UN Resolution 968 (see below). Other aid agencies reported that many of their Kurdish staff were also demanding to be evacuated, fearing reprisals by Baghdad. Early in 1997 relief agencies still operating in the enclave claimed that more than 70,000 Iraqi Kurds, including women and children, had been forcibly displaced since the cease-fire; both the PUK and the DPK were accused of intimidating and persecuting rival supporters living in their territory, although both factions rejected such allegations. Relief agencies also stated that tens of thousands of refugees remained destitute, while uncertainty about future Western funding of aid programmes continued.

In April 1997 David Welch, the acting US Assistant Secretary of State for Near Eastern Affairs, held talks with Barzani and Talibani, both of whom reaffirmed their commitment to the reconciliation process begun in November 1996. President Clinton later announced that further talks between the rival factions had been arranged to consolidate the cease-fire and to encourage the DPK and PUK to resolve their political differences. Also in April a Peace Monitoring Force (PMF), with US political, financial and logistical support, began deployment in the region to demarcate the cease-fire boundary and to monitor the truce between the DPK and the PUK. In May President Clinton reported that the PMF had already resolved several violations of the terms of the cease-fire, but that security in the enclave remained tenuous. Nevertheless, he stated that progress had been made, especially in securing the release of prisoners held by both factions, and that both the DPK and the PUK were participating in a joint Higher Co-ordination Committee in an attempt to improve the provision of basic services such as electricity and health care.

At the end of December 1996 'Operation Provide Comfort' was terminated at Turkey's request and was replaced by a new surveillance system whereby air cover alone was to be provided by Turkey, the USA and Britain. France refused to participate in this new operation, which was inaugurated on 1 January 1997, since it did not include the provision of humanitarian aid. At the end of 1996 Turkish forces resumed artillery and air attacks on PKK bases in northern Iraq, which were immediately denounced by the Iraqi Government. In mid-May 1997 an estimated 25,000–50,000 Turkish troops, with support from tanks and fighter aircraft, crossed into northern Iraq to launch another attack on PKK bases there. Turkish sources claimed that more than 900 rebels were killed, a figure rejected as a gross exaggeration by pro-PKK sources. Fighting was also reported between DPK and PKK forces in Arbil. A DPK spokesman claimed that PKK activities threatened peace and security in the city and hampered relief work by the UN and other aid agencies. During the fighting between the DPK and the PUK in August and September 1996 the PKK was reported to have increased its influence in the mountainous region along the Turkish border. Turkey claimed that its latest incursion into northern Iraq was undertaken in order to help the DPK regain control of the border areas.

As a result of the Turkish incursion, which was fiercely condemned by the Iraqi Government, the Baghdad authorities postponed a planned military campaign against the PUK which aimed to recapture the Dukan dam. The Iraqi Government had

accused the PUK of cutting off the water supply to the provinces of Kirkuk and Ba'qubah and of depriving large areas of agricultural land in the Tigris basin of water for irrigation. A new round of peace talks between the PUK and the DPK, sponsored by the USA, the United Kingdom and Turkey, which began in Ankara on the same day as the Turkish incursion, promptly collapsed. Further talks between the two factions in July failed to produce an agreement. Although Turkey had withdrawn most of its troops from northern Iraq, it launched a new military campaign against the PKK at the end of September 1997, and there were reports that Turkish forces, comprising 8,000–15,000 troops with armoured vehicles and air support, had penetrated Iraqi territory. It appeared that the Turkish strategy of using a client militia in a war against the PKK had failed, forcing Ankara to provide direct support to the DPK. The PUK, on the other hand, lent military support to the PKK in its battle with the DPK, increasing instability in the enclave. Fighting erupted between DPK and PUK forces in October, in violation of the cease-fire agreement concluded in 1996. The PUK reportedly achieved some success in its attempt to secure control over the lucrative north–south supply route, but in November the DPK, supported by Turkish forces, launched a successful counter-attack, thereby regaining control of the route. In January 1998 the PUK leader, Jalal Talibani, proposed peace and reconciliation and the establishment of a transitional government, in which both the PUK and the DPK would be represented, to assume sole responsibility for customs duties on cross-border trade. Following its recent military success against the PUK, however, the DPK leadership did not respond. Iran continued to offer some support to the PUK, but appeared unwilling to become more directly involved in the Kurdish enclave. There were reports that delegations from both Kurdish factions had been invited for talks in Baghdad in November 1997. However, Saddam Hussain's aim of eventually re-establishing Baghdad's control over the northern region could only be encouraged by continued in-fighting between the Kurdish factions.

By mid-1998 the fragile cease-fire between the PUK and the DPK appeared to be holding, and, after a number of meetings between representatives of the two factions, agreement was reached on an exchange of prisoners and on the establishment of a joint committee to promote co-operation in public health, education and energy. Meanwhile, the issue of DPK control over customs duties on cross-border trade from Turkey, which had thwarted previous attempts to reconcile the rival factions, remained unresolved. Nevertheless, the two factions continued to hold regular meetings, and both parties pledged to co-operate to secure a permanent settlement with Baghdad that would provide for Kurdish autonomy. In May the DPK leader stated that all Kurdish factions were prepared to make peace with the Government in Baghdad, on condition that Baghdad agreed to devolve power to a regional Kurdish government and grant it jurisdiction over the oil-rich Kirkuk district. Earlier, the Deputy Prime Minister, Tareq Aziz, had asserted that Baghdad had maintained regular contact with both the DPK and PUK for several years. In June the PUK leader admitted that he had met with the head of Iraqi intelligence services, Rafa at-Tikriti. The Iraqi authorities remained firmly opposed to allowing Kurdish control over Kirkuk, and preferred to maintain separate contacts with the two main factions in the hope of undermining their tentative alliance.

In September 1998 the USA brokered a peace agreement between the PUK and DPK; the accord, signed in Washington, DC, provided for new elections in 1999, a unified regional administration, the sharing of local revenues, an end to hostilities and interfactional fighting, and co-operation in implementing the 'oil-for-food' programme to benefit the Kurdish population. By April 1999, although the cease-fire remained in place and the two factions had suspended their press campaigns against one another, little progress had been made in implementing the Washington accord and differences remained on fundamental issues such as the formation of a new government and the division of financial resources. Representatives of both factions attended a meeting of 11 Iraqi opposition groups held in London, United Kingdom, at the beginning of April (see below), but it appeared unlikely that either the DPK or the PUK would be willing to see other opposition groups based in Kurdish territory, and both the DPK and PUK continued their dialogue with Baghdad.

OTHER POST-WAR DEVELOPMENTS

By mid-August 1991, despite the failure of his Kuwaiti adventure and the outbreak of internal revolts in its aftermath, the overthrow of President Saddam Hussain, which had been widely predicted during the crisis in the Gulf, seemed unlikely in the short term. Indeed, it was arguable that his position was more secure than it had been at the time of the invasion of Kuwait: opponents of the Government in the south of the country had been ruthlessly suppressed; a negotiated settlement of the Kurdish question was under discussion; and, in the wake of several alleged attempts to mount a military *coup d'état*, the Government appeared to have strengthened its control of the army, which remained the key to its survival in power. A reshuffle of the Council of Ministers in March 1991 had placed the President's closest supporters and members of his family in the most important positions of government and additional governmental adjustments later in the year, and in February and August 1992, furthered this process. Above all, it emerged that the US Government was not willing actively to seek Saddam Hussain's overthrow at the expense of the integrity of Iraq.

The survival of the Iraqi Government in the long term depended on three factors: its continued control of the armed forces; the length of time and the stringency with which economic sanctions would continue to be applied against Iraq; and the degree to which popular disaffection, created by the economic sanctions, could be appeased by the granting of limited political reform.

In September 1991 the Government introduced legislation providing for the establishment of a multi-party political system, in accordance with the draft of the new permanent Constitution. New political parties were to be subject to stringent controls, however, and later in the month the President stated that the Baath Party would retain its leading role in Iraqi political life. In early September the Baath Party held its 10th Congress—the first such Congress since 1982—at which Saddam Hussain was re-elected Secretary-General of the party's powerful regional command.

Iraq's post-war relations with the international community have been dominated by conflicts over the way in which the Iraqi regime has apparently sought to circumvent demands by the UN—as stipulated by UN Security Council Resolution 687—that it should disclose the full extent of its programmes to develop chemical weapons, nuclear weapons and missiles, and should eliminate its weapons of mass destruction. One consequence of the conflicts over Iraqi compliance with Resolution 687 was that there was no easing of the economic sanctions that were first imposed on Iraq on 6 August 1990, under the terms of UN Security Council Resolution 661.

In May 1991 the UN Security Council decided to establish a compensation fund for victims of Iraqi aggression (both governments and individuals), to be financed by a levy (subsequently fixed at 30%) on Iraqi petroleum revenues. In August the UN Security Council adopted a resolution (No. 706, subsequently approved in Resolution 712 in September) proposing that Iraq should be allowed to sell petroleum worth up to US $1,600m. over a six-month period, the revenue from which would be paid into an escrow account controlled by the UN. Part of the sum thus realized was to be made available to Iraq for the purchase of food, medicines and supplies for essential civilian needs.

Iraq rejected the terms proposed by the UN for the resumption of exports of petroleum, and in February 1992 withdrew from further negotiations on the issue. In April the UN reiterated its demand that Iraq should comply with the terms of Security Council Resolutions 706 and 712 before resuming petroleum exports. In late June a further session of negotiations between Iraq and the UN on the resumption of petroleum exports ended indecisively. On 2 October the UN Security Council adopted a resolution (No. 778) permitting it to confiscate up to $500m.-worth of oil-related Iraqi assets in order to place further pressure on Iraq to accept the UN's terms for renewed exports of petroleum. In late October the UN commission responsible for the supervision of the destruction of Iraqi weapons proposed a relaxation of the embargo on sales of Iraqi oil in return for

increased co-operation by Iraq with the UN. However, this suggestion did not gain the support of Western governments or of Iraqi opposition movements, and in late November the UN Security Council refused a request by an Iraqi delegation to repeal the economic sanctions in force against Iraq.

In January 1993 a 52-member team of UN weapons inspectors arrived in Iraq, the Government having revoked a prohibition on all UN flights into the country, in response to renewed air attacks by Western forces (see below). In early July, however, another team of UN weapons inspectors departed abruptly from Baghdad after the Government had refused to allow them to station surveillance equipment at missile-testing locations. Iraq continued to refuse the terms of UN Security Council Resolution 715, which governed the long-term monitoring of its weapons programmes. In early July a further session of negotiations between Iraq and the UN on the resumption of petroleum exports ended inconclusively, and later in the month the UN Security Council renewed the economic sanctions in force against Iraq. At the beginning of September Iraq's Deputy Prime Minister, Tareq Aziz, met the UN Secretary-General to discuss the resumption of Iraqi petroleum sales and the lifting of the economic sanctions. The UN was reportedly anxious to raise funds from such sales in order to finance its own operations in Iraq. The talks were inconclusive, however, and at the end of September the economic sanctions in force against Iraq were renewed. In early October the Government agreed to UN demands that it should release details of its weapons suppliers. In the absence of any progress on the issue of UN Security Council Resolution 715, however, economic sanctions were extended for a further 60 days in late November. Shortly after their renewal, the Iraqi Government was reported to have agreed to the provisions for weapons-monitoring contained in Resolution 715, and the UN to have begun plans for their implementation. However, it was clear by the end of December that neither the UN Security Council nor the US Government would be willing to allow even a partial easing of sanctions until Iraq had demonstrated its commitment to the dismantling of its weapons systems for a period of at least six months. Moreover, the US Government insisted that Iraq must first also comply with all other relevant UN resolutions, recognize the newly-demarcated border with Kuwait and cease the repression of its Kurdish and southern Shi'ite communities. In September hundreds of inhabitants of Iraq's southern marshlands were reported to have been killed by government forces using chemical weapons; and in November the UN accused the Government of indiscriminate attacks on civilians in that area.

From March 1994 the Iraqi Government engaged in a campaign of diplomacy to obtain the lifting of economic sanctions, and in mid-July evidence emerged of a division within the UN Security Council regarding their continuation. Russia, France and China were all reported to be in favour of acknowledging Iraq's increased co-operation with UN agencies. In September, however, the Security Council extended the sanctions for a further period of 60 days. Russia and France had proposed that the Security Council should draw up a timetable for the ending of sanctions, but had not obtained the agreement of other permanent members of the Council.

On 6 October 1994 the leader of the UN Special Commission on Iraq (UNSCOM—responsible for inspecting the country's weapons) announced that a system for monitoring Iraqi defence industries was ready to begin operating. On the same day, however, there was a large movement of Iraqi forces towards the border with Kuwait, apparently to draw attention to Iraq's demands for swift action to ease the sanctions. In response, Kuwait deployed most of its army to protect its side of the border on 9 October, and the USA sent reinforcements to Kuwait and other parts of the Gulf region to support the 12,000 US troops already stationed there. On 10 October Iraq announced that it would withdraw its troops northward from their positions near the Kuwaiti border. On 15 October the Security Council adopted a resolution (No. 949) demanding that the withdrawal of all Iraqi forces recently transferred to southern Iraq be completed immediately; and stipulating that Iraq must not 'utilize its military or any other forces in a hostile or provocative manner to threaten its neighbours or the UN operations in Iraq'.

On 10 November 1994 the Iraqi National Assembly voted to recognize Kuwait within the borders defined by the UN in April 1992 and May 1993. Nevertheless, on 14 November the UN Security Council renewed the economic sanctions in force against Iraq for a further 60 days. Russia, China and France were all reportedly in favour of responding to Iraq's recognition of Kuwait with an easing of the sanctions. In a statement issued on 16 November, however, the Security Council welcomed Iraq's recognition of Kuwait, but emphasized that it must comply with all the relevant UN resolutions before any such relaxation could occur.

In mid-December 1994 the Iraqi Deputy Prime Minister visited Moscow, Russia, for talks with the Russian Minister of Foreign Affairs, Andrei Kozyrev. Following the talks, Kozyrev stated that the UN Security Council should adopt a more flexible attitude towards Iraq in respect of economic sanctions. On 20 December the Security Council met to study a report by the head of UNSCOM, in which he expressed his confidence that Iraq no longer had any nuclear, chemical or ballistic weapons. Russia, France, China and Spain were all reported to have urged the Security Council to acknowledge Iraq's co-operation with the UN's weapons inspectorate. The USA and the United Kingdom, however, expressed concern at Iraq's past failures to co-operate.

On 7 January 1995 the UN Secretary-General offered to resume dialogue with Iraq on a partial lifting of the economic sanctions. On 12 January the UN Security Council renewed the sanctions in force against Iraq for a further 60 days. Both the US and the UK Governments had again reportedly insisted that Iraq should comply with all the relevant UN resolutions before sanctions were eased, prompting Iraq to accuse them of unfairness and illegality. France and Russia were reported to have argued within the Security Council for a partial lifting of sanctions, provided that Iraq co-operated fully with the UN weapons-monitoring programme. The division between the members of the Security Council regarding the easing of sanctions had intensified as a result of France's announcement, on 6 January, that it was to establish an interests section at the Romanian embassy in Baghdad.

UN sanctions against Iraq were again renewed for 60 days on 13 March 1995. In April the Iraqi Government rejected as a violation of its sovereignty a revised UN proposal (Resolution 986) for the partial resumption of exports of Iraqi petroleum. Iraqi attempts to secure an end to the sanctions had suffered a serious reversal in February when, following a visit to Baghdad in the same month, the head of UNSCOM announced that the Iraqi authorities had failed satisfactorily to account for a substantial amount of material used in the manufacture of biological weapons, known to have been imported by Iraq in 1988. Further concerns regarding the use of these stockpiles were expressed by the Commission in April, May and June. However, expectations of a prompt easing of sanctions were renewed in early July, following the Iraqi Government's acknowledgement of the past existence of a biological weapons development programme for offensive as well as research purposes. Notwithstanding this admission, on 11 July the UN Security Council voted to extend sanctions against Iraq for a further 60 days, prompting the Iraqi Minister of Foreign Affairs, Muhammad Saeed as-Sahaf, to insist that the Special Commission should complete its report and promote an end to the sanctions by the end of August if it wished to avoid the complete cessation of co-operation from the Iraqi authorities. By mid-August, however, the Iraqi Government had adopted a more conciliatory stance towards the Commission, and it was reported that crucial new information regarding Iraq's military programme had been made available to its officers. This change in attitude and the sudden appearance of new information appeared to be related to the defection of Hussain Kamel al-Majid (see below), a former Iraqi Minister of Industry and Military Production, and consequent Iraqi fears that he might divulge information to the UN and hamper efforts to obtain the lifting of sanctions. Rolf Ekeus, the head of UNSCOM, stated that preliminary work on the new data appeared to show that Iraq had developed a more extensive weapons programme than had so far been discovered, and that it had been concealing a significant biological weapons programme. In September it was reported that illegal shipments of oil from Iraq were continuing, even though the US Navy had increased its efforts to enforce the UN blockade. (Since October 1994 14 cargoes had been

confiscated by the US Navy.) In October 1995 UNSCOM reported that its work was far from over and that Iraq had concealed evidence of biological weapons development, chemical missile flight tests and work on missiles with nuclear capability. As a result, areas of investigation that had been closed would have to be reopened. At the end of November the head of the Commission told a press conference that Iraq had not been co-operating fully in its investigations and that it was still trying to mislead UN inspection teams. In December Jordan intercepted missile parts and toxic chemicals destined for Iraq.

Meanwhile, on 26 August 1992 the Governments of the USA, the United Kingdom, France and Russia had announced their decision to establish a zone in southern Iraq, south of latitude 32°N, from which all flights by Iraqi fixed-wing and rotary-wing aircraft were to be excluded. Although the air exclusion zone was not formally established by a UN Security Council resolution, the UN Secretary-General subsequently indicated his own support for the measure and stated that it enjoyed that of the Security Council. The exclusion zone was established in response to renewed attacks by Iraqi government forces on southern Iraqi Shi'ite communities and on the inhabitants of the marshlands of southern Iraq. In April 1992 Saddam Hussain had ordered the evacuation of the marshlands and the resettlement of their inhabitants; and in June Iraqi armed forces were reported to have encircled the areas and to have intensified their attacks on the communities there. The Iraqi Government reacted with predictable anger to the establishment of the air exclusion zone, but it was reported in early September to have withdrawn all flights over the area. However, large numbers of troops remained there and continued to attack the civilian population. Other Arab governments, notably those of Algeria, Jordan, Sudan, Syria and Yemen, also condemned the establishment of the air exclusion zone as a step towards the disintegration of Iraq, which, as a result of the other, UN-authorized exclusion zone north of latitude 36°N (see above), was now effectively divided into three parts.

In late December 1992 a US combat aircraft shot down an Iraqi fighter aircraft which had allegedly entered the southern air exclusion zone; and on 6 January 1993 the USA, with the support of the British and French Governments, demanded that Iraq should withdraw anti-aircraft missile batteries from within the zone. Iraq was reported to have complied with this demand, but subsequent Iraqi military operations inside Kuwaiti territory, to recover military equipment, provoked air attacks by Western forces on targets in southern Iraq on 13 January. A ban which the Iraqi Government had imposed on UN flights into the country was cited as a further justification for the attacks. Further air raids by Western forces on targets in northern and southern Iraq took place in late January. In late May, in response to the deployment of Iraqi armed forces close to the UN-authorized exclusion zone north of latitude 36°N, the USA warned Iraq that it might suffer military reprisals in the event of any incursion into the Kurdish-held north. In late June the USA launched an attack against intelligence headquarters in Baghdad, in retaliation for Iraq's role in an alleged conspiracy to assassinate former US President Bush in Kuwait in April 1993. Iraq made a formal protest to the UN Security Council over the attack, which provoked widespread international condemnation, not least because it was regarded by many observers as an attempt by the Clinton administration to increase its domestic popularity. In early July Iraqi armed forces were reported to have renewed the Government's offensive against the inhabitants of the marshlands of southern Iraq, and the London-based INC urged the UN Security Council to send emergency supplies of food and medicine to the communities there. In late July the Food and Agriculture Organization (FAO) of the UN warned that pre-famine conditions existed in much of Iraq and appealed for the economic sanctions in force against the country to be either alleviated or lifted. In late August it was reported that the Government had drained some 70% of the southern marshlands and that some 3,000 of their inhabitants had fled to Iran. In December 1995 SCIRI reported that Iraqi armed forces were continuing their offensive against the civilian population in the southern marshlands, but claimed that its own forces were carrying out regular attacks against Iraqi military positions in the south. In January 1996 it was reported that the exodus of refugees from the southern marshlands was continuing, with an estimated 60,000–70,000 people living in camps in south-western Iran and many more in other parts of the country. In addition it was estimated that some 200,000 people in southern Iraq had been internally displaced, having fled to other parts of the country.

ECONOMIC CRISIS, MILITARY INSTABILITY AND CONFLICTS WITHIN HUSSAIN'S REGIME

By October 1994 the living standards of large sections of the Iraqi population had reportedly been reduced to subsistence level. The Iraqi Government appeared increasingly desperate to maintain order in the face of this economic crisis. In May 1994 Saddam Hussain himself had assumed the post of Prime Minister in a reshuffle of the Council of Ministers in which the Ministers of Finance and Agriculture were dismissed. In June, and again in September, harsh new punishments for those convicted of theft were announced by the RCC. Also in September a substantial reduction in the daily ration of some staple food items was announced. In December another Minister of Agriculture was dismissed, and subsequent reports claimed that he had been imprisoned on charges relating to the neglect of his duties. (The agriculture portfolio was allocated to Khalid Abd al-Munim Rashid in April 1995.)

Dissatisfaction within the armed forces resurfaced in early 1995. An unsuccessful coup attempt in January prompted a comprehensive reorganization of military ranks, including the (unconfirmed) dismissal of 68 air force officers. In March another coup attempt, organized by the former head of Iraqi military intelligence during the 1990–91 hostilities in the Gulf, and supported by Kurdish insurgents in the north and Shi'ite rebels in the south, was also thwarted. Further reorganization of military personnel resulted in the appointment of a new Chief of the General Staff in April 1995. The scale of disruption within the armed forces provoked widespread anxiety among the civilian population, and civil disturbances began to escalate (particularly in Anbar province), leading to the replacement of the Minister of the Interior in May. Regional reports of a substantial insurrection by the armed forces at the Abu Ghraid army base, near Baghdad, in mid-June were strenuously denied by the Iraqi Government. However, there was mounting evidence to suggest that an uprising had been organized by members of the Sunni Dulaimi clan (many of whom had been killed in continuing disturbances in Ramadi, the capital of Anbar province), with the support of the élite 14 July battalion of the Iraqi army. While unconfirmed reports suggested that those responsible for the rebellion had been immediately and severely punished (many by execution), the loss of the support of the previously loyal Dulaimi clan was widely interpreted as the beginning of the disintegration of Saddam Hussain's traditional support base of powerful Sunni Muslim clans.

A minor reorganization of portfolios in the Council of Ministers was effected in late June 1995, and in July a new Minister of Defence and a new Chief of the General Staff were appointed in an attempt to consolidate support for the President. However, in early August further significant divisions within Saddam Hussain's power base became apparent following the defection to Jordan of two sons-in-law of the President, Lt-Gen. Hussain Kamel al-Majid and his brother Col Saddam Kamel, together with their wives. Both were senior figures in the regime. Hussain Kamel had been Minister of Industry and Military Production, responsible for Iraq's weapons development programme, and Saddam Kamel the head of the Presidential Guard, responsible for presidential security. It was rumoured that they had become alarmed at the increasing concentration of power in the hands of Saddam Hussain's two sons, Uday and Qusai, and that they feared for their lives. The two men were immediately granted political asylum by King Hussein of Jordan. From Amman, Hussain Kamel urged the Iraqi army to overthrow Saddam Hussain's regime, and Iraqi opposition groups to unite and form a government-in-exile. There was speculation that he himself was regarded as a possible successor to Saddam Hussain. Hussain Kamel also met Rolf Ekeus, the head of UNSCOM, and was believed to have provided further information on Iraq's weapons development programmes. Iraq condemned both men as traitors and a wave of arrests and executions followed their defection as Saddam Hussain ordered a purge of senior army

officers and government officials who had been close to the two brothers.

In a move widely interpreted as an attempt to re-establish domestic and international recognition of Saddam Hussain's mandate, a meeting of the RCC was convened on 7 September 1995 and an interim amendment to the Constitution was approved whereby the elected Chairman of the RCC would automatically assume the Presidency of the Republic, subject to the approval of the National Assembly and endorsement by national plebiscite. Saddam Hussain's candidature was duly approved by the National Assembly on 10 September. The meticulously organized referendum took place on 15 October and a 99.96%-endorsement of the President's continuance in office for a seven-year renewable term was recorded. An official turn-out of 99.47% of the estimated 8.4m. electorate was reported to have voted. This unprecedented level of support provoked widespread incredulity throughout the international community. At the end of October Hussain promised further elections and 'more democratization' and emphasized the leading role of Baath Party in achieving political pluralism. Some observers argued that as a result of the conflict within his immediate family and the defections of Hussain and Saddam Kamel, Saddam Hussain might use the Baath Party structures, his original power base, to bolster his position. The Iraqi leader appeared to have curbed the power of his son Uday at least temporarily. The Deputy Prime Minister Tareq Aziz implied in October that Uday had no official political role. There were further changes in the Council of Ministers at the end of the year, with new appointments made to to the portfolios of education, agriculture, irrigation and finance.

In February 1996 the two defectors, Hussain and Saddam Kamel, returned to Baghdad, having been granted a pardon by Saddam Hussain. Immediately after their return to Iraq the two men (who were promptly divorced from their wives) were assassinated. Unconfirmed reports suggested that their father, Kamel Hassan al-Majid, and a number of their children were also killed in the attack, allegedly perpetrated by men under the command of Saddam Hussain's son, Uday. Their assassination led to international condemnation and was followed by reports of armed clashes among rival clans in Baghdad, and in the Ajwa region of Tikrit. In December Uday sustained serious injuries after surviving an attempted assassination in Baghdad. Both the Dulaimi tribe and the Shi'a group, Ad-Da'wa al-Islamiya, claimed responsibility for the attack, but there was considerable speculation that the attack had been perpetrated in retaliation for the murders of Hussain and Saddam Kamel. At the end of March another high-level defection had occurred when Lt-Gen. Nizar Kharaji, Chief of Staff of the Iraqi Army during the Gulf War, fled to Amman, Jordan, where he joined the Iraqi National Accord (INA—see below). In June reports emerged of a new coup plot involving senior officers of the Republican Guard and close associates of Saddam Hussain from Tikrit. More than 100 officers, including two army commanders, were arrested and subsequently executed. Mounting opposition to the President from within the armed forces was widely considered to have prompted his decision to transfer responsibility for the national military intelligence department from the Ministry of Defence, and to create new paramilitary units entrusted with the protection of his own family.

Elections to 220 of the 250 seats in the National Assembly were held in March 1996. Predictably, all 160 candidates from the ruling Baath Party gained seats, with the remaining 60 seats being won by so-called independent candidates. According to official sources, 93.5% of the approximately 8m.-strong electorate participated in the poll. Iraqi opposition groups derided the regime's claim to have introduced greater democracy and denounced the elections as a farce. Elections to local councils were conducted in May. The new councils were to be responsible not only for municipal services, but also for food rationing. In December Latif Jasim was relieved of the Labour and Social Affairs portfolio in order to devote himself to Baath Party activities; he was succeeded by Abd al-Hamid Aziz Muhammad Salih as-Sayigh.

In May 1996 government forces were reported to have launched a major offensive against the Shi'a opposition and tribes in the Basra Governorate and further fighting in the southern marshlands was reported in September. At the end of the year there were armed clashes between the security forces and the Shi'a opposition thoughout the southern regions as the Government attempted to eliminate popular unrest in that part of the country. Early in 1997, the US-based Human Rights Watch condemned the fiercely repressive activities of Iraqi Government forces in the southern marshlands during 1996 and also claimed that Saddam Hussain's regime was continuing to engage in severe abuses of human rights against the Iraqi people. Saddam Hussain's absence from celebrations organized to mark his 60th birthday, at the end of April 1997, prompted speculation that security concerns surrounding the President had intensified severely since the assassination attempt on his son, Uday. In June it was reported that a senior air force commander, Maj.-Gen. Izz ad-Dulaimi, had been assassinated in Baghdad. In mid-1997 a number of changes were made to senior military posts, including, most notably, the reported replacement of Qusai Hussain by one of the President's nephews, Kemal Mustafa at-Tikriti, as Commander of the Republican Guard, in August. (Qusai's removal was somewhat unexpected since his political profile appeared to have been enhanced since the attempt on his brother's life, and some commentators had described his recent status as being akin to 'heir apparent'.) New appointments were also made to head the national intelligence directorate (where a new anti-corruption campaign for the ranks of the Baath Party and the armed forces was to be formulated) and to a number of provincial governorships in the central and southern regions. Ali Hassan al-Majid, a former member of the RCC and a cousin of the President, was appointed Military Governor of the southern provinces of Basra and Nasiriya. Al-Majid had gained a reputation for his uncompromising response to insurrection during the Kurdish uprisings of the late 1980s, and reports soon emerged of a fresh campaign of subjugation in the southern marshlands.

In August 1997 Vice-President and Deputy Prime Minister, Taha Yassin Ramadan, replaced Izzat Ibrahim (who was reported to be suffering from ill health) as Vice-Chairman of the RCC. In the same month a reorganization of the Council of Ministers was effected: Abd al-Jabbar Tawfiq Muhammad was transferred from the Ministry of Education to the Ministry of Higher Education and Scientific Research where he replaced Humam Abd al-Khaliq Abd al-Ghafur, who moved to the Ministry of Culture and Information; Fahd Salim ash-Shakrah was appointed new Minister of Education.

Towards the end of 1997 reports began to emerge of renewed efforts by Saddam Hussain to impose his authority on the nation. A number of senior military officers and Baath Party members (several of them relatives or known associates of Maj.-Gen. Wafiq as-Samarrai, a former head of military intelligence who had fled Iraq some three years previously to join the opposition INC, and had successfully sought political asylum in the United Kingdom) were executed, as were an estimated 800 prisoners suspected of belonging to opposition organizations. Many mid-level and senior Baath Party officials were also replaced in a political purge that was thought to have been organized in order to dilute the influence of increasingly powerful provincial party groups.

Iraqi opposition groups, however, remained weak and divided. One of the founding members of the INA, Gen. Tawfiq al-Yasiri, resigned in February 1998, accusing the organization's leadership of misappropriating funds. In early 1998 one of the leaders of the rival, London-based INC, Ahmad Chalabi, visited Washington, DC, to lobby support from the US Congress. Chalabi claimed that Iraq was ripe for a broad-based revolt, and urged the US Government to transform the existing air exclusion zones in the north and south of the country into total exclusion zones for the Baghdad authorities, from which an INC provisional government could operate, protected from Saddam Hussain's military forces. Although certain Republican politicians in Washington were sympathetic to Chalabi's request, the US Administration remained cautious about encouraging civil war in Iraq and questioned the INC's ability to topple the Iraqi leader. Later in the year, however, the US Administration announced that 73 exiled opposition groups would benefit from US support. Assistant Secretary of State Martin Indyk further stated that although he did not believe that the opposition groups were capable of ousting Saddam Hussain, they warranted assistance because they represented an alternative

vision for Iraq to Saddam Hussain that was 'democratic in its aspirations'. After it was revealed that the US had given some \$21m. directly to Ahmad Chalabi, other groups protested that they had not been consulted. In October the US Congress overwhelmingly approved the Iraq Liberation Act, which allows the President to provide up to \$97m. in military assistance to the exiled opposition groups. While Congress appeared convinced that direct attempts to destabilize Saddam Hussain's regime by means of some sort of military offensive organized by the Iraqi opposition were the only way forward, the Clinton administration, and particularly the State Department, remained sceptical that a reinvigorated opposition could bring down the Iraqi leader, given the infighting that was endemic within and between the different groups, as well as the high level of corruption. Muhammad Baqir al-Hakim, the leader of the Shi'ite opposition SCIRI, refused to involve his group in any US-sponsored plan to overthrow Saddam Hussain. In January 1999 Washington selected seven opposition groups that it judged worthy of receiving US assistance, but also widened its contacts to include other groups and individuals. At the beginning of April 11 opposition groups gathered in London, where they pledged to relaunch and reform the moribund INC and to prepare by July a plan of campaign against Saddam Hussain's regime. Although the two main Kurdish factions, the DPK and the PUK, as well as the INA, attended the meeting, SCIRI and the ICP did not participate. The US special representative for transition in Iraq, Frank Ricciardone, and the Vice-Chairman of the US Senate Intelligence Committee, Senator Bob Kerry, also attended. Two new organizations were created at the meeting: a collegiate leadership of seven members (six members were nominated, with the remaining place reserved for a representative of SCIRI), and a five-member committee charged with contacting all opposition groups in preparation for a meeting in July, intended to be a sort of constituent assembly of a united opposition. Ahmad Chalabi was removed from his post as president of the INC, and Salah esh-Sheikhli of the INA was named as the new spokesman for the organization. Indyk described the London meeting as an important step towards the downfall of Saddam Hussain's regime, but most observers were far from optimistic that the opposition groups would be able to put aside their differences. The fact that little progress had been made in implementing the accord between the two Kurdish factions (see above) did not augur well for the success of a much larger coalition of groups. A US official was reported as stating informally that the Clinton administration was unlikely to release the bulk of the \$97m. in military assistance until the opposition agreed on a viable strategy. At the end of May the US Secretary of State, Madeleine Albright, met the new interim leadership of the INC and six other opponents of Saddam Hussain. At the same time the State Department announced that a plan to provide the opposition in exile with equipment and training to set up a headquarters, publicize its cause and prepare for running the country had been prepared and would shortly be submitted to Congress.

The annual report of the UN special rapporteur on Iraq, Max Van der Stoel, presented to the UN Commission on Human Rights in Geneva in April 1998, was once again highly critical of the Iraqi regime's record on human rights. The report stated that at least 1,500 people had been executed during 1997, mainly for political reasons, and that most of that number were killed as part of the 'prison cleansing' operation conducted in November and December. Iraqi officials dismissed the report as 'a mere repetition of the same allegations and false accusations'. (A separate report published in March claimed that some 16,000 instances of forced disappearance had been registered in Iraq during the previous 10 years—the highest number in the world.) Also in April the Iran-based SCIRI claimed that a renewed offensive against the Shi'a opposition in the southern regions had resulted in the execution of some 60 Shi'ites during March. Van der Stoel later denounced the assassinations of two senior Shi'a religious leaders, Ayatollah Murtada al-Burujirdi and Grand Ayatollah Mirza Ali al-Gharawi, in April and June respectively. Van der Stoel reported that both men had been harassed and warned by the Iraqi authorities to cease organizing prayer meetings, and expressed fears that the murders were part of a systematic attack on the independent leadership of Iraq's Shi'a Muslims. Although Ayatollah al-Gharawi had never been involved in political activity, there had been reports that the Iraqi Government wished to replace him as *Marja* (a senior spiritual leader of Shi'a Muslims) by another candidate whom many leading Shi'a religious scholars believed was unqualified for the position. Van der Stoel stated that the Iraqi authorities failed to investigate either murder thoroughly. The Iraqi Government, however, denied any involvement in the killings, attributing them instead to 'malicious foreign-based elements'. Some observers argued that there may have been a link between the attempted assassination of Izzat Ibrahim ad-Duri, Vice-Chairman of the RCC, during a visit to the holy city of Karbala in October 1998, and the murders of the two Shi'a clerics. Towards the end of 1998 there were several reports alleging that the security forces had undertaken new campaigns in the southern provinces involving attacks on villages, mass arrests and executions. The appointment of Saddam Hussain's cousin, Ali Hassan al-Majid, as military commander of the southern provinces, was interpreted as evidence of the regime's determination to eliminate unrest in the region. In a new report submitted by Van der Stoel in November, the special rapporteur asserted that human rights violations continued to be perpetrated by the Government of Iraq, and that the information he had received presented 'an alarming picture of one of the most repressive regimes in the world since the end of the Second World War'. Van der Stoel reported that he had received allegations that mass executions continued in Abu Ghrayb prison, where he believed that more than 170 detainees from the southern and north-central areas of Iraq had been executed between December 1997 and July 1998. He further stated that inhuman and degrading punishments remained in force, and that, despite the regime's denials, he had evidence that these continued to be imposed sometimes without due process of law and by persons who held no judicial or similar authority. In addition to cases of torture, Van der Stoel continued to receive lists of persons arbitrarily arrested and detained in extremely harsh conditions without specific charges or trial, lists of cases of disappearances, as well as lists of families forced on ethnic grounds to leave their homes. As part of a long-running policy of 'Arabization' of the oil-rich Kirkuk region, Van der Stoel asserted that some 150,000 people of Kurdish origin had been evicted from their homes, and that evictions were occurring on a daily basis. The report stated that more than 200,000 people had been internally displaced in the rest of the country, mainly in the southern provinces. Van der Stoel identified the plight of displaced persons, many of whom were women and children, as one of the most pressing humanitarian concerns in Iraq. Despite the expanded 'oil-for-food' programme, available resources were not being channelled adequately to those in the southern provinces who were in the greatest need. It was Van der Stoel's assessment that the situation with regard to food and health remained 'precarious', and that the primary responsibility for the suffering of the Iraqi people lay with the Government in Baghdad.

In February 1999 Ayatollah as-Sadr was assassinated in the holy city of Najaf, the third senior Shi'a cleric to be murdered in less than a year. In his last sermon, a week before his death, as-Sadr had called on the authorities to release immediately an estimated 100 Shi'a clerics who had been arbitrarily arrested. The Iraqi Government again denied any involvement in the murder, and swiftly suppressed widespread riots among Shi'ites throughout the southern provinces, as well as in at least one major suburb of Baghdad, which erupted following as-Sadr's murder. In April the Iraqi authorities announced that four men had been executed for the murder of the Ayatollah. While most sources maintained that as-Sadr had been murdered by government agents, others claimed that he may have been killed by other Shi'a who regarded him as a 'puppet' of the regime. There were reports of continuing unrest among Shi'a in the southern provinces. In June it was reported that Saddam Hussain had dismissed Ali Hassan al-Majid as military commander of the southern region and replaced him with Gen. Ayad Fitayeh ar-Rawi, a former commander of the Republican Guard. One source claimed that al-Majid's dismissal followed an assault by his sons on the President's son, Qusay, who was reported to have sustained serious injuries in the attack.

In May 1998 the Minister of Labour and Social Affairs, Abd al-Hamid Aziz Muhammad Salih as-Sayigh, was dismissed after

stating that Iraq's prisons were grossly over-populated. He was replaced in July with Saadi Tuma-Abbas, who had been Minister of Defence at the time of the Gulf War. Salih as-Sayigh (who was himself imprisoned following his dismissal) was reported to have fallen victim to Saddam Hussain's elder son, Uday, who, having been disregarded as a political force as a result of the serious injuries sustained in the attempt on his life in December 1996, now appeared to have recovered sufficiently to pursue his ambitions, although the extent of his political influence remained unclear. Uday was also believed to have been responsible for the dismissal of Nouri Faisal ash-Shaher as governor of Baghdad. Also in May 1998 the opposition claimed that 22 officers of the Republican Guard and the Special Republican Guard had been executed for plotting a coup, and their bodies publicly displayed in Baghdad. However, the Iraqi Government insisted that the men were executed after having been found guilty of corruption and bribery. In June Jordanian newspapers reported that Saddam Hussain's daughter, Rana, was seeking to gain control of a bank account in Amman that had been opened by her late husband, Saddam Kamel, after his defection. The report provided the first firm evidence that the Iraqi authorities were trying to recover some of the tens of millions of dollars believed to have been taken out of the country by Saddam and Hussain Kamel (see above).

Saddam Hussain's half-brother, Barzan at-Tikriti, who had spent several years in Geneva as Iraq's envoy to the UN, was due to return to Baghdad in October 1998 but appeared reluctant to do so, and opposition sources claimed that members of his family had been placed under house arrest to induce him to return. The main reason put forward for Barzan's reluctance to return to Baghdad was his strained relations with his nephew, Saddam Hussain's son Uday, whose brief marriage to Barzan's daughter had failed and who had apparently been involved in 1993 in the shooting of one of Barzan's brothers and the imprisonment of another. In late January 1999 rumours surfaced that the authorities had in the previous month successfully foiled a coup attempt by officers of the third army corps. Some sources claimed that the coup was to have been launched to coincide with 'Operation Desert Fox' (see below) but was uncovered just before the air strikes began. At the same time SCIRI reported that Lt-Gen. Kamil Sachit al-Janabi, deputy commander in the southern provinces, had been executed, along with eight others, for conspiring against the regime. In the early months of 1999 there were unconfirmed reports of more purges within the armed forces, involving the arrest and execution of hundreds of officers. Saddam Hussain's son Qusay was also reported to have been accorded further 'special security' powers to interrogate senior figures within the regime suspected of being disloyal. Among those he was claimed to have summoned was Barzan at-Tikriti, who had eventually returned to Baghdad but whose loyalty was again questioned after one of his aides defected to the opposition.

CONCLUSION OF AGREEMENT ON PETROLEUM SALES

In January 1996 Iraq indicated that it was willing to 'enter into a dialogue' on an 'oil-for-food' agreement with the UN, provided that no conditions were attached to it. Iraq had originally rejected UN Security Council Resolution 986 of April 1995 (see above), arguing that the terms were a violation of its sovereignty. Under the conditions of the resolution, Iraq had to accept UN monitoring of the distribution of humanitarian supplies and to agree to the supply of specified amounts of food and medicine to the Kurdish-controlled enclave in the north. On several occasions the Iraqi Government had indicated that it wished to renegotiate the terms of the Resolution, but the UN Security Council had refused and insisted that Iraq must accept the conditions as set out in the original offer. The Security Council agreed that the UN Secretary-General should begin new talks with Iraq on the implementation of Resolution 986, and a first round commenced in early February 1996. By the end of April UN and Iraqi negotiators had held three rounds of talks, but no agreement had been reached on a draft memorandum of understanding. It was reported that agreement could have been reached, but that the USA and the United Kingdom had insisted on certain changes to the original terms of Resolution 986, including a demand that Iraq should play no part in the supply and distribution of supplies to the Kurdish governorates. Despite these problems, Iraq proceeded in early March to sign a protocol with Turkey on resuming oil exports through the two pipelines from the Kirkuk oilfields to the Turkish ports of Ceyhan and Yumurtalık on the Mediterranean. A fourth round of talks between the UN and Iraq began in early May, but in the middle of the month the two sides remained divided over the conditions which should govern limited sales of Iraqi petroleum. On 20 May, however, Iraq accepted the UN terms. The memorandum of agreement, which must be renewed every six months, detailed stringent conditions for the sale of up to US $4,000m.-worth of Iraqi oil a year in order to purchase food and medicine, and to finance UN operations in Iraq. The agreement stipulated that 30% of the revenues obtained would be used to pay war reparations, and that a further 13%–15% would be spent on aid to the Kurdish provinces. Independent inspection agents would be appointed by the UN to verify the arrival of humanitarian supplies in Iraq and their equitable distribution. The UN would take direct charge of the distribution of supplies in the Kurdish-held areas. Dr al-Anbari, Iraq's chief negotiator at the UN, hoped that the agreement would be the first step leading to the gradual lifting of the embargo, but this appeared unlikely. There was, however, general acknowledgement that the agreement represented the biggest change in Iraq's relations with the international community since the war with the multinational force in 1991.

In March 1996 UN sanctions against Iraq were renewed for a further 60 days. The head of UNSCOM, Rolf Ekeus, reported to the Security Council that Iraq had not yet surrendered certain proscribed weapons or related materials and he expressed concern that Iraq might still be engaged in the development of prohibited weapons systems. He feared that Iraq was concealing as many as 16 surface-to-surface missiles armed with biological warheads from UN inspectors. On 27 March, in response to these fears, the Security Council unanimously approved Resolution 1051, which provided for the establishment of an elaborate system to monitor the export of any material and equipment to Iraq that could be used in the production of weapons of mass destruction, to come into force as soon as trade sanctions were lifted.

Confrontations between UN inspectors and Iraqi officials continued. In March 1996, for example, inspectors were prevented from entering and searching sites on five occasions. In June, during a visit to Baghdad, Ekeus signed an agreement with Tareq Aziz whereby Iraq promised to grant UN inspectors immediate access to sites provided they fully respected Iraq's concerns over sovereignty when visiting those sites deemed to be 'sensitive'. Yet, despite this, in late July a team of UN inspectors was barred from entering a 'sensitive site' and was forced to suspend its operations.

In late July 1996 Iraq's chief negotiator at the UN stated that Iraq's amended food distribution plan had been approved by the UN Secretary-General and that Iraq hoped that the agreement would now be swiftly implemented. On 31 July, however, it was announced that the USA, at a meeting of the UN Security Council sanctions committee, had withheld its approval of the amended food distribution plan as it required further details of monitoring procedures. Final approval of the sanctions committee (including that of the USA) for the implementation of Resolution 986 was granted on 8 August, and it was announced that the means of monitoring exports of Iraqi petroleum and the purchase and distribution of humanitarian goods inside Iraq were in the process of being established. In mid-September, however, the implementation of Resolution 986 was postponed indefinitely, following the deployment of Iraqi armed forces (in alliance with the forces of the DPK) inside the Kurdish 'safe haven' in northern Iraq. In response, the USA launched missile attacks on targets in southern Iraq. The threat of further retaliatory US attacks on Iraqi targets receded on 13 September, when Iraq announced that it would cease targeting allied aircraft enforcing the air exclusion zones. There was, in any case, little support among the international community for the escalation of retaliatory action which the USA appeared, initially, to wish to pursue. The US Government, nevertheless, continued to reinforce its military capabilities in the Gulf region. At the end of October Italy followed France in opening an interests section in a diplomatic mission in Baghdad, and in December Spain announced that it was sending a permanent

diplomatic representative to its Baghdad embassy. Other Western countries were expected to begin to re-establish diplomatic relations with Iraq (suspended in 1991) following the implementation of the 'oil-for-food' agreement.

At the beginning of December 1996 the UN Secretary-General issued a memorandum of understanding finally implementing Resolution 986, Iraq having accepted all the conditions stipulated by the UN. Petroleum began to flow through the pipeline to Turkey on 10 December. Revenues from the sale of Iraqi oil are to be deposited in a special account at the Banque Nationale de Paris in New York which will issue letters of credit for all supplies of food and medicine ordered by the Iraqi authorities, and funds will only be released when the goods have been inspected and verified by UN monitors on the Iraqi border. UN teams have the right to visit all humanitarian supply centres in Iraq without prior warning, and 151 UN monitors will supervise the actual distribution of humanitarian supplies. However, international agencies have expressed doubts that the funds made available for humanitarian relief under the terms of the agreement will be sufficient to alleviate the high levels of malnutrition and disease among the Iraqi population. Part of Iraq's oil revenue will be allocated to the UN Compensation Commission (UNCC), which has been unable to settle the majority of Gulf War compensation claims because of inadequate funds. The first shipments of food and humanitarian supplies purchased under the new agreement reached Iraq in late March 1997.

Following approval of the 'oil-for-food' agreement, a new dispute arose between UNSCOM and the Iraqi authorities. Ekeus reported that Iraqi officials had refused UN inspectors permission to remove *Scud* missile components for examination abroad. At the end of December 1996 all UN sanctions against Iraq were renewed for a further 60 days. At the beginning of April 1997 Iraq violated the southern air exclusion zone in order to fly pilgrims to Jeddah, Saudi Arabia, and at the end of the month, ignoring US warnings, Iraqi helicopters collected returning pilgrims from the Saudi border. Both President Clinton and the US Secretary of Defense, William Cohen, issued renewed warnings to the Iraqi Government that it should not challenge international restrictions on the use of its airspace, but no retaliatory measures were undertaken. In its six-monthly report, presented to the UN Security Council on 18 April, UNSCOM stated that it was still not satisfied that Iraq had disclosed full details of its past nuclear, biological and chemical weapons programme and warned that there could be 'political consequences' if Baghdad continued to undermine the Commission's activities. These claims were rejected by the Iraqi Deputy Prime Minster, Tareq Aziz, in a letter to the Chairman of the Security Council published on 23 April. In May Iraq again accused the USA of disrupting the delivery of food and medicine purchased under UN Resolution 986 by delaying its approval of contracts without satisfactory reason.

Reporting to the US Congress in May 1997 on efforts to secure Iraq's compliance with UN resolutions, President Clinton reaffirmed that Saddam Hussain remained a serious threat to the Iraqi people and to regional peace and stability. He declared that the USA would not relax its sanctions until the Iraqi authorities complied with all their obligations under UN resolutions. The President stated that the northern and southern air exclusion zones would be maintained and emphasized the scale of US forces in the region. He criticized the Iraqi leadership for refusing to co-operate fully with UN weapons inspectors and condemned Iraqi efforts to impose new restrictions on UN officials responsible for monitoring the distribution of humanitarian supplies to the Iraqi people. He stated that his administration would continue to support the various Iraqi opposition groups and non-governmental organizations monitoring the human rights situation in Iraq. At the beginning of June the UN Security Council unanimously approved the extension of the 'oil-for-food' agreement for a further six months, despite complaints from both Washington and Baghdad. The Security Council indicated that it would consider extending the programme for a third six-month period if there were no major problems during the second stage, but rejected Iraq's request to increase the amount of oil that it is permitted to sell under the agreement. In response to demands from the USA and the United Kingdom for more information on the distribution of humanitarian supplies, the UN Secretary-General, Kofi Annan, dispatched his Under-Secretary-General for Humanitarian Affairs, Yasushi Akashi, to Iraq to investigate these concerns. Akashi confirmed that almost all of the UN World Food Programme observers were in place and had been given access to all parts of the country, but had discovered no evidence of discrimination in the distribution of supplies. Akashi's report also drew attention to certain administrative and financial deficiencies in the UN's implementation of the 'oil-for-food' agreement which continued to result in serious delays in the processing and distribution of humanitarian supplies. However, later in June Iraq suspended oil exports under the agreement, and on 18 June the Minister of Oil, Amir Muhammad Rashid, stated that exports would resume following UN approval of a new distribution plan proposed by the Iraqi authorities.

The Iraqi authorities continued to complain about the large number of contracts, especially for medical and water-treatment equipment, that had either been rejected or delayed by the UN Security Council sanctions committee, and to accuse the USA of obstructing humanitarian efforts. The Iraqi authorities drew attention to the contrast between the slow pace of progress of the work of the sanctions committee and the speed at which the UNCC had moved to deal with claims for compensation arising from Iraq's invasion of Kuwait. US officials, however, insisted that the Iraqi Government was deliberately abusing its humanitarian imports facility to obtain goods that could be used for other purposes. Iraq and the UN agreed a new distribution plan in early August 1997, incorporating improvements designed to accelerate the approval process, and Iraqi oil exports resumed on 14 August. In order to enable Iraq to meet its revenue target for the first three months of the second phase of the 'oil-for-food' agreement, in September the UN Security Council extended the deadline to the beginning of October. By the end of August, 672 contracts had been approved by the sanctions committee, 20 rejected and 83 withheld. The UN renewed the agreement for a third six-month period on 4 December and agreed to consider changes to the procedures and value of oil exports during that period. This move failed to satisfy Iraq, and oil exports were immediately suspended. In early January 1998 revisions proposed by Iraq to a new plan for the distribution of food and medicine during the third phase were approved by the UN Secretary-General, and by midJanuary Iraqi oil exports had resumed.

Following a visit to Iraq in January 1998, the UN Secretary-General, Kofi Annan, recommended an increase in the value of oil exports allocated to Iraq under the 'oil-for-food' agreement, and on 20 February the UN Security Council agreed Resolution 1153, which more than doubled, to US $5,200m., the level of six-monthly revenue permitted to the Iraqi Government. Iraq was to be entitled to spend up to $3,550m. every six months on humanitarian imports, the definition of which was broadened to include investment in infrastructure projects such as repairs to oil production facilities and power generators. The remaining $1,650m. was to be used to pay war reparations and the cost of UN operations in Iraq. Some aspects of the new arrangement provoked criticism from Baghdad. The Iraqi authorities were particularly insistent that all additional revenues should be allocated to humanitarian imports. They also stated that they would not recognize any agreements concluded between the UN and the Kurds without consultation with Baghdad, and would refuse to be dictated to by the UN on decisions relating to infrastructure projects. Despite its acceptance of the original 'oil-for-food' agreement, the Iraqi Government had always been concerned that the deal would delay the full lifting of sanctions. The Iraqi authorities complained that the new arrangement implied a permanence to the agreement, and that it further violated Iraq's sovereignty. In addition, Iraq's ambassador to the UN, Nizar Hamdoon, stated that until vital rehabilitation of the oil sector was completed, Iraq could export no more than $4,000m. of oil every six months. A UN technical team visited Iraq in mid-March and reported that six-monthly exports worth only $3,000m. were currently possible and that this level of production could only be maintained if Iraq was permitted to import essential spare parts. As a result, the UN Secretary-General asked the Security Council to allocate $300m. for repairs to oil production facilities and requested that the value of Iraqi oil exports under the revised agreement be reduced to

$4,000m. every six months. Iraq was required to submit a new aid distribution programme before the revised agreement could take effect. The new plan was submitted in early May and approved by the UN Secretary-General at the end of the month. It provided for oil sales of $4,500m. over the following six months, of which $3,100m. was to be allocated for humanitarian supplies and emergency infrastructure repairs, while the remainder would finance war reparations.

UN Security Council Resolution 1175, approved unanimously in mid-June 1998, stated that the new distribution plan would remain in effect, subject to constant review and amended as necessary. Iraq was permitted to import spare parts to the value of US $300m. in order to improve its oil production. The list of spare parts was to be approved by the sanctions committee, and not by UN overseers as Iraq had requested. Despite an increase in oil exports under phase four of the 'oil-for-food' programme, the sharp fall in international petroleum prices meant that only some $3,000m. in revenues was generated. The fourth phase of the programme ended in late November, and there was a smooth transition to phase five, effective to May 1999. In late 1998 the UN co-ordinator of the 'oil-for-food' programme. Denis Halliday, resigned, declaring that UN sanctions had served to strengthen Saddam Hussain's regime while causing poverty and disastrous social problems for the Iraqi people. He later wrote of what he termed a climate of dispair, anger and frustration in Iraq, and warned that sanctions were fostering fanaticism. Halliday argued that while Saddam Hussain's regime was perceived in the West as 'extremist', there were many Iraqis who were critical of any attempt to reach a compromise with the UN, and that within the ruling Baath Party there were those who wanted Iraq to cease all co-operation with the UN and call on solidarity with Arab and Islamic states to secure food, medicines and other basic commodities. In late May 1999 the 'oil-for-food' programme was extended for a sixth phase, to 20 November. In mid-May the Iraqi Minister of Health criticized the programme, claiming that although supply contracts had been signed, no new medical supplies had arrived in the country since the fifth phase began. At the same time the Iraqi Government again accused the US and United Kingdom of blocking contracts for spare parts that were essential for upgrading the country's oil facilities.

In March 1998 the US Department of State welcomed efforts by Iraq's neighbours, particularly Iran, to curtail the illegal export of crude oil and petroleum products by Saddam Hussain's regime. The scale of the smuggling, mainly through Iran, Turkey and the Gulf, was difficult to quantify, but US officials estimated that during February Iraq had been illegally transporting 100,000 b/d, providing the regime with annual revenues of some US $700m. which, it was believed, would be devoted to the security services and to the purchase of luxury goods for the political élite. In May the US Administration reported that oil-smuggling had increased once again, especially through Iran's territorial waters, a route that has proved difficult for the Multilateral Interdiction Force to police.

Following a number of incidents during June 1997 in which UNSCOM inspectors were further obstructed by Iraqi officials, on 21 June the UN Security Council unanimously adopted Resolution 1115, condemning the Iraqi authorities for repeatedly refusing to allow inspection teams access to sites and indicating that further sanctions might be imposed on Iraq if the authorities failed to co-operate with UNSCOM. A decision on the imposition of further sanctions was postponed until October. In July Rolf Ekeus, who had headed UNSCOM for six years, resigned and was replaced by an Australian diplomat, Richard Butler. During a visit to Baghdad, undertaken soon after his appointment, Butler noted a new spirit of co-operation with the Iraqi authorities, but in the weeks that followed UN operations appeared to be systematically frustrated by Iraqi officials. In October Butler presented his report of UNSCOM's operations during the previous five months to the UN Security Council. Despite noting significant progress in determining the scale of Iraq's chemical weapons programme, the report was essentially highly critical of the authorities in Baghdad, emphasizing a persistent lack of co-operation from the Iraqi Government. Subsequently, within the UN Security Council, the USA and the United Kingdom proposed a resolution to prohibit Iraqi officials considered to be responsible for obstructing weapons inspectors from leaving the country. France and Russia objected to the draft resolution but approved a revised version to impose a travel ban on Iraqi officials in April 1998 should non-co-operation with UNSCOM continue. At the same time sanctions against Iraq were renewed for a further 60 days.

In late October 1997 the RCC criticized the high proportion of UNSCOM personnel supplied by the USA, claiming that they were predisposed to resist the ending of sanctions. Iraq demanded that all such personnel should leave the country by 5 November. This deadline was extended by one week, however, in order to allow a UN mission to travel to Baghdad in an attempt to resolve the dispute. Negotiations proved unsuccessful, and therefore the UN Security Council unanimously adopted a resolution (No. 1137) that immediately activated the travel ban proposed earlier. The resolution also stipulated that Iraq should retract its decision to expel US personnel and stated that further Iraqi intransigence regarding weapons inspections would result in the suspension of the 60-day sanctions review until April 1998 and, furthermore, possibly provoke military action. Nevertheless, Iraq refused to rescind its decision and US weapons inspectors were forced to leave the country on 13 November. In response to the escalating crisis, both the USA and the United Kingdom ordered military reinforcements into the region, with both Kuwait and Bahrain reluctantly allowing warplanes to be deployed on their territory. Tensions appeared to ease on 19 November, after the Iraqi Deputy Prime Minister, Tareq Aziz, met the Russian Minister of Foreign Affairs, Yevgenii Primakov, who affirmed that Russia would continue to urge an end to economic sanctions, provided that Iraq complied with Resolution 1137. Following this assurance, UNSCOM weapons inspectors were permitted to return to Iraq on 21 November. Renewed Iraqi co-operation with UNSCOM was short-lived, however: shortly after the inspectors' return, Iraqi officials refused to allow UNSCOM the unconditional access that it sought to areas designated as presidential palaces. In mid-December Richard Butler, accompanied by commissioners from the United Kingdom, France and Russia, held talks in Baghdad with Tareq Aziz. Although Aziz expressed satisfaction at the presence of representatives of countries other than the USA, no progress was achieved. In response to the impasse, the US Secretary of Defense, William Cohen, reiterated the threat of military action in order to force Saddam Hussain to capitulate to UN demands, a move which was condemned by Russia. On 12 January 1998 Iraq prohibited inspections by a former US marine officer, Scott Ritter, claiming that he was spying for the CIA. On 19 January Richard Butler returned to Iraq, where he agreed to Russian requests to introduce outside experts into technical talks regarding the weapons inspections, scheduled to commence in February, thereby diluting the presence of US personnel. In spite of this concession, Iraq maintained a policy of non-co-operation with UNSCOM. In response, the US Secretary of State, Madeleine Albright, warned that the time for diplomacy was fast expiring and embarked on an intensive diplomatic mission in Europe and the Middle East in order to secure support for possible military action against Iraq. Albright subsequently announced that Egypt, Jordan, Kuwait, Bahrain, Saudi Arabia and Israel were prepared for a military response. France, the People's Republic of China and Russia opposed the use of force. The apparently increased likelihood of air strikes against Iraq prompted Russia's Deputy Minister of Foreign Affairs, Viktor Posuvalyuk, to hold extensive talks with Iraqi officials in Baghdad in late January and early February. The USA did not consider that Russia had achieved a breakthrough, and began to make preparations to evacuate 450 UN staff to secure hotels. However, the Russian President, Boris Yeltsin, maintained that progress was indeed being made and threatened that Russia would veto any Security Council resolutions authorizing military attacks on Iraq. The extent of Russian opposition to military force became evident on 4 February, after Yeltsin warned that US military strikes could have serious international repercussions. Indeed, and despite Albright's earlier claims, it became apparent that there was little support among the Gulf states for military action. Only Kuwait announced its approval for the use of force if diplomatic efforts should fail, while Saudi Arabia and Bahrain refused to authorize military attacks from their territories. Meanwhile, senior representatives from the Arab League, Russia, Turkey and France

met on 3 February, in Baghdad, in an attempt to defuse the crisis. In mid-February the five permanent members of the UN Security Council approved a compromise formula whereby a special group of diplomats, appointed by the UN Secretary-General in consultation with experts from UNSCOM and the International Atomic Energy Agency (IAEA), would be allowed unconditional and unrestricted access to presidential palaces. A visit to Baghdad by Kofi Annan on 22 February resulted in agreement on a memorandum of understanding between the UN and Iraq, which narrowly averted the immediate threat of military action. Under the terms of the memorandum, signed on 23 February, the Iraqi Government (which reiterated its acceptance of all relevant UN resolutions) agreed to grant UNSCOM immediate, unconditional and unrestricted access to all sites, while UNSCOM agreed to respect the legitimate concerns of Iraq relating to national security, sovereignty and dignity. A Special Group to inspect the eight presidential sites was to be created, comprising senior diplomats and experts from UNSCOM, and headed by a Commissioner appointed by the UN Secretary-General. The Special Group was to operate under the established procedures of UNSCOM, and specific detailed procedures which were to be developed given the special nature of the presidential sites. Noting the progress already achieved by UNSCOM and the need to intensify efforts to complete its mandate, the UN and the Iraqi Government agreed to improve co-operation, and efficiency, effectiveness and transparency of work. Finally, the memorandum noted that the ending of sanctions was of paramount importance to the people and Government of Iraq, and the Secretary-General undertook to bring this matter to the full attention of members of the UN Security Council.

Iraq's Deputy Prime Minister, Tareq Aziz, who signed the memorandum on behalf of the Iraqi Government, asserted that Iraq had achieved 'excellent political gains for the present and for the future and practical gains related to the lifting of sanctions'. Kofi Annan was careful to highlight the role played by the USA in securing the agreement, stating that 'diplomacy backed up by force' had facilitated the negotiating process. There was general agreement that Saddam Hussain had improved his position domestically and in the Arab world by confronting the USA. Iraq also viewed the personal involvement of the UN Secretary-General as an important achievement, hoping that he would use his influence to effect an early end to the regime's international isolation. On the other hand, Iraq had been forced to make some concessions, notably to allow UNSCOM access to all suspect areas, including presidential sites. However, it was clear that the establishment of the Special Group to inspect the presidential sites would complicate the work of UNSCOM and the organization of unannounced visits to these sites. The Secretary-General had also declined to place a six-month time limit on UNSCOM's work, as requested by Iraq, insisting that sanctions would only be revoked when UNSCOM confirmed that all of Iraq's alleged nuclear, chemical and biological weapons and facilities had been destroyed. According to some observers, Saddam Hussain's decision to accept the compromise agreement brokered by Kofi Annan was strongly influenced by his reluctance to see the key pillars of his regime, the Republican Guard and the Presidential Guard, become the target of US and British air strikes. Despite the apparent breakthrough, both the USA and the United Kingdom remained cautious, and urged the UN Security Council to adopt a resolution advocating the use of force should Iraq breach the agreement. On 2 March 1998 the UN Security Council unanimously approved a resolution warning of extreme consequences, but not immediate use of force, if the agreement was reneged upon by Iraq. UNSCOM inspection teams returned to Iraq on 5 March, and, after a meeting with Tareq Aziz on 23 March, Richard Butler reported that his teams had been allowed access to many 'sensitive' sites. In early March Kofi Annan appointed the Indian diplomatist Prakash Shah to be the UN Secretary-General's special representative to Iraq. The Special Group, led by Jayantha Dhanapala of Sri Lanka, who had been appointed chief UN disarmament officer in February, completed a first round of inspections of presidential sites in late March and early April, finding most of the buildings virtually empty. On 3 April Dhanapala stated that the Group had been 'able to fulfil their mandated task'. In contrast, Charles Duelfer, the deputy head of UNSCOM, reported that Iraqi officials had informed him that inspections of presidential sites would not be permitted indefinitely and concluded that the fundamental problem of continuing access had been postponed rather than solved. The US press accused some senior UN officials close to the Secretary-General of supporting Iraqi complaints against UNSCOM inspectors, and advocated an end to sanctions and weapons inspections. In his six-monthly report to the UN Security Council in April, Richard Butler stated that virtually no progress in verifying disarmament had been made since October 1997 because of the recent crisis, for which he held Baghdad responsible, and he insisted that the destruction of Iraq's chemical and biological weapons was far from complete. Butler criticized Iraq's policy of 'disarmament by declaration', and stated that verification was essential to establish the credibility of these claims. The Iraqi authorities continued to maintain that they had destroyed all weapons of mass destruction and requested the complete and comprehensive ending of sanctions. On 27 April the Security Council, having examined Butler's latest report, voted not to review the sanctions regime against Iraq. Russia, however, did prepare a draft resolution urging an end to UN inspections into Iraq's nuclear weapons programme. The IAEA had recently reported that it had no evidence of a covert Iraqi nuclear weapons programme, and that the authorities in Baghdad had answered all relevant questions on the subject satisfactorily. Despite French and Chinese support for the resolution, opposition from the United Kingdom and the USA forestalled further discussion of the draft document. Meanwhile, Iraqi officials continued to complain that, despite the increased involvement of some Russian and French diplomats in UNSCOM, the weapons inspectorate was still dominated by specialists from the United Kingdom and the USA.

In late June 1998 Richard Butler reported to the UN Security Council that traces of a lethal chemical agent known as VX had been discovered following US laboratory tests on remnants of missile warheads recovered from an Iraqi weapons destruction pit. Despite claims by a former head of Iraqi military intelligence (currently resident in the United Kingdom—see above) that VX had been employed in Iraq's war with Iran, the Iraqi Government stressed that the chemical had never been used as a weapon. In response to Iraqi demands that the tests should be repeated at neutral locations, in early July the UN agreed to re-examine fragments of the warheads at laboratories in France and Switzerland. However, the results of these tests were inconclusive. On 2 August Butler visited Baghdad for talks with Iraqi officials which it was hoped would expedite completion of the arms inspection programme. Negotiations collapsed two days later, however, after Tareq Aziz rejected Butler's proposal for further inspections. Furthermore, Aziz urged the UNSCOM Chairman to report to the UN Security Council that Iraq had eliminated its weapons of mass destruction, a request that Butler claimed he could not fulfil, owing to lack of evidence. Consequently, the Iraqi Council of Ministers suspended arms inspections on 5 August and Saddam Hussain presented new terms and conditions for the inspections to resume, including the establishment of a new executive bureau to oversee UNSCOM's operations and the transfer of UNSCOM headquarters from New York to Vienna. Resumption of arms inspections was authorized by the UN on 18 August, but the Iraqi authorities continued to insist that co-operation with the inspection teams would be withheld. On 14 September the Iraqi Government announced that it was suspending all co-operation with UNSCOM indefinitely, unless the UN Security Council revoked a decision, taken on 9 August, to suspend the periodic review of the maintenance of sanctions against Iraq. In late October, in an attempt to persuade Baghdad to resume co-operation with UNSCOM, the Security Council agreed to a comprehensive review of the sanctions regime, to be conducted by the UN Secretary-General. A balance sheet was to be compiled of work completed hitherto by the weapons inspectors, and on that basis a list of requirements would be prepared that Iraq would be required to fulfil for the oil embargo to be revoked, together with a 'reasonable timescale' for the inspections work to be completed. Iraq, however, rejected the proposal, insisting that the review should lead automatically to the ending of sanctions, and proceeded to ban all UNSCOM inspections of new or existing sites. Baghdad's stance was condemned by the Security Council,

and the USA and United Kingdom stated that they were prepared to undertake military action against Iraq if necessary. In November, as the US and British forces were about to launch air strikes, Saddam Hussain relented and allowed UNSCOM inspectors to resume their investigations. Although the USA and United Kingdom had called off their air strikes, they warned Iraq that if it interfered with UNSCOM's work in the future, there would be an immediate military response.

'OPERATION DESERT FOX'

Only a few weeks after the return of the UN weapons inspectors a new crisis erupted. In mid-December 1998 Richard Butler submitted a new report to the UN Security Council that was critical of Iraq's attitude towards UNSCOM. On 16 December, as the Security Council considered Butler's report, the USA and United Kingdom launched an intensive bombing campaign against Iraq over four consecutive nights, involving 'cruise' missiles, fighter aircraft and heavy bombers. The stated aim of the campaign was to diminish and degrade Saddam Hussain's ability to use and deploy weapons of mass destruction. The air attacks targeted Iraq's air-defence system, sites such as missiles factories, and repair sites alleged to be connected with weapons of mass destruction (but not sites where it was believed chemical and biological agents were being stored), together with command centres such as the headquarters of the Republican Guard, the Special Republican Guard and the intelligence services. The Iraqi Government remained defiant and claimed that the bombing had caused heavy civilian casualties. Both China and Russia immediately condemned the attacks. Russia temporarily withdrew its ambassadors from Washington, DC, and London, and the Duma urged the Russian Government to end sanctions against Iraq. Criticism was also voiced, albeit less vehemently, by France, while Germany expressed support for the air strikes. Across the Arab and Islamic world numerous popular demonstrations condemned the bombings and expressed support for Iraq. Seeking to capitalize on this popular sympathy, Saddam Hussain condemned Arab leaders, especially those allied to the USA, and called on the people to rise up and overthrow their governments.

A number of analysts were critical of the role played by Richard Butler, arguing that in his report, which provided the pretext for the air strikes, he chose to emphasize several relatively minor difficulties with the Iraqi authorities rather than mention the large number of inspections that had taken place without incident in less than a month. While few observers doubted that Saddam Hussain was determined to rebuild a part of his military capability, they pointed out that of the four dossiers on disarmament, three—those relating to nuclear weapons, missiles and chemical weapons—were either complete or nearing completion. A US official was reported to have admitted that Butler had discussed the content of his report with senior members of the Clinton administration before producing the final draft, and former UNSCOM inspector Scott Ritter insisted that Butler had been in regular contact with members of the US National Security Council. This led some commentators to assert that the White House had influenced the tone of Butler's report. Although the use of military force against Baghdad was seen as a long-established element in US strategy of political and military primacy in the Middle East and in the Gulf, several observers argued that the actual timing of US-British air strikes may well have been determined by political considerations in Washington, DC—where President Clinton was, notably, threatened with impeachment over the Lewinsky affair. Others maintained that military action was inevitable given the time and effort that the US had expended on denouncing the menace posed by Saddam Hussain's regime, and that the timing of the air strikes was of secondary importance.

At the end of the bombing campaign the US Department of Defense claimed that the air strikes had set back Iraq's chemical and biological weapons programme by a year. However, independent observers challenged these claims, pointing out that the Iraqi authorities had probably moved vital weapons material to more remote sites before the bombing campaign began and that only empty buildings would have been destroyed. Despite targeting the regime's power structure, there was little evidence that Saddam Hussain's authority had been weakened. On the contrary, surveillance cameras installed by UNSCOM as part of its long-term monitoring programme were no longer functioning; Baghdad proclaimed that UNSCOM's disarmament work, undertaken over seven years, risked being written off. The attacks failed to bring about a revolt within the Iraqi armed forces, and there was no proof that they had achieved their stated objective of degrading the regime's ability to produce weapons of mass destruction. The bombings underscored and deepened divisions within the UN Security Council regarding policy towards Iraq, and some commentators argued that the UN itself had been discredited. A number of analysts considered that the air strikes had better served the long-term strategic objectives of Saddam Hussain's regime than those of the USA and its British ally.

In an address on 19 December 1998 announcing the end of 'Operation Desert Fox', President Clinton outlined the main elements of future US strategy towards Iraq. Both the USA and United Kingdom would maintain a substantial military force in the Gulf, ready to carry out new strikes if necessary. Sanctions, which he described as 'the most extensive in the history of the UN', would be maintained. Inspectors from UNSCOM and the IAEA would resume their work, on condition that the Iraqi authorities demonstrated their preparedness to co-operate; if not, force would be used to eliminate all efforts by the Iraqis to resume a programme to develop weapons of mass destruction. Finally, the USA would seek the overthrow of Saddam Hussain. France, Russia and China all criticized this pledge to seek the removal of Saddam Hussain, which—although supported by the British Government—caused considerable disquiet within the international community. In mid-January 1999 France suggested an alternative approach, proposing that the oil embargo should be revoked and UNSCOM replaced by a new organization which would concentrate its efforts on ensuring that Iraq was prevented from acquiring any new weapons of mass destruction, rather than seeking to trace and document past development programmes. Although the French proposals received broad support from the UN Secretary-General and from Russia, they were opposed by the USA, which claimed that to end the oil embargo would merely strengthen Saddam Hussain's regime. The USA did, however, propose raising the existing limit on Iraqi oil sales under the terms of the 'oil-for-food' programme in order to address the humanitarian needs of the Iraqi people. Baghdad, for its part, insisted that all sanctions must be ended and that under no circumstances would it contemplate the return of UNSCOM. Also in January the Iraqi parliament voted to renounce all commitments made to the UN Security Council, including Iraqi recognition of the Iraq–Kuwait border.

In late January 1999 the *Washington Post* reported that it had been informed by US officials that the USA had been monitoring coded radio communications of Saddam Hussain's personal security forces, using equipment secretly installed by UNSCOM weapons inspectors. It was stated that UNSCOM had quickly concluded that the Iraqi authorities did not intend to co-operate and were determined to hide evidence of their weapons programmes from the UN inspection teams. As Saddam Hussain's personal security forces were charged with facilitating inspections, UNSCOM had found it necessary to penetrate their operations, thus providing an opportunity for the USA to gather intelligence about other aspects of the security forces' operations. Scott Ritter, who had resigned from UNSCOM in August 1998, further claimed that the USA had later decided to install its own permanent surveillance equipment in sensitive sites, giving the US formidable intelligence capabilities within Iraq. Ritter, a controversial figure, had earlier admitted to having co-operated with Mossad, the Israeli intelligence service, in his efforts to expose Iraq's weapons programmes. In late March 1999 the British Broadcasting Corporation claimed in a televised documentary that, in its efforts to uncover Iraq's weapons programmes, UNSCOM had developed close links with the CIA and other Western intelligence services, using their expertise and personnel to penetrate Iraqi security services, but that the organization had increasingly been used as a 'cover', by the CIA in particular, to conduct intelligence operations in Iraq. These operations had provided vital intelligence used to select targets during 'Operation Desert Fox'. It was also claimed that Richard Butler had lost control over UNSCOM's intelligence operations, some of which were carried

out without his consent. The documentary concluded that the CIA had virtually taken over UNSCOM, seriously undermining the organization's credibility. Iraq had for some time accused UNSCOM inspectors of acting as agents for Western intelligence services, and these latest allegations strengthened calls within the UN Security Council for UNSCOM's mandate to be terminated and a new system of monitoring introduced. Some commentators had long maintained that since the USA had no intention of agreeing to the ending of sanctions against Iraq while Saddam Hussain remained in power, it had always regarded UNSCOM as merely a useful means of gathering intelligence.

By mid-January 1999 Iraq had aimed, but not fired, missiles at US and British aircraft patrolling the northern and southern air exclusion zones on several occasions, and for the first time in six years Iraqi jets had made sorties into these zones. Iraq declared that it would confront any infringement of its airspace and continue to challenge allied aircraft monitoring these zones. During the early months of 1999 US and British forces continued to attack military targets in both zones, extending the range of targets from surface-to-air missile batteries to their command and control infrastructure, and began attacking some oil-related installations. Baghdad insisted that the bombing of military installations had resulted in a growing number of civilian casualties. In March China urged the USA and United Kingdom to end their air strikes against Iraq, and together with Russia continued to maintain that the 'no-fly' zones were illegal because they had not been authorized by the UN. In April Russia strongly criticized the bombing of Iraqi oil installations. By mid-1999 US and British aircraft were reported to have made more than 200 multi-missile air strikes against Iraq since the end of 'Operation Desert Fox', with only a temporary pause in bombing raids in and around the northern 'no-fly' zone during the second half of March (during the military preparations for NATO air strikes against Yugoslavia). It was estimated that some 55 Iraqis had been killed, and more than 160 injured, in these attacks.

Meanwhile, the UN Security Council had the difficult task of trying to establish a new policy towards Iraq. In an effort to formulate a basis for a new approach to Iraq following the December 1998 bombing campaign, the UN established three panels—to consider the question of Iraq's weapons of mass destruction, to examine the issue of Kuwaiti prisoners of war, and to review the humanitarian situation—which reported in March 1999. The panel on weapons took an uncompromising stance: it concluded that outstanding issues remained in almost every weapons category, notably those relating to Iraq's biological weapons programme, and urged a reinforced continuous monitoring and verification system that would be both comprehensive and intrusive, requiring full and free access to all suspect sites. Only minor concessions were made to the Russian and Chinese panel members, who had sought a more conciliatory approach. The panel investigating the fate of Kuwaiti prisoners of war and property looted in 1991 reported that Iraq had not yet supplied adequate information to the UN. The humanitarian panel, in contrast, adopted a more conciliatory position: its report stated that Iraq had fallen from relative affluence to massive poverty since 1991, with infant mortality and chronic malnutrition particularly serious problems. It recommended that Iraq should be permitted to export as much oil as it could to finance goods under the 'oil-for-food' programme, and that production-sharing agreements with foreign firms should be allowed in order to increase output. Foreign firms might also be allowed to invest in other Iraqi export sectors. It also recommended that the UN sanctions committee allow Iraq freely to import food, medicines, agricultural equipment and basic educational supplies, but insisted that all future revenues from oil exports should continue to be deposited in UN accounts, and that foreign companies operating in Iraq should be monitored closely by the UN sanctions committee. The proposals suggested a radical revision of the UN sanctions regime. Baghdad immediately issued a memorandum denouncing the proposals of all three panels, declaring that they merely re-presented old conclusions and provided a pretext for continued aggression by Iraq's enemies. *Ath-Thawra*, the organ of the Baath Party, stated that the Iraqi Government would continue to reject the proposals unless wide-ranging sanctions were lifted.

In mid-April 1999 the United Kingdom and the Netherlands presented a proposal to the UN Security Council whereby UNSCOM would be replaced by a new and expanded weapons inspections body, to be known as the UN Commission for Investigation, Inspection and Monitoring. Iraq would be required to grant the new commission's inspection teams immediate, unconditional and unrestricted access to all areas, facilities, equipment, records and means of transportation. In return, the existing US $5,250m. limit on the amount of oil that Iraq is permitted to sell under the 'oil-for-food' agreement would be abolished, and the plan recommended that the UN Secretary-General establish a committee to recommend ways of increasing Iraq's oil production. There were also provisions temporarily to reduce Iraq's contributions to the fund for victims of the Iraqi invasion of Kuwait. This initiative was an attempt to find a compromise that would be acceptable to all the permanent members of the UN Security Council. Whereas France, Russia and China favoured a significant relaxation in sanctions, the USA insisted on maintaining a resolute stance towards Iraq. In mid-May the United Kingdom and the Netherlands revised their proposal, recommending that foreign companies should be allowed to invest in the Iraqi oil industry if Baghdad co-operated fully with the proposed new weapons inspections organization. In June Russia called an emergency meeting of the UN Security Council, claiming that allegedly dangerous substances, including chemical materials, had been left behind by UNSCOM in its laboratory in Baghdad, thus endangering the lives of Iraqis. A team of experts appointed by the UN Secretary-General reported in July that there were no leaks in the laboratory and that work on neutralizing the samples was proceeding smoothly. However, the UN was criticized in some quarters for allowing Iraq to have a veto on the choice of personnel for the assignment (no British or US operators, nor any with previous UNSCOM experience, were included in the team) and for acquiescing with Baghdad's demands that the technicians be accompanied by diplomats. By the end of July it was reported that the Anglo-Dutch resolution had the support of a majority of Security Council members, but that, despite intensive negotiations and debates, Russia, France and China continued to seek an end to sanctions in advance of a new weapons inspection programme. Iraq continued to reject the resolution, and at the end of June Tareq Aziz referred to it as 'a suspicious project'. After relinquishing his post as head of UNSCOM on 30 June, Richard Butler wrote an article in which he argued that too much reliance had been placed on diplomacy in efforts to persuade Iraq to comply with its disarmament obligations.

RELATIONS WITH NEIGHBOURING STATES

Since the end of the conflict in the Gulf in 1990–91 Jordan had continued to distance itself from Saddam Hussain's regime and on a number of occasions King Hussein spoke publicly of the need for political change in Iraq. However, the defections of Saddam Hussain's sons-in-law in August 1995 marked a sharp deterioration in relations between the two countries. Jordan immediately granted the two men political asylum and shortly after their defection King Hussein praised Hussain Kamel as a great patriot and strongly criticized the Iraqi leader, accusing him of planning a new invasion of Kuwait and of Saudi Arabia's oil-rich eastern province. The King also referred at length to the period when Iraq was under Hashemite rule and to the brief union between Jordan and Iraq, although he denied that he was seeking to revive a Hashemite claim to Iraq. Iraq's response to King Hussein's remarks was muted and despite their political differences economic co-operation between the two countries continued. Iraq remained Jordan's principal supplier of oil, and Jordan remained Iraq's most important link with the international community. King Hussein acknowledged that it would be difficult to sever all economic links with Iraq and refused a request by the USA to increase the pressure on Saddam Hussain by closing Jordan's border with Iraq, although border controls were tightened. In October King Hussein renewed his criticism of the Iraqi regime, denouncing the presidential elections there as a farce. He also made contact with Iraqi opposition groups based in London, United Kingdom, and promoted the idea of a congress in Amman to bring the different factions together in order to discuss political change in Iraq. However, the Iraqi opposition groups vociferously objected to the King's suggestion of a federal approach to Iraq's political future on the grounds that it might lead to the fragmentation of the country. In April

1996 Jordan gave permission for the stationing of US fighter aircraft at an air force base at Azraq to assist in the enforcement of the air exclusion zone in southern Iraq. Diplomatic sources in Washington, DC, reiterated that the USA had promised military support for Jordan in the event of an attack by Iraq. However, the Jordanian Government insisted that it would not permit the country to be used as a base for attacks against Iraq. Nevertheless, King Hussein had met with Iraqi opposition leaders in London in March and allowed the INA to open an office in Amman. At the end of June it was reported that US, British, Saudi Arabian and Jordanian intelligence officers had met in Saudi Arabia in January and that they had agreed that Amman would become the centre of operations for the Iraqi opposition. They agreed to support the INA, which had been established in 1990 with funding from Saudi Arabia. The INA claims to have contacts with high-ranking officers in the Iraqi armed forces and favours a decisive *coup d'etat* that would depose Saddam Hussain but leave the country intact. It was also reported that US President Clinton had authorized a grant of some £6m. to finance the INA's operations in Amman, which include radio broadcasts to most parts of Iraq. Additional funds were to be provided by Saudi Arabia, Kuwait and several other Arab countries. Speaking in Washington, DC, in June, the Jordanian Minister of Information stated that Jordan preferred to support the INA because its rival, the INC, had no credibility in either Iraq or Jordan. (The INC, an umbrella organization of some 30 groups, which is based in Kurdish-controlled northern Iraq, has been paralysed by internal dissent.) In May 1996 relations with Iraq deteriorated further after the murder of a Jordanian student in Baghdad, the fifth Jordanian student to have been killed in Iraq since the beginning of the year. With growing concern for Jordanian nationals living in Iraq, the Jordanian Prime Minister informed the Iraqi authorities that he held them responsible for the safety of all Jordanians living in Iraq and recalled Jordan's ambassador from Baghdad for consultations.

Some observers regarded Jordan's dramatic break with Saddam Hussain and its *rapprochement* with Saudi Arabia and the Gulf states as part of a plan carefully orchestrated by the USA to redraw the political map of the region with the aim of further isolating Iraq, politically and economically. In April 1996, when it was revealed that Turkey had signed a secret military agreement with Israel earlier in the year, some analysts argued that a new strategic partnership was emerging in the region, bringing together the USA, Israel, Turkey and Jordan in a military union designed essentially to protect Israeli and US interests and to isolate those states opposed to them. Both the Egyptian and Syrian Governments expressed disquiet at Jordan's new policy towards Iraq, fearing that they were being excluded from plans for Iraq's future after the proposed fall of Saddam Hussain. Syria condemned the defector, Hussain Kamel, and stated its commitment to preserving Iraq's territorial integrity, and its opposition to foreign interference in the country's internal affairs. These sentiments were appreciated in Iraq and the Iraqi Minister of Foreign Affairs stated that Iraq was willing to build new relations with any Arab country. However, in view of the long-standing differences between the two regimes, any significant improvement in relations appeared unlikely. Indeed, in April Syria hosted a congress of Iraqi opposition groups, including the SCIRI, the PUK and the newly formed Hizb al-Watan, or Homeland Party. Nevertheless it was alleged that Saddam Hussain had conducted a clandestine meeting with the Syrian President, Hafiz al-Assad, on the Syrian-Iraqi border in early May to discuss common issues including Turkey's military agreement with Israel, although some sources maintained that the meeting was only attended by their representatives.

In October 1995 Sheikh Zayed, the President of the UAE, appealed for the lifting of the UN-imposed sanctions on Iraq and for reconciliation between Iraq and the Gulf states. His remarks were criticized by Saudi Arabia and Kuwait, which, together with Bahrain, continued to express extreme disapproval of Saddam Hussain's regime. Oman and Qatar, however, like the UAE, have pursued more conciliatory policies towards Iraq. In March 1995 the Iraqi Minister of Foreign Affairs had visited Doha for talks with his Qatari counterpart, after which the Qatari Government expressed surprise that economic sanctions on Iraq had not been lifted. The Kuwait National Committee for Missing People and Prisoners of War claimed in 1994 that 625 Kuwaiti nationals were still in detention, or missing, in Iraq, and the fate of missing persons remains a major obstacle to any future normalization of relations between the two countries. Since mid-1996 Iraqi and Kuwaiti officials have held meetings in the mutual border area to discuss the fate of those not accounted for. The meetings have been conducted in closed sessions under the auspices of the International Committee of the Red Cross (ICRC), and have been attended by international observers. Although the Iraqi Government stated that it was holding no Kuwaiti prisoners of war, in late 1997 Kuwait claimed to be in possession of documentation, given to the ICRC by Iraq, relating to 126 Kuwaiti prisoners of war. In July 1998 delegations from both countries met in Geneva for 'highly confidential' discussions on this issue. Iraq was the only state not invited to the emergency summit meeting of Arab League member states in Cairo, Egypt, at the end of June, because of what President Mubarak of Egypt referred to as 'continuing sensitivities'. However, the final communiqué of the meeting urged all Arabs to oppose any policy that affected the territorial integrity of Iraq. In September US missile attacks against targets in southern Iraq were condemned by several Arab states, including Jordan and Saudi Arabia, both of which refused to allow their airbases to be used for new US air strikes against Iraq. Kuwait, however, reluctantly endorsed the US attacks and allowed the reinforcement of US military forces stationed in the emirate. At the GCC's annual summit in Qatar in December, the UAE again requested reconciliation with Iraq, but this initiative was rejected by the other member states. The summit also condemned Iraq's failure to implement all UN resolutions pertaining to the Gulf War, indicating that any normalization of relations between Iraq and the Gulf states would be dependent on Baghdad fulfilling the terms of those resolutions. The UAE, meanwhile, continued to send food and medical supplies to Iraq.

At the end of 1996 Jordan attempted to improve relations with Iraq by sending a ministerial delegation to Baghdad, the first high-level meeting between officials of the two countries since August 1995. King Hussein reportedly had been opposed to any relaxation of sanctions against Saddam Hussain's regime until Baghdad's acceptance of Resolution 986. The Iraqi foreign and trade ministers held talks with the Jordanian Prime Minister in Amman in December at which Jordanian industrialists were informed that they would be given preference when Iraq began placing orders for the supply of basic goods. Nevertheless, the INA was permitted to maintain its office in Amman, despite reports that it had been infiltrated by Iraqi agents. The Jordanian Government repeatedly asserted that Jordan would not be used as a base for armed operations against the Iraqi regime. Suggestions of improved relations between Syria and Iraq emerged in May 1997 when an economic delegation from Syria which included the Chairman of the Federation of Syrian Chambers of Commerce, and six other Syrian businessmen met the Iraqi Minister of Trade, Muhammad Mahdi Salih, in Baghdad to discuss possible Syrian exports to Iraq following the implementation of the 'oil-for-food' agreement. On 2 June, as discussions on bilateral trade agreements proceeded, border crossings between the two countries, which had remained closed for 18 years, were reopened. Contracts worth US $20m. (for Syrian exports of food and medicines to Iraq) were signed during the visit. An Iraqi delegation led by the head of the Baghdad Chamber of Commerce and Industry visited Damascus in June. The import of goods to Iraq through Syrian ports and the reopening of the oil pipeline from Iraq to the Mediterranean through Syria, which has been closed since 1982, were discussed and agreement was reached to open three border posts. The Iraqi Minister of Foreign Affairs, Muhammad Saeed as-Sahaf, was keen to portray these contacts as a major diplomatic breakthrough, whereas Syrian officials were more cautious and emphasized the fact that the economic links proposed were in accordance with UN resolutions. Syria's willingness to improve its relations with Iraq appeared to be strongly influenced by its concerns about Turkey's military co-operation with Israel, and Ankara's recent military operations in northern Iraq. In June Iraq closed down Voice of Arab Syria, a radio station established in the late 1970s in Baghdad, which had been broadcasting

attacks on the Assad regime, and the following month the Syrian Government curtailed the operations of Radio Voice of Iraq, a radio station which had been broadcasting anti-Iraqi propaganda since 1980. In August the Syrian Chamber of Commerce obtained a contract for exports to Iraq worth $13m., and further economic co-operation between the two countries was encouraged by UN approval of a new border crossing at al-Walid. Despite considerable progress in re-establishing economic links, at the end of September Muhammad Saeed as-Sahaf voiced frustration at the slow pace of *rapprochement* with Syria. However, at the end of the year, as tension between Iraq and the USA mounted, the Iraqi Deputy Prime Minister, Tareq Aziz, was received in Damascus by the Syrian Minister of Foreign Affairs, Farouk ash-Shara, the first public meeting between senior ministers of the two countries for 17 years. After the meeting there were reports that ash-Shara travelled to Riyadh with a communication from President Assad to King Fahd, detailing proposals for reintegrating Iraq into the Arab 'fold'. It was also claimed that Iraq was prepared to make a goodwill concession to Kuwait by providing information on alleged Kuwaiti prisoners of war held in Iraq. Tareq Aziz was also officially received in Cairo, and, although he did not meet President Mubarak, his visits to Syria and Egypt were viewed in some quarters as a significant diplomatic victory for Saddam Hussain's regime. In early February 1998, when the USA sought renewed regional support for air strikes against Iraq, Syria strongly opposed such action. President Assad received as-Sahaf in Damascus on 10 February, the first time that he had met publicly with a senior Iraqi official since the early 1980s. In March Iyad ash-Shatti, the Syrian Minister of Health, became the first Syrian minister to visit Baghdad for almost 20 years. Kuwait, however, remained firmly opposed to any rehabilitation of Iraq under Saddam Hussain, and a meeting of the GCC in Kuwait in late December 1997 demanded that Iraq comply with all UN Security Council resolutions 'without selection' and blamed the Iraqi leader for the continued suffering of the Iraqi people. Earlier in the year pressure from the Kuwaiti Government had frustrated efforts by Baghdad to re-establish links with Lebanon. In February 1998 Kuwait was the only Arab state which publicly supported US demands for new air strikes against Iraq. In March Kuwait's First Deputy Prime Minister and Minister of Foreign Affairs, Sheikh Sabah al-Ahmad al-Jaber as-Sabah, stated that normalization of relations with Iraq would be possible only when Baghdad had formally apologized for the invasion of Kuwait, implemented all relevant UN resolutions and released all Kuwaiti prisoners of war. Saudi Arabia did not publicly support US recommendations for the use of force against Iraq in February 1998 but some analysts speculated that the USA would have been permitted to launch military strikes from Saudi bases if diplomatic efforts had failed to defuse the crisis. Although anxious to see Iraq's territorial integrity maintained, Saudi Arabia has continued to resist Baghdad's reintegration into the Arab world.

In Jordan, meanwhile, Abdul-Karim Kabariti, a vociferous critic of Iraq, was replaced as Prime Minister in March 1997 by Abd as-Salam al-Majali, who attempted to improve relations with Baghdad, ordering the closure, in July, of an INC-controlled radio station established in 1996. In December the execution in Baghdad of four young Jordanians convicted, by Iraqi courts, of smuggling activities, was denounced by King Hussein as a 'heinous crime', and prompted widespread popular outrage in Jordan. The Jordanian Government expelled almost one-half of the total number of Iraqi diplomatic staff in Amman and recalled its chargé d'affaires from Baghdad. In an attempt to defuse the situation, Iraq commuted the death sentence imposed on a fifth Jordanian convicted of a similar charge, and promised the release of other Jordanians in Iraqi prisons. Iraq's deputy ambassador to Jordan, Hikmat al-Hajou, his wife and a prominent Iraqi businessman were among the casualties of a multiple murder in Amman in January 1998, prompting speculation that Iraqi Government agents had been involved in the incident; the murders threatened to exacerbate tensions between the two countries. However, following the arrests of several Jordanians on charges connected to the murders, the Jordanian Minister of the Interior, Nadhir Rashid, insisted that the attack had not been politically motivated and had no connection with neighbouring countries. During the crisis over UNSCOM inspections in February, the Jordanian authorities urged Iraq to comply with UN resolutions regarding weapons inspections but also stated that they would not allow Jordanian territory or airspace to be used in an attack on Iraq. Widespread popular support for Iraq prevailed throughout the crisis, although the Jordanian Government prohibited pro-Iraqi demonstrations.

In June 1998 Egypt's Minister of Supply and Trade, Ahmad Gueily, became the first senior Egyptian official to visit Baghdad since 1991. He conducted talks regarding the sale of Egyptian food products to Iraq under the terms of the 'oil-for-food' programme. Iraq made some efforts to improve relations with Egypt during the year, but with limited success. The two countries are traditional rivals within the Arab world, and Cairo's tentative moves towards dialogue with Baghdad were interpreted by some analysts as merely a means of pressurizing the USA to advance the Arab-Israeli peace process. Iraq's relations with its Arab neighbours deteriorated sharply at the end of the year in the wake of 'Operation Desert Fox'. While there were popular demonstrations across the Arab world in support of Iraq, Saddam Hussain denounced those Arab leaders closely allied with the USA, and urged their people to rise up against them. Iraq's demands to be included in preliminary discussions in advance of the Arab League meeting in Cairo in late January 1999 were rejected. Demands by the Iraqi National Assembly in January 1999 for the country to recover lands lost to Kuwait as a result of the UN border demarcation of 1993–94 caused particular unease. Commercial relations between Iraq and Syria continued to develop, and in late May 1999 the Iraqi Minister of Transport and Communications stated that talks were being held with Damascus to restore railway links closed for some 20 years. However, little progress was recorded in improving relations at a political level.

Iraq's relations with Turkey deteriorated in early 1995. In March Turkish armed forces mounted a major operation to destroy PKK bases in the Kurdish enclave in northern Iraq (see above), and although the troops were withdrawn in May a smaller force crossed the border again in July. These actions, and statements by the Turkish President, Süleyman Demirel, revived fears of a Turkish claim to the former Ottoman province of Mosul. In a number of interviews with the Turkish media in May, Demirel stated that the alignment of the border with Iraq was wrong and that certain adjustments were needed to improve Turkey's security. He also pointed out that that the province of Mosul was still Ottoman territory when the Turkish Republic was founded in 1923 and had not become part of Iraq until 1929. Although Turkish officials emphasized that only minor border changes were being suggested, the President's comments were denounced by Iraq. However, the appointment of a new Turkish Government under Prime Minister Necmettin Erbakan was followed by an improvement in relations between Iraq and Turkey, and in mid-August 1996 the two countries signed a 'mutual understanding' memorandum which provided for improved political and economic links, increased trade and the construction of a gas pipeline. Under the agreement Turkey indicated that it hoped to supply all of Iraq's food imports and to receive payment in Iraqi oil. Turkey insisted that the 'oil-for-food' agreement had been signed within the framework of UN Resolution 986. However, some analysts observed that the memorandum was politically inspired and unlikely to have any tangible results. At the end of August, Ankara condemned Baghdad's invasion of the Kurdish enclave but did not endorse US missile attacks against Iraq in early September. Nevertheless, at the same time Turkey announced that it was establishing a security zone in northern Iraq (just south of the border) which would be patrolled by Turkish army units, and launched new attacks against PKK bases in the Kurdish enclave. Iran, Egypt, Jordan and Syria demanded that Turkey cease actions which threatened the territorial integrity of Iraq. In May 1997 a major new Turkish assault on PKK bases in northern Iraq was condemned by Baghdad and by several Arab countries, notably Syria. Before the invasion, Turkey had accused both Syria and Iran of mobilizing troops along the border with northern Iraq and providing support for the PKK. Cautious moves by Syria to improve relations with Iraq (see above) were attributed, in part, to growing concern in Damascus over Turkish actions in northern Iraq and by Ankara's 1996 military co-operation agreement with Israel. The UN Secretary-General, Kofi Annan,

demanded that Turkish troops withdraw from the area and declared that UN relief operations, as well as food supplies to the Kurdish enclave, could be jeopardized by the invasion. The USA, however, anxious to 'disengage' from northern Iraq, appeared to support the Turkish intervention. Despite Turkey's military operations in northern Iraq, economic links between the two countries showed some improvement. In July Turkey revoked its ban on border trade with Iraq and in September an official of the Turkish Ministry of Foreign Affairs visited Baghdad to discuss economic co-operation. During the visit agreement was reached on increasing the number of Turkish diplomats in Baghdad and on the transfer of Turkish prisoners held in Iraq to prisons in Turkey. At the end of September, however, Turkish forces again invaded northern Iraq, and although the campaign was smaller in scale than that of May, Turkish troops were reported to have penetrated much deeper into Iraqi territory. Iraq protested to the UN, portraying the Turkish invasion as part of a US-Zionist campaign aimed at 'the Arab nations'. Although Turkey's aims in northern Iraq appeared to be limited to the removal of PKK bases there, Syria and the Kurdish groups insisted that Ankara still had designs on Mosul and Kirkuk. In May 1998 the Iraqi Minister of Foreign Affairs repeated claims that Turkey was violating international law by building several dams on the Euphrates and Tigris rivers without consultation with other riparian nations.

In February 1999 Tareq Aziz visited Ankara for talks with the new Turkish premier, Bülent Ecevit. None the less, Baghdad's efforts to improve relations with Turkey appeared to make little progress, as the Turkish military had made it clear to Ecevit that it would not accept any change to the existing policy of allowing the USA and United Kingdom use of Turkish air bases to patrol the northern 'no-fly' zone. In early July Baghdad condemned a new invasion by Turkish forces into northern Iraq against PKK bases there, protesting that this violated Iraq's sovereignty and territorial integrity. Some 15,000 Turkish troops, supported by helicopters and fighter aircraft, were reported to have taken part in the operation.

Iraq has expressed disquiet at Iran's growing involvement in the conflict between Kurdish factions in the Kurdish enclave (see above). Disputes over the question of prisoners of war from the 1980–88 Iran–Iraq War, and each country's support for the other's opponents, have prevented any significant improvement in relations. Early in 1996 Iraq urged Iran to adopt an 'objective and serious approach' to their relations, based on respect for each country's sovereignty and non-interference in each other's internal affairs. Later in 1996 there were unconfirmed reports of Iranian military intervention in northern Iraq, where the Iranian Government had developed a range of activities, including the supply of humanitarian relief. One of the justifications given by Iraqi officials for Baghdad's intervention in the Kurdish enclave in August was the need to address Iran's growing influence there. In November Saddam Hussain sent an envoy to Teheran to inform the Iranian leadership that he wished to achieve good relations with Iran and to engage in discussions concerning regional issues, as well as the release of prisoners of war. After the visit, Iran released more than 700 Iraqi prisoners of war and indicated that it was willing to discuss the release of other prisoners in order to foster improved relations. According to Iraqi sources, more than 18,000 Iraqi prisoners of the Iran–Iraq War are still being held in Iran. Several visits were undertaken at ministerial level during 1997, and in August Saddam Hussain offered to allow Iranian pilgrims to visit Shi'a holy shrines in Iraq. The Ministers of Foreign Affairs of the two countries held talks at the UN in New York in late September, but as-Sahaf stated that further gestures of reconciliation from Teheran, in particular the return of Iraqi fighter aircraft that had landed in Iran at the beginning of the 1990–91 Gulf War, were necessary if relations were to improve. A few days later Iranian military aircraft attacked bases of an Iranian opposition group, Mujahidin-e-Khalq, near Baghdad. In December 1997 Iraqi Vice-President Taha Yassin Ramadan held talks with the new Iranian President, Sayed Muhammad Khatami, at a summit meeting of the Organization of the Islamic Conference in Teheran. Iran was opposed to US demands for renewed air strikes against Iraq in February 1998, but in March US officials welcomed Iranian efforts to curtail the illegal export of Iraqi oil through Iranian territorial waters. In early April it was reported that some 1,500 Iraqi and 89 Iranian prisoners of the 1980–88 war had been exchanged by the two sides as part of an arrangement to release 5,592 Iraqi and 250 Iranian prisoners of war. In May 1998 the two countries embarked on an unprecedented joint operation to locate the remains of soldiers killed in the Iran–Iraq war.

There was considerable disquiet in Baghdad at the beginning of 1998 when Iran successfully tested medium-range missiles. Indeed, a number of analysts argued that Iraq's determination to resume its weapons programmes was motivated more by fears that a number of its neighbours were acquiring or expanding their arsenal of weapons of mass destruction rather than by a desire to threaten neighbouring states. There were further strains in relations with Iran after the murders in southern Iraq in the first half of 1998 of two senior Shi'a clerics, both Iranians. Iraqi opposition sources claimed that the Iraqi Government was responsible for the killings, and while Teheran avoided directly accusing Baghdad of responsibility, it urged the Iraqi authorities to make every effort to protect Shi'a religious leaders in Iraq. Later in the year Tareq Aziz asserted that despite Iraqi efforts to improve relations with Iran, Teheran had not 'fully responded' to these initiatives. In early June 1999 six members of Mujahidin-e-Khalq were killed by a truck bomb in Baghdad. A few days later Iraqi officials and the Mujahidin claimed that Iran had fired Scud missiles at the group's Ashraf camp north-east of Baghdad.

Economy

Revised for this edition by the Editor

INTRODUCTION

Having begun to recover from the effects of the 1980–88 war with Iran, the Iraqi economy entered a new period of trauma in August 1990, as a result of the UN sanctions that were imposed because of Iraq's invasion of Kuwait. It then suffered substantial material damage in the war with the US-led multinational force in early 1991; a UN report suggested that aerial bombardment had reduced Iraq to a 'pre-industrial' state in the immediate aftermath of the 1991 hostilities. Although the authorities succeeded in restoring a measure of basic infrastructural viability by early 1992, having given priority to the rapid rebuilding of key installations and facilities, there was no prospect of a full normalization of economic life while Iraq remained subject to UN trade sanctions. Having relied on petroleum for 98% of export earnings over the previous decade, the country suffered a massive loss of revenue when it was excluded from the world oil market in 1990. In September 1993 Iraq's Minister of Trade estimated that three years of sanctions had cost the country US $60,000m. in lost oil revenues. By 1994 the living standards of large sections of the Iraqi population had been reduced to subsistence level by the prolongation of conditions of acute economic hardship. According to unofficial Western estimates, the annual rate of decline in Iraq's gross domestic product (GDP) was about 10% in 1994 and 1995 and 15% in 1996, suggesting a GDP of $11,500m. at the end of that year. In March 1996 the Chairman of the UN Special Commission on Iraq (UNSCOM) estimated that the country was losing about $15,000m. of revenue per year as as result of trade sanctions. In the previous month Iraq had opened negotiations with the UN with a view to agreeing terms for the export of a limited volume of oil to finance a UN-supervised humanitarian programme (centred on the import and distribution of medical and food supplies). UN trade sanctions would be subject to temporary modification while the proposed scheme was operating. No date

for the full lifting of sanctions could be foreseen in mid-1999, as efforts continued to devise an effective new regime for UN weapons inspections.

The earlier war with Iran had itself severely affected Iraq's economic development, which had been steadily gaining momentum since 1977, forcing expenditure on former priority areas, such as water and electricity, to be reduced, with funds being transferred to defence. Towards the end of that conflict, the Government initiated, in March 1987, an economic reform programme which was supposed to reduce the extent of state control over industry, this having previously been an article of faith of the Baath Socialist Party regime which came to power in 1968. Many state organizations were abolished, and others sold to the private sector, the emphasis being placed on securing greater efficiency in the industrial and agricultural sectors and on the performance of workers and management, rather than on the state bureaucracy. More liberal import regulations—including the use of 'offshore' foreign currency funds—were introduced to enable private companies to become more involved in foreign trade.

As it emerged from the 1980–88 war, Iraq was generally considered to have strong development prospects, despite its continuing allocation of huge sums to military expenditure. Unlike other Arab states in the region, Iraq had the advantage of a relatively large population (16,335,199 at the census of October 1987), giving it the labour force necessary for industrial development. It also placed considerable emphasis on education and the creation of a skilled work-force. Moreover, Iraq continued to have an extensive and productive agricultural sector, assisted by substantial investment funds, ample supplies of irrigation water and availability of fertile land. However, by the late 1980s agriculture had become overshadowed by large-scale production of petroleum and natural gas. Both the 1970–75 and the 1976–80 development plans had given priority to the petroleum and industrial sectors, the aim being not only to maximize earnings from exports of oil and gas, but also to diversify into other industrial exports. These objectives were maintained in the 1981–85 development plan, but this was abandoned amid the exigencies of the 1980–88 war with Iran, after which planning was conducted on an annual basis. The country's increasing industrialization was reflected in the population distribution: according to World Bank estimates, 71% of the population were classed as urban at mid-1990, compared with 51% in 1965 and 64% in 1977, when only 30% of the labour force were employed in agriculture, compared with 53% in 1960. Nevertheless, the industrial sector remained totally dominated by oil and gas production, which accounted for more than 99% of export earnings in 1989.

Lack of reliable official data has prevented the World Bank from publishing recent statistics for Iraq's overall national output and income. According to the Statistical Office of Iraq, GDP at factor cost increased from ID 1,139m. in 1970 to ID 15,647m. in 1980, while GDP per caput rose from ID 120 to ID 1,181 over the same period. The Iran–Iraq War resulted in a decline in GDP to ID 11,215m. in 1981, and in GDP per caput to ID 820, but thereafter GDP rose steadily, to ID 15,551m. in 1987 and to ID 20,811m. in 1989, while GDP per caput recovered to ID 1,186 by 1989, just above the pre-war level. The effect of the 1980–88 war was particularly apparent in the decline in oil export revenues, from ID 7,718.4m. in 1980 to ID 5,982.4m. in 1982, although by 1988 revenue from this source had recovered to ID 7,223.9m. National income increased from ID 10,589m. (ID 826 per caput) in 1979 to ID 17,290m. (ID 986 per caput) in 1989. According to Iraqi officials, overall GDP in dinar terms rose by 16% in 1989, compared with 1988 (and per caput GDP by 20%) and by 78% during 1979–89 (in which period national income grew by 63%), despite the adverse effects of the Iran–Iraq War. According to Western estimates, the real growth in GDP in 1989 was 6.5%, following zero growth in 1988, an increase of 7.7% in 1987, an actual decline of 2.9% in 1986, an increase of 3.2% in 1985 and an increase of 15.7% in 1984.

Iraq's development plans were, however, seriously compromised by a continuing shortage of foreign exchange (reserves were estimated at between zero and US $2,000m. in 1987) and the accumulation of massive foreign debts during the 1980–88 war. Estimated at more than $50,000m. at the end of 1986, Iraq's total foreign debt was thought to have increased to about $65,000m. by mid-1990, including some $30,000m. in the form of loans from neighbouring Gulf states, about $13,000m. in civil debt guaranteed by export credit agencies and a further $6,000m. owed to Western companies and not covered by export credit guarantees; some $3,000m. per year was required to service the Western portion of the debt. In the late 1980s Iraq successfully negotiated a number of debt-rescheduling agreements, enabling it to proceed with major development projects in the petroleum, industrial and water-management sectors, with foreign contractors accepting deferred payment terms or using credit lines to finance contracts. Nevertheless, Iraq's international financial standing continued to be eroded by the decline in international petroleum prices in 1989 and early 1990, which, in turn, explained the country's fierce criticism of Kuwait and other Gulf states for exceeding OPEC production quotas (see Petroleum and Natural Gas, below). Against this background, Iraq's invasion of Kuwait in August 1990 had a powerful economic motivation, although in the event it was to lead to economic catastrophe.

CONSEQUENCES OF THE 1990–91 GULF CRISIS

The mandatory economic sanctions that were imposed on Iraq (and Iraqi-controlled Kuwait) by the UN Security Council on 6 August 1990 included bans on the purchase or transhipment of Iraqi oil and other commodities and on the sale or supply of all goods and products to Iraq (with possible humanitarian exceptions for medical supplies and foodstuffs). Also prescribed were an interdiction of new investment in Iraq and Kuwait and the 'freezing' of Iraqi and Kuwaiti assets abroad. Adopted unanimously and applied by virtually the whole international community, these sanctions were tightened on 25 September to cover interdiction of air traffic and obligatory detention of Iraqi-registered ships violating the trade embargo. Their effect was to place the Iraqi economy in almost total isolation, except that the land route from Jordan remained open for certain supplies. Particularly damaging for Iraq was the abrupt cessation of its oil and gas exports, including those via pipelines through Saudi Arabia and Turkey, which were closed. With its prime source of revenue thus interrupted, the Government responded by introducing rationing for basic food items and by taking various emergency measures to promote economic self-sufficiency. It also sought to counter the damaging effects of the flight from Iraq and Kuwait of hundreds of thousands of foreign workers, mostly from other Arab countries and the Indian sub-continent. Moreover, under Law 57 of 1990, announced on 18 September but backdated to 8 August, the Government declared Iraq's non-recognition of all seizures of Iraqi assets and decreed the seizure of the assets of all countries and organizations which 'issued arbitrary decisions' against Iraq. As part of this strategy, Iraq suspended debt repayments to the USA and other members of the anti-Iraq coalition.

Western reports indicated that, despite some shortages and steeply rising prices, the Iraqi economy continued to function on an emergency basis in the latter months of 1990. The situation changed dramatically, however, during the active hostilities of January–February 1991, particularly as a result of the massive allied bombing campaign against both military and strategic economic targets. According to an official UN report compiled in mid-March 1991, the conflict 'wrought near-apocalyptic results on the economic infrastructure', destroying or damaging most modern means of life support and relegating Iraq for some time to come to a 'pre-industrial age but with all the disabilities of post-industrial dependency on an intensive use of energy and technology'. The report detailed the effects of the war in the various economic sectors (see separate sections, below) and warned, in particular, of the danger of famine and epidemics spreading because of the collapse of water-distribution and sewerage systems. Of various forecasts made of the potential cost of repairing the war damage, US officials estimated in April that some $30,000m. would be required for the reconstruction of roads, power plants and oil installations. Other Western estimates assessed the total cost of the conflict to Iraq at some $50,000m. as at mid-May 1991, including the loss of 50% of GDP since August 1990 as well as war damage. The Iraqi Government, in April 1991, estimated the cost of reconstruction at $25,800m., excluding repairs in the private sector and damage to the military and nuclear industries.

The maintenance of most UN sanctions after the cease-fire agreement of 3 March 1991 (except those on food and medical supplies), meant that the Iraqi Government was obliged to begin its reconstruction efforts within those constraints, involving the continued non-availability of crucial oil revenues. An emergency six-month reconstruction budget, announced on 2 May, incorporated a reduction of state expenditure in 1991 to the equivalent of US $44,760m. (from the original total of $47,080m.) but still assumed a partial resumption of oil revenues in the second half of the year. As a result of the consequential Iraqi campaigning for the removal of the UN embargo, the sanctions committee agreed on 9 May to a partial 'unfreezing' of Iraqi assets abroad, officially estimated at $4,000m., so that Iraq could pay for essential civilian items. However, Iraqi requests for the repeal of the oil export embargo were complicated by the UN Security Council's decision, on 20 May, to establish a Geneva-based Compensation Commission (UNCC) to administer a fund for victims of Iraq's aggression (governments, corporations and individuals), to be financed by a percentage levy on Iraqi oil revenues. With Western estimates valuing the possible extent of claims for damages at between $50,000m. and $100,000m., Iraq appealed for a five-year moratorium on payments from the fund and also urged that the country be permitted to export at least $1,000m.-worth of oil in 1991 to pay for urgently needed imports. It also opposed, as unrealistic, the level of 'up to 30%' which the Security Council eventually set for the UNCC's fund level, on the proposal of the UN Secretary-General.

In support of its requests to the UN for more lenient treatment, the Iraqi Government, on 29 April 1991, took the unprecedented step of submitting a report on its external debt position. This showed that at the end of 1990 outstanding debts totalled US $43,320m., excluding interest already due (of some $32,350m.) and what Iraq termed 'grants' from other Gulf states (estimated at between $30,000m. and $40,000m.). The report calculated that a total of $75,450m. would be required to service the debt in the 1991–95 period (during which 97% of the outstanding amount fell due) and that the foreign currency requirement for imports, development and reconstruction would total $140,000m. Export earnings over this period were forecast at $65,455m., on the assumption of progress to approaching pre-war oil export levels by 1993, so that an overall external deficit of $150,000m. was expected to accumulate by 1995. Western analysts noted that these calculations were based on the conservative assumption of a constant nominal price for crude petroleum of $16 per barrel. They nevertheless agreed that, if any substantial proportion of Iraqi oil revenues was diverted to war reparations in this period, an even greater deficit would accumulate and that the other commitment categories would not be fulfilled as specified.

In the event, Iraqi resistance to full observance of the UN cease-fire resolution terms meant that the UN embargo was still in force in late 1998. Moreover, UN Security Council Resolutions 706 and 712 of 16 August and 19 September 1991 respectively, authorizing Iraq to export oil to the value of US $1,600m. to pay for emergency food and medical imports, were not immediately utilized by Iraq, which claimed that the stringent terms attached thereto amounted to an infringement of the country's sovereignty. The Security Council's decision was prompted by an FAO study of Iraq, warning that a 'widespread and acute food supply crisis' threatened 'massive starvation throughout the country', and describing the effects of the economic blockade as 'alarming'. Iraq's rejection of Resolutions 706 and 712 was reaffirmed in February 1994 by a government spokesman, who said that no oil would be sold on terms which constituted 'a flagrant violation of Iraq's sovereignty'. UN Security Council Resolution 986 of 14 April 1995 extended a revised offer to Iraq to permit the supervised export of petroleum to the value of $2,000m. over a period of 180 days, with the possibility of further 180-day renewals thereafter. Revised monitoring arrangements would allow limited use of Iraq's Gulf export facilities (rather than requiring all the petroleum to be piped via Turkey), while the UN would be more flexible than previously proposed in its monitoring of the distribution of the humanitarian supplies to be purchased with 50% of the permitted petroleum export income. Some 30% of the revenue would be allocated to war reparations, and most of the remaining 20% to UN relief work in northern Iraq. Initially Iraq rejected the scheme, objecting in particular to the use of petroleum income to fund relief work in the predominantly Kurdish north, a proposal which the Government interpreted as 'part of a UN plan to dissect Iraqi sovereignty and establish secession in the north'.

Countries which 'unfroze' part of the Iraqi assets under their jurisdiction included the United Kingdom (in November 1991) and Italy (in January 1992). Such relaxations enabled Iraq to import some urgently-needed items, although the country relied mainly on overland supplies, in breach of UN sanctions. According to a US report of January 1992, substantial 'seepage' through the sanctions net had resulted in Iraq being able to import goods worth some US $2,000m. since the end of the war, representing about 25% of the pre-crisis level.

During the first half of 1993 it was clear that Iraq's economic position was rapidly deteriorating; hyperinflation in the market prices of most goods, including basic foodstuffs, was accompanied by a collapse in the value of the currency and sharp rises in unemployment and destitution. Even in the central regions, where the Government was most concerned to underpin minimum living standards, growing numbers of people lacked the means to supplement the official ration of subsidized staple foods. Increases in this ration entitlement in early 1993 raised its estimated calorific value to about two-thirds of the minimum subsistence level defined by UN humanitarian agencies. The Government claimed in March 1993 that nearly 234,000 people, including 83,000 children under the age of five, had died 'as a result of sanctions' between August 1990 and January 1993, over which period the provision of basic health care had been compromised by an 85% shortfall in medical supplies. A UNICEF report estimated that Iraq's infant mortality rate had tripled over this period. Subsequent reports from UN agencies re-emphasized the human costs of the situation. FAO and the World Food Programme (WFP) issued a statement on 26 May 1994 describing present-day Iraq as a country crippled by 'massive deprivation, chronic hunger, endemic under-nutrition for the vast majority of the population, collapse of personal incomes and rapidly increasing numbers of destitute people'. In September WFP announced a six-month emergency programme to supply over 100,000 tons of food aid to 1.3m. people in Iraq at a cost of US $33.6m. In May 1995 the UN agencies monitoring Iraq's economic crisis estimated that about 4m. Iraqis currently depended on the basic state food ration, that at least 1m. of these experienced chronic hunger, and that about 23% of children under the age of five were suffering from malnutrition. A $183.3m. UN aid programme for Iraqi civilians was proposed for the 12 months to March 1996 to alleviate hunger, to support health, water, sanitation and educational projects and to resettle displaced families. By October 1995, however, less than $40m. had been pledged to this relief programme by donors.

By the end of May 1994 (two months before its scheduled closing date for claims) the UNCC had received claims totalling US $81,000m. (including $15,000m. claimed by the Kuwait Government). The UNCC's resources at this time totalled about $43m., derived from frozen Iraqi assets and voluntary contributions by Saudi Arabia and the USA. These resources were expected to be significantly depleted by payments to priority claimants, namely individuals who had been severely injured and families of those who had been killed. The first awards in this category (to 670 persons from 16 countries) were approved on 26 May and totalled $2.7m.

It was estimated that funds held in the escrow account established under Security Council Resolution 778 (see 'Finance and Banking', below) might be sufficient to meet an estimated US $150m. in claims by workers forced to leave Kuwait as a result of the invasion, and might also cover the slightly lower estimate for aggregate claims by individuals who had suffered personal losses of up to $100,000, including loss of earnings or assets held in Kuwait. However, the claims which made up the greater part of the total—those submitted by governments and businesses and by individuals with losses exceeding $100,000—stood no chance of even partial settlement while the intended funding mechanism remained inoperable for want of any Iraqi oil revenues to appropriate.

In early April 1996 WFP made an urgent appeal to donor countries for US $162m. of emergency food supplies for Iraq. On 20 May, at the conclusion of four rounds of talks over a period of four months, the Iraqi Government signed a memorandum of

understanding accepting the terms of UN Security Council Resolution 986 of April 1995. Having taken this step, Iraq was required to agree a detailed implementation plan with the UN sanctions committee. The UN subsequently came under pressure from the USA to establish strong supervisory mechanisms at every stage of the proposed export, import and distribution activities. The USA was particularly concerned to ensure that the UN applied a very narrow definition of humanitarian supplies in order to prevent the import of items that could be diverted to other uses.

An implementation plan was eventually approved by the UN sanctions committee in early August 1996, and it was expected that all the required procedures and personnel would be established by mid-September. However, the new crisis in US–Iraqi relations at the start of September 1996 (see History) caused a temporary suspension of UN preparatory work within Iraq, and it was not until late November that arrangements to monitor oil sales under the terms of Resolution 986 were completed. Production of oil for export under UN supervision began on 10 December 1996. The export of some US $2,000m.-worth of oil was to be permitted over a period of 180 days, and all proceeds were to be paid into a special UN escrow account in New York. Of the $2,000m., $20m. was allocated for the operation of the escrow account, $44.32m. for UN operational and administrative costs, $15m. for UNSCOM (tasked with verifying compliance with cease-fire conditions) and $600m. for the UNCC's fund for war reparations. This left $1,320.68m. available for spending on humanitarian supplies, of which $260m. was assigned for UN co-ordinated relief programme in Kurdish-controlled areas of Iraq and $1,060.68m. for supplies to the remainder of Iraq. Some 61% of total humanitarian spending was allocated for imports of foodstuffs, 16% for medicines and 8% for soaps and detergents. Priority imports for the electricity, agricultural and educational sectors accounted for 11% of authorized humanitarian spending, compared with 3% for water and sanitation services and 1% for health infrastructure and nutrition. By mid-March 1997, the UN had approved a total of 39 oil export contracts and had received $719m. of deposits in the relevant escrow account, of which $473m. had been allocated to humanitarian supplies. The UNCC used its first allowance of oil export revenues to pay a total of $144m. to 57,636 claimants from 63 countries on 1 March 1997. The first shipment of humanitarian goods arrived in Iraq on 25 March, by which time more than 100 international inspectors had been appointed to monitor the distribution process. In May 1997 the Iraqi Government accused the USA of seeking to 'delay and disrupt' deliveries of humanitarian supplies, including medicines and ambulances, by challenging the validity of many of the import contracts submitted by Iraq for UN approval. It was subsequently stated that more than 40 'medical contracts' (including an order for agricultural pesticides) were being delayed by the UN sanctions committee in response to US insistence.

By the end of May 1997, shortly before the expiry of the first 180-day 'oil-for-food' arrangement, the UN had processed approximately US $2,110m.-worth of oil export contracts, had received nearly $1,750m. in oil sales revenues and had issued a total of $466m. of bank credits to pay for humanitarian supplies. The renewal of the arrangement for a further 180 days was unanimously approved by the UN Security Council on 5 June. However, Iraq suspended its UN-supervised oil exports at the start of the renewal period in protest at the slow rate of delivery of humanitarian supplies under existing arrangements. The Government intended to maintain the suspension until a more satisfactory distribution plan was implemented. Cumulative food deliveries to Iraq under Resolution 986 amounted to around 1m. tons by early July. In that month Iraq submitted a new distribution plan, and, following UN approval, it recommenced exports of petroleum in mid-August.

The 'oil-for-food' arrangement was renewed in December 1997, and revised in February 1998, after the UN Security Council approved a plan to increase Iraq's export entitlement to US $5,200m., of which $3,550m. was to be spent on humanitarian goods and $1,650m. was to finance reparations and UN operations. Exports were expected to increase following agreement on a new distribution programme between Iraq and the UN, which was duly approved at the end of May. The programme did not cover Iraq's full export entitlement, owing to Iraqi claims that it could not fulfil the quota unless essential repairs to oil installations were made. The distribution plan provided for oil exports of up to $4,500m. over six months, if oil production facilities were upgraded; of this amount, $3,100m. would be used to purchase humanitarian goods. In mid-June the UN Security Council unanimously approved a resolution allowing Iraq to purchase $300m.-worth of equipment for its oil industry. In early July the Iraqi Minister of Oil announced that 40 contracts for oil equipment worth $50m. had been awarded. Despite an increase in oil exports under phase four of the 'oil-for-food' programme, the sharp fall in the price of oil meant that only some $3000m. in revenues was generated. The fourth phase of the programme ended in late November 1998, and phase five ran to May 1999. In late May the 'oil-for-food' programme was extended for a further six months.

The UNCC had received about US $400m. of oil export revenues by late April 1997, enabling it to settle many of the individual and small claims and to make plans for substantial payments in the second half of the year (although the disbursement schedule had to be modified because of Iraq's suspension of oil exports in June 1997). Meanwhile, the UNCC was beginning its evaluation of the corporate claims (numbering more than 6,000) which accounted for the bulk of the reparations being sought from Iraq. About one-half of the claims were by bodies in Kuwait, including the Kuwait Oil Company, whose entitlement in respect of the cost of extinguishing oilfield fires started by Iraqi troops was provisionally assessed by the UNCC at $613m. (plus interest). The home countries of non-Kuwaiti corporate claimants included the United Kingdom (451 claimants), Egypt (450), Germany (314) and the USA (152).

A survey carried out in April 1997 by WFP, UNICEF and the Iraqi Ministry of Health found that 27% of Iraq's child population of five years of age and less were affected by chronic malnutrition. In September the Minister of Health, Umeed Madhat Mubarak, claimed that sanctions had dramatically increased the mortality rate of Iraqi citizens: the rate for children under five years of age had increased from an annual average of 506 per month in the pre-war years to an annual average of 6,500 per month following the imposition of sanctions. Likewise, the death rate of those over five years of age had increased from a yearly average of 1,600 per month before the sanctions to 8,000 per month in the period after their implementation.

AGRICULTURE AND FOOD

Despite the increasing dominance of oil and gas production, the Government continued, through the 1980s, to allocate substantial resources to the development of agriculture, with the aim of achieving food self-sufficiency and even surpluses for export. At the same time, state control of the agricultural sector was steadily relaxed in favour of allowing a greater role for private initiative and for private-sector investment from both Iraqi and other Arab sources. The total area under cultivation rose from 3.2m. ha in 1984 to about 3.7m. in 1989, it being estimated that a further 20% increase was required to achieve self-sufficiency. Like the rest of the economy, however, agriculture suffered major disruption in the Gulf crisis and hostilities of 1990–91, one consequence of which was a return to state control and direction.

Until the 1958 revolution, agricultural improvement was often inhibited by the need for adequate land reform. In October 1958 the incoming Government announced a new and more radical land reform project. This provided for the break-up of large estates whose owners were to be compelled to forfeit their 'excess' land to the Government, which would redistribute the land to new peasant owners. Landowners losing land were to be compensated in state bonds (in 1969 all the state's liabilities to recompense land-owners were cancelled). It was hoped that the reform would take only five years to complete, but the application of the law was initially mismanaged: expropriation of land was administered much faster than its redistribution. By the end of 1972 some 4.73m. dunums (1 dunum = 0.25 ha approx.) had been requisitioned from landlords and allocated to 100,646 families. By 1988, more than 300,000 families had received 10.8m. dunums. The Government has been promoting the growth of co-operatives and collective farms since 1967. By the end of 1987 there were 857 agricultural co-operatives, with a total of 376,329 members. In 1984 there were 23 state farms,

covering 188,000 ha. By 1997 the percentage of the labour force engaged in agriculture had decreased to 11.6%, compared with 50% in 1965 and 53% in 1960.

Government awareness that the rate of progress in the agricultural sector had been disappointing encouraged measures to be taken to allow greater private involvement in agriculture. By 1986, the land area occupied by state farms had fallen to only 52,925 ha, and by 1988 more than 220,000 ha had been leased—a total investment estimated at ID 72m.—as a result of the 1983 law enabling local and other Arab companies or individuals to lease land at nominal rates. Other incentives included encouragement for agriculturists and graduates working for the Ministry of Agriculture and Agrarian Reform to take up farming, and there was a more liberal attitude towards profit-making. Farmers could now bypass the state marketing system and sell direct, either to public wholesale markets or to private shops which were licensed for wholesale trade. Higher procurement prices were now paid by the state. These concessions were intended to ease supply difficulties, and to encourage local farmers.

In May 1987 came belated recognition of criticism voiced in 1982, at the Baath Party regional congress, that state intervention had often proved more of a hindrance than a help to small farms, and that state and collective farms were frequently unprofitable. It was announced that all state farms (including six dairy farms) were for sale or lease to local or Arab investors or companies, providing that the land continues to be used for agriculture. In July 1987 the Ministry of Agriculture and Agrarian Reform was reorganized, and in September the ministry was merged with the Ministry of Irrigation to become the Ministry of Agriculture and Irrigation.

A wide variety of crops is grown but the most important are barley and wheat. Production estimates vary considerably. In the case of wheat, annual output fluctuated around 950,000 metric tons in the 1980s, although drought severely affected the 1984 crop, which slumped to 471,000 tons. A good crop is dependent on favourable rains, and 1997 saw an estimated 1.1m. tons of wheat produced, while barley production was estimated at 778,000 tons, compared with 743,000 tons in 1987.

Other crops are rice, vegetables, maize and millet, sugar cane and beet, oil seeds, pulses, dates and other fruits (the main fruit being melon), fodder, tobacco and cotton. Drought caused production to fall in 1984, but output recovered after 1986. In 1997 Iraq produced an estimated 244,000 metric tons of paddy rice and 121,000 tons of maize, compared with 196,000 tons and 61,000 tons respectively in 1987. Total vegetable output (including cabbages, spinach, carrots, tomatoes, okra, beans, cauliflowers and potatoes), which had been about 3m. tons per year in 1982 and 1983, fell to an estimated 1.8m. tons in 1984. In 1997 production of vegetables was estimated at 2.9m. tons.

Production of dates, the country's main export after petroleum, was also affected by drought. During 1983–88 production of dates averaged 350,000 tons per year. Iraq had about 29m. date palms in 1987, compared with 25m. in 1985. In 1986/87 some 150,000 metric tons were exported to Japan, France, Canada, India and to Arab and Asian countries. Exports rose to 163,000 tons in 1988/89, and to 373,000 tons (worth $75m.) in 1989/90. Dates are not only a lucrative export, but are also being put to industrial use. Several years ago, the former Ministry of Industry and Minerals started a major programme to produce sugar, dry sugar alcohol, vinegar and concentrated protein from dates. Such factories together with the private sector, will use up to 100,000 tons of dates per year when operating at full capacity. As part of the Government's programme for economic reform, a new mixed-sector company, the Iraqi Date Processing and Marketing Company (IDPMC), was established to replace the Iraqi Dates Commission, which was formerly responsible for production and marketing. Deliveries to the IDPMC in the 1990/91 season were estimated at 350,000 tons. Production of dates was estimated at 630,000 tons in 1997.

The livestock and poultry sector was developed in the 1980s with the assistance of Dutch, British, West German and Hungarian companies. Iraq's annual output of eggs was 1,274m. in 1988, almost enough to meet local demand which is estimated at about 1,350m. eggs per year. White meat production amounted to 199,000 tons in 1988. A significant decline in livestock products was witnessed in the mid-1990s, owing to reduced production of animal feed. A report compiled by UN and US sources stated that domestic production of meat, milk and eggs during 1993–96 was less than 50% of levels of output recorded in 1990.

Provision has also been made to develop a fishing industry and the private sector has been encouraged to establish fish farms on many of the lakes and reservoirs which have been created by the construction of new dams. In 1996 catches of freshwater fish were estimated at 7,000 tons, while the marine fish catch was estimated at 2,000 tons.

Aid to farmers is channelled through the Agricultural Co-operative Bank, which loaned ID 570m. over the period 1980–87 and increased its lending after the cease-fire in the Iran–Iraq War. To encourage farmers to use its services, the bank offers a low interest rate and has raised its maximum credit limit.

The country's food import bill, which reached $3,100m. in 1984, declined to $2,712m. in 1986, and remained at a similar level thereafter. The USA was formerly a major agricultural supplier, retaining a large share of the market under a credit programme. The EC (European Community, now European Union—EU) supplied some $345m. worth of farm products in 1986, equivalent to a 12.7% market share, compared with 16% in 1984. Canada and Australia were long-term wheat suppliers. Cuba was a long-standing sugar supplier and Thailand supplied rice.

Following the implementation of UN economic sanctions against Iraq in August 1990, the Government announced the introduction, from 1 September, of rationing for flour, tea, sugar and rice; other items, such as cooking-oil, children's milk and salt, were later added to the list. The Government also steadily raised the official purchase prices for important crops, with the aim of encouraging greater production, and initiated an urgent programme to increase the cultivated area, especially in northern Iraq. From October it became compulsory for cereal farmers to deliver their output to state collection centres within two weeks of harvesting. The Government also took emergency powers to confiscate land from farmers who failed to fulfil production quotas, and from November it introduced the death penalty for hoarding of cereals. According to Iraqi officials, the 1990 cereal harvest was the best for several years, including nearly 1.2m. tons of wheat (an increase of 75% compared with 1989), more than 1.8m. tons of barley and 500,000 tons of rice. These figures were, however, questioned by US government officials, who estimated that Iraq would need to import some 1.75m. tons of grain in 1991 to feed its population.

The combined effect of rationing, increased local production, use of reserves and imports through Jordan was to prevent the development of serious food shortages in Iraq until the outbreak of actual hostilities in January 1991, although prices rose steeply. Thereafter, the devastation resulting from allied bombing seriously disrupted not only agricultural production but also food distribution, and food stocks declined to a record low in the war's immediate aftermath. On 23 March the UN Security Council's sanctions committee eased restrictions on food exports to Iraq, following which several countries agreed in principle to resume supplies. However, the continuing UN embargo on Iraqi petroleum exports rendered payment for imported food problematical, even though the UN committee decided, on 9 May, to 'unfreeze' sufficient Iraqi assets to pay for emergency food and medical supplies (see Consequences of the 1990–91 Gulf Crisis, above).

As part of its post-war reconstruction plans, the Government launched a national agricultural campaign on 12 April 1991, involving new incentives for farmers, priority allocation of fuel and machinery, and the creation of a special ministerial committee to supervise the 1991 harvest and to maintain the state's monopoly of food sales. The emergency six-month reconstruction budget, announced on 2 May, included provision for substantial state subsidies on cereal production in order to reduce consumer prices.

An FAO report of August 1991 found that Iraq would have to spend about US $500m. to restore the country's agricultural output. FAO estimated the 1991 grain harvest at only 1.25m. tons, about a third of the 1990 yield, while other crops, as well as the livestock and poultry sectors, had been devastated by the war. Prospects of speedy recovery were regarded as bleak, in that seed stocks were deficient and much of the sector's machi-

nery and irrigation system were out of commission. The Iraqi Minister of Agriculture, speaking in May 1992, estimated that 50% of the country's cereal and seed stocks had been destroyed during the 1991 war, as had 95% of the breeding stock of the poultry and livestock industry. Efforts by the Government to import food supplies included the signing of agreements with Thailand (for rice), Malaysia (for palm oil), Sri Lanka (for tea), France and Australia (for wheat) and Morocco (various items).

In July 1993 FAO estimated that Iraq's food import requirement for the coming year would amount to 5.4m. tons, valued at $2,500m. FAO experts said that the threat of famine was exacerbated by the prolonged deadlock over utilization of the emergency petroleum export quota authorized by the UN Security Council on humanitarian grounds in summer 1991. Western observers had earlier reported that the Government had started using gold reserves to fund essential food imports in the latter part of 1992, having virtually exhausted its hard-currency resources.

The execution in July 1992 of 42 merchants accused of 'profiteering' served only to intensify the problem of persistent food price inflation, as a consequent drop in the volume of trade with Jordan added further scarcity value to items in short supply. The market prices of such staple items as wheat flour reached up to 500 times their mid-1990 levels at some points during the first half of 1993, while the estimated ratio between the average urban wage and the average market price of a typical family's food requirements widened from about 1:3 to 1:9 between April and July 1993.

Following increases in January and April 1993, the monthly ration of state-subsidized foodstuffs comprised 9 kg of flour, 2.25 kg of rice, 1.75 kg of cooking-oil and 1.5 kg of sugar. The Government implicitly acknowledged the seriousness of the food supply situation when it distributed an extra month's rations (in September 1992), brought forward a scheduled distribution date (in February 1993) and announced a supplementary Ramadan distribution of one chicken per family (in March 1993). So-called 'economic crime squads' were established in March 1993 to enforce harsh laws against overcharging for price-controlled basic foods.

Efficient administration of the rationing system was reported throughout most of Iraq, with the main exceptions in government-controlled Kurdish areas to the south of the Kurdish-controlled 'safe havens'. The availability of subsidized supplies in these areas was assessed to represent no more than 10% of the ration entitlement. There were also reports of some supply shortfalls in southern cities, attributed by Shi'a spokesmen to a government policy of moving food-processing operations and storage facilities out of the southern air exclusion zone.

The prices of a wide range of food items outside the rationing system, including meat, eggs and dairy produce, exceeded the budget of the average Iraqi worker in mid-1993. Government efforts to stimulate domestic food production included price incentives for farmers to sell staple crops through state marketing channels, coupled with penalties for such offences as failing to harvest crops.

There were reports in May 1993 that Kurdish farmers were being harassed by troops based in Iraqi-controlled cities south of the Kurds' northern 'safe haven', but it was not clear whether there was any systematic government campaign to commandeer local agricultural production. Within the Kurdish-controlled 'safe haven', there was a heavy dependence on international relief supplies in mid-1993, when early efforts to rebuild local agriculture were being hampered by shortages of fertilizer and other inputs. Agricultural rehabilitation projects and the provision of food supplements remained high on the UN's list of aid priorities for the 'safe haven' in 1994.

Against a background of worsening hyperinflation, the Iraqi Government ordered the official rations of rice, cooking-oil and tea (but not flour or sugar) to be increased by up to one-third from February 1994. However, supplies of food to supplement the still-meagre ration were priced even further beyond the reach of most wage-earners as the depreciation of the Iraqi dinar accelerated in subsequent months. By mid-May the average monthly salary of a schoolteacher would buy about 800 g of meat, or 21 eggs or 70 centilitres of cooking-oil, at current market prices. It was not unusual for middle-class households to sell or barter valuable possessions in order to buy food, while Iraq's crime rate (once very low by regional standards) increased dramatically as theft became a major problem.

In early May 1994 the Government announced that the theft of goods worth more than ID 5,000 (about $12 at the prevailing unofficial exchange rate) would henceforth be punishable by the amputation of a hand, while in early June branches of the Baath Party were empowered to incarcerate shopkeepers or traders who violated official price guidelines. The Minister of Agriculture was dismissed on 25 May for having 'failed to check the rise in food prices', and on 22 June the Government banned the import of many foodstuffs, including canned meat, fish, eggs, potatoes, spaghetti and chicken, in order to conserve foreign exchange. Traders who failed to clear their shelves of banned goods within two months would be subject to 'stringent penalties'. The Iraqi business community was urged to make voluntary financial contributions to the Government (repayable after the lifting of UN sanctions) to finance government food imports. Public-sector wages, pensions and allowances were increased from July, bringing little real benefit against a background of spiralling price inflation. In September the Government reduced the monthly ration of basic foodstuffs to 6 kg of flour, 1.25 kg of rice, 750 g of sugar and 625 g of cooking-oil, prompting a wave of panic buying which caused the market prices of many commodities to double in a matter of days. Public-sector incomes were again increased by amounts which barely kept pace with inflation. By early November rice was selling for ID 350 per kg and flour for ID 450 per kg in the shops, while the average civil service salary was ID 2,500 per month. By the end of January 1995, when the average civil service salary was ID 3,000 per month, meat was selling for around ID 1,150 per kg, while the price of a litre of imported vegetable oil had reached a similar level. Six months later an average civil service salary of ID 3,500 per month was sufficient to buy 38 eggs at prevailing market prices. Subsequent pay rises of 70% for military personnel and 50% for civil servants were expected to fuel a further round of price inflation. According to UN estimates, average shop prices of essential commodities stood at 850 times their July 1990 level in July 1995.

In October 1995 the Government announced increases in the monthly rations of flour (from 6 kg to 7 kg) and vegetable oil (from 625 g to 750 g), giving no explanation for the availability of additional supplies at this time. Estimates published by FAO in April 1996 gave Iraq's 1994/95 cereal production as 2.2m. tons (20% less than in 1993/94 and 25% below the average for the previous five years). The cost of Iraq's basic food import requirements in 1995/96 was estimated by FAO at $2,700m. Iraq's estimated wheat imports totalled 933,000 tons in 1993/94 and around 1m. tons in 1994/95, compared with an annual average of 3.1m. tons in the four years preceding the imposition of UN trade sanctions. The severity of Iraq's food supply crisis was believed to be the main motivating factor behind the Government's January 1996 decision to seek an early agreement on limited oil exports. Food prices within Iraq (which could be expected to stabilize after implementation of such an agreement) became subject to violent fluctuation during the first half of 1996 as traders responded to every reported development in the negotiations taking place at UN headquarters in New York.

The arrival in March 1997 of Iraq's first food imports under the long-delayed 'oil-for-food' scheme had a dramatic effect on local market prices, causing immediate reductions of up to 45% for eggs and 33% for flour and meat. In April the Government increased the monthly flour ration to 9 kg, while in May the rice ration was raised to 2 kg and the cooking-oil ration to 1 kg. In July the monthly rice ration was further increased to 2.5 kg and the ration of pulses was doubled from 500 g to 1 kg. Other ration entitlements in July included 2 kg of sugar, 150 g of tea, 250 g of soap, 350 g of detergent and 150 g of table salt. It was reported in mid-1997 that Iraqi cereal growers had been guaranteed 'above-market' crop prices by the Government in order to protect them from the impact of resumed food imports.

In May 1998 the Government reduced the monthly ration of basic foodstuffs, citing slow distribution of aid under the 'oil-for-food' agreement as the reason for the cuts. The new rations included 100 g of tea, 625 g of cooking-oil and 150 g of pulses.

A survey of Iraqi agricultural output over the period 1990–96 (based on US and UN estimates) indicated a decrease in yields of poultry and livestock products to less than one-half of the

1990 level, from 1993 onwards. This was due to a lack of local and imported animal feed, coupled with reductions in local output of animal feed as greater priority was given to crops for human consumption. Recent poor cereal crops (see above) were attributed in part to a lack of pesticides which had caused yields to decline at a rate faster than that by which farmers had increased the areas planted. However, total grain production in 1996 was estimated to have recovered to 3.0m. tons following a good harvest, before declining to 2.2m. tons in 1997. Within the Kurdish-controlled areas of Iraq, grain production exceeded local consumption by an estimated 100,000 tons per year from 1994 onwards, and in 1996 the Baghdad authorities agreed to supply electricity, fuel and rice to these areas in exchange for Kurdish farmers' surplus grain. In 1997 Iraq produced an estimated 860,000 tons of tomatoes (up from 722,000 tons in 1990) following a policy decision to devote irrigated land primarily to vegetable production. Production of potatoes reached 400,000 tons in 1997 (compared with 167,000 tons in 1991), while date production was 630,000 tons in 1997 (more than 50% higher than in the 1980s). Barley, previously regarded as an animal feed, was used as a supplementary ingredient in bread-making as supplies of wheat-flour diminished during the first half of the 1990s. In 1996 the average daily calorific intake of Iraqis was thought to be about 30% below its 1990 level. According to international aid organizations, at least 2.15m. Iraqis were receiving less than 50% of their calorific requirement in 1996.

RIVER CONTROL AND IRRIGATION

River control policy in Iraq has three main objectives: the provision of water for irrigation, the prevention of devastating floods, and the creation of hydroelectric power. An extensive dam-building programme has been instituted on the River Tigris and its tributaries in northern Iraq, with the aim of using stored water to irrigate land which has traditionally been rain-fed. However, such installations were among those which suffered serious damage and dislocation in the 1991 Gulf hostilities.

When operational, the main systems providing flow irrigation are based in the Euphrates (serving nearly 3m. dunums), the Tigris (1.7m. dunums), the Diyalah river and the Lesser Zab river. Pumps are used extensively along both the Euphrates and the Tigris. A series of dams, barrages or reservoirs (at Samarra, Dokan, Derbendi Khan, and Habbaniya) provide security against flood dangers. When the waters of the Euphrates and Tigris are fully utilized through dams and reservoirs, the area of cultivated land in Iraq will be almost doubled.

After delays during the Iran–Iraq War, the Government evinced renewed determination to proceed with its programme of water control and storage. In the summer of 1984 the Government was able to release stored water to farmers, to offset the low levels of the Euphrates. It was hoped that the completion of the Mosul (on the Tigris) and Haditha (on the Euphrates) dams (renamed the Saddam and Qadisiya dams) would ease concern over Syrian and Turkish dam-building plans for the upper reaches of the Tigris and Euphrates, which were expected to reduce the flow of water significantly. The Qadisiya dam and its associated 600-MW hydroelectric power plant were opened in 1986. By 1990, however, the distribution of these water resources had become a fundamental issue in Iraq's relations with Syria and Turkey, following Turkey's diversion of the Euphrates in order to fill the reservoir of its new Atatürk dam. Discussions between Iraq, Syria and Turkey, held in June 1990, failed to resolve the issue, and Iraq subsequently announced that future water shortages might create the need for water rationing. In early 1993 Turkey appointed a German-led consortium to implement a major hydroelectric project at Birecik on the Euphrates. Iraq, which had condemned this project as an infringement of its water rights under international law, announced its intention to take legal action against the contractors.

In September 1986 a $1,485m.-contract to build the Bekme dam, in the north-east, 40 km from the Iranian border, on the Greater Zab, a tributary of the Tigris, was awarded to a joint venture of Turkey's Enka and Yugoslavia's Hidrogradnja companies. Work on the dam commenced in 1987, and the first phase of the diversion of the Greater Zab had been completed by June 1990. In November 1990 the Bekme dam was renamed 'Al-Faris' (Knight), an appellation which the Iraqi media often used for Saddam Hussain. Another Yugoslav company, Energoprojekt, was chosen to design dams at Badush, also on the Tigris, and at Mandawa, on the Greater Zab. There are also plans to construct dams at Taqtaq, Dujala and Farha. River control projects are also under way at Hindiya, Kifl-Shinafiya and Baghdadi.

In December 1983 the 87,500-ha first stage of the massive Kirkuk irrigation project (now renamed Saddam) was opened. More than 300,000 ha will eventually be irrigated at a cost of more than ID 1,000m. Contracts have been awarded to Chinese and South Korean companies to work on the North Jazira irrigation project, which will be fed with water stored by the Saddam dam; and to local and international companies for work on the East Jazira irrigation project, involving the installation of irrigation networks on more than 70,000 ha of rain-fed land near Mosul. These projects are part of an ID 820m.-scheme to irrigate 250,000 ha of the Jazira plain. South of Baghdad, completed land reclamation schemes include Lower Khalis, Diwaniya-Dalmaj, Ishaqi, Dujaila and much of Abu Ghraib. The massive Dujaila project is intended to produce about 22% of Iraq's output of crop and animal products. Consultants have designed irrigation schemes for Kifl-Shinafiya, East Gharraf, Saba Nissan, New Rumaitha, Zubair, Bastora, Greater Musayyib and Makhmour. The project's main outfall canal, completed in December 1992, is known as the 'third river'. It runs for 565 km from Mahmudiya, south of Baghdad, to Qurna, north of Basra, and carries saline water (flushed away from 1.5m. ha of reclaimed land) to an outlet on the Gulf.

A 120-km 'fourth river', designed to irrigate an area of 250,000 ha, and the 140-km Qadisiyah canal, branching off from the Euphrates and designed to irrigate an area of 125,000 ha, were under construction in early 1993. Political opponents of the Iraqi Government claimed that this major programme of irrigation works, together with a number of drainage schemes in the southern marshes in 1992/93, was partly aimed at Shi'ite dissidents living in the area. However, the Government was able to provide numerous economic justifications for its policy (including, on the issue of marsh drainage, the fact that the area contained large untapped petroleum reserves).

Since 60% of Iraq's land area has no access to the major river irrigation schemes, a programme of well-drilling has been initiated under the direction of the State Co for Water Wells Drilling (SCWWD). In November 1990 the SCWWD announced that it had drilled 1,615 wells and supplied 1,159 pumps since its creation in 1987.

In the war with the multinational force in 1991, several dams were hit in the bombing campaign, but the wholesale dislocation of the country's river control and irrigation systems was mainly attributable to the multinational force's destruction of Iraq's power supply network. Restoration of such installations to proper functioning became a major priority of the Government's post-war reconstruction programme, as did restoration of drinking water supplies and sewerage systems in Baghdad and other major cities. Many of the failures of urban sewerage systems in 1992/93 were attributed to shortages of imported spare parts for pump motors. The UN Development Programme (UNDP), which had a US $4m. budget for projects in Iraq, said in June 1994 that $1m. had been allocated for the rehabilitation of two major sewage plants in Baghdad and $1m. for the repair of water treatment plants in southern population centres. Serious sewerage breakdowns and contamination of water supplies continued to be reported in Iraqi towns and cities in 1998. In mid-1998 the British Department for International Development announced that it was financing a $3.2m. project to improve water and sanitation.

PETROLEUM AND NATURAL GAS

Following the nationalization of the hydrocarbons sector in the early 1970s, Iraq rapidly increased its output of crude petroleum, becoming, by 1979, the world's second largest exporter, after Saudi Arabia. Production in 1979 totalled 170.6m. metric tons (compared with 83.5m. tons in 1971, the last full year before nationalization, and 47.5m. tons in 1960). Exports in 1979 and 1980 averaged 3.3m. barrels per day (b/d), producing revenues of $21,300m. and $26,300m. respectively. However, because of the outbreak of the Iran–Iraq War in September

1980, output sharply declined in 1981 and exports fell to 800,000 b/d by 1982 (worth $10,000m.), before rising to 1.4m. b/d in 1986, although lower world petroleum prices reduced revenues in that year to $7,000m. The end of the war with Iran in 1988 facilitated further recovery in production, from 127.4m. tons (2.6m. b/d) in 1988 to 138.6m. tons (2.8m. b/d) in 1989, earning export revenues of some $13,000m. and $12,000m. respectively. In the first half of 1990 production was averaging about 3.1m. b/d (almost back to the pre-1980 level) and 1990 export earnings from this source were expected to total $15,400m. However, Iraq's petroleum exports were then brought to a virtual halt by the UN embargo, imposed as a consequence of its invasion of Kuwait, and in the Gulf hostilities of early 1991 the massive damage sustained by Iraqi oil installations brought production to a standstill. Independent analysts estimated Iraq's end-1998 petroleum reserves at 112,500m. barrels (equivalent to 10.7% of total world petroleum reserves).

Iraq's petroleum industry has been highly dependent on pipelines carrying Iraqi oil through neighbouring territories or to the Gulf coast. In 1980 these were the 'strategic' reversible-flow pipeline (with a capacity of 1m. b/d) from Rumaila to Haditha and Kirkuk which links oilfields in the north and south of Iraq; a pipeline running for 980 km (609 miles) from Kirkuk, through Turkey, to Dörtyol, on the Mediterranean coast in the Gulf of İskenderun; another from Haditha, via Syria, to Tripoli, in Lebanon and Banias, in Syria; and lines running from the southern oilfields near Basra to the offshore Gulf export terminals of Mina al-Bakr and Khor al-Amaya, with capacities of 2.7m. b/d and 1.8m. b/d, respectively, which were exporting up to 2.9m. b/d before the Iran–Iraq War.

Following Iranian air raids on key installations in the early stages of the war, however, exports soon ceased from Iraq's offshore oil terminals in the Gulf, and production declined to 900,000 b/d in 1981. Refineries, pipelines, pumping stations and petrochemical plants were all damaged. Exports of petroleum were, at first, diverted to Mediterranean ports via Iraq's reversible pipeline pumping network, but these were then brought to a halt by an explosion on the line through Turkey, reportedly the work of Kurdish guerrillas, and by Iranian bombing of the K-1 pumping station at the Kirkuk oilfield in the north.

By December 1980 petroleum exports through the Mediterranean ports had resumed but total exports consisted only of petroleum being pumped through the pipeline across Turkey at a rate of around 650,000 b/d, supplemented by 60,000 b/d–80,000 b/d transported by road to Jordan. Not all of this was for worldwide exports, however, since Turkey was taking 250,000 b/d as its entitlement under the pipeline transit agreement. Preference for sales was given to countries which were major customers for Iraqi petroleum before the war and which had suffered most from the cessation of petroleum exports in the fourth quarter of 1980. These included Japan and France.

Pumping through the Banias pipeline resumed in early December 1981, despite tense political relations between Iraq and Syria and the Iraqi decision of April 1976 to suspend deliveries through the pipeline because of a dispute over transit fees and other political issues. The long period of disuse limited the throughput to 350,000 b/d, compared with the full capacity of 1.4m. b/d, and pumping soon halted, not to be resumed until the end of February 1982. On 10 April 1982, however, Syria closed the pipeline, depriving Iraq of a possible US $17m. per day in revenues and leaving the Turkish pipeline as Iraq's only outlet for petroleum exports. The loss of the Gulf terminals and the vulnerability of the Turkish and Syrian pipelines forced Iraq to consider alternative pipelines.

To complement the pipeline through Turkey, which was pumping about 1m. b/d by mid-1987, the Government decided to build new export pipelines across Turkey (to run parallel to the existing line), Saudi Arabia and Jordan. In September 1984 a US $507m. order to build the first (640 km) phase of the Saudi Arabian project (IPSA-1)—to link Iraq's southern oilfields with Saudi Arabia's east-west Petroline to the terminal at Yanbu—was awarded to an Italian consortium, led by Saipem and including France's Spie-Capag. The French and Italian Governments provided credit to support the project, and the contractors agreed to accept Iraqi petroleum in part-payment. The spur line began pumping in September 1985. Although Japanese and Indian customers were secured, throughput was limited to 350,000 b/d–400,000 b/d by the Saudi Arabian Government. In March 1987, however, Saudi Arabia agreed to allow Iraq to export petroleum through its terminal at Yanbu at the spur line's full capacity of 500,000 b/d, on condition that it charged OPEC's official prices for crude. The second phase (IPSA-2), for which a contract was awarded in September 1987 to a consortium led by Italian and Japanese companies, envisaged an independent 970-km Iraqi pipeline (with a capacity of 1.15m. b/d) across Saudi Arabia, parallel to the Saudi line, to a new export terminal on the Red Sea coast, near Yanbu, providing a total throughput via Saudi Arabia of 1.65m. b/d.

A consortium of Italian and Turkish companies began work in February 1986 on the second 980-km trans-Turkey line, parallel to the existing line from Kirkuk to the Mediterranean port of Yumurtalık in Turkey. With a capacity of 500,000 b/d, this boosted total possible exports through Turkey to 1.5m. b/d, when it became operational at the end of July 1987, and there were plans to double the capacity of this line. Plans for an oil pipeline to Aqaba, in Jordan, were suspended in 1984, as Iraq could secure no guarantee of compensation from the US Bechtel Corpn, the project's managing contractor, for loss of earnings in the event of Israeli sabotage of the pipeline, which would have terminated near the Israeli border. In April 1987 Turkey and Iraq agreed plans to construct a third trans-Turkish pipeline, with a capacity of 70,000 b/d, from oilfields at Ain Zalah, near Mosul, to the Batman oil refinery in Turkey, a distance of 240 km. With its promised new export capacity, Iraq now had less need for the reopening of the pipeline across Syria, despite speculation in 1987 of a possible reconciliation with Damascus. When the new lines across Turkey and the two phases of the trans-Saudi Arabia development are in full operation, Iraq's export capacity will be about 3.2m. b/d. The facilities in the south, which were put out of action by the war with Iran, could provide another 3m. b/d in exports. Repair work started in March 1989, and by July tankers were lifting 200,000 b/d from the Mina al-Bakr terminal. Iraq has also exported between 100,000 b/d and 250,000 b/d of refined petroleum products by road through Jordan and Turkey. In 1986 Saudi Arabia and Kuwait, through the Arabian Oil Co which operates in the Neutral Zone, renewed an agreement whereby they sold as much as 310,000 b/d (250,000 b/d from the Zone and the remainder from Saudi Arabia), with the proceeds going to Iraq to compensate it for lost export capacity. This agreement was terminated at the end of 1988.

When war broke out with Iran in September 1980, many major oil and gas development projects were in progress. War damage was not as extensive as was originally believed, although the Basra petroleum refinery, with a capacity of 140,000 b/d, was bombed early in the war. Repair work began in 1988, and by mid-1989 the refinery was again producing oil products for export. Iraq was already short of refining capacity, so the damage to the Basra refinery had a severe impact on the domestic supply of petroleum products. The country was left with the 70,000 b/d Dawra refining facility, near Baghdad, which also came under attack, and some 100,000 b/d topping capacity at a number of other locations. At 1 January 1981 refinery capacity stood at 118,000 b/d. The 150,000 b/d north Baiji refinery (Baiji II), built by Chiyoda of Japan, was opened in 1983, complementing the 71,000 b/d Czechoslovak-built refinery (Baiji I) already in operation. In the first quarter of 1987 the Baiji lubricating oil refinery, built by Technip of France, began operations. During its first year of operations, about 70,000 tons were expected to be available for export, rising subsequently to 200,000 tons per year. Plans were also announced to quadruple refining capacity. In mid-1988 international companies submitted offers to construct a 140,000 b/d refinery south of Baghdad.

Before the outbreak of war in 1980, the West German-US consortium of Thyssen Rheinstahl Technik and C.E. Lummus completed a petrochemicals complex at Khor az-Zubair, near Basra. The plant sustained minor damage during the war, but recommissioning began in 1988, and by 1989 some units had resumed operations. The complex was intended to produce 150,000 tons per year of low- and high-density polyethylene and PVC, and 40,000 tons per year of caustic soda, using 90m. cu ft per day of natural gas as feedstock. The Government also

approved plans for a second petrochemicals complex about 60 km south of Baghdad, near the planned new refinery.

Other projects in the Basra area include a gas liquefaction and treatment plant at Zubair, which was constructed by a French company, Technip, under a US $239m. 'turnkey' contract, awarded in March 1980. The recommissioning of this plant began in 1989, with the intention that it would use as feedstock 6,000m. cu m of associated gas from the Rumaila oilfields to produce 4m. tons of propane and butane and 1.5m. tons per year of condensate. The plant is part of the southern gas project, which entails gathering and compression facilities that will be capable of handling 16,000m. cu m of gas per year from the Rumaila oilfields. Part of the project, a southern gas-gathering complex with the capacity to process and export as much as 4m. tons of associated gas annually, commenced operations in July 1990. A similar scheme exists in the north. Both are part of a government programme to increase its use of gas as an energy resource.

Total gas reserves, three-quarters of which are associated with oil, were estimated at 3,110,000m. cu m at 1 January 1999. Gas production rose from 5,900m. cu m in 1966 to 20,160m. cu m in 1979, but declined, owing to the war with Iran, to 5,290m. cu m in 1984. By 1986 output had recovered to 8,270m. cu m, and in 1989 it totalled 10,680m. cu m. Whereas 80% of gas production was flared in 1979, projects to make wider use of gas, particularly in industry, resulted in a decline in this proportion to 40% by 1989. Gas exports also increased, from 8.3% of production in 1986 to some 30% in 1989. Shortly before the onset of the August 1990 Gulf crisis, Petrobrás of Brazil shipped Iraq's first export cargo of liquefied petroleum gas (LPG).

In 1986 a Soviet contractor, Tsvetmetpromexport (TSMPE), was awarded a $154m.-contract to construct the first section, 345 km in length, of the trans-Iraq dry gas pipeline. This section runs from Nasiriya, in the south, to Baghdad, and will initially carry 4.2m. cu m of gas per day. TSMPE was also expected to win the contract for the second stage of the trans-Iraq gas pipeline project, which will extend the line to the border with Turkey. After being linked to the northern gas-gathering network, the pipeline will supply a national gas grid. Eventually, power stations and industrial plants will be connected to the gas grid.

In the late 1970s and early 1980s the Iraq National Oil Co (INOC), then the supreme state body exercising control over the hydrocarbons sector, pursued a programme of further exploration for oil and gas reserves. Five major fields were identified in 1981 for future development—Majnoon, Nahr-Umr, Halfaya, East Baghdad and West Qurnah. These fields are likely to increase production capacity by some 2m. b/d. Exploitation of the East Baghdad field (with estimated reserves of 5,000m. barrels) began at the end of 1984, with the award of a $60m. contract to establish a plant to process and degas an initial 30,000 b/d to Italy's Snamprogetti and its British affiliate. Production began in April 1989, and capacity was to be eventually increased to 150,000 b/d. The main contractor at West Qurnah was Technoexport of the USSR, with TPL of Italy. The Soviet company also undertook development work at the North Rumaila field, which was producing at a rate of 500,000 b/d in 1987, compared with potential capacity of 800,000 b/d. Development of Halfaya and Nahr-Umr was delayed by the war with Iran. In the north, exploitation of the Sfaya oilfield is under way. In 1988 experimental production started at Nasiriya, Gharraf, Subba, Balad and West Tikrit. Contracts were awarded in 1988 to Technip, of France, and Mannesmann, of West Germany, to develop the Khabbaz and Saddam oilfields to produce 30,000 b/d and 45,000 b/d respectively; both came into production in 1990. The recapture from Iran of Majnoon Island and the surrounding area of the al-Hawizah marshes, in June 1988, restored to Iraq oilfields containing reserves estimated at 30,000m. barrels. Plans for a second reversible-flow pipeline, parallel to the first, 670 km in length, linking new oilfields in the south with northern petroleum installations, and capable of pumping 900,000 b/d, were announced in April 1988. Plans for a $500m. oil-products storage complex at Khor az-Zubair have also been announced.

INOC's activities extended beyond exploration for, and production of, crude petroleum. In 1972 it established an autonomous company to be responsible for the operation and management of a tanker fleet. In May 1987, however, INOC and the Ministry of Oil were merged as part of a programme to reorganize the oil industry and make it more efficient. At the same time, a number of state organizations, hitherto responsible for, among other functions, oil-refining, distribution and industrial training, under the auspices of INOC, were removed from INOC control and converted into separate national companies, responsible to the ministry.

Iraq is one of the founder members of the Organization of the Petroleum Exporting Countries (OPEC, see p. 272). It was not required to make a reduction in its output in October 1984, when OPEC cut production by 1.5m. b/d in order to prevent a further decrease in prices on the world market, which was over-supplied with oil. With new export outlets becoming available, Iraq frequently lobbied for an increase in its OPEC production quota, while consistently exceeding its allocation. During 1986 oil prices continued to decline, falling below US $10 per barrel in July. When, in August, OPEC decided to reduce production to a maximum 16.7m. b/d for two months from 1 September, effectively reverting to the quota restrictions imposed in October 1984, in order to raise petroleum prices, Iraq declined to be a party to the decision, demanding at least parity with Iran, and continued to produce as much as it could to finance its war effort. The proposal for a reduction in output was made by Iran, whose Minister of Oil said that Iran would 'act in a way to prevent Iraq getting its desired quota'. Iraq then opted out of a succession of OPEC production agreements, between October 1986 and May 1988 (though it was allocated notional quotas in each), and stated that it would continue to do so while its quota allocations were lower than those allotted to Iran, and failed to take account of Iraq's increased export capacity. For the second half of 1987 a ceiling of 16.6m. b/d was placed on OPEC production, including a notional quota for Iraq of 1.54m. b/d, compared with actual export capacity of about 2.7m. b/d in August, and the 2.37m. b/d allocated to Iran. A reference price for OPEC petroleum of $18 per barrel had been in force since February 1987. At OPEC's meeting in December 1987 Iraq declined to participate in the agreement covering production in the first half of 1988, whereby the ceiling on collective output and Iraq's notional quota were unchanged.

The cease-fire in the Iran–Iraq War prompted preliminary efforts by OPEC to accommodate Iraq in future production agreements by raising its quota to take account of increased export capacity, even though Iran had clearly stated that it would not participate in an agreement which awarded Iraq quota parity with itself. In late 1988 OPEC granted Iraq parity with Iran and set its production quota at 2.64m. b/d. Iraqi production had reached 2.8m. b/d in November 1987, and was subject to government reviews during 1988, when output was maintained at about 2.6m. b/d. By the end of 1988 production had risen to about 2.7m. b/d, and exports were running at about 2.3m. b/d. On 1 January 1989 Iraq temporarily reduced production to match its quota, halting the bulk of its crude petroleum exports by road to Jordan and Turkey. In mid-1989 Iraq's quota was raised to 2.783m. b/d, still maintaining parity with Iran, and average output in 1989 amounted to some 2.8m. b/d.

In view of its need to reconstruct its economy, Iraq sought, following the cease-fire in the Iran–Iraq War, to maximize its oil revenues and to raise the OPEC minimum reference price. At the OPEC meeting held in June 1989, Kuwait claimed a quota of 1.35m. b/d, rather than the 1.12m. b/d which would have been allocated to it under a simple pro-rata distribution of the 20m. b/d ceiling which the majority of members judged to be reasonable in order to stabilize prices. Since Kuwaiti overproduction was now regarded as inevitable (it had already been overproducing by some 800,000 b/d–900,000 b/d in May and June), the new production ceiling was raised by only 1m. b/d, to 19.5m. b/d. In September a new ceiling of 20.5m. b/d was fixed, but Kuwait rejected its quota of 1.149m. b/d for the final quarter of 1989. Overproduction continued, and by the end of 1989 total OPEC output had reached almost 24m. b/d, with a consequential depressive effect on world petroleum prices.

At the next OPEC meeting, held in November 1989, the production ceiling was raised to 22m. b/d, although the *de facto* level of production was already 24m. b/d. Quotas were

redistributed, with Kuwait being allocated 6.82% of total output, compared with 5.61% previously. Owing to optimistic estimates of demand, and closer adherence to quotas by member states, prices rose following the November meeting, reaching their highest level for two years in January 1990. By May, however, quotas were again largely being ignored, and prices had slumped. Iraq's crude petroleum production at this time was estimated at about 3.14m. b/d—approximately its quota level.

By May 1990 overproduction had continued to such an extent that increasing numbers of tankers were being chartered for floating storage. At a meeting of OPEC's ministerial monitoring committee, held on 2 May, it was agreed to reduce production by 1.445m. b/d from an average level of 23.5m. b/d. However, the effect of this on prices was negligible. In June 1990 an Iraqi Deputy Prime Minister, Dr Sa'adoun Hammadi, condemned Kuwait and the UAE for producing above their quota levels, and stated that there should be no further review of quotas until a 'fair' price for crude petroleum—$25 per barrel—had been achieved. Kuwaiti overproduction was regarded as an attempt to wreck efforts within OPEC to raise the minimum reference price above US $18 per barrel, and Iraq claimed to be losing $1,000m. annually for every reduction of $1 per barrel in the price of petroleum. In July President Saddam Hussain blamed overproduction for low petroleum prices, and warned of action against those states—Kuwait and the UAE—which persistently flouted their quotas. He claimed that the decline in the price of petroleum in the first half of 1990 had cost Iraq $14,000m. Iraq subsequently accused Kuwait of violating the Iraqi border in order to acquire resources worth more than $2,400m. from Iraq's section of the Rumaila oilfields.

At the full OPEC meeting held in Geneva in late July 1990, Iraq sought to raise the minimum reference price for crude petroleum to US $25 per barrel. Although the agreement that was achieved at the meeting raised the reference price to only $21 per barrel until the end of 1990, and fixed the production ceiling at 22.5m. b/d, it was regarded as OPEC's most serious attempt to address the problem of overproduction for many years. However, the markets were thrown into turmoil by Iraq's invasion and annexation of Kuwait at the beginning of August 1990 and by the consequential imposition of mandatory UN sanctions on all trade with Iraq and Iraqi-controlled territory. By late August, prices had risen as high as $30 per barrel, and an emergency OPEC meeting was held in an attempt to restore stability to the market. At the meeting, which was attended by the oil ministers of all OPEC member states except Libya and Iraq, draft agreement to suspend the production quotas that had been agreed in July (and thus compensate for the loss of Iraqi and Kuwaiti production) was endorsed by all member states attending except Iran.

In the context of the UN embargo and the closure of its pipeline outlets through Saudi Arabia and Turkey, Iraq reduced its production to less than 400,000 b/d in the latter months of 1990, sufficient to supply its domestic refining capacity. Although consumer prices increased sharply, a move by the Minister of Oil to introduce petrol rationing on 19 October was countermanded by the Revolutionary Command Council 10 days later (and the Minister was dismissed). The situation deteriorated rapidly with the onset of hostilities in January 1991, when the allied bombing campaign resulted in the destruction of most of Iraq's oil and gas installations, both upstream and downstream. By mid-February petrol was officially rationed (but virtually unobtainable), as were heating-oil and gas. A UN report, compiled in March, estimated that restoration of 25% of pre-war refinery capacity—the minimum needed for survival—would take from four to 13 months. Some refineries resumed limited production in April–May, enabling the Government to end petrol rationing on 28 April and to reduce consumer prices, but government claims that oil exports of 1.5m. b/d could be resumed in July 1991 (if UN sanctions were repealed), rising to 2m. b/d in 1992, were not put to the test, because the UN embargo remained in place. In its emergency six-month reconstruction budget, announced on 2 May, the Government identified the restoration of oil production, refining and pipeline facilities as a central priority. The appointment of a new Minister of Oil on 27 May confirmed the dominance over the hydrocarbons sector of the Ministry of Industry, Minerals and Military Industrialization.

By-mid 1992 Iraq appeared to have made substantial progress in restoring its production, refining and storage capacity, in accordance with the priorities laid down in the reconstruction plan. Annual average oil production (including natural gas liquids) rose from 235,000 b/d in 1991 to 480,000 b/d in 1992 (compared with average production of 2.01m. b/d in 1990 and a production level of over 3m. b/d before the August 1990 invasion of Kuwait). Output averaged 495,500 b/d in 1993 and 601,700 b/d in 1994. In the first half of 1992, Iraq claimed that it had restored its output capacity to 3m. b/d, although the non-availability of export markets (and Iraq's refusal to utilize the UN concession of limited, authorized exports to pay for emergency imports) precluded an early attempt to bring the bulk of this capacity back on stream. Iraq's oil-refining capacity, which has averaged 3,200 b/d since the mid-1980s, increased to 585,000 b/d in 1992 and averaged 530,000 b/d from 1993 to 1996.

In April 1993 the head of oil operations in the south of the country announced that available productive capacity in this region amounted to 1.8m. b/d (compared with production of 2.25m. b/d from the southern fields in August 1990), and that facilities were in place to export up to 800,000 b/d via the Mina al-Bakr terminal and 1m. b/d via the strategic pipeline to the north. Mina al-Bakr was Iraq's preferred export point for UN-authorized petroleum exports, whereas the sanctions administrators proposed that any shipments should be made via Turkey to facilitate strict monitoring. The Turkish authorities also declared their anxiety about possible corrosion problems associated with a prolonged pipeline shut-down. Technical arrangements for repairing and flushing Iraq's Turkish pipeline were agreed in principle between the two Governments in the first half of 1994, with Turkey proposing to use the resulting outflow of trapped petroleum on its domestic market and to arrange for 30% of the payment due to Iraq to be deposited in the UNCC's fund for victims of Iraq's aggression, while the remaining 70% would be used to finance Iraqi imports of essential foodstuffs and medical supplies. It was estimated that 12m. barrels of petroleum (of which 3.8m. barrels were already owned by Turkey) would be discharged in the course of the proposed maintenance operation. Iraq made it clear that the scheme (for which Turkey was hoping to obtain early UN clearance) could not proceed if the UN sought to attach the same conditions that had caused Iraq to reject Security Council Resolutions 706 and 712.

In March 1995 Iraq's Minister of Oil stated that the country was currently producing petroleum at the rate of 700,000 b/d but could raise output to 2m. b/d 'within a few weeks' of the lifting of UN trade sanctions. He estimated that it would take 14 months to achieve an output level of 3.5m. b/d and four to five years to bring capacity up to 4.5m. b/d. A full-scale resumption of Iraq's oil development programme (including the opening of hitherto undeveloped oilfields) would, he said, require investment totalling around US $30,000m. over a period of five to eight years. French and Russian oil companies were widely reported to have reached preliminary agreements with Iraq in 1993/94 to develop key oilfields after the lifting of UN sanctions, while companies from several other countries (including Italy and Brazil) had held discussions on aspects of Iraq's oil development plans. Delegates from 29 countries attended a two-day seminar on future oil and gas markets, held in Baghdad in March 1995. Many of the claims made by Iraqi officials during the Baghdad seminar were challenged in the following month at the annual conference of the London-based Centre for Global Energy Studies (CGES), whose executive director estimated that it could take Iraq up to three years after the lifting of the export embargo to increase its production capacity to 3.2m b/d, and rather longer to bring export capacity fully into line with production capacity. The CGES estimated that Iraq would need to spend up to $6,000m. on essential repairs and reconstruction in the oil sector. The CGES conference was attended by a representative of the London-based opposition Iraqi National Congress, who stated that foreign oil companies currently negotiating with Iraq should not expect any 'post-Saddam democratic government' to honour oil agreements drawn up in the present circumstances.

Although the resumption of its own petroleum exports remained in abeyance, Iraq continued to attend OPEC meetings to express formal opposition to pricing and production decisions

adopted by the other member countries from 1991 to mid-1993. At the end of 1992 the Iraqi Minister of Oil accused OPEC of failing to uphold 'the interests of producing countries'. In June 1993 the Deputy Prime Minister, Tareq Aziz, indicated that Iraq's eventual return to the oil export market would be geared to the country's revenue needs, and that the Government would be prepared to see prices fall to US $5 per barrel if necessary, 'since now we get nothing'. He pointed out that the UN had defined the proposed emergency export quota in cash terms, setting no limit on the volume of petroleum that could be exported to generate income of $1,600m. By early 1994 Iraqi ministers and officials had moderated their criticism of OPEC, and appeared to be laying the foundations for a reasoned claim for a high OPEC quota allocation at such time as Iraq was able to rejoin the export market. At the end of 1994 Iraq's formal claim within OPEC was for quota parity with Iran when exports resumed.

In March 1996 Iraq and Turkey held technical talks on the reopening of pipelines to handle part of the limited oil exports for which Iraq was currently seeking UN approval. A Turkish company was mandated to repair any pipeline damage, although this work would not start until all negotiations with the UN had been satisfactorily concluded. The effective capacity of the Kirkuk to Yumurtalık pipeline was expected to be in the range of 300,000 b/d to 500,000 b/d in the initial stages because of the settling of trapped oil and the loss of an important pumping station in northern Iraq (destroyed by bombing during the Gulf War). In the south, Iraq claimed to have an initial 1.2m. b/d of export capacity available at its Gulf terminal of Mina al-Bakr, which was said to be ready to handle tankers of up to 350,000 dwt. Both the safety of the port approaches and the adequacy of the loading facilities were, however, called into question by Western oil analysts. Iraq's estimated oil output in the first half of 1996 was between 550,000 b/d and 700,000 b/d, of which up to 80,000 b/d was exported to Jordan and the balance consumed within Iraq. At current prices, Iraq expected to have to increase its production by between 700,000 b/d and 800,000 b/d to take full advantage of the formula set out in UN Security Council Resolution 986 (which provided for export revenue of up to $2,000m. over a period of 180 days). In June 1996 an OPEC ministerial meeting agreed that Iraq's OPEC production quota (currently a nominal 400,000 b/d) should be raised to 1.2m. b/d in the second half of 1996 in anticipation of an early agreement between Iraq and the UN on implementation of Resolution 986. The subsequent delay in implementation of Resolution 986 until December meant that Iraq's average 1996 oil output was, at an estimated 590,000 b/d, only 50,000 b/d higher than the average for 1995. The greater part of the oil exported under UN supervision in the first half of 1997 was pumped via Yumurtalık, with the balance shipped from Mina al-Bakr. The largest single export contract concluded at the end of 1996 was for the supply of 75,000 b/d to the Turkish refiner Tupras throughout the 180 days of the initial export period authorized by the UN Security Council. It later emerged that Iraq was seeking to divide its export allocation among a large number of different buyers requiring delivery of limited volumes over short periods. In addition to contract sales, the UN authorized some spot-market transactions in February 1997 to maintain oil earnings at target levels. In June 1998 production resumed at three southern oilfields after a suspension of some 20 years.

In 1998 Iraqi oil production averaged some 2.2m. b/d (compared with 630,000 b/d in 1996). Following the February 1998 revision of the terms of the UN 'oil-for-food' arrangement, whereby the value of Iraqi oil exports permitted by the UN was to be increased from US $2,000m. to $5,200m. in a six-month period, production increased significantly, and exports were officially estimated to be averaging 1.6m.–1.7m. b/d by mid-June, although UN officials calculated that exports peaked at 2.4m. b/d in the final two weeks of June. It was expected that exports would approach a sustainable 2.6m. b/d by early 1999, following UN approval, announced in June 1998, of an Iraqi request to spend $300m. on the purchase of vital new equipment to upgrade and overhaul oil-production facilities. Without the necessary renovation, it was estimated, Iraq would be able to fulfil only $4,000m. of its new six-monthly export quota.

In March 1997 Iraq signed an agreement with Russia (ratified by the Iraqi National Assembly in the following month) for the future development of the West Qurnah oilfield in southern Iraq. A consortium of Russian companies was to take a 75% interest (Lukoil 52.5%, RVO Zarubezhneft 11.25% and VO Mashinoimport 11.25%) and Iraq a 25% interest in a 23-year contract to develop 600,000 b/d of production capacity and associated infrastructure after the lifting of UN sanctions against Iraq. In June the Chinese National Petroleum Corporation signed an agreement to develop 90,000 b/d of capacity in the Adhab oilfield after the lifting of sanctions. A consortium of Turkish companies reached a preliminary agreement with Iraq in May, envisaging the development of a major gas export project after the ending of sanctions. In March 1998 the French petroleum company, Total, announced that it was negotiating an agreement to develop the Bin Umar oilfield (with an estimated production capacity of 450,000 b/d), whilst Ranger Oil, the Canadian group, confirmed that it was in the process of securing a US $250m. field-development contract and exploration block in the Western Desert. In June an Indian joint venture between the Oil and Natural Gas Corporation and Reliance Petroleum secured a deal to develop the Tuba oilfield.

In July 1998 Iraq and Syria signed an agreement to reopen the Kirkuk–Banias oil pipeline which had been inactive since 1982. An initial capacity of 300,000 b/d was expected. An agreement was also reached to construct a second pipeline to the Mediterranean with a 1.4m. b/d capacity.

INDUSTRY

Until the 1970s Iraq had few large industries apart from petroleum. In greater Baghdad the larger enterprises were concerned with electricity and water supply and the building materials industry. In addition, there was a large number of smaller-unit industries concerned with food and drink processing (date-packing, breweries, etc.), cigarette-making, textiles, chemicals, furniture, shoe-making, jewellery and various metal manufactures.

In recent years greater priority has been given to industrial developments, as the Government has sought to reduce Iraq's dependence on the petroleum industry. Between 1970 and 1986 more than ID 14,000m. was invested in the industrial sector. Iraq now has some major industrial plants, with others under construction. An iron and steel works at Khor az-Zubair, built by Creusot-Loire of France, began operations in 1978 and should eventually have a maximum annual output of 1.2m. tons of sponge iron and 400,000 tons of steel. Plans for a second iron and steel works were announced at the beginning of 1988. Khor az-Zubair is also the site of a major petrochemicals complex (see Petroleum and Natural Gas, above).

Iraq's mineral resources, apart from hydrocarbons, include sulphur and phosphate rock. Sulphur has been mined at Mishraq, near Mosul, since 1972. The mining complex, which includes a sulphuric acid plant, has a design capacity of 1.25m. tons per year. However, a record 1.4m. tons were produced in 1989, of which 1.2m. tons were for export, compared with 950,000 tons and 750,000 tons, respectively, in 1988. A new sulphur recovery and sulphuric acid plant, built by Japanese contractors, uses Mishraq sulphur. Production began in 1988 and has raised exports of sulphur by more than 50%, from their former level of 500,000 tons per year. Some 500,000 tons of sulphur are sent for sulphuric acid production at the phosphate processing plant at al-Qaim, but Iraq hopes to maintain sulphur exports by increasing the rate of sulphur recovery (currently 90%) during hydrocarbon processing. In 1988 proven reserves of sulphur stood at 515m. tons, the largest in the world according to the Iraqi Government.

Phosphate rock reserves, mostly in the Akashat area, and in the Marbat region, north-west of Baghdad, were estimated at 10,000m. tons in 1988. The phosphate fertilizer plant at al-Qaim was built by Sybetra of Belgium, which also installed the phosphate mine in Akashat. The mine, which has reserves estimated at 3,500m. tons, opened in 1981 and was intended to produce 3.4m. metric tons per year of phosphate rock for the al-Qaim plant, which received the first loads from the mine by rail in 1982. Iraq is now self-sufficient in fertilizers, producing slightly more than 1.2m. tons in 1989. Of this, some 766,000 tons were exported. The al-Qaim plant started production in 1984, and is scheduled to export 75% of its output. A US $400m. programme to double production at al-Qaim began in 1989.

Daily production of 1,000 tons of ammonia and 1,700 tons of urea also commenced at a fourth nitrogenous fertilizer factory at Baiji. One of the contractors, the M. W. Kellogg Co, was appointed in 1988 to double capacity at the Baiji plant. There are also plans to build a new ammonia/urea factory at al-Qaim, and work to expand capacity at the Basra fertilizer plant commenced in early 1990.

Major state factories also include a textile factory at Mosul, producing calico from local cotton; three sugar refineries, at Karbala, Sulaimaniya and Mosul, with another four planned; a tractor assembly plant which produced 2,500 tractors in 1975; a paperboard factory at Basra, a synthetic fibres complex, at Hindiya; and a number of flour mills. Shoe and cigarette factories serve the domestic market. Other developments in the manufacturing sector have included factories to produce pharmaceuticals, electrical goods, telephone cables and plastics, together with additional food-processing plants. In 1984 Iraq's annual capacity for cement production was 11m. tons; this is expected to reach 20m. tons when the country's newest cement works operate at full capacity. Two cement works, a plant at al-Qaim with a capacity of 1m. tons per year, and another at Sinjar, in Nineveh Governorate, with a capacity of 2m. tons, were built by Uzinexportimport of Romania. Exports of 1m. tons of cement to Egypt began in 1986. Production of cement reached 13m. tons in 1989, when 5.4m. tons were exported, mainly to other Arab countries. Brick production in 1984 reached 1,607m. units, rising to 1,773m. in 1986. Much of the output was used to build homes. Up to 4m. homes are expected to be built in the years 1981–2000. According to official plans, the local construction industry would also be supplied by three new factories—a steel foundry, a central moulds factory and a steel formworks—built on at-Taji industrial estate. Trucks and buses designed by the Swedish firm Saab-Scania have been assembled under licence in Iskandariya since 1973.

The latest developments in the manufacturing sector have been in the production of pharmaceuticals, electrical goods, telephone cables and plastics, and in the establishment of more food processing plants.

The USSR assisted with the construction of 11 factories, including a steel mill and an electrical equipment factory at Baghdad, a drug factory at Samarra and a tractor plant at Musayib. A large share of industrial development took place in co-operation with Eastern bloc countries and several agreements were signed, including one at the end of 1984 with Bulgaria's Bulgartabac to extend the northern tobacco industry. Other projects include the establishment of an electronics industry, by Thomson CSF of France.

Local industry came under increasing scrutiny during 1987 and 1988 and a wide improvement was sought both in the quantity and the quality of production, while particular emphasis was placed on import substitution by local production and on producing surpluses for export. Priority continued to be given to meeting local demands for raw materials, spare parts, new machinery and equipment. There has also been official recognition of private and mixed-sector companies' ability to meet vital consumer needs more effectively than the state.

In July 1988, following a number of earlier attempts to reorganize the government departments responsible for industry in Iraq, responsibility for all civilian and military industry was placed under the control of a single Ministry of Industry, Minerals and Military Industrialization. This was to run large-scale and strategic industries such as power generation, minerals and petrochemicals, and military industrial production, through the Military Industries Commission which was attached to it. Some state factories producing light industrial goods were auctioned off to private companies, or to newly established mixed-sector firms. In August 1988 the new ministry announced that it was to sell 47 factories to the private sector by the end of the year. Iraq allocated the equivalent of US $11,500m. to investment in development projects in fiscal 1988, some 42% of which was to be devoted to industrial and agricultural schemes. Some 229 light industrial schemes (involving investment of ID 234m.) were listed in the Five-Year (1986–90) Industrial Development Plan and were also open to private and Arab investment. In April 1988, the Arab Investment Law No. 46 was passed, offering Arab investors tax exemptions and profit remittances.

Industrial production was valued at a record US $8,500m. in 1987, owing, said government sources, to optimum use of production facilities and greater use of local, rather than imported, raw materials, which was estimated to have saved $130m. By 1987 the proportion of the labour force employed in industry was just over 21%. The foreign labour force was reduced by one-third during 1987, saving an additional $50m., according to government announcements. Some 218 development projects worth a total of ID 2,496m. ($8,051m.) were completed in 1987, according to the Ministry of Planning, including 50 agricultural schemes (worth $2,319m.) and 33 industrial schemes ($1,574m.). During 1989 the Ministry of Industry, Minerals and Military Industrialization emerged as the leading client for new business. Danieli of Italy was awarded a contract to construct a special steel factory at Taji, and a rolling mill for flat steel products at Khor az-Zubair. Contracts for new pipe factories were awarded to companies from Italy and the Federal Republic of Germany. The Ministry's Technical Corpn for Special Projects also assumed responsibility for the new petrochemicals complex and for the new central oil refinery in mid-1989. The Ministry also announced plans in 1989 to manufacture cars, tractors, trucks and buses. A licensing agreement for the production of cars has been signed with General Motors of the USA, and an agreement for the production of trucks and buses has been signed with Mercedes-Benz of Germany.

Investment in the power generation sector, which was severely disrupted during the early years of the Iran–Iraq War, has been given a high priority by the Government. In 1981 a large number of contracts—worth more than US $2,000m.—were awarded for additional generation and transmission facilities (including a 600-MW power station at Haditha), as well as for the expansion and renovation of local and national networks, and the supply of emergency back-up systems. Since 1982, contracts for 400-kV 'supergrid' and 132-kV transmission lines and substations have been awarded to South Korean, French, Italian, Yugoslav and Japanese companies. The first of three 1,200-MW thermal power stations planned during the early 1980s was to be built at al-Musayyib, under a $730m. contract awarded to the Hyundai Engineering and Construction Co of South Korea. The second, at Yousufia, on the Euphrates, comprising six 200-MW units, was to be built by the USSR's Technopromexport under the terms of a Soviet-Iraq agreement covering the period 1986–90, which also provided for co-operation on an 800-MW power plant in Mosul; and a 300–400-MW hydroelectric plant and dam, costing $200m., in Baghdadi, on the Euphrates. The USSR also helped to build an 840-MW thermal power plant in Nasiriya; a 400-MW hydroelectric plant in Dukan; and a 200-MW thermal power plant in Najibiya. A West German consultant, Fichtner, was chosen to design the third 1,200-MW power station, the al-Anbar plant, which was to be built near Ramadi, on the Euphrates. Italy's GIE has completed expansion of Baghdad's Dawra power station, and was appointed in 1989 to add two 350-MW units to al-Musayyib power station. Another new plant, the 1,400-MW oil-fired power station at ash-Shamal, on the Tigris, was being designed by Energoprojekt of Yugoslavia, and four 350-MW turbine generators were to be supplied by Northern Engineering Industries of the United Kingdom.

In 1987 six new hydroelectric plants, one power station and 18 transformer units began operating, raising Iraq's generating capacity by 6% to 8,538 MW. By mid-1990 capacity had reached 9,000 MW and was expected to double by the end of the century. However, it was estimated that demand for power would increase fourfold by 2000. By 1990 about 95% of the population had access to electricity, with millions connected to the network since the rural supply scheme began in 1975. Consumption was 1,450 kWh per head in 1987, compared with 1,344 kWh per head in 1986. The connection with the Turkish grid has been completed, and wider inter-Arab power connections have also been discussed. Supplies for Turkey were scheduled to flow in December 1988, making Iraq the first exporter of electricity in the Middle East.

Iraq's experimental 70-MW Osirak nuclear reactor was destroyed by an Israeli air force bombing attack in June 1981. In 1990, according to official sources, Iraq had only one nuclear reactor: the 5-MW reactor at Temmuz, supplied by the USSR in the 1960s. Nevertheless, the USA and allied governments remained convinced that Iraq was pursuing a large-scale nuclear

development programme with the aim of producing nuclear weapons. During the 1991 hostilities, it was reported that Iraqi nuclear installations had been bombed to destruction. However, the issue resurfaced in the post-war period, when it became apparent that Iraq's nuclear potential had partially survived, although the Government continued to insist that only civilian nuclear research was being conducted.

The UN embargo that was imposed on Iraq in August 1990 resulted in the suspension of most industrial development projects involving foreign co-operation. The industrial sector was also adversely affected by the loss of technicians from Western countries. The outbreak of actual hostilities in January 1991 led to massive destruction of Iraq's heavy industrial capacity and infrastructure, including as much as 90% of its electricity generating and transmission facilities as well as oil refineries, oil export terminals, petrochemical plants, iron and steel foundries, engineering factories, and phosphate and cement plants. The light industrial sector, which normally supplied the domestic market, was also badly disrupted by the general infrastructural collapse, chronic shortages of fuel and power, and destruction of communications. By early 1992 the Government claimed that 75% of the national power grid had been restored.

The director-general of one of Iraq's main power stations stated in early June 1997 that the national electricity-generating system was currently operating at less than 50% of capacity because of a lack of spare parts. He added that the US $36m. allocated (but not yet disbursed) for the purchase of parts under the current 180-day oil export agreement with the UN would meet 'only 4% of the needs of the power grid'. In 1998 it was announced that Baghdad had been suffering power cuts for five–six hours daily, whilst rural areas had been known to lack electricity for 14–16 hours daily.

A major priority in the Government's six-month emergency reconstruction budget, announced on 2 May 1991, was the restoration of sufficient industrial production to ensure self-sufficiency in certain basic areas. Sectors that were identified for special attention included drug manufacturing, geological surveys and mining, phosphate, fertilizer and sulphur production, and electricity generation and transmission. Priority repairs were also to be undertaken to factories making electrical fittings, bricks, cigarettes and textiles. According to the minister responsible, the rebuilding of civilian industry would have priority over military production (which had traditionally absorbed a large, albeit undisclosed, proportion of resources); however, Western reports of urgent Iraqi moves to re-establish its armaments production capacity (to as much as 87% of the pre-war level by September 1992) cast doubt on this stated policy. Also in May 1991, the Government approved the replacement of Arab Investment Law No. 46 of 1988 by new rules that were designed to encourage greater Arab investment in the private and mixed industrial sectors by granting Arab nationals the right to implement industrial projects and offering them tax and other incentives. Moreover, in August 1991 Law 115 of 1982 was replaced by Law 25 of 1991, which aimed to accelerate industrial development in the private and mixed sectors through the provision of state assistance to selected projects. Strategic and export-orientated industries using local raw materials were to be targeted under the new policy, which specified that a project must involve the use of plant worth at least ID 100,000.

In April 1993 the Iraqi Minister of Labour stated that the prolonged UN embargo was causing many factories to close or to shed labour, with the result that 'for the first time in Iraqi's modern history we have registered a large number of unemployed people'. In September the Ministry of Industry and Minerals (which had reverted to its former name in 1991), which was responsible for thousands of state enterprises in areas other than oil production and arms manufacture, was authorized to incorporate these enterprises as limited companies and to offer up to 75% of their shares for sale on the Baghdad stock exchange. Companies which passed into majority private ownership would enjoy tax exemptions for 10 years. About 150m. shares in four of the largest companies—producing textiles, bricks and cement—were offered for sale later in the year, but the level of public indifference to this exercise was such that less than 1m. shares were bought. In the case of a major cement company, the reported take-up was 40,000 shares, each priced at ID 125, out of 75m. shares offered. By mid-1995, however, the Baghdad stock exchange was reported to be trading as many as 6m. shares per week, mainly in companies still under formation. Within the state-controlled armaments industry, import-substitution achievements announced in 1995 included the local manufacture of electrical production-line equipment for use in a 'major steel project'.

COMMUNICATIONS

The communications sector was considered to be of major importance under the provisions of the 1981–85 Plan, and there was considerable activity in this sector during 1981. In May a consortium of British consultants was awarded a US $129m. contract to design an extensive underground public transport system for Baghdad. It was believed to be the largest design contract ever awarded in Iraq, and the full cost of constructing the system was estimated to be up to $10,000m. The consortium, known as the British Metro Consultants Group, was to act as project designer. Contracts for detailed designs for the various sections have so far been awarded to a German consortium of JV Dorsch, to the US company DeLeuw Cather International, to a Brazilian consortium, led by Promon Engenharia, and to Belgium's Transurb Consult; and the contract for soil investigation has been tendered. However, the project had already been reduced in priority before the 1991 hostilities rendered its future even more uncertain.

Another major project is the construction of the new Baghdad international airport. In April 1979 a US $900m. contract was awarded to two French companies—Spie Batignolles and Fougerolle Construction—to build the airport for the State Organization for Roads and Bridges. The first stage has been completed and is used by Western European airlines and Iraqi Airways. In preparation for the substantial increase in traffic that the opening of the new airport is expected to bring, Iraqi Airways began expanding its fleet and network, acquiring two Boeing 747s and three 727s from the USA in 1981 at a cost of $183.6m. Passenger traffic was expected to rise by 10% per year, but was limited by regulations which permitted only night flights in and out of Baghdad airport. In 1989 Iraqi Airways carried 1,171,600 passengers, compared with 695,538 in 1988 and 525,948 in 1987. The airline normally flies to about 42 cities in Iraq and abroad.

A new international airport was built at Basra during the Iran–Iraq War by West German contractors and was opened in August 1988, after the cease-fire. The airport has a 4,000-m runway, capable of taking the biggest wide-bodied aircraft now available. Consultants have designed the country's third international airport, at Mosul, and a local airport at Arbil. The latter is intended to form part of a domestic network which will also include Amara, Kirkuk and Najaf. It was reported in mid-1990 that Airbus Industries had concluded the sale of five Airbus A310-300 aircraft to Iraq, but discussions concerning the financing of the sale were cancelled following the imposition of UN economic sanctions against Iraq. The two aircraft scheduled for delivery to Iraq in 1992 were allocated to other customers and no work was undertaken on the remainder of the contract.

Total freight carried by Iraqi Airways amounted to 31,539 tons in 1989, compared with 24,752 tons in 1988 and 16,833 tons in 1987. In 1990 plans were announced to establish a separate freight airline, Iraqi Airways Cargo.

Iraq's main port is at Basra but it was not able to operate during the Iran–Iraq War, and its future depends on there being a lasting political decision over the ownership and use of the Shatt al-Arab waterway. Before the war, two new ports were developed, at Umm Qasr and Khor az-Zubair. The latter is linked with Umm Qasr and the Gulf by a 40-km ship canal. Clandestine operations to clear this canal began before the end of the war with Iran, and after August 1988 extensive dredging operations were begun in order to clear navigation channels to both ports. Deep-water channels were certified free from hazards in early 1990, and the ports now have the capacity to handle general cargo, sulphur, petrochemicals, iron ore, grain, sugar and fertilizers. A further 13 berths are to be constructed at Umm Qasr, at a projected cost of more than $500m. Just before the Iraqi invasion of Kuwait in August 1990, work commenced on the construction of two floating docks at Khor az-Zubair. The first cargo to be unloaded at Umm Qasr since 1990 was a food shipment in November 1993. In March 1994 the UAE announced

its intention to apply to the UN sanctions committee for permission to set up a direct shipping link with Umm Qasr to ferry in approved supplies from the UAE port of Jebel Ali.

River transport has been given increasing prominence. Dredging of several stretches of the Tigris between Baghdad and Basra has been completed, and navigation channels are being laid out. A French consultant, Sogreah, was appointed to study the navigation possibilities on the Euphrates between Haditha and Qurnah, and Iraq has invited consultants to bid for a navigation development study of the Tigris as a whole—from Mosul to Basra. The artificial 'third river', completed in December 1992, is navigable by 5,000-ton cargo barges.

The Government sought to proceed with plans to build some 2,400 km of railways between 1981 and 1985. The two major existing lines (between Baghdad and Basra, and from Baghdad north to Mosul and Tel Kotchek) will eventually be superseded by more modern, high-speed tracks. The cost of the Baghdad–Basra line, for which companies were reported in August 1990 to be preparing bids, has been estimated at $6,000m. The contract for the building of the first stage of the new Baghdad–Umm Qasr line has been delayed. Designs for the new line north from the capital to the Turkish border, via Mosul, Arbil and Kirkuk, have been completed by French consultants. A 273-km (170-mile) line between Kirkuk, Baiji and Haditha, built by South Korean firms, and the 550-km (342-mile) line from Baghdad to Husaibah, on the Syrian border, built by Construction Mendes of Brazil, were both opened in 1986. An Indian company has built the third and fourth stages of the Musayyib–Samarra line. All lines entering Baghdad will eventually be connected to the 112-km (70-mile) Baghdad loop line. Designs have been completed for the project, which involves the expansion of the capital's two main passenger stations, the development of a new freight terminal, and the building of three new bridges. The Indian Railways Enterprise and the Iraq Rail Establishment signed a memorandum of understanding in March 1996 'to execute new railways projects in Iraq' at an unspecified future date. A Czech company which had supplied 100 diesel locomotives to Iraq at the end of the 1970s announced plans in 1996 to bid to supply a further 70 locomotives as soon as UN trade sanctions were lifted.

Negotiations with Kuwait and Saudi Arabia over the establishment of rail links have taken place over a number of years. A working link and joint operation with Turkey may be developed first. The Government hopes eventually to link its rail system with Kuwait, Saudi Arabia and Turkey as part of a European-Gulf network.

Considerable emphasis is also being put on road construction. A 137-km section, from Tulaiha to Rutba, of the six-lane 1,200-km international Expressway Number One, was opened in August 1987. It is the main section in a project designed to create a road link between the Gulf states and the Mediterranean. The bulk of the project had been completed by 1989. In Baghdad, a South Korean company is working on the Abu Ghraib expressway, which will connect the capital with Expressway Number One.

A second expressway is intended to link Baghdad with the Turkish border via Samarra, Kirkuk, Arbil, Mosul, Dohuk and Zakho. Cowiconsult of Denmark has completed designs for the project, which will cost an estimated US $6,000m. A six-lane highway, running from Safwan, on the Kuwaiti border, to Baghdad, via Zubair and Nasiriya, was completed in 1987. Several urban expressways and bridges have been built in Baghdad, though further work on the capital's planned motorway network is expected to be delayed for some years. A three-stage programme to build 10,000 km of rural roads is also being implemented.

Iraq has been modernizing its telecommunications system for some years and has introduced crossbar telephone switching, a telex system, a microwave link between major cities and an earth satellite connection for international communications. By 1985 more than 1m. lines had been added to the network. Iraq is also investigating the potential of fibre optics, and awarded a contract to a Japanese firm at the end of 1982. At the end of 1985 bids were invited for a 1,000-km cable to link Baghdad and Basra. Prior to the 1991 hostilities the Government's aim was to increase the total number of telephone lines to 2m. by 1995.

Iraq's communications infrastructure was a prime target of the multinational force's bombing campaign during the 1991 hostilities and suffered massive damage as a result. According to an official UN report compiled in March 1991, all modern communications systems were destroyed, including the internal and external telephone networks, and heavy damage was inflicted on roads, railways and ports. Of 123 bridges hit by allied bombs, about one-third were totally destroyed, and in the war's immediate aftermath the only viable surface transport link to the outside world was through Amman (Jordan) to the port of Aqaba. In June the Government estimated the cost of repairing bridges and other installations that had been built by the Ministry of Housing and Construction at US $1,450m. Repair of roads and bridges was given priority in the post-war reconstruction programme, it being claimed that 35 bridges had been repaired by the end of June 1991. By January 1992 the Government claimed that 99 bridges had been repaired, while the colossal damage to the telephone system (including the destruction of nearly half of the country's 900,000 telephone lines) was also being remedied. Completion of a new 190-m telecommunications tower in Baghdad, to replace the tower destroyed in the 1991 war, was scheduled for November 1993. However, at the end of 1994 Iraq's international telecommunications services remained severely restricted, while the domestic telephone network was officially estimated to be operating at 30% of its pre-1991 capacity. Despite continued progress in the reconstruction of bridges, roads and other elements of the transport infrastructure, the quality of Iraq's public transport services underwent a marked deterioration in 1994 because of lack of access to spare parts for vehicles and essential equipment. In January 1992 Iraqi Airways resumed regular commercial flights between Baghdad and Basra. The airline stated in early 1995 that it was maintaining intensive training programmes for pilots, engineers and technicians whose normal duties had been disrupted by the UN embargo.

FINANCE AND BANKING

Owing to Iraq's inability to export large quantities of petroleum during the early years of the Iran–Iraq War, the reduction of petroleum prices, the heavy cost of the conflict (estimated at US $600m.–$1,000m. per month at the beginning of 1986) and the additional burden of funding economic development, the country's official reserves of foreign exchange had declined to below $5,000m. by mid-1983. This was to be compared with the pre-war estimate of $35,000m. Little new information has become available since, and 1989 estimates were between zero and $2,000m. To minimize the continuing annual deficits on the current account of the balance of payments (an estimated $1,571m. in 1986), the Iraqi Government imposed stringent controls on foreign currency payments and imports. In the absence of Iraqi statistics, Western sources estimated, before the 1990–91 Gulf crisis, that the current account deficit would be about $1,500m. in 1990, declining to $200m. per year by 1992 and then going into increasing surplus in the mid-1990s. However, the combined effects of the UN embargo, the 'freezing' of Iraqi assets abroad, the physical destruction of the 1991 war and the post-war requirement on Iraq to pay reparations served to reduce Iraq's national finances to a state of total disarray (see Consequences of the 1990–91 Gulf Crisis, above).

In comparison with other Arab countries, Iraq has few banks and all are state-controlled, although in May 1991 the Government adopted an amendment to the banking laws, enabling the creation of private banks, provided that they undertook to operate under the supervision of the Central Bank. The Central Bank of Iraq, founded in 1947 as a successor to the National Bank of Iraq, was one of the first Arab monetary authorities.

For many years, the only commercial bank was Rafidain Bank, which was founded in 1941. Rafidain was long considered the biggest Arab commercial bank in terms of deposits and gross assets. In 1996 its total assets reached ID 221,132m. Rafidain has 152 local branches and nine branches abroad. Rafidain is also permitted to take part in the Arab and international markets for syndicated loans and bonds. It is a shareholder in several European-Arab consortia banks, such as the Paris-based Union de Banques Arabes et Françaises, and development agencies. It is also one of the seven shareholders in Gulf International Bank, established in Bahrain in 1977 as a regional

commercial bank. At the end of 1981, Rafidain established a joint venture bank with Banco do Brasil. Its capital was set at US $17.5m. In 1987 Rafidain's capital was doubled to ID 100m. in the first stage of a programme to upgrade and expand the banking system. In May 1988 the Government announced that a second commercial bank, Rashid Bank, would be established, with capital of ID 100m., to compete with Rafidain Bank. Competition was also to be encouraged in the insurance sector. The three companies in this sector have all been absorbed into the Ministry of Finance, as have the country's three specialist banks. The ministry is encouraging them to expand, and the banks are being given administrative and financial autonomy, bound only by the Government's fiscal policy.

The oldest specialized bank is the Agricultural Co-operative Bank, established in 1936, which provides medium- and long-term credits to farmers and agricultural development organizations. After 1981, when a record ID 186m. was loaned, lending levels fell as a consequence of the war. In 1987 the bank loaned a total of ID 25.4m., compared with ID 43.2m. in 1986. Total lending by the bank over the period 1980–87 amounted to ID 570m. There are two other specialized banks. The Industrial Bank, established in 1940, provides short-, medium- and long-term loans to public and private industrial companies. Between 1980 and 1987 the bank extended ID 52m. in loans and credits. During 1987 total loans amounted to ID 1.5m., compared with ID 14.9m. in 1982. The bank holds shares worth US $62.9m. in 14 mixed-sector joint-stock companies and has been instructed to become more involved in offering finance to both local and Arab investors, as private and mixed-sector companies are encouraged to play a wider role in the development of the economy. The bank is also administering a $28m. loan for the Kuwait-based Arab Fund for Economic and Social Development (AFESD) to assist in the development of light industry. The Real Estate Bank, founded in 1949, provides credits for housing, construction and tourism. Because of the high demand for housing, the bank has expanded rapidly in recent years. Lending over the period 1980–87 totalled ID 2,770m., although annual levels have declined since the 1982 peak of ID 750.5m. In mid-1988 the bank's capital was raised by ID 50m., to ID 800m. to enable it to play a wider role in encouraging people to build their own houses. A government decree of June 1991 established a new state-owned Socialist Bank, with an initial capital of ID 500m., its principal stated role being to make interest-free loans to civil servants and decorated veterans of the war with Iran.

Iraq was also a major aid donor before the Iran–Iraq War, being the third biggest among Arab states, after Saudi Arabia and Kuwait. In 1979, according to OECD figures, its disbursements totalled US $861.5m., representing about 3% of gross national product (GNP). Most of this was channelled through the Iraqi Fund for External Development which had a capital of $677m. In mid-1979 Iraq decided to compensate poorer customers for its petroleum for any future petroleum price increases by granting them long-term interest-free loans. Under this system, 12 developing countries (Bangladesh, India, Madagascar, Morocco, Mozambique, Pakistan, the Philippines, Senegal, Somalia, Sri Lanka, Tanzania and Viet Nam) received over $200m. in the second half of 1979.

Donations of aid had resumed by 1990, and in June Iraq announced that it would grant Jordan US $50m. (for 1990) and the PLO $25m. In September 1990 the Iraqi Government offered to supply free petroleum to developing countries, but this was widely seen as a public relations exercise, intended to undermine international support for the UN embargo that had been imposed on Iraq in the previous month because of its invasion of Kuwait.

An amendment to Law 64 of 1976, introduced in May 1991, authorized the operation of private banks and thus ended the state monopoly of banking dating from 1964. Applications were subsequently lodged by four prospective new banks, namely the Alitimad Bank, the Baghdad Bank, the Iraqi Commercial Bank and the Private Bank. The step was intended to encourage a wider private-sector role in the economy, in accordance with the Government's post-1989 liberalization policy. However, observers commented that the authorization of private banks was unlikely to affect the banking system substantially until the Central Bank relaxed its tight control of monetary policy. A stock exchange was established in Baghdad in March 1992.

Having acted as the Iraqi Government's main means of paying external debts before the country was isolated from the international financial system, Rafidain Bank was exposed to numerous claims from overseas creditors after 1990. However, a creditors' meeting held in London in April 1993 was informed by British liquidation experts that liquidation of Rafidain's international operations would yield only a minimal recovery, as these operations currently showed a net deficiency of funds totalling £5,560m. ($8,800m.).

UN Security Council Resolution 778 of 2 October 1992 authorized the impounding of oil-related Iraqi assets ('frozen' in overseas accounts since August 1990) for the purpose of funding UN programmes connected with the Gulf crisis and its aftermath, including humanitarian relief operations, administration of war victims' compensation claims and inspection and destruction of Iraqi weapons. Assets so impounded were to be transferred to a UN escrow account in New York, disbursements from which would be refundable to Iraq if the Iraqi Government agreed to sell petroleum under UN supervision.

Notwithstanding an Iraqi Government threat to take legal action against foreign banks transferring funds to the escrow account, a total of US $101.5m. had been so transferred by 30 April 1993. In response to a UN appeal for further transfers to meet ongoing programme costs, the US Government said that it was prepared to authorize the transfer of $200m. of the $637.4m. of impounded Iraqi assets within its jurisdiction, provided that transfers of US-based funds never exceeded 50% of total transfers. Among other overseas fund holders, the Bank of Tokyo said that assets totalling $44.88m. could not be transferred in view of third-party rights over them, while Tunisia indicated that $15.8m. in locally-held assets had been used to offset outstanding Iraqi debts to Tunisia.

Total Iraqi assets held in UK banks fell from about US $1,100m. at the time of the invasion of Kuwait to $748m. at the beginning of 1995, as a result of the release of funds to pay debts owed to British companies and to finance exports of food and medicines to Iraq. In March 1995 the Iraqi Ministry of Finance claimed that seven Arab countries owed Iraq a total of $1,282m. in loans, payments for oil, profits withheld by Arab companies and assets belonging to Iraqi banks. Saudi Arabia was said to owe 35% of the total, Syria 28%, Bahrain 20%, Kuwait 10% and Somalia 5%, with the UAE and Egypt responsible for the remainder.

The black-market value of the Iraqi dinar, already worth only a fraction of the official exchange rate of US $1 = ID 0.31, was further depressed by the UN Security Council's October 1992 decision on external asset transfers. Punctuated by occasional extreme fluctuations (e.g. from $1 = ID 23 in February 1993 to $1 = ID 95 in April 1993), the underlying decline of the currency continued during the first half of 1993, taking the average market rate to around $1 = ID 65 during July.

In early May 1993 the Iraqi Government announced a six-day deadline for the exchange of old-style Swiss-printed 25-dinar notes for locally-printed equivalents, introduced after the 1990–91 Gulf crisis. The old-style notes were not exchangeable outside the country, and the border with Jordan, where speculators and currency traders held notes with an estimated market value of US $200m., was closed during the exchange period. Within Iraq, this exercise highlighted the problematical status of the Kurdish-controlled area in the north, which was effectively deprived of the exchange facility yet unable to relinquish its formal currency link with Baghdad. It led to a marked rise in Kurdish use of the Turkish lira as a preferred medium of exchange within the 'safe haven', this arrangement being presented as a strictly practical (i.e. politically neutral) matter.

Western observers had difficulty in discerning a clear-cut economic motive for the May 1993 currency initiative. It was readily accepted in Iraqi government circles that the post-war reconstruction drive had been accompanied by rapid growth in the money supply, making price inflation and currency depreciation inevitable while the external position continued to deteriorate. Moreover, the Government had virtually institutionalized the unofficial currency trade by itself relying on the black market to supply part of its hard currency requirement

(estimated at US $90m. per month in the first half of 1993) to maintain the food rationing system.

The unofficial exchange rate fell below US $1 = ID 100 for the first time on 26 October 1993. The Government responded to this development by halting its own purchases of dollars on the black market. At the beginning of December, when the unofficial rate had fallen below $1 = ID 150, the Government authorized its ministries to deal in hard currency with the private sector. At the beginning of January 1994 Iraqis were permitted to deal legally in foreign exchange and to open foreign cash accounts in domestic banks, while 28 firms were licensed by the Central Bank to buy and sell foreign currency at rates determined by 'daily supply and demand'. On 5 February, after the unofficial exchange rate had fallen below $1 = ID 200, state banks were authorized to buy and sell hard currency outside the official rate of $1 = ID 0.31. As Iraq's chronic economic crisis intensified, the rate of currency depreciation accelerated, taking the unofficial rate per dollar to around 250 dinars in March, 300 dinars in April, 400 dinars in mid-May and 500 dinars by the beginning of June. The Central Bank, which had previously issued no currency notes above 25 dinars, announced the launch of a 50-dinar note in March and a 100-dinar note in May. During January 1995, when the Central Bank issued a 250-dinar note for the first time, the unofficial exchange rate declined from $1 = ID 665 to $1 = ID 750, while the authorized dealing rate was devalued from $1 = ID 550 to $1 = ID 600. The unofficial exchange rate reached 1,000 dinars to the dollar for the first time in March, after which the value of the currency depreciated further to 1,300 dinars per dollar by late June and 1,450 dinars per dollar by mid-July. In May the Government announced an issue of five-year bonds paying interest of 20% per year (more than the prevailing bank deposit rates but far less than the rate of inflation). The annual interest rate for two-year deposits at state-owned commercial banks was raised from 15% to 18% in June.

The unofficial exchange rate slumped from 2,000 dinars per US dollar in September 1995 to 2,600 dinars per dollar in October 1995. The Government had in September lifted an import ban on 232 types of foreign goods (imposed in 1993 for exchange-control reasons). In mid-December, when the unofficial rate was around 2,550 dinars per dollar, the Government devalued its authorised dealing rate from $1 = ID 600 to $1 = ID 1,000, stating that it was determined 'not to allow the exchange rate to suffer any further setbacks'. In January 1996 the Government halted the printing of new banknotes; raised petrol prices by 600% and doubled the fees for official building permits; and further relaxed the exchange-control and currency trading regulations. Having depreciated below the level of $1 = ID 3,000 for the first time in early January the unofficial exchange rate recovered to $1 = ID 1,500 towards the end of the month following Iraq's decision to open talks on UN Security Council Resolution 986. As the talks proceeded the dinar's free-market value moved above the authorised dealing rate of 1,000 dinars per dollar. In mid-June the unofficial exchange rate stood at 900 dinars to the dollar, having touched a high point of 580 dinars per dollar in February. During the second half of 1996 the rate decreased to a low point of 1,780 dinars per dollar in November before recovering to 600 dinars per dollar in mid-December after the delayed implementation of Resolution 986. From October 1996 state banks were authorized to exchange dinars for hard currency needed for any legitimate purpose, whereas previously they had sold hard currency only to licensed importers, students studying abroad and Iraqis receiving medical treatment abroad. In January 1997 it was reported that the Central Bank was applying 'strict monetary policies' in order to support the exchange rate of the dinar. The unofficial exchange rate fluctuated mainly within the range 1,000 to 1,200 dinars per dollar during the first half of 1997. At September 1998 the unofficial rate was $1 = ID 1,600.

FOREIGN TRADE

Exports of petroleum have been, by far, Iraq's most important source of revenue, providing more than 95% of the country's earnings of foreign exchange. Receipts from these exports rose sharply in the mid- and late 1970s, partly because of higher production, but mainly because of the rise in prices. By 1979, Iraq's petroleum exports were earning three times as much as in 1974, and by 1980 these exports were worth US $26,278m. However, owing to Iraq's inability to export sufficient petroleum, because of the war with Iran, and to the drop in prices, exports fell to $9,198m. in 1981. Revenues from oil exports were in the range $9,000m.–$11,000m. per year in 1982–85, and declined to an estimated $6,813m. in 1986. The higher oil prices recorded in the first half of 1987 were believed to have brought about a revival in the value of petroleum sales to more than $11,000m. in 1987, to about $13,000m. in 1988 and to about $12,000m. in 1989. While earnings declined in 1981 and 1982, Iraq continued to spend, importing goods worth more than $18,000m. in 1981 and $19,000m. in 1982, before imposing a sharp decrease in the level of imports, to about $12,000m. per year in 1983, 1984 and 1985. Imports were reduced to between $8,000m. and $9,000m. per year in 1986 and 1987 (though Western analysts estimate that they reached $9,700m. in 1987), and to $7,146m. in 1988. In 1989, according to Western calculations, total exports were worth $12,080m., while imports rose to $10,290m.

Most trade is normally with Western Europe, the USA and Japan, but Iraq also exports significant amounts of petroleum to Brazil, Yugoslavia, eastern Europe and Turkey. Trade with the USSR consisted mainly of Soviet military supplies. Among Western countries, France has been one of Iraq's most important trading partners. It is estimated that, after the outbreak of war with Iran, Iraq bought more than US $5,500m. worth of French armaments in the 1980s, while French contractors won orders worth more than $4,500m.

Although several countries experienced a decline in exports to Iraq during the second half of the 1980s, imports from Western countries generally rose during 1988 and 1989. The value of Japanese exports rose to US $406m. in 1988 and to $490m. in 1989, compared with $391m. in 1987. French exports were worth $445m. in 1988 and $478m. in 1989, compared with $391m. in 1987, while the value of the United Kingdom's exports rose from $445m. in 1987 to $720m. per year in both 1988 and 1989. The value of West German exports rose from $457m. in 1987 to $884m. in 1988 and to $1,168m. in 1989. The value of imports from Italy declined to $174m. in 1988, compared with $225m. in 1987, but rose to $372m. in 1989, while that of imports from Brazil fell to $228m. in 1988, compared with $305m. in 1987. The value of imports from the USSR declined from $511m. in 1987 to $509m. in 1988 and to $405m. in 1989. In 1988 the USA supplanted Turkey as Iraq's leading trading partner, exporting $1,156m. worth of goods (mainly agricultural products), compared with $683m. in 1987. US exports to Iraq were valued at $1,173m. in 1989. Like the United Kingdom, the USA extended a credit line to Iraq in 1988 in order to guarantee the volume of its exports. The value of Turkish exports to Iraq increased from $945m. in 1987 to $986m. in 1988, but fell to $445m. in 1989.

The value of Iraq's exports to the USA, at US $2,408m., more than quadrupled in 1989, compared with 1987, as a result of Iraq's decision to market its crude petroleum more attractively in the USA. Another leading importer of Iraqi petroleum was the USSR, the value of whose total imports from Iraq rose from $1,243m. in 1987 to $1,585m. in 1988, but declined to $1,549m. in 1989. The value of Turkish imports from Iraq was $1,650m. in 1989, compared with $1,154m. in 1987, while the value of Italian imports declined from $1,214m. in 1987 to $996m. in 1988 and to $674m. in 1989.

In the first half of 1990 there were increased efforts by Iraq's trading partners to prevent exports of industrial goods which might possibly serve as components for missiles and atomic weapons. In March the United Kingdom and the USA claimed to have frustrated Iraqi attempts to import nuclear detonators, and in April two UK companies were prevented from exporting to Iraq steel cylinders which were later proved to be components for a planned 'supergun'. The USA has also claimed that Iraq planned to use loans made improperly by the Atlanta (USA) branch of Italy's Banca Nazionale del Lavoro to acquire military technology. In February 1995 a US company which had illegally supplied artillery fuses to Iraq in 1990 was fined US $500,000 by a US court and was ordered to dissolve itself.

The imposition of the UN trade embargo on Iraq in August 1990 and the subsequent Gulf hostilities brought about the total disruption of Iraq's external trade, subsequently prolonged by disagreements between the Iraqi Government and UN sanctions

administrators (see Consequences of the 1990–91 Gulf Crisis, above). The IMF estimated the value of Iraq's total imports in 1992 as ID 78.2m., compared with ID 118.9m. in 1991 and ID 2,042.4m. in 1990. The estimated 1992 total was equivalent to about US $250m. at the official exchange rate, but only a fraction of this at prevailing black-market rates. Unofficial estimates of Iraq's external trade in 1994 suggested that import spending had totalled $2,000m., while exports had earned $500m. The volume of basic commodities imported via the Jordanian port of Aqaba in the first quarter of 1995 totalled 233,800 tons (of which nearly two-thirds was wheat). The embargo on Iraqi oil exports from the Gulf was closely monitored by naval patrols acting on behalf of the UN, which occasionally reported instances of vessels attempting to use false Iranian documentation as a cover for shipments of Iraqi oil. By the end of April 1996 the UN's naval patrols had boarded about 10,000 vessels in all, of which 76 had come under suspicion of breaking the trade embargo. Amid growing speculation about an early relaxation of UN sanctions, Western and other foreign business representatives visited Baghdad in substantial numbers in 1994/95 to assess the prospects for a resumption of trading relations with Iraq. In the first half of 1996 foreign business interest was centred on the trading opportunities that could be expected to open up when UN Security Council Resolution 986 was implemented.

DEVELOPMENT AND PLANNING

At the beginning of the 1980s Iraq did not need to seek external loans, economic development having been funded mainly from the State's petroleum revenues. The sustained rise in petroleum prices gave Iraq a major opportunity to increase its development spending. Despite the high costs incurred by the war with Iran, the 1982 expenditure programme allocated an estimated ID 7,000m. to the ordinary budget and ID 7,000m. to investment spending. The import programme was allocated ID 5,000m. Iraq was unable to maintain the early momentum of its development programme, however, because of falling petroleum revenues and the high cost of the Iran–Iraq War. No detailed budget figures were disclosed from 1982 to 1989, and the 1981–85 Development Plan had to be abandoned, although longer-term plans were published for specific sectors.

In the Government's published budget for 1990, expenditure was forecast at ID 24,400m. The new 'consolidated general budget' reportedly projected a deficit of ID 6,600m., compared with a deficit of ID 7,200m. in 1989. The budget proposals also incorporated a total investment allocation of ID 5,600m., of which industry was to receive ID 2,965m. Because of the Gulf crisis, no details were disclosed of the 1991 budget until it was substantially revised to take account of damage sustained in the hostilities. A six-month emergency reconstruction budget, announced on 2 May 1991, reduced planned expenditure in the general consolidated budget to ID 13,876m. (from the original total of ID 14,596m.) and cut the investment budget to ID 1,660m. (from ID 2,340m.). It was stated that non-essential development projects had been postponed until 1992, and available resources diverted to the reconstruction effort. Nevertheless, over the five-year period 1991–95, it was envisaged that ID 28,700m. would be spent on development projects, of which the foreign currency component would be some $56,000m.

In the 1980s Iraq attracted substantial foreign investment for its development projects, notably from West European countries, Japan and the USSR. In 1984 the USSR pledged US $2,000m. in long-term credits for Iraq, which also obtained lines of credit or other credit facilities from the United Kingdom, the USA and the Federal Republic of Germany (the latter two agreeing in 1987–88 to restore export credit guarantees which had earlier been withdrawn when Iraq defaulted on debt repayments). Nevertheless, as a result of persistent repayment problems, much of the credit—and the goodwill—had again ceased by the end of the decade, despite the conclusion of various intergovernmental refinancing agreements. By mid-1990 the claims on Iraq of banks reporting to the Bank for International Settlements were calculated as totalling $7,690m. worldwide, while national credit guarantee agencies with major exposure to outstanding Iraqi debts were headed by Coface of France (some $3,200m.) and included those of Japan and Italy (each some $3,000m.) and of Germany ($2,000m.).

On a multilateral basis, loans worth more than US $250m. were agreed with the Islamic Development Bank to fund imports and hospital work. The Arab Monetary Fund also loaned money ($523m. between 1983 and mid-1989) to support Iraq's balance of payments. Loans to support a coldstore project, telecommunications, an earthquake warning system, agricultural and industrial development and the upgrading and extension of power generation units were made by the AFESD. Iraq secured two Euroloans of $500m., in 1983 and 1985, to finance foreign trade and development projects, but was forced to reschedule payments due on them, owing to a shortage of foreign exchange.

Against this background, there was considerable doubt regarding continued foreign investment in Iraqi development projects even before the onset of the Gulf crisis in August 1990 brought about the suspension of virtually all such co-operation and of Iraqi repayments on outstanding debts. In September 1990 Iraq's total foreign debt was estimated at US $65,000m., a total which the Iraqi Government itself appeared to revise upwards in a post-war submission to the UN in April 1991 (see Consequences of the 1990–91 Gulf Crisis, above).

Finance

CURRENCY AND EXCHANGE RATES

Monetary Units

1,000 fils = 20 dirhams = 1 Iraqi dinar (ID).

Sterling, Dollar and Euro Equivalents (30 April 1999)

£1 sterling = 501.26 fils;
US $1 = 310.86 fils;
€1 = 329.42 fils;
100 Iraqi dinars = £199.50 = $321.69 = €303.57.

Exchange Rate

From February 1973 to October 1982 the Iraqi dinar was valued at US $3.3862. Since October 1982 it has been valued at $3.2169. The dinar's average value in 1982 was $3.3513. The aforementioned data refer to the official exchange rate. There is, in addition, a special rate for exports and also a free-market rate. The unofficial exchange rate was $1 = 1,600 dinars in September 1998.

Directory

The Constitution

The following are the principal features of the Provisional Constitution, issued on 22 September 1968:

The Iraqi Republic is a popular democratic and sovereign state. Islam is the state religion.

The political economy of the State is founded on socialism.

The State will protect liberty of religion, freedom of speech and opinion. Public meetings are permitted under the law. All discrimination based on race, religion or language is forbidden. There shall be freedom of the Press, and the right to form societies and trade unions in conformity with the law is guaranteed.

The Iraqi people is composed of two main nationalities: Arabs and Kurds. The Constitution confirms the nationalistic rights of the Kurdish people and the legitimate rights of all other minorities within the framework of Iraqi unity.

The highest authority in the country is the Council of Command of the Revolution (or Revolutionary Command Council—RCC), which will promulgate laws until the election of a National Assembly. The Council exercises its prerogatives and powers by a two-thirds majority.

Two amendments to the Constitution were announced in November 1969. The President, already Chief of State and Head of the Government, also became the official Supreme Commander of the Armed Forces and President of the RCC. Membership of the latter body was to increase from five to a larger number at the President's discretion.

Earlier, a Presidential decree replaced the 14 local government districts by 16 governorates, each headed by a governor with wide powers. In April 1976 Tikrit (Salah ad-Din) and Karbala became separate governorates, bringing the number of governorates to 18, although three of these are designated Autonomous Regions.

The 15-article statement which aimed to end the Kurdish war was issued on 11 March 1970. In accordance with this statement, a form of autonomy was offered to the Kurds in March 1974, but some of the Kurds rejected the offer and fresh fighting broke out. The new Provisional Constitution was announced in July 1970. Two amendments were introduced in 1973 and 1974, the 1974 amendment stating that 'the area whose majority of population is Kurdish shall enjoy autonomy in accordance with what is defined by the Law'.

The President and Vice-President are elected by a two-thirds majority of the Council. The President, Vice-President and members of the Council will be responsible to the Council. Vice-Presidents and Ministers will be responsible to the President.

Details of a new, permanent Constitution were announced in March 1989. The principal innovations proposed in the permanent Constitution, which was approved by the National Assembly in July 1990, were the abolition of the RCC, following a presidential election, and the assumption of its duties by a 50-member Consultative Assembly and the existing National Assembly; and the incorporation of the freedom to form political parties. The new, permanent Constitution is to be submitted to a popular referendum for approval.

In September 1995 an interim constitutional amendment was endorsed by the RCC whereby the elected Chairman of the RCC will assume the Presidency of the Republic subject to the approval of the National Assembly and endorsement by national referendum.

In July 1973 President Bakr announced a National Charter as a first step towards establishing the Progressive National Front. A National Assembly and People's Councils are features of the Charter. A law to create a 250-member National Assembly and a 50-member Kurdish Legislative Council was adopted on 16 March 1980, and the two Assemblies were elected in June and September 1980 respectively.

The Government

HEAD OF STATE

President: SADDAM HUSSAIN (assumed power 16 July 1979; according to official results, at a national referendum conducted on 15 October 1995, 99.96% of Iraq's 8.4m. electorate recorded its endorsement of President Saddam Hussain's continuance in office for a further seven years).

Vice-Presidents: TAHA YASSIN RAMADAN, TAHA MOHI ED-DIN MARUF.

REVOLUTIONARY COMMAND COUNCIL

Chairman: SADDAM HUSSAIN.

Vice-Chairman: TAHA YASSIN RAMADAN.

Other Members:

IZZAT IBRAHIM AD-DURI
TAREQ AZIZ
Gen. SULTAN HASHIM AHMAD
MUHAMMAD HAMZAH AZ-ZUBAYDI
TAHA MOHI ED-DIN MARUF
SA'ADOUN HAMMADI MAZBAN KHADR HADI

COUNCIL OF MINISTERS
(September 1999)

Prime Minister: SADDAM HUSSAIN.

Deputy Prime Ministers: TAREQ AZIZ, TAHA YASSIN RAMADAN, MUHAMMAD HAMZAH AZ-ZUBAYDI.

Deputy Prime Minister and Minister of Finance: HIKMAT MIZBAN IBRAHIM.

Minister of the Interior: MUHAMMAD ZIMAN ABD AR-RAZZAQ.

Minister of Defence: Gen. SULTAN HASHIM AHMAD.

Minister of Foreign Affairs: MUHAMMAD SAEED AS-SAHAF.

Minister of Agriculture: ABDULLAH HAMEED MAHMOUD SALEH.

Minister of Culture and Information: HUMAM ABD AL-KHALIQ ABD AL-GHAFUR.

Minister of Justice: SHABIB AL-MALKI.

Minister of Irrigation: MAHMOUD DIYAB AL-AHMAD.

Minister of Industry and Minerals: ADNAN ABD AL-MAJID JASSIM.

Minister of Oil: Gen. AMIR MUHAMMAD RASHID.

Minister of Education: FAHD SALIM ASH-SHAKRAH.

Minister of Health: UMEED MADHAT MUBARAK.

Minister of Labour and Social Affairs: Gen. SAADI TUMA ABBAS.

Minister of Planning: SAMAL MAJID FARAJ.

Minister of Higher Education and Scientific Research: ABD AL-JABBAR TAWFIQ MUHAMMAD.

Minister of Housing and Construction: MAAN ABDULLAH SARSAM.

Minister of Transport and Communications: Dr AHMAD MURTADA AHMAD KHALIL.

Minister of Awqaf (Religious Endowments) and Religious Affairs: Dr ABD AL-MUNIM AHMAD SALIH.

Minister of Trade: MUHAMMAD MAHDI SALIH.

Minister of State for Military Affairs: Gen. ABD AL-JABBAR KHALIL ASH-SHANSHAL.

Ministers of State: ARSHAD MUHAMMAD AHMAD MUHAMMAD AZ-ZIBARI, ABD AL-WAHHAB UMAR MIRZA AL-ATRUSHI.

Presidential Advisers: WATBAN IBRAHIM AL-HASSAN, SAFA HADI JAWAD, ABD AS-SATTAR AHMAD AL-MAINI, ABD AL-WAHHAB ABDULLAH AS-SABBAGH, ABDULLAH FADEL-ABBAS, AMER HAMMADI AS-SAADI HATIM AL-AZAWI, NIZAR JUMAH ALI AL-QASIR.

MINISTRIES

Office of the President: Presidential Palace, Karradat Mariam, Baghdad.

Ministry of Transport and Communications: Nr Martyr's Monument, Karradat Dakhil, Baghdad; tel. (1) 776-6041; telex 212020.

KURDISH AUTONOMOUS REGION

Executive Council: Chair. MUHAMMAD AMIN MUHAMMAD (acting).

Legislative Council: Chair. AHMAD ABD AL-QADIR AN-NAQSHABANDI.

In May 1992, in the absence of a negotiated autonomy agreement with the Iraqi Government, the KIF (see below) organized elections to a 105-member Kurdish National Assembly. The DPK and the PUK were the only parties to achieve representation in the new Assembly and subsequently agreed to share seats equally between them. Elections held at the same time as those to the National Assembly, to choose an overall Kurdish leader, were inconclusive and were to be held again at a later date.

Legislature

NATIONAL ASSEMBLY

No form of National Assembly existed in Iraq between the 1958 revolution, which overthrew the monarchy, and June 1980. (The existing provisional Constitution, introduced in 1968, contains provisions for the election of an assembly at a date to be determined by the Government. The members of the Assembly are to be elected from all political, social and economic sectors of the Iraqi people.) In December 1979 the RCC invited political, trade union and popular organizations to debate a draft law providing for the creation of a 250-member National Assembly (elected from 56 constituencies) and a 50-member Kurdish Legislative Council, both to be elected by direct, free and secret ballot. Elections for the first National Assembly took place on 20 June 1980, and for the Kurdish Legislative Council on 11 September 1980, 13 August 1986 and 9 September 1989. The Assembly was dominated by members of the ruling Baath Party.

Elections for the fourth National Assembly were held on 24 March 1996. Some 689 candidates contested 220 of the Assembly's 250 seats, while the remaining 30 seats (reserved for representatives of the Autonomous Regions of Arbil, D'hok and As-Sulaimaniya) were filled by presidential decree. According to official sources, 93.5% of Iraq's 8m.-strong electorate participated in the elections.

Chairman: Dr SA'ADOUN HAMMADI.

Chairman of the Kurdish Legislative Council: AHMAD ABD AL-QADIR AN-NAQSHABANDI.

Political Organizations

National Progressive Front: Baghdad; f. July 1973, when Arab Baath Socialist Party and Iraqi Communist Party signed a joint manifesto agreeing to establish a comprehensive progressive national and nationalistic front. In 1975 representatives of Kurdish parties and organizations and other national and independent forces joined the Front; the Iraqi Communist Party left the National Progressive Front in mid-March 1979; Sec.-Gen. NAIM HADDAD (Baath).

Arab Baath Socialist Party: POB 6012, al-Mansour, Baghdad; revolutionary Arab socialist movement founded in Damascus in 1947; has ruled Iraq since July 1968, and between July 1973 and March 1979 in alliance with the Iraqi Communist Party in the National Progressive Front; founder MICHEL AFLAQ; Regional Command Sec.-Gen. SADDAM HUSSAIN; Deputy Regional Command Sec.-Gen. IZZAT IBRAHIM; mems of Regional Command: TAHA YASSIN RAMADAN, TAREQ AZIZ, MUHAMMAD HAMZAH AZ-ZUBAYDI, ABD AL-GHANI ABD AL-GHAFUR, SA'ADOUN HAMMADI MAZBAN KHADR HADI, ALI HASSAN AL-MAJID, KAMIL YASSIN RASHID, MUHAMMAD ZIMAM ABD AR-RAZZAQ, MUHAMMAD YOUNIS AL-AHMAD, KHADER ABD AL-AZIZ HUSSAIN, ABD AR-RAHMAN AHMAD ABD AR-RAHMAN, NOURI FAISAL SHAHIR, MIZHER MATNI AL-AWWAD, FAWZI KHALAF, LATIF NUSAYYIF JASIM, ADEL ADBULLAH MEHDI; approx. 100,000 mems.

Kurdistan Revolutionary Party: f. 1972; succeeded Democratic Kurdistan Party; admitted to National Progressive Front 1974; Sec.-Gen. ABD AS-SATTAR TAHER SHAREF.

There are several illegal opposition groups, including:

Ad-Da'wa al-Islamiya (Voice of Islam): f. 1968; based in Teheran; mem. of the Supreme Council of the Islamic Revolution in Iraq (see below); guerrilla group; Leader Sheikh AL-ASSEFIE.

Iraqi Communist Party: Baghdad: f. 1934; became legally recognized in July 1973 on formation of National Progressive Front; left National Progressive Front March 1979; proscribed as a result of its support for Iran during the Iran–Iraq War; First Sec. AZIZ MUHAMMAD.

Umma (Nation) Party: f. 1982; opposes Saddam Hussain's regime; Leader SAAD SALEH JABR.

There is also a breakaway element of the Arab Baath Socialist Party represented on the Iraqi National Joint Action Cttee (see below); the Democratic Gathering (Leader SALEH DOUBLAH); the Iraqi Socialist Party (ISP; Leader Gen. HASSAN AN-NAQUIB); the Democratic Party of Kurdistan (DPK; f. 1946; Leader MASOUD BARZANI); the Patriotic Union of Kurdistan (PUK; f. 1975; Leader JALAL TALIBANI); the Socialist Party of Kurdistan (SPK; f. 1975; Leader RASSOUL MARMAND); the United Socialist Party of Kurdistan (USPK; Leader MAHMOUD OSMAN), a breakaway group from the PUK; the Kurdistan People's Democratic Party (KPDP; Leader SAMI ABD AR-RAHMAN); the Kurdish Workers' Party (PKK); the Islamic League of Kurdistan (ILK, also known as the Islamic Movement of Iraqi Kurdistan (IMIK)); the Kurdish Hezbollah (Party of God; f. 1985; Leader Sheikh MUHAMMAD KALED), a breakaway group from the DPK and a member of the Supreme Council of the Islamic Revolution in Iraq (SCIRI), which is based in Teheran under the leadership of the exiled Iraqi Shi'ite leader, Hojatoleslam MUHAMMAD BAQIR AL-HAKIM, and has a military wing, the Badr Brigade; the Iraqi National Accord (INA; Leader SALAH ESH-SHEIKHLI); and Hizb al-Watan or Homeland Party (Leader MISHAAN AL-JUBOURI).

Various alliances of political and religious groups have been formed to oppose the regime of Saddam Hussain in recent years. They include the Kurdistan Iraqi Front (KIF; f. 1988), an alliance of the DPK, the PUK, the SPK, the KPDP and other, smaller Kurdish groups; the Iraqi National Joint Action Cttee, formed in Damascus in 1990 and grouping together the SCIRI, the four principal Kurdish parties belonging to the KIF, Ad-Da'wa al-Islamiya, the Movement of the Iraqi Mujahidin (based in Teheran; Leaders Hojatoleslam MUHAMMAD BAQIR AL-HAKIM and SAID MUHAMMAD AL-HAIDARI), the Islamic Movement in Iraq (Shi'ite group based in Teheran; Leader Sheikh MUHAMMAD MAHDI AL-KALISI), Jund al-Imam (Imam Soldiers; Shi'ite; Leader ABU ZAID), the Islamic Action Organization (based in Teheran; Leader Sheikh TAQI MODARESSI), the Islamic

Alliance (based in Saudi Arabia; Sunni; Leader ABU YASSER AL-ALOUSI), the Independent Group, the Iraqi Socialist Party, the Arab Socialist Movement, the Nasserite Unionist Gathering and the National Reconciliation Group. There is also the London-based Iraqi National Congress (INC), which has sought to unite the various factions of the opposition. At a conference held in London in April 1999 a new collegiate leadership, under SALAH ESH-SHEIKHLI of the INA, was appointed. In September 1992 the KPDP, the SPK and the Kurdish Democratic Independence Party were reported to have merged to form the Kurdistan Unity Party (KUP).

Diplomatic Representation

EMBASSIES IN IRAQ

Albania: Baghdad; Ambassador: GYLANI SHEHU.

Judicial System

Courts in Iraq consist of the following: The Court of Cassation, Courts of Appeal, First Instance Courts, Peace Courts, Courts of Sessions, *Shari'a* Courts and Penal Courts.

The Court of Cassation: This is the highest judicial bench of all the Civil Courts; it sits in Baghdad, and consists of the President and a number of vice-presidents and not fewer than 15 permanent judges, delegated judges and reporters as necessity requires. There are four bodies in the Court of Cassation, these are: (*a*) the General body, (*b*) Civil and Commercial body, (*c*) Personal Status body, (*d*) the Penal body.

Courts of Appeal: The country is divided into five Districts of Appeal: Baghdad, Mosul, Basra, Hilla, and Kirkuk, each with its Court of Appeal consisting of a president, vice-presidents and not fewer than three members, who consider the objections against the decisions issued by the First Instance Courts of first grade.

Courts of First Instance: These courts are of two kinds: Limited and Unlimited in jurisdiction.

Limited Courts deal with Civil and Commercial suits, the value of which is 500 Iraqi dinars and less; and suits, the value of which cannot be defined, and which are subject to fixed fees. Limited Courts consider these suits in the final stage and they are subject to Cassation.

Unlimited Courts consider the Civil and Commercial suits irrespective of their value, and suits the value of which exceeds 500 Iraqi dinars with first grade subject to appeal.

First Instance Courts consist of one judge in the centre of each *Liwa*, some *Qadhas* and *Nahiyas*, as the Minister of Justice judges necessary.

Courts of Sessions: There is in every District of Appeal a Court of Sessions which consists of three judges under the presidency of the President of the Court of Appeal or one of his vice-presidents. It considers the penal suits prescribed by Penal Proceedings Law and other laws. More than one Court of Sessions may be established in one District of Appeal by notification issued by the Minister of Justice mentioning therein its headquarters, jurisdiction and the manner of its establishment.

Shari'a Courts: A *Shari'a* Court is established wherever there is a First Instance Court; the Muslim judge of the First Instance Court may be a *Qadhi* to the *Shari'a* Court if a special *Qadhi* has not been appointed thereto. The *Shari'a* Court considers matters of personal status and religious matters in accordance with the provisions of the law supplement to the Civil and Commercial Proceedings Law.

Penal Courts: A Penal Court of first grade is established in every First Instance Court. The judge of the First Instance Court is considered as penal judge unless a special judge is appointed thereto. More than one Penal Court may be established to consider the suits prescribed by the Penal Proceedings Law and other laws.

One or more Investigation Court may be established in the centre of each *Liwa* and a judge is appointed thereto. They may be established in the centres of *Qadhas* and *Nahiyas* by order of the Minister of Justice. The judge carries out the investigation in accordance with the provisions of Penal Proceedings Law and the other laws.

There is in every First Instance Court a department for the execution of judgments presided over by the Judge of First Instance if a special president is not appointed thereto. It carries out its duties in accordance with the provisions of Execution Law.

Religion

ISLAM

About 95% of the population are Muslims, more than 50% of whom are Shi'ite. The Arabs of northern Iraq, the Bedouins, the Kurds, the Turkomans and some of the inhabitants of Baghdad and Basra are mainly of the Sunni sect, while the remaining Arabs south of the Diyali belong to the Shi'i sect.

CHRISTIANITY

There are Christian communities in all the principal towns of Iraq, but their principal villages lie mostly in the Mosul district. The Christians of Iraq comprise three groups: (*a*) the free Churches, including the Nestorian, Gregorian and Syrian Orthodox; (*b*) the churches known as Uniate, since they are in union with the Roman Catholic Church, including the Armenian Uniates, Syrian Uniates and Chaldeans; (*c*) mixed bodies of Protestant converts, New Chaldeans and Orthodox Armenians.

The Assyrian Church

Assyrian Christians, an ancient sect having sympathies with Nestorian beliefs, were forced to leave their mountainous homeland in northern Kurdistan in the early part of the 20th century. The estimated 550,000 members of the Apostolic Catholic Assyrian Church of the East are now exiles, mainly in Iraq, Syria, Lebanon and the USA. Their leader is the Catholicos Patriarch, His Holiness MAR DINKHA IV.

The Orthodox Churches

Armenian Apostolic Church: Bishop AVAK ASADOURIAN, Primate of the Armenian Diocese of Iraq, POB 2280, Younis as-Saba'awi Sq., Baghdad; tel. (1) 885-1853; fax (1) 885-1857; nine churches (four in Baghdad); 18,000 adherents, mainly in Baghdad.

Syrian Orthodox Church: about 12,000 adherents in Iraq.

The Greek Orthodox Church is also represented in Iraq.

The Roman Catholic Church

Armenian Rite

At 31 December 1997 the archdiocese of Baghdad contained an estimated 2,200 adherents.

Archbishop of Baghdad: Most Rev. PAUL COUSSA, Archevêché Arménien Catholique, Karrada Sharkiya, POB 2344, Baghdad; tel. (1) 719-1827.

Chaldean Rite

Iraq comprises the patriarchate of Babylon, five archdioceses (including the patriarchal see of Baghdad) and five dioceses (all of which are suffragan to the patriarchate). Altogether, the Patriarch has jurisdiction over 21 archdioceses and dioceses in Iraq, Egypt, Iran, Lebanon, Syria, Turkey and the USA, and the Patriarchal Vicariate of Jerusalem. At 31 December 1997 there were an estimated 190,000 Chaldean Catholics in Iraq (including 150,000 in the archdiocese of Baghdad).

Patriarch of Babylon of the Chaldeans: His Beatitude RAPHAËL I BIDAWID, POB 6112, Patriarcat Chaldéen Catholique, Baghdad; tel. (1) 887-9604; fax (1) 884-9967.

Archbishop of Arbil: Most Rev. JACQUES ISHAQ, Archevêché Catholique Chaldéen, Ainkawa, Arbil; tel. (665) 24701.

Archbishop of Baghdad: the Patriarch of Babylon (see above).

Archbishop of Basra: Most Rev. DJIBRAIL KASSAB, Archevêché Chaldéen, POB 217, Ahsar-Basra; tel. (40) 210323.

Archbishop of Kirkuk: Most Rev. ANDRÉ SANA, Archevêché Chaldéen, Kirkuk; tel. (50) 213978.

Archbishop of Mosul: Most Rev. GEORGES GARMO, Archevêché Chaldéen, Mayassa, Mosul; tel. (60) 762022; fax (60) 772460.

Latin Rite

The archdiocese of Baghdad, directly responsible to the Holy See, contained an estimated 3,000 adherents at 31 December 1997.

Archbishop of Baghdad: Most Rev. PAUL DAHDAH, Archevêché Latin, Hay al-Wahda—Mahalla 904, rue 8, Imm. 44, POB 35130, Baghdad; tel. (1) 719-9537; fax (1) 717-2471.

Melkite Rite

The Greek-Melkite Patriarch of Antioch (MAXIMOS V HAKIM) is resident in Damascus, Syria.

Patriarchal Exarchate of Iraq: Rue Asfar, Karrada Sharkiya, Baghdad; tel. (1) 719-1082; 600 adherents (31 December 1995); Exarch Patriarchal: Archimandrite NICOLAS DAGHER.

Syrian Rite

Iraq comprises two archdioceses, containing an estimated 53,000 adherents at 31 December 1997.

Archbishop of Baghdad: Most Rev. ATHANASE MATTI SHABA MATOKA, Archevêché Syrien Catholique, Baghdad; tel. (1) 719-1850; fax (1) 719-0168.

Archbishop of Mosul: Most Rev. CYRILLE EMMANUEL BENNI, Archevêché Syrien Catholique, Mosul; tel. (60) 762160.

The Anglican Communion

Within the Episcopal Church in Jerusalem and the Middle East, Iraq forms part of the diocese of Cyprus and the Gulf. Expatriate congregations in Iraq meet at St George's Church, Baghdad (Hon. Sec. GRAHAM SPURGEON). The Bishop in Cyprus and the Gulf is resident in Cyprus.

JUDAISM

Unofficial estimates assess the present size of the Jewish community at 2,500, almost all residing in Baghdad.

OTHERS

About 30,000 Yazidis and a smaller number of Turkomans, Sabeans and Shebeks reside in Iraq.

TRADE UNIONS

General Federation of Trade Unions of Iraq (GFTU): POB 3049, Tahrir Sq., Rashid St, Baghdad; tel. (1) 887-0810; telex 212457; fax (1) 886-3820; f. 1959; incorporates six vocational trade unions and 18 local trade union federations in the governorates of Iraq; the number of workers in industry is 536,245, in agriculture 150,967 (excluding peasants) and in other services 476,621 (1986); GFTU is a member of the International Confederation of Arab Trade Unions and of the World Federation of Trade Unions; Pres. FADHIL MAHMOUD GHAREB.

Union of Teachers: Al-Mansour, Baghdad; Pres. Dr ISSA SALMAN HAMID.

Union of Palestinian Workers in Iraq: Baghdad; Sec.-Gen. SAMI ASH-SHAWISH.

There are also unions of doctors, pharmacologists, jurists, artists, and a General Federation of Iraqi Women (Chair. MANAL YOUNIS).

Transport

RAILWAYS

The metre-gauge line runs from Baghdad, through Khanaqin and Kirkuk, to Arbil. The standard gauge line covers the length of the country, from Rabia, on the Syrian border, via Mosul, to Baghdad (534 km), and from Baghdad to Basra and Umm Qasr (608 km), on the Arabian Gulf. A 404-km standard-gauge line linking Baghdad

to Husaibah, near the Iraqi-Syrian frontier, was completed in 1983. The 638-km line from Baghdad, via al-Qaim (on the Syrian border), to Akashat, and the 252-km Kirkuk–Baiji–Haditha line, which was designed to serve industrial projects along its route, were opened in 1986. The 150-km line linking the Akashat phosphate mines and the fertilizer complex at al-Qaim was formally opened in January 1986 but had already been in use for two years. Lines totalling some 2,400 km were planned at the beginning of the 1980s, but by 1988 only 800 km had been constructed. All standard-gauge trains are now hauled by diesel-electric locomotives, and all narrow-gauge (one-metre) line has been replaced by standard gauge (1,435 mm). As well as the internal service, there is a regular international service between Baghdad and Istanbul. A rapid transit transport system is to be established in Baghdad, with work to be undertaken as part of the 1987–2001 development plan for the city.

Responsibility for all railways, other than the former Iraq Republic Railways (see below), and for the design and construction of new railways, which was formerly the province of the New Railways Implementation Authority, was transferred to the newly created State Enterprise for Implementation of Transport and Communications Projects.

State Enterprise for Iraqi Railways: Baghdad Central Station Bldg, Damascus Sq., Baghdad; tel. (1) 543-4404; telex 212272; fax (1) 884-0480; fmrly the Iraqi Republic Railways, under the supervision of State Org. for Iraqi Railways; re-formed as a State Enterprise in 1987, under the Ministry of Transport and Communications; total length of track (1996): 2,029 km, consisting of 1,496 km of standard gauge, 533 km of one-metre gauge; Dir-Gen. Dr YOUSUF ABD AL-WAHID JASSIM.

New Railways Implementation Authority: POB 17040, al-Hurriya, Baghdad; tel. (1) 537-0021; telex 2906; f. to design and construct railways to augment the standard-gauge network and to replace the metre-gauge network; Sec.-Gen. R. A. AL-UMARI.

ROADS

At the end of 1996, according to the International Road Federation, there was an estimated total road network of 47,400 km, of which approximately 40,760 km were paved.

The most important roads are: Baghdad–Mosul–Tel Kotchuk (Syrian border), 521 km; Baghdad–Kirkuk–Arbil–Mosul-Zakho (border with Turkey), 544 km; Kirkuk–Sulaimaniya, 160 km; Baghdad-Hilla–Diwaniya–Nasiriya–Basra, 586 km; Baghdad–Kut-Nasirya, 186 km; Baghdad–Ramadi–Rurba (border with Syria), 555 km; Baghdad–Kut-Umara–Basra–Safwan (border with Kuwait), 660 km; Baghdad–Baqaba–Kanikien (border with Iran). Most sections of the six-lane 1,264-km international Express Highway, linking Safwan (on the Kuwaiti border) with the Jordanian and Syrian borders, had been completed by June 1990. Studies have been completed for a second, 525-km Express Highway, linking Baghdad and Zakho on the Turkish border. The estimated cost of the project is more than US $4,500m. and is likely to preclude its implementation in the immediate future. An elaborate network of roads was constructed behind the war front with Iran in order to facilitate the movement of troops and supplies during the 1980–88 conflict.

Iraqi Land Transport Co: Baghdad; f. 1988 to replace State Organization for Land Transport; fleet of more than 1,000 large trucks; Dir Gen. AYSAR AS-SAFI.

Joint Land Transport Co: Baghdad; joint venture between Iraq and Jordan; operates a fleet of some 750 trucks.

State Enterprise for Implementation of Expressways: f. 1987; Dir-Gen. FAIZ MUHAMMAD SAID.

State Enterprise for Roads and Bridges: POB 917, Karradat Mariam, Karkh, Baghdad; tel. (1) 32141; telex 212282; responsible for road and bridge construction projects to the Ministry of Housing and Construction.

SHIPPING

The ports of Basra and Umm Qasr are usually the commercial gateway of Iraq. They are connected by various ocean routes with all parts of the world, and constitute the natural distributing centre for overseas supplies. The Iraqi State Enterprise for Maritime Transport maintains a regular service between Basra, the Gulf and north European ports. There is also a port at Khor az-Zubair, which came into use during 1979.

At Basra there is accommodation for 12 vessels at the Maqal Wharves and accommodation for seven vessels at the buoys. There is one silo berth and two berths for petroleum products at Muftia and one berth for fertilizer products at Abu Flus. There is room for eight vessels at Umm Qasr. There are deep-water tanker terminals at Khor al-Amaya and Faw for three and four vessels respectively. The latter port, however, was abandoned during the early part of the Iran–Iraq War.

For the inland waterways, which are now under the control of the General Establishment for Iraqi Ports, there are 1,036 registered river craft, 48 motor vessels and 105 motor boats.

General Establishment for Iraqi Ports: Maqal, Basra; tel. (40) 413211; telex 207008; f. 1987, when State Org. for Iraqi Ports was abolished; Dir-Gen. ABD AR-RAZZAQ ABD AL-WAHAB.

State Enterprise for Iraqi Water Transport: POB 23016, Airport St, al-Furat Quarter, Baghdad; telex 212565; f. 1987 when State Org. for Iraqi Water Transport was abolished; responsible for the planning, supervision and control of six nat. water transportation enterprises, incl.:

State Enterprise for Maritime Transport (Iraqi Line): POB 13038, al-Jadiriya al-Hurriya Ave, Baghdad; tel. (1) 776-3201; telex 212565; Basra office: 14 July St, POB 766, Basra; tel. 210206; telex 207052; f. 1952; Dir-Gen. JABER Q. HASSAN; Operations Man. M. A. ALI.

Shipping Company

Arab Bridge Maritime Navigation Co: Aqaba, Jordan; tel. (03) 316307; telex 62354; fax (03) 316313; f. 1987; joint venture by Egypt, Iraq and Jordan to improve economic co-operation; an expansion of the company that established a ferry link between the ports of Aqaba, Jordan, and Nuweibeh, Egypt, in 1985; cap. US $6m.; Chair. NABEEH AL-ABWAH.

CIVIL AVIATION

There are international airports near Baghdad, at Bamerni, and at Basra. A new airport, Saddam International, is under construction at Baghdad. Internal flights connect Baghdad to Basra and Mosul. Civilian, as well as military, airports sustained heavy damage during the war with the multinational force in 1991. Basra airport reopened in May 1991.

National Co for Civil Aviation Services: al-Mansour, Baghdad; tel. (1) 551-9443; telex 212662; f. 1987 following the abolition of the State Organization for Civil Aviation; responsible for the provision of aircraft, and for airport and passenger services.

Iraqi Airways Co: Saddam International Airport, Baghdad; tel. (1) 887-2400; telex 213453; fax (1) 887-5808; f. 1948; Dir-Gen. NOUR ED-DIN AS-SAFI HAMMADI; formerly Iraqi Airways, prior to privatization in September 1988; operates limited domestic services.

Tourism

The Directorate-General for Tourism was abolished in 1988 and the various bodies under it and the services that it administered were offered for sale or lease to the private sector. The directorate was responsible for 21 summer resorts in the north, and for hotels and tourist villages throughout the country. These were to be offered on renewable leases of 25 years or sold outright. In 1995 an estimated 340,000 tourists visited Iraq. Tourist receipts in that year were estimated at US $13m.

Defence

Defence Expenditure (1998): Estimated at US $1,300m.

Military service: 18 months–2 years.

Total armed forces (August 1998): Estimated at 429,000 (mostly conscripted): army 375,000 (incl. 100,000 recalled reserves); air force 35,000; navy 2,000; air defence command 17,000. Additionally, 45,000–50,000 in paramilitary forces; 650,000 reserves.

Commander-in-Chief of the Armed Forces: SADDAM HUSSAIN.

Chief of the General Staff: Gen. ABD AL-WAHHAB CHANNAN AR-RABBAT.

Commander of the Popular Army: TAHA YASSIN RAMADAN.

Commander of the Air Force: Lt-Gen. MUZAHIM SA'AB HASSAN.

Commander of the Republican Guard: Maj.-Gen. KEMAL MUSTAFA AT-TIKRITI.

Education

Since the establishment of the Republic in 1958, there has been a marked expansion in education at all levels. Spending on education increased substantially after that time, reaching ID 211m. in the 1980 budget. During the mid-1970s free education was established at all stages from pre-primary to higher and private education was abolished; all existing private schools were transformed into state schools. Pre-school education is expanding, although as yet it reaches only a small proportion of children in this age-group. Primary education, lasting six years, is now officially compulsory, and there are plans to extend full-time education to nine years as soon as possible. Primary enrolment of children aged six to 11 reached 99% in 1980, but by 1992 enrolment included just 79% of students in the relevant age-group. At present, secondary education, which is

expanding rapidly, is available for six years (two three-year cycles). In 1992 enrolment at secondary schools included 37% of students in the relevant age-group. A US $22m. anti-illiteracy campaign began during the 1978/79 academic year. There are seven teacher training institutes in Iraq. Teacher training schools were abolished at the end of the 1985/86 academic year.

Science, medical and engineering faculties of the universities have undergone considerable expansion, although technical training is less developed. Two branches of Baghdad University at Basra and Mosul became independent universities in 1967. There are eight universities—the universities of Baghdad, Basra, Mosul, Salah ad-Din (in Arbil), al-Mustansiriya (in Baghdad), Tikrit and a university of engineering and science and another of technology (both in Baghdad). Preliminary designs of two new universities at Salah ad-Din and ar-Rashid have been completed, and in February 1988 plans were announced for a further four to be established in Tikrit, al-Kufa, Ramadi (in al-Anbar governorate) and Diwaniya (in al-Qadisiya governorate). The Foundation for Technical Institutes incorporates 18 institutes of technology throughout the country. The number of students enrolled in higher education increased from 86,111 in 1975 to 209,818 in 1988.

ISRAEL

Physical and Social Geography

W. B. FISHER

The pre-1967 frontiers of Israel are defined by armistice agreements signed with neighbouring Arab states, and represent the stabilization of a military front as it existed in late 1948 and early 1949. These boundaries are thus, in many respects, fortuitous, and have little geographical basis. It may be pertinent to recall that, prior to 1918, the whole area which is now partitioned between Syria, Israel, the emerging Palestinian entity and the Kingdom of Jordan formed part of the Ottoman Empire, and was spoken of as 'Syria'. Then, after 1918, came the establishment of the territories of Lebanon, Syria, Palestine and Transjordan—with the frontier between the last two lying, for the most part, along the Jordan river.

The present state of Israel is bounded on the north by Lebanon, on the north-east by Syria, on the east by the Hashemite Kingdom of Jordan and the emerging Palestinian Autonomous Area in the West Bank, and on the south and south-west by the Gulf of Aqaba and the Sinai Desert, occupied in 1967 and returned in April 1982 to Egyptian sovereignty. The so-called 'Gaza Strip', a small piece of territory some 40 km long, formed part of Palestine but was, under the Armistice Agreement of February 1949, then left in Egyptian control. (Since May 1994 the 'Gaza Strip' has been under the limited jurisdiction of the Palestinian National Authority (PNA) and will eventually—it is envisaged—form part of a single Palestinian entity, together with the emerging Palestinian Autonomous Area in the West Bank.) The territories which were occupied after the war of June 1967 are not recognized as forming part of the State of Israel, although it seems unlikely that Israel will reverse its annexation of the Old City of Jerusalem. The geographical descriptions of these territories are, therefore, given in the supplementary section at the end of the chapter.

Because of the nature of the frontiers, which partition natural geographical units, it is more convenient to discuss the geography of Israel partly in association with that of its neighbour, Jordan. The Jordan Valley itself is dealt with in the chapter on Jordan, but the uplands of Samaria-Judaea, from Jenin to Hebron, and including Jerusalem, which form a single unit, will be discussed below, though parts of this territory lie outside the frontiers of Israel.

PHYSICAL FEATURES

The physical geography of Israel is surprisingly complex and, though the area of the state is small, a considerable number of regions are easily distinguished. In the extreme north the hills of the Lebanon range continue without break, though of lower altitude, to form the uplands of Galilee, where the maximum height is just over 1,200 m. The Galilee hills fall away steeply on three sides: on the east to the well-defined Jordan Valley (see Jordan), on the west to a narrow coastal plain, and to the south at the Vale of Esdraelon or 'Emek Yezreel'. This latter is a rather irregular trough formed by subsidence along faults, with a flat floor and steep sides, and it runs inland from the Mediterranean south-eastwards to reach the Jordan Valley. At its western end the vale opens into the wide Bay of Acre, 25 km–30 km in breadth, but it narrows inland to only a few km before opening out once again where it joins the Jordan Valley. This lowland area has a very fertile soil and an annual rainfall of 400 mm, which is sufficient, with limited irrigation, for agriculture. Formerly highly malarial and largely uncultivated, the vale is now very productive. For centuries it has been a corridor of major importance linking the Mediterranean coast and Egypt with the interior of south-west Asia, and has thus been a passageway for ethnic, cultural and military invasions.

South of Esdraelon there is an upland plateau extending for about 150 km. This is a broad upfold of rock, consisting mainly of limestone and reaching 900 m in altitude. In the north, where there is a moderate rainfall, the plateau has been eroded into valleys, some of which are fertile, though less so than those of Esdraelon or Galilee. This district, centred on Jenin and Nablus, is the ancient country of Samaria, until 1967 part of Jordan. Further south rainfall is reduced and erosion is far less prominent; hence this second region, Judaea proper, stands out as a more strongly defined ridge, with far fewer streams and a barer open landscape of a more arid and dusty character. Jerusalem, Bethlehem and Hebron are the main towns. Towards the south-east rainfall becomes scanty and the Wilderness of Judaea, an area of semi-desert, unfolds. In the extreme south the height of the plateau begins to decline, passing finally into a second plateau only 300 m–450 m above sea-level, but broader, and broken by occasional ranges of hills that reach 900 m in height. This is the Negev, a territory comprising nearly one-half of the total area of Israel, and bounded on the east by the lower Jordan Valley and on the west by the Sinai Desert. Agriculture, entirely dependent on irrigation, is carried on in a few places in the north, but for the most part the Negev consists of steppe or semi-desert. Irrigation schemes have been developed in those areas where soils are productive.

Between the uplands of Samaria-Judaea and the Mediterranean Sea there occurs a low-lying coastal plain that stretches southwards from Haifa as far as the Egyptian frontier at Gaza. In the north the plain is closely hemmed in by the spur of Mount Carmel (550 m), which almost reaches the sea; but the plain soon opens out to form a fertile lowland—the Plain of Sharon. Still further south the plain becomes broader again, but with a more arid climate and a sandier soil—this is the ancient Philistia. Ultimately the plain becomes quite arid, with loose sand dunes, and it merges into the Sinai Desert.

One other area remains to be mentioned—the Shephelah, which is a shallow upland basin lying in the foothills of the Judaean plateau, just east of the Plain of Sharon. This region, distinguished by a fertile soil and moister climate, is heavily cultivated, chiefly in cereals.

CLIMATE

Climatically Israel has the typical 'Mediterranean' cycle of hot, dry summers, when the temperature reaches 32°C–38°C, and mild, rainy winters. Altitude has a considerable effect, in that although snow may fall on the hills, it is not frequent on the lowlands. Several inches of snow may fall in Jerusalem in winter, whereas Upper Galilee may receive several feet. The valleys, especially Esdraelon and adjacent parts of the upper Jordan, lying below sea-level, can become extremely hot (more than 40°C) and very humid.

Rainfall varies greatly from one part of Israel to another. Parts of Galilee receive over 1,000 mm annually, but the amount decreases rapidly southwards, until in the Negev and Plain of Gaza, it is 250 mm or less. This is because the prevailing south-westerly winds blow off the sea to reach the north of Israel, but further south they come from Egypt, with only a short sea track, and therefore lack moisture.

RACE AND LANGUAGE

Discussion of the racial affinities of the Jewish people has continued for many years, but there has been little agreement on the subject. One view is that the Jewish people, whatever their origin, have now taken on many of the characteristics of

the peoples among whom they have lived since the Dispersal—e.g. the Jews of Germany were often quite similar in anthropological character to the Germans; the Jews of Iraq resembled the Arabs; and the Jews of Ethiopia had black skin. Upholders of such a view would largely deny the separateness of ethnic qualities amongst the Jews. On the other hand, it has been suggested that the Jews are really a particular and somewhat individual intermixture of racial strains that are found over wider areas of the Middle East: a special genetic 'mix' with ingredients by no means restricted to the Jews themselves. The correctness of either viewpoint is largely a matter of personal interpretation.

Under British mandatory rule there were three official languages in Palestine—Arabic, spoken by a majority of the inhabitants (all Arabs and a few Jews); Hebrew, the ancient language of the Jews; and English. This last was considered to be standard if doubt arose as to the meaning of translation from the other two.

Since the establishment of the State of Israel the relative importance of the languages has changed. Hebrew is now dominant, Arabic has greatly declined following the flight of Arab refugees, and English is also less important, though it remains the first foreign language of many Israelis.

Hebrew, widely current in biblical days, was largely eclipsed after the dispersal of Jewish people by the Romans, and until fairly recently its use was largely restricted to scholarship, serious literature and religious observance. Most Jews of Eastern and Southern Europe did not employ Hebrew as their everyday speech, but spoke either Yiddish or Ladino, the former being a Jewish-German dialect current in East and Central Europe, and the latter a form of Spanish. Immigrants into Israel since 1890, however, have been encouraged to use Hebrew in normal everyday speech, and Hebrew is now the living tongue of most Israeli Jews. The revival has been a potent agent in the unification of the Israeli Jewish people since, in addition to the two widely different forms of speech, Yiddish and Ladino, most Jewish immigrants spoke yet another language according to their country of origin, and the census of 1931 recorded more than 60 such languages in habitual use within Palestine. Now, as the proportion of native-born Israelis increases, Hebrew is dominant, and the use of other languages is diminishing.

It is only by a revival of Hebrew that the Jewish community has found a reasonable *modus vivendi*—yet this step was not easy, for some devout Jews opposed the use of Hebrew for secular speech. Furthermore, there was controversy as to the way Hebrew should be pronounced, but the Sephardic pronunciation was finally adopted.

History

TOM LITTLE

Revised for this edition by Nur Masalha

For most Jews, the creation of the State of Israel in 1948 was the fulfilment of Biblical prophecy; to some, in this more secular age, it is a country justifiably won by political skill and force of arms in a world that denied them one for nearly 2,000 years; but, however regarded, it is seen as the fulfilment of Jewish history.

Although clearly a more ancient people from east of the Euphrates, the Jews trace their descent from Abraham, the first of the Patriarchs, who departed from Ur, the centre of the ancient Chaldean civilization, about 2,000 years BC. Oral tradition, as recorded in the Old Testament, states that he was instructed by God to leave Chaldea with his family and proceed to Canaan (Phoenicia), or Palestine, the land of the Philistines, where he would father a great nation which would play an important part in human history. The authors of the Old Testament were primarily concerned to establish the descent of the Jewish people from Abraham under the guidance of God but, in so doing, they preserved the ancient history of the Jews which archaeology has tended to confirm within a debatable chronology.

Abraham's nomad family eventually reached Canaan and grazed their flocks there for a time before crossing Sinai to the richer pastures of Egypt. They remained in Egypt for probably about 400 years and multiplied greatly, but their separateness in race, religion and customs at last excited the fears of the pharaohs, who enslaved them. Moses, who had escaped this slavery because he was brought up as an Egyptian, fled with the Jews from the country (c. 1200 BC) and gave them his law (the Torah), proclaiming the absolute oneness of God and establishing the disciplines for worship. They wandered for some decades in the wilderness before reaching the Jordan river. Moses' successor, Joshua, led some of the families (or tribes) across the Jordan and conquered Canaan. It was a stormy occupation of constant conflict with the indigenous peoples until the warrior Saul triumphed and became the first 'king'. His successor, David, completed the subjugation of the Israelites' enemies and briefly united all the tribes. King Solomon, his son, raised the country to its peak and built the Temple of Jerusalem which came to be recognized as the temple of all the Jews and the focal point of worship. His magnificence burdened the people, and this and his tolerance of the worship of idols provoked a successful revolt of the 10 northern tribes under Jereboam who established Israel as his own kingdom. This division into two parts, Israel and Judah (which contained Jerusalem), was disastrous, for Israel was soon overcome by the Assyrians and its people were taken into captivity and lost to history. About 100 years later Judah fell victim to the Babylonians and its people were also taken captive, but their community endured to become an important element in the future of Judaism. The Babylonians destroyed Solomon's temple.

When the Persian leader Cyrus conquered Babylon he gave the Jews permission to return to Jerusalem, and some did so. There they set about rebuilding the Temple which was completed about 500 BC, and in 200 years of relative tranquillity their religion was consolidated by a series of great teachers. Palestine, in turn, was conquered by Alexander the Great, becoming (together with the Jews) part of his empire; but Alexander was tolerant, as were his successors in Egypt, the Ptolemies, and consequently Alexandria became the centre of a learned school of Hellenic Judaism.

This tolerant policy was reversed under the Roman Empire, which succeeded the Ptolemies. The Jews rebelled against the oppressive Roman rule and Nero sent his greatest general, Vespasian, and his son, Titus, to suppress them. The conquest was completed by Titus; Jerusalem and the second temple were destroyed (c. AD 70), and the Diaspora which began with the Assyrian conquest of Israel was complete. A small community of Jews remained in Jerusalem and the surrounding countryside, and devoted themselves to their religion, producing their version of the Talmud, the repository of Judaic history, learning and interpretation which, with the Torah and the Old Testament became the essence of the faith. However, it was the version of the Talmud produced by the Babylonian scholars which became the accepted document.

Scattered across the world, throughout Arabia, Asia as far as China, North Africa and Europe as far as Poland and Russia, Jewish communities continued to exist, sometimes powerful, often persecuted, but united by religion and certain central themes: their belief in the oneness of God, His promise to Abraham, the promise of the 'return', and the Temple as the temple of all Jews. The duration of Jewish occupation of Palestine was relatively short and for even less of that time did they hold or rule it all, but the scattered communities continued to look towards Jerusalem.

THE ZIONIST MOVEMENT

In the late 19th century there were affluent and even powerful groups of Jews in Europe but the people as a whole were usually treated as second-class citizens in the countries where they lived. The large, pious and orthodox groups in Eastern Europe, in particular, were subject intermittently to persecution, and in 1881 there was a series of pogroms in Russia which stirred the conscience of world Jewry into forming plans for their escape. For the Eastern Jews there could be only one destination: Palestine. The pogroms led directly to the formation in Russia of a movement called the Lovers of Zion (Hovevei Zion), and within that movement another was formed, called the Bilu, by a large community of young Jews in the Kharkov region. In 1882 a Bilu group in Constantinople issued a manifesto demanding a home in Palestine. They proposed that they should beg it from the Sultan of Turkey, in whose empire Palestine lay.

The word Zionism was coined by a Russian about a decade later as a spiritual-humanitarian concept but Theodor Herzl, who became the leader of the movement, defined its aim specifically at the Basle Congress of 1897 (see Documents on Palestine, p. 98): 'Zionism', he said, 'strives to create for the Jewish people a home in Palestine secured by public law.' He wrote in his journal after the congress: 'At Basle I founded the Jewish State ... perhaps in five years, and certainly fifty, everyone will know it.' Herzl is recognized as the founder of political Zionism.

Herzl was concerned essentially with the creation of a safe refuge for the suffering communities of Eastern Europe and thought that their migration and settlement could and should be financed by prosperous Jews. When he failed to get help from the Sultan he considered other possible 'homes' as far apart as Uganda and Latin America, but even safe places could never have the same appeal to orthodox Jews as Palestine, sanctioned in their scriptures and 'promised' to them by God. Some of the Jews of Russia and Poland escaped persecution to make their own way to Palestine and became the earliest immigrant communities there.

When the Turkish Empire was destroyed by Allied forces in the 1914–18 (First World) War new possibilities of securing a 'home' or state in Palestine opened up before the Zionists. In the years 1915–16 Sir Mark Sykes for Britain and M. Charles Georges-Picot for France had, in fact, drafted an agreement (see Documents on Palestine, p. 98) in which, while undertaking 'to recognize and protect an independent Arab State or Confederation of Arab States', the two powers in effect carved the Middle East into their respective spheres of influence and authority pending the time of its liberation from Turkey. Influential Zionists, notably Dr Chaim Weizmann, saw their opportunity to press Britain for a commitment to provide a home for the Jews in Palestine and secured the help of Judge Louis Brandeis, a leading US Zionist and principal adviser to President Woodrow Wilson, in bringing the USA into the war on the side of the Allies in April 1917. The outcome was the Balfour Declaration (see Documents on Palestine, p. 99) which was contained in a letter from Arthur James Balfour to Lord Rothschild on behalf of the Zionist Federation, dated 2 November 1917. It stated:

> 'His Majesty's Government view with favour the establishment in Palestine of a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the existing civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status of Jews in other countries.'

The San Remo Conference decided on 24 April 1920 to give the Mandate under the newly formed League of Nations to Britain (the terms of which were approved by the USA, which was not a member of the League, before they were finally agreed by the League Council on 24 July 1922). The terms (see Documents on Palestine, p. 101) included a restatement of the Balfour Declaration and provided that 'an appropriate Jewish agency' should be established to advise and co-operate with the Palestine Administration in matters affecting the Jewish national home and to take part in the development of the country. This gave the Zionist Organization a special position because the Mandate stipulated that it should be recognized as such an agency if the mandatory authority thought it appropriate. Britain took over the Mandate in September 1923.

THE MANDATE

Herzl's first aim had thereby been achieved: the national home of the Jewish people had been 'secured by public law'; but major obstacles were still to be overcome before the home, or state, became a reality. When the Mandate was granted, the Arabs constituted 92% of the population and owned 98% of the land in Palestine, and it could clearly not be a home unless the demography and land ownership were changed in favour of the Jews. It was to these ends that the Zionist movement now directed itself, but Britain had different views concerning what was meant by 'favouring' the establishment of the home, both in the matter of boundaries and immigration, even while it remained sympathetic to the enterprise. This was important, for although nominally under the supervision of the Mandates Commission of the League, Britain was able to run Palestine very much as a Crown Colony and administered it through the Colonial Office.

The World Zionist Organization had presented a memorandum to the Paris Peace Conference in 1919 setting forth its territorial concept of the home, as follows:

> The whole of Palestine, southern Lebanon, including the towns of Tyre and Sidon, the headwaters of the Jordan river on Mount Hermon and the southern portion of the Litani river; the Golan Heights in Syria, including the town of Quneitra, the Yarmouk river and al-Himmeh hot springs; the whole of the Jordan valley, the Dead Sea, and the eastern highlands up to the outskirts of Amman, thence in a southerly direction along the Hedjaz railway to the Gulf of Aqaba; in Egypt, from el-Arish, on the Mediterranean coast, in a straight line in a southerly direction to Sharm esh-Sheikh on the Gulf of Aqaba.

The League of Nations and the Peace Settlement did not accept these boundaries but the Mandate given to Britain included Transjordan, the territory east of the river and beyond Amman. Britain allotted Transjordan as an Emirate to Emir Abdullah in 1921 and with the grant of full independence in 1946 it became a kingdom.

The Arabs bitterly opposed the Balfour Declaration and Jewish immigration and advocated the prohibition of land sales to Jews. Britain would neither accede to their demands nor to Jewish claims to a majority in Palestine. There were intermittent outbreaks of Arab violence, notably in 1922 and 1929, which brought the Arabs into conflict with the mandatory government and there were four British Commissions of Inquiry and two White Papers were issued (see Documents on Palestine, p. 102) on the situation before 1936, none of which envisaged a Jewish majority. In 1936 there was an effective six-month general strike of the Arab population followed by a large-scale rebellion which lasted until the outbreak of the Second World War, and in 1939 another Commission issued the third White Paper (see Documents on Palestine, p. 103) which stated that Britain would not continue to develop the Jewish national home beyond the point already reached and proposed that 75,000 more Jews should be admitted over five years after which time Jewish immigration would cease. Finally, it proposed that self-governing institutions should be established at the end of the five years. This would have preserved the Arab majority in the country and its legislature.

THE BILTMORE PROGRAMME AND AFTER

International opinion at that time was conditioned by the horrifying Nazi policy of exterminating Jews—a practice which was to reach even more frightful proportions after the outbreak of war. Zionists and Jews generally regarded the White Paper as a betrayal of the terms of the Mandate. During a visit to New York in 1942 by David Ben-Gurion, Chairman of the Jewish Agency Executive, an Extraordinary Zionist Conference was held at the Biltmore Hotel, which utterly rejected the White Paper and reformulated Zionist policy. The declaration of the conference (see Documents on Palestine, p. 104), issued on 11 May 1942, concluded as follows:

> The conference urges that the gates of Palestine be opened; that the Jewish Agency be vested with control of immigration

into Palestine and with the necessary authority for upbuilding the country, including the development of its unoccupied and uncultivated lands; and that Palestine be established as a Jewish Commonwealth integrated into the new structure of the democratic world.

This policy brought the Jews into direct conflict with the Palestine Government before the war was over. Those in Europe who escaped the Nazi holocaust were herded into refugee camps and some, with organized Zionist help, tried to reach Palestine, but the British authorities, in accordance with the 1939 policy, attempted to prevent their entry.

The British failed. The Jewish population which had been 56,000 at the time of the Mandate was 608,000 in 1946 and was estimated to be 650,000 on the eve of the creation of Israel, or about two-fifths of the entire population. Furthermore, the Jewish Agency had formed its own military organizations, the Haganah, and its units of shock troops, the Palmach, which were strengthened by those Jews who had fought on the side of the British during the war, and supported by two smaller extremist groups, the Irgun Zvaei Leumi and the Stern Gang. Towards the end of the war they embarked on a policy of violence designed to impose the Biltmore programme. They successfully made the Mandate unworkable and Britain referred it to the United Nations (which had replaced the League) on 2 April 1947.

The UN General Assembly sent a Special Commission (UNSCOP) to Palestine to report on the situation, and its report, issued on 31 August 1947, proposed two plans: a majority plan for the partition of Palestine into two states, one Jewish and one Arab, with economic union; and a minority plan for a federal state. The Assembly adopted the majority plan (see Documents on Palestine, p. 104) on 29 November by 33 votes for and 13 against, with 10 abstentions. The plan divided Palestine into six principal parts, three of which, comprising 56% of the total area, were reserved for the Jewish state, and three (with the enclave of Jaffa), comprising 43% of the area, for the Arab state. It provided that Jerusalem would be an international zone administered by the UN as the holy city for Jews, Muslims and Christians. The Arabs refused to accept this decision and, in the subsequent disorders, about 1,700 people were killed. In April 1948 the Jewish forces launched a full-scale attack and, by the time the Mandate was terminated on 14 May, 400,000 Arabs had evacuated their homes to become refugees in neighbouring Arab countries.

THE STATE ESTABLISHED

The Mandate was relinquished by Britain at 6 p.m. Washington time; at 6.01 p.m. the State of Israel was officially declared by the Jewish authorities in Palestine; at 6.11 p.m. the USA accorded it recognition and immediately afterwards the USSR did likewise. Thus Israel came into existence only one year later than Herzl's 50-year diary prophecy. The Arab states belatedly came to the help of the Palestinian Arabs but their attempt to overthrow the new state failed and Israel was left in possession of more territory than had been allotted to it under the UN partition plan, including new (non-Arab) Jerusalem. Israel rejected the proposed internationalization of the city, for the Jews considered the return to Jerusalem to be central to their divine legacy.

A provisional government was formed in Tel-Aviv the day before the Mandate ended, with Ben-Gurion as Prime Minister and other members of the Jewish Agency Executive in leading ministerial posts. The Constitution and electoral laws had already been prepared and the first general elections were held in January 1949 for a single-chamber Knesset (or Parliament) elected by proportional representation. This enabled several parties to gain representation, with Ben-Gurion's Labour Party (Mapai) usually in the majority but never predominant. As a result, government has usually been conducted by uneasy coalitions.

After the war another 400,000 Arabs fled from the additional territory conquered by Israel and in the course of another year about 300,000 more left the impoverished Arab West Bank for Transjordan. (In 1950 Abdullah held a referendum in which the West Bank Arabs agreed to be part of his kingdom which then became known as Jordan.) The Israeli Government maintained the mandatory military control, established in the earlier disorders, over those Arab populations which remained within its territory but allowed 'co-operative' Arabs to be elected to the Knesset; four were elected to the first Parliament.

A gigantic programme of immigration was launched immediately after the Provisional Government took over and within three years the Jewish population was doubled. This result, unparalleled in history, was assisted by Iraq which expelled the larger part of its age-old Jewish communities. The 1961 census recorded Israel's population at 2,260,700, of whom 230,000 were Arabs. The two-millionth Jew arrived in May 1962 and the three-millionth early in 1972. A massive plan for land development to provide for the new people was executed concomitantly with the early immigration programme; the Jewish National Fund took over 3m. dunums of former Arab land and used heavy mechanical equipment to bring it rapidly back into production. This was made possible by the stupendous support from abroad which came in the form of private gifts from world Jewry, state loans and aid, and private Jewish investments. The USA was both privately and publicly the major contributor, but following negotiations conducted between the Conference on Jewish Material Claims and the Israeli and West German authorities at The Hague (the Netherlands) in 1952, the Federal Republic of Germany agreed to pay reparations for Nazi crimes. These payments amounted to £216m. in Deutsche Marks before they were concluded in 1966. One effect of this influx of unearned money from all sources was to cause serious inflation which was still a problem in the 1990s (see Economy).

Israel was admitted to the UN, albeit on conditions concerning Jerusalem and refugees which were contrary to its overall policy and were never fulfilled. Its relations with the Arab states were governed by a series of armistice agreements reached in Rhodes in 1949 which, in effect, established an uneasy truce without an Arab commitment to permanent peace. The Arabs continued to insist that the creation of Israel was a usurpation of Arab territory and rights and a denial of UN principles. Defence policy therefore dominated Israel's political thinking and firmly established the principle that it would remain militarily superior to any combination of Arab states. In the early 1950s, however, it was the Palestinian refugees who caused intermittent frontier trouble, mainly from Syria and Jordan, but to some extent from the Gaza Strip which, since the 1948 war, had been administered by Egypt.

Whenever one of the frontiers became too troublesome, Israel mounted a retaliatory raid *pour décourager les autres*. Acting on the principle that Nasser's Egypt was the only serious danger, Ben-Gurion ordered a raid which, on 28 February 1955, annihilated the small Egyptian garrison at Gaza and the reinforcements travelling by road to its support. The result was contrary to Ben-Gurion's intention; Nasser determined to secure adequate military strength and to that end entered into the 'Czech' arms agreement in August 1955, by which he bartered cotton and took credits from the USSR for substantial quantities of arms and aircraft which began to arrive promptly. The threat to Israel was therefore increased.

SUEZ

On 26 July 1956 Nasser nationalized the Suez Canal Co of which Britain and France were the principal shareholders (see chapter on Egypt) and the two European powers prepared to retake control of it. Neither could expect any support from the two 'superpowers', or from world opinion in general, for open invasion, but in October Ben-Gurion entered into a secret pact with them by which Israel would invade Sinai and thus justify Britain and France intervening to keep the combatants apart. Israel invaded on 29 October, with powerful armoured columns, and rapidly advanced towards the Canal. The following day Britain and France issued their ultimatum that both sides should withdraw to 20 miles from the Canal. Israel, which had by this time taken almost all of the Sinai, including the Gaza Strip and Sharm esh-Sheikh at the entrance to the Gulf of Aqaba, readily agreed to comply with the ultimatum, but Egypt refused on the grounds that it was being asked to withdraw from its own territory.

The Anglo-French force thereupon invaded the Port Said area and advanced some miles along the Suez Canal. There it was halted by Sir Anthony Eden, the British Prime Minister, in face of the forthright condemnation of the UN and financial sanctions threatened by the USA; a decision which the French Prime

Minister, M. Guy Mollet, reluctantly accepted. Both countries withdrew their troops before the end of the year. This was a severe blow to Ben-Gurion who had counted on holding at least a security buffer zone on a line from el-Arish, on the Mediterranean coast, to Sharm esh-Sheikh (the Zionist 1919 frontier proposal). Therefore Israel delayed its final withdrawal from Egypt until January, and from the Gaza Strip until March 1957 when a UN Emergency Force was safely established on the Sinai frontier and at Sharm esh-Sheikh.

A development of great consequence to Israel at this time was the increasing involvement of the Soviet Union in the Middle East, especially in Egypt. The USSR took no less than 50% of Egyptian exports in 1957, and in 1958 agreed to finance and direct the building of the mammoth High Dam at Aswan. In keeping with this policy, the Soviet Union adopted a strongly pro-Arab and anti-Israeli line and steadily rearmed Nasser's forces.

Ben-Gurion resigned, to pursue non-political ambitions, in June 1963 and was succeeded by Levi Eshkol, the Minister of Finance, who had been a minister continuously since joining the Provisional Government from the Jewish Agency in 1948. He was politically inclined to a more conciliatory policy which he hoped would in time erode Arab enmity. This was opposed by many in the ruling hierarchy, notably the veteran Ben-Gurion and Gen. Moshe Dayan, who had commanded the Israeli forces in their brilliant victory in 1956.

There was a notable increase in Arab guerrilla activity across the frontiers with Egypt, Jordan and Syria in the mid-1960s. The Palestinians formed a guerrilla organization called al-Fatah, for which the Syrian Prime Minister publicly declared his support in 1966. Mutual accusations of frontier violations followed, and President Nasser warned that he would have to activate the Egypt-Syrian Joint Defence Agreement if Israel's 'aggression' did not cease. In May 1967 King Hussein brought Jordan into the agreement and in that same month Nasser received information, which later proved to be unfounded, that Israeli troops were massing on the Syrian frontier. In response Nasser ordered the withdrawal of the UN Emergency Force from the Gaza Strip, the Sinai Desert and Sharm esh-Sheikh. U Thant, the Secretary-General of the UN, immediately complied, and Nasser then imposed a total blockade on Israeli shipping in the Straits of Tiran, although Israel had always made it plain that this would be considered a *casus belli.*

U Thant flew to Cairo on 22 May 1967 but, by that time, Nasser had already strengthened his forces in the Sinai and summoned his reserves. Israel, Jordan and Syria had also mobilized. Israel formed a national government, introducing to the Cabinet one representative of each of the three opposition parties. Gen. Moshe Dayan, the leader of the 1956 Sinai campaign was appointed Minister of Defence.

THE JUNE WAR

Israel made its pre-emptive strike in the early hours of 5 June when its armoured forces moved into Sinai. At 0600 hours GMT Israeli planes attacked 25 airfields in Egypt, Jordan, Syria and Iraq, destroying large numbers of aircraft on the ground and disabling the runways, thus effectively depriving the Egyptian and Jordanian ground forces of air cover. There were some fierce armoured battles in the Sinai but Israeli forces were in position along the Suez Canal on 8 June: they took Sharm esh-Sheikh without armed opposition. On the eastern front, they reached the Jordan river on 7 June and entered and conquered Old (Arab) Jerusalem on the same day. Their main forces destroyed, President Nasser and King Hussein accepted a cease-fire on 8 June. Israel then turned its attention to the Syrian fortifications on the Golan Heights from which Israeli settlements were being shelled. In a brilliant but costly action, armour and infantry captured the heights. Syria accepted a cease-fire on 9 June but Israel ignored it until 10 June, by which time its troops were in possession of Quneitra, on the road to Damascus. The 'Six-Day War', as it became known, was over; Israel had achieved a victory more sweeping even than that of 1956.

Israel had recovered Jerusalem and access to the Western Wall of the Temples of Solomon and Herod, which were the most sacred places of worship for all Jews but to which they had been denied access since the partition of the city between the Arabs and Israel in 1948. Israel immediately tore down the barriers, reunited the city, put the administration of Arab Jerusalem under its existing city administration, and effectively annexed it. The UN General Assembly passed a resolution on 4 July (which Israel disregarded), urging the Israeli authorities to rescind all the measures taken and to desist from any further action that would change the status of the holy city. Israel asserted from the outset that it would not countenance the return of Old Jerusalem to Arab possession in any peace settlement.

The UN and the world powers busied themselves with the peace process. On 29 August the heads of the Arab states began a summit conference in Khartoum at which they decided to seek a political settlement but not to make peace with or recognize Israel, nor to negotiate directly with it, and meanwhile 'to adopt necessary measures to strengthen military preparation to face all eventualities'. On 22 November, after many attempts, the UN Security Council agreed to Resolution 242, which stated that the establishment of a just and lasting peace in the Middle East should include the application of the following principles:

> (i) withdrawal of Israeli armed forces from territories occupied in the recent conflict; and (ii) termination of all claims or states of belligerency and respect for and acknowledgement of the sovereignty, territorial integrity, and political independence of every State in the area, and their right to live in peace within secure and recognized boundaries free from threats or acts of force. The Council affirmed also the necessity for (*a*) guaranteeing freedom of navigation through international waterways in the area, and (*b*) achieving a just settlement of the refugee problem.

The UN Secretary-General designated Ambassador Gunnar Jarring of Sweden as Special Representative to assist the process of finding a peaceful settlement on this basis.

The essential ambiguity of the Resolution was contained in the phrase 'withdrawal . . . from territories occupied . . .' (which in the French translation became 'les territoires'), and the Israeli Government contended that it meant an agreed withdrawal from some occupied territories 'to secure and recognized boundaries'. This was, in Israel's view, precluded by the Arab states' Khartoum Resolution and their insistence that Resolution 242 meant total withdrawal from the territories occupied in 1967. Furthermore, Israel insisted that it would only negotiate withdrawal directly with Egypt and the Arab states as part of a peace settlement and that the function of Jarring was to bring this about and not to initiate proposals of his own for a settlement.

UNEASY SECURITY

Meanwhile Israel based its policy on retention of the Occupied Territories as warranty for its security. The 1967 defeat had severely damaged the USSR's prestige in the Arab world, and to repair its position it began immediately to restore the Egyptian armed forces, including the air force. Meanwhile in 1967 President de Gaulle imposed an arms embargo on Israel and refused to deliver 50 supersonic *Mirage* IV fighters which Israel had ordered and paid for. Israel therefore turned to the USA arguing that the balance of military power must, for its security, be maintained in its favour. This point was conceded by the USA in 1968 with a contract to deliver 50 *Phantom* jet fighter-bombers, which brought Cairo within range and were more powerful than any MiG aircraft in Egypt.

Using powerful artillery installed by the USSR west of the Canal, Nasser began in 1968 a 'war of attrition' in order to force Israel to accept his terms. Relatively heavy casualties were inflicted on the Israeli troops, notably in July and October, and throughout the period Israel retaliated with air and artillery attacks which forced Egypt to evacuate the Canal zone towns. Suez and its oil refineries were destroyed. The zone remained unsettled until 1970.

Israel's Prime Minister, Levi Eshkol, died on 26 February 1969, and was succeeded in the following month by Mrs Golda Meir, who had been Minister for Foreign Affairs from 1956 to 1966.

President Nixon, who had taken office in the USA, supported an initiative by his Secretary of State, William Rogers, 'to encourage the parties to stop shooting and start talking'. This was announced on 25 June 1970, and was unfavourably received

in the Arab world. Nasser flew to Moscow with a proposal to accept it on condition that Russia supplied SAM-III missiles capable of destroying low-flying aircraft. He returned to Cairo and stunned Egypt and the Arab world with an unconditional acceptance of the Rogers plan and its related Canal zone 90-day cease-fire. King Hussein immediately associated Jordan with Nasser's acceptance. Israel accepted the Rogers plan on 7 August but immediately complained that Egypt had broken the cease-fire agreement by moving SAM-III missile sites into the 30-mile wide 'standstill' area along the canal.

President Nasser died suddenly on 28 September 1970, but President Sadat, who succeeded him, sustained his policy. Although he only agreed to extend the cease-fire for another 90 days, it continued indefinitely. The US effort was directed towards securing an interim agreement by which Israel would withdraw from the Suez Canal and allow it to be reopened, but Israel, again on the basic principle of its security, would only consider a limited withdrawal and would not agree that Egyptian troops should cross the Canal, terms which Egypt would not accept. US–Israeli relations, vital to Israel, were uneasy during most of 1971 while the Department of State pressed the Israeli Government to concede unacceptable terms of withdrawal from the Canal. President Sadat gave the end of the year as a deadline for 'peace or war', but before the year was over Mrs Golda Meir secured a commitment to Israeli security from President Nixon firmer than any obtained in the past; the Rogers plan was thereby abandoned, but 1972 began without the threatened outbreak of war with Egypt. Instead, there was a series of terrorist acts by various Palestinian groups, which in turn provoked punitive raids by Israeli forces.

The stated objective of Israeli raids on Syria and Lebanon was to compel both countries to prevent the Palestinian resistance groups from mounting raids from within their borders, whether against Israel or in other countries. This objective seemed most successfully achieved in Lebanon on 10 April 1973 by a daring commando raid into the heart of Beirut, where the raiders killed three resistance leaders, while other commando units attacked two refugee camps outside the city and destroyed the headquarters of the Popular Democratic Front for the Liberation of Palestine, killing one of its leaders. The Israeli authorities were able to make a number of arrests in the Occupied Territories from information gained in this raid.

THE OCCUPIED TERRITORIES

About 380,000 Arabs fled from the West Bank to Jordan, but nearly one million remained under Israeli occupation; of these, the 70,000 in East (Arab) Jerusalem, which was annexed, were treated as Israeli citizens and the remainder brought under military administration. This was of necessity strict for the first three years because of help given to Palestinian guerrillas by the Arabs in the Occupied Territories and, in some instances, in Israel proper. The Gaza Strip was by far the most troublesome and it was not until the end of 1971 that Israeli security operations, including the clearance of one large refugee camp which had proved particularly difficult, brought the area under control. It was announced in March 1973 that the strip would be incorporated into Israel, that Jewish settlement in the strip would continue and that Arab inhabitants could circulate freely in Israel during the day. Higher living standards enjoyed by the Arabs under the occupation, 60,000 of whom found work in Israel itself, the inevitable growth of collaboration with the Israeli authorities and, finally, the disarray in which the Palestinian movement found itself by late 1970, rendered the security problem inside the country minimal during 1971. In March of the following year the Israeli military authorities successfully held elections for the mayors and municipalities in the main Arab towns, despite guerrilla threats of reprisals against any Arabs taking part.

Government policy was officially that in a peace settlement there would be substantial territories returned to the Arabs but there was no clear consensus in the Government or the country as to what they would amount to, except to the extent that Israel should have 'secure frontiers'. However, statements by ministers emphasized that in addition to East Jerusalem and the Gaza Strip, which had been effectively annexed, the Golan Heights of occupied Syria and parts of the Jordanian West Bank would not be returned. There was also increasing evidence on the ground. An extensive building programme to house immigrants was rapidly being executed in and around Jerusalem; 42 settlements had been established by January 1973 although, according to Israeli figures, only 3,150 Israeli civilians had been allowed to take up permanent residence in the areas.

Israel radio announced on 18 August 1973 that another 35 settlements would be built in the Occupied Territories, bringing the total to 77. The Jewish National Fund and the Israeli Lands Administration had between them acquired 15,000 acres (6,070 ha) of Arab land and the army was in occupation of another 20,000 acres (8,100 ha). A plan advanced by Deputy Prime Minister Yigal Allon, although not publicly approved by the Government, seemed to be in process of *de facto* execution. He proposed that a chain of Israeli settlements should be established along the Jordan river (which was effectively being done) a second chain along the Samarian hills on the West Bank, and a third along the road from Jerusalem to Jericho, in order to establish Israel's security. The rest of the West Bank and the main towns, excepting Jericho, would then be returned to Jordan.

The virtue of the Allon plan for most Israelis was that it would absorb few Arabs, for the core of the dispute within Israel remained the question of demographic balance between Arabs and Jews which would be changed in the Arabs' favour by the absorption of territory in which there were many of them resident. For that reason, the Government refused the request, submitted by the newly-elected mayors of the Arab towns on the West Bank, that those Arabs who had fled the area after the 1967 war should be allowed to return. To restore the population balance the Jewish Agency, which was responsible for organizing immigration, concentrated upon Jews in the USSR, who were the largest reservoir of would-be immigrants. The USSR began to relax its stringent opposition to Jewish emigration in 1971, with the result that thousands of Soviet Jews began to arrive in Israel.

THE YOM KIPPUR WAR

Although the Arab world had been urging Sadat to attack Israel, it was firmly believed that Egypt was afraid to go to war again and that the Bar-Lev defences along the eastern bank of the Suez Canal could not be overcome. In fact Sadat was working steadily towards war, against the advice of his Soviet ally. He secured the financial support of King Faisal of Saudi Arabia to buy arms for hard currency, the agreement of Syria's President Hafiz al-Assad to a limited war for the recovery of territories lost in 1967, made his peace with King Hussein of Jordan and finally secured the arms required from the USSR.

At 2 p.m. on 6 October 1973—the most important religious festival in Israel, Yom Kippur—the Egyptians launched their attack, demolishing the supposedly impregnable sand banks of the Bar-Lev line with powerful water-jets, throwing pontoon bridges across the Suez Canal and breaking into Sinai. By midnight that day, the Egyptians had 500 tanks and missiles across the Canal and destroyed 100 Israeli tanks. Almost simultaneously the Syrian armed forces had broken through the Israeli lines on the Golan Heights.

Israel began the rapid mobilization of its reserve forces, the highly trained and numerically most important part of its defensive system, but before they could play an effective part Egyptian armed forces had occupied the east bank of the Canal to a depth of several miles and by the third day were advancing to the strategic Mitla pass in Sinai. The Syrian forces had by that time reached a point five miles from the Israeli frontier in Golan.

While fierce tank battles, said to be bigger than any in the Second World War, raged in Sinai, Israel halted the Syrian forces on its vulnerable northern frontier and counter-attacked successfully, driving them in a fighting retreat back over the 1967 cease-fire lines to within 20 miles of Damascus, where its forces were halted on the Syrian second line of defence. The Egyptian forces held their positions in Sinai but did not reach the Mitla pass.

The Egyptian High Command blundered on the twelfth day when it allowed a small Israeli commando force to cross to the west bank of the Suez Canal near Deversoir at the northern end of the Great Bitter Lake. The Israeli force was able to reinforce the bridgehead with a force strong enough to swing

southwards to Suez and endanger the Egyptian Third Army on the east bank. Losses were very heavy on both sides.

After three UN Security Council resolutions, a precarious cease-fire came into effect on 25 October, but even this was honoured more in the breach than the observance until the end of the year. The US Secretary of State, Dr Henry Kissinger, did much to maintain a peace-making momentum by touring the Arab countries to secure negotiations for a permanent settlement in Geneva on 18 December, and in November Israel had accepted 'in principle' the terms of an agreement Dr Kissinger had reached with President Sadat for the 'scrupulous' observance of the cease-fire.

Talks were soon adjourned to an unspecified date in order to allow time for the Israeli general elections, which had been postponed from 30 October to 31 December 1973 because of the war. Kissinger returned to the Middle East in January and after days of intensive diplomatic activity, shuttling back and forth between Israel and Egypt, he secured the agreement of both countries to a disengagement of their forces which was announced on 17 January 1974 (see Documents on Palestine, p. 109). Israel agreed to withdraw its troops in Sinai to a line approximately 20 miles from the Suez Canal and Egypt to reduce its forces on the east bank. There was to be a neutral buffer zone between the two armies manned by troops of the UN Emergency Force.

Agreement for the disengagement of forces on the northern front was not signed until 31 May (see Documents on Palestine, p. 109) and then only after further shuttle diplomacy by Dr Kissinger. Israel and Syria agreed to withdraw their troops to lines on each side of the 1967 cease-fire line, and the ruined town of Quneitra, capital of the Golan Heights, was handed back to Syria.

Two important factors weakened Israel's position. In the last days of the war the Arab oil-producing states banned the supply of oil to the USA and the Netherlands, and reduced supplies to Western Europe. (Britain and France were exempted but, in fact, were unable to obtain their full supplies.) This, combined with steep increases in oil prices which caused serious balance-of-payments problems for the European countries—although this had nothing to do with the war—led the EC to issue a joint declaration in the Arab favour. Even more damaging to Israel was the confrontation which almost developed between the USSR and the USA when they both began delivering heavy supplies of war equipment to the Arabs and Israel respectively. Dr Kissinger emphasized to Israel that the USA would continue to support Israel, but only within the limits imposed by *détente* with the USSR. It was unquestionably a form of pressure on Israel, although this was denied. President Nixon went on a peace-making mission to the Middle East in June, and shortly afterwards Israel's Minister of Finance, Shimon Peres, visited Washington. The outcome was the conversion of a $500m. loan into a gift and an undertaking to supply a powerful fleet of fighter aircraft to ensure Israel's security.

THE AFTERMATH

The war had a profoundly disturbing effect on Israeli public opinion. The country had never suffered such losses before; nearly 3,000 dead and missing. The ease with which the Egyptian forces had crossed the Canal and overrun the Bar-Lev line and the firmness with which the Syrian forces held the second line of defence 20 miles from Damascus were not offset in Israeli eyes by the fact that Israeli troops had broken through and recrossed the Canal and had made territorial gains in Syria; the Arab forces had fought with hitherto unknown determination and had used their sophisticated Soviet weaponry with great skill. The public's confidence in the overwhelming superiority of their own army and air force was severely shaken, with the result that a sharp division of opinion occurred between those who thought the war emphasized the need to keep defensible frontiers at all costs and those, less numerous, who viewed it as an argument for a more diligent search for a permanent peace. There was widespread dissatisfaction with the Government and a public debate ensued over the failure to anticipate the outbreak of war and the breakdown of military intelligence. There were mutual recriminations among the generals and the Minister of Defence Moshe Dayan's popularity in the country slumped. General Ariel Sharon, whose forces had made the breakthrough and Canal crossing in Egypt, resigned from the army to join the right-wing Likud party.

The elections of December 1973 reflected this confusion. The Labour Alignment, led by the United Workers' Party (Mapam), emerged as the strongest party, with 51 seats. Likud, the main opposition, made substantial gains and won 39 seats. Mrs Golda Meir reformed her coalition but resigned in April 1974, when the report on the 1973 war was published. She was succeeded in June by Gen. Itzhak Rabin, whose Cabinet contained neither Moshe Dayan nor Abba Eban, who had been Minister of Foreign Affairs since 1966. General Rabin and his Minister of Foreign Affairs, Yigal Allon, were both willing to make territorial sacrifices to achieve a settlement with the Arabs, and in September 1975 Israel and Egypt signed a second disengagement agreement, whereby Israeli forces withdrew from some territory in the Sinai peninsula.

Meanwhile, the Palestine Liberation Organization (PLO) had achieved recognition by the Arabs as 'sole representative of the Palestinian people' at the Rabat summit of November 1974, but Rabin asserted Israeli policy, which he was to maintain throughout his premiership, of refusing to recognize a PLO delegation at any renewed Geneva peace talks.

Rabin was never able to command the support that he needed as Prime Minister. Moreover, Israel's economic difficulties cost Rabin considerable popularity, and it seemed that the austerity measures that he was forced to introduce to combat inflation were hugely unpopular, discouraged immigration, and made little visible progress towards a sounder economy.

In December 1976 the National Religious Party (NRP) abstained in a 'confidence' vote in the Knesset arising from charges that the Sabbath had been desecrated at a ceremony marking the arrival of three US aircraft. Rabin subsequently dismissed two NRP ministers from the Cabinet, and the consequent withdrawal of NRP support left the Government in a minority in the Knesset, thus precipitating Rabin's resignation. After continuing in a caretaker capacity until the election of May 1977, in April 1977 Rabin resigned as leader of the Labour Party. On 10 April the Labour Party selected Shimon Peres as its new leader. Peres had earlier been narrowly defeated by Rabin in the February poll for the leadership of the Labour Party.

ISRAEL UNDER BEGIN

When the elections for the ninth Knesset took place on 17 May 1977, the result was a surprise victory for the Likud, under Menachem Begin, who won 43 of the 120 seats—the largest single total. The Likud victory removed the Labour Party from the predominant position it had held in Israel since 1949. With the support of the NRP, the Union of Israel (Agudat Israel) and Ariel Sharon's Realization of Zion (Shlomzion), Begin was able to form a government on 19 June, and his position was strengthened in October 1977 when the Democratic Movement for Change (DMC) joined the Likud coalition. In September 1978, however, the DMC split into two factions, with seven Knesset members leaving Begin's coalition because they felt that his policy of announcing plans for further Israeli settlements on the West Bank was endangering prospects for peace.

A permanent peace settlement suddenly seemed possible when President Sadat of Egypt visited Jerusalem in November 1977 and addressed the Knesset. Talks between Sadat and Begin continued, and after various delays an unexpected breakthrough occurred in September 1978 after talks at Camp David in the USA under the guidance of President Carter, when Begin and Sadat signed two agreements. The first was a 'framework for peace in the Middle East' (see Documents on Palestine, p. 111) and the second was a 'framework for the conclusion of a peace treaty between Egypt and Israel'. The first agreement provided for a five-year transitional period during which the inhabitants of the Israeli-occupied West Bank and Gaza would obtain full autonomy and self-government, and the second agreement provided for the signing of a peace treaty between Egypt and Israel, which was finally signed on 27 March 1979. The treaty provided for a phased withdrawal from Sinai which was successfully completed on 25 April 1982. Diplomatic relations between Israel and Egypt were established on 26 January 1980.

Proposals for Palestinian autonomy provided for negotiations to be completed by 26 May 1980. However, that date passed with no agreement concluded. It became clear during the negotiations that Egypt and the Palestinians were considering 'autonomy' in terms of an independent Palestinian state, whereas Israel envisaged only some form of administrative self-government for the Palestinian Arabs in the West Bank. The announcement of fresh Israeli settlements in the West Bank, and a Knesset bill making East Jerusalem an integral part of the Jewish capital, gave Arabs little ground for hope that their concept of Palestinian autonomy would ever emerge from the negotiations, though both Israel and Egypt maintained their adherence to the 'Camp David process'.

BEGIN'S PROBLEMS

After becoming Prime Minister, Begin had to contend with two opposed factions in his Cabinet. Ariel Sharon, then Minister of Agriculture and the Minister responsible for Settlements, was a supporter of the Gush Emunim movement, which endeavoured to push the maximum number of Israeli settlements into the West Bank as quickly as possible. Sometimes voices requesting moderation prevailed, but more often settlements went ahead unopposed. As the deadline for the autonomy talks (26 May) approached, plans for more settlements were announced. Begin prevaricated on the subject of the settlements, but more often than not he supported them. The uncertainty of his exact position on many policy matters led to tensions in the Cabinet. Begin's health was also a cause for concern at times. In October 1979 Moshe Dayan resigned as Minister of Foreign Affairs, because he considered the Israeli Government stand on Palestinian autonomy to be too intransigent, and at the end of May 1980 Ezer Weizman resigned as Minister of Defence, ostensibly because of reductions in planned expenditure on defence, but his dissatisfaction with the settlements position and with the autonomy talks was well known. Begin encountered difficulty when trying to arrange the consequent Cabinet reshuffle. He was hoping to appoint the Minister of Foreign Affairs, Itzhak Shamir, to the post of Minister of Defence but, when this proposal encountered opposition, Begin assumed the defence portfolio himself.

Begin's biggest problem, however, was the state of the Israeli economy. Rampant inflation demanded austerity measures, and the Minister of Finance, Yigael Hurwitz, resigned in early January 1981 when the Knesset voted to award pay increases to teachers. Hurwitz withdrew his Rafi Party, with three Knesset members, from the Likud coalition and the Government could no longer command a majority. General elections were then planned for 30 June. It was thought in early 1981 that Begin was certain to be defeated in the forthcoming elections, but his position grew stronger as they approached. The tax-cutting policies of the new Minister of Finance, Yoram Aridor, proved popular. Begin's support for the Christians in Lebanon, in their struggle with the Syrians, who had stationed SAM missiles on Lebanese soil, also proved electorally popular.

A SECOND TERM FOR BEGIN

Although the election results were close, Begin was able to present a new coalition to the Knesset in early August. This was possible only by making an agreement with the religious parties, in particular Agudat Israel, by which numerous undertakings on religious observance, affecting most aspects of everyday life, were guaranteed. Although these measures were welcomed by zealots, more secular elements in Israeli society found them unpalatable.

Begin's majority was precarious, and it is remarkable that his Government survived as long as it did. In December he formally annexed the strategically important Golan Heights, a step which pleased right-wing political elements in Israel, but which angered the USA sufficiently to cause it to suspend the strategic co-operation agreement which it had signed with Israel less than one month previously.

As the time for withdrawal from Sinai drew nearer, there was increasing pressure from settlers in Sinai (particularly Yamit) to remain there. Squatters from the extreme right-wing Tehiya party adopted a belligerent stance, but they were eventually removed and the withdrawal took place as planned on 25 April 1982.

ADVANCE INTO LEBANON

During 1982 and the first half of 1983, Arab disturbances on the West Bank became more severe, and there were even Jewish demonstrations against Israel's settlement of the area. The number of Jewish settlements in the West Bank increased to more than 100 in 1983, and more land was expropriated. The event which provoked another major Middle East crisis, however, was Israel's 'Operation Peace for Galilee', an armed incursion into Lebanon which was launched on 6 June 1982 and intended as a brief and limited campaign. By the end of June, however, Israeli forces had advanced across Lebanon and surrounded West Beirut, where 6,000 PLO fighters had become trapped. Israel's action met with disapproval from most of the world, and the support of the USA became questionable after Secretary of State Haig's resignation at the end of June, and his replacement by George Shultz. Israel declared a cease-fire and demanded that the Palestinians lay down their heavy arms and leave Lebanon.

Intensive diplomatic efforts, hampered by repeated outbreaks of fighting, were made between June and August to find an acceptable basis for the supervised withdrawal of the trapped Palestinian and Syrian forces. With the help of a US envoy, Philip Habib, their evacuation began on 21 August and was completed by 1 September (estimates put the number of evacuees at 14,500–15,000).

Israeli forces remained in effective control of Beirut, although, under the terms of the evacuation agreement, an international peace-keeping force (predominantly comprising US, French and Italian troops) was stationed in various parts of the city until early September. Despite US protests, Israeli forces moved into West Beirut again on 15 September, taking up positions around Palestinian refugee camps located in the Muslim sectors. On 17 September reports began to emerge of a massacre committed in the Sabra and Chatila camps by armed men who were ostensibly seeking PLO guerrillas. The identity of the killers was uncertain but evidence suggested their being Christian Phalangist militiamen, whose entry into the camps had been facilitated by Israeli troops. Israel rejected the Arab world's charge of responsibility for the massacre, but on 28 September the Government initiated a full judicial inquiry, led by the Chief Justice of the Supreme Court, Itzhak Kahan. Published on 8 February 1983, the report of the inquiry placed actual responsibility for the massacre on Lebanese Phalangists, but concluded that Israel's political and military leaders bore indirect responsibility for the tragic events by failing properly to supervise the militiamen in the area. Begin was censured merely for showing indifference to reports reaching him of Phalangists entering the camps. As recommended by the inquiry, Ariel Sharon resigned as Minister of Defence (though he remained in the Government as Minister without Portfolio), to be replaced by the Ambassador to the USA, Moshe Arens.

Direct talks between Israel and Lebanon for the withdrawal of foreign forces began on 28 December. Progress was slow but a 12-article agreement, formulated by US Secretary of State Shultz and declaring the end of hostilities, was finally signed on 17 May 1983. Syria rejected the agreement and its forces held their positions in the Beka'a valley, raising the possibility of open war with Israel, which, in turn, refused to withdraw while the Syrians remained. On the same day that Israel signed its agreement with Lebanon, it concluded another secret one with the USA which recognized Israel's right, despite the accord with Lebanon, to retaliate against terrorist attacks in Lebanon and to delay its withdrawal, beyond the date (three months from the date of signing) which had been agreed in that accord, if Syrian and PLO forces remained there.

In July, Israel, with its casualties from guerrilla attacks increasing, decided to redeploy its forces south of Beirut along the Awali river.

BEGIN'S RESIGNATION

Support for Begin's Government had been sustained throughout the early weeks of 'Operation Peace for Galilee' but, as the planned, limited incursion developed into a costly occupation, opposition to government policy increased, not only among the Israeli public but also in the army.

By the summer of 1983, Israel was sliding into an economic crisis and the involvement in Lebanon had become an expensive

stalemate. The Government's prestige had been severely undermined by the Beirut massacres and by a capitulation to wage demands by the country's doctors, whose four-month strike for higher pay had taken medical services to the brink of collapse. Begin, distressed by the death of his wife in November and by the events in Lebanon, announced his resignation as Prime Minister and leader of the Likud bloc on 30 August 1983. Itzhak Shamir, the Minister of Foreign Affairs since 1980, was elected leader of Likud on 2 September. Begin withheld his formal resignation until 15 September, while a period of political wrangling ensued to find a viable coalition government. Although Labour was the largest single party in the Knesset, Shamir was asked to form a government on 21 September, his Likud grouping having a theoretical majority of seven seats with the support of minority religious parties. Shamir pronounced himself committed to the Israeli presence in Lebanon, to the continuation of the West Bank settlement programme and to tackling the country's economic problems.

During the second half of 1983 a severe monetary crisis contributed to the declining popularity of the Government. The lack of a co-ordinated approach to the crisis led to the resignation, in October, of the Minister of Finance, Yoram Aridor, whose policies, diluted by the Cabinet, failed to prevent inflation from soaring. The rigorously applied austerity measures of Aridor's successor, Yigal Cohen-Orgad, however, threatened to alienate elements of Shamir's fragile coalition (in particular the Tami party), prompting concerns over the effects of cuts in social services and increases in the price of food, and provoking increasing labour unrest. A plan virtually to 'freeze' the programme of creating Jewish settlements on Israeli-occupied territory in the West Bank and the Gaza Strip, in order to save money, generated further uproar at the beginning of 1984. Although the rate of settlement had slowed down (owing to Israel's economic recession and the shortage of government funds with which to finance new communities), the number of settlements established since 1967 had risen to 129 (114 in the West Bank) by March 1985, and the number of Israeli settlers to 46,000 (42,500 in the West Bank). By March 1985, Israel had direct control of more than 50% of the 490,000 ha of land in the West Bank. The depth of feeling on the issue was illustrated by the exposure in April 1984 of a Jewish anti-Palestinian terrorist organization operating in the West Bank, some of whose members were active in Gush Emunim.

THE 1984 GENERAL ELECTION

Inflation continued to rise sharply in 1984 and in January the Government narrowly survived a vote of 'no confidence' in the Knesset. Its position was further weakened by the resignation from the Cabinet (and the loss of the guaranteed vote) of the Minister without Portfolio, Mordechai Ben-Porat, one week later. Finally, in March, the Government failed by 61 votes to 58 to prevent the passage of a bill, sponsored by the Labour Party, proposing the dissolution of the Knesset prior to a general election. In this vote the Tami party supported the opposition. The general election was set for 23 July.

The election campaign was conducted against a background of strikes as the state of the economy continued to deteriorate. The overall rate of inflation passed 400% in July and it was apparent that the main issue determining voters' likely preference in the election was the economy. Bans which had been imposed by the parliamentary election committee on the ultra-right-wing Kach and the left-wing Progressive List for Peace parties, preventing them from contesting the election, were overturned by the Supreme Court so that 27 parties (including 16 new groupings, mostly splinter groups from existing parties) were expected to compete for seats on 23 July.

Although an opinion poll conducted three weeks before the election indicated a clear Labour lead, the election produced no conclusive result. The Labour Alignment won 44 seats in the Knesset (an insufficient number to enable it to form Israel's first single-party government), while Likud gained 41. The balance of power lay, once again, with the minority parties which won the remaining 35 seats in the 120-seat assembly. When what was required was the swift establishment of a new government to deal with the deteriorating economy, both Labour and Likud were embroiled in negotiations to win the support of the minority parties for a viable coalition administration. These talks provided no clear majority in the Knesset for either side, and it became increasingly likely that a government of national unity, comprising both Labour and Likud, presented the only resolution to the political impasse, short of calling a second election. President Herzog nominated the Labour leader, Shimon Peres, as Prime Minister-designate on 5 August and invited him to form a government of national unity. The 11th Knesset was inaugurated on 13 August in an atmosphere of great uncertainty as to whether Labour and Likud could bridge the political gap between them and could agree on the formation of a national government.

THE ISRAELI OCCUPATION OF SOUTHERN LEBANON

The withdrawal in September 1983 of Israeli forces in Lebanon to the Awali river, south of Beirut, produced a *de facto* partition of the country. Israeli troops (reduced to some 10,000 by the end of 1983) faced about 50,000 Syrian troops and 2,000–4,000 Palestinian guerrillas entrenched in the Beka'a valley to the north. The 2,500 men of Maj. Sa'ad Haddad's Israeli-controlled southern Lebanese militia, the so-called 'South Lebanon Army' (SLA), were employed to police the occupied area, with the Israeli troops, and to combat guerrilla attacks on the occupying forces. Israel also armed other, independent, militias (including Shi'ite Muslim groups) so that they could control their own areas of influence. Despite these measures and, perhaps, partly because of them, Israeli soldiers continued to be the target of guerrilla attacks (the Israeli death toll in the 'Peace for Galilee' operation approached 600 by July 1984). Although, after the withdrawal to the Awali river, the Israeli air force and navy were involved in attacks on Syrian targets in north Lebanon and against the PLO in the port of Tripoli (in November and December 1983), there were no serious land-based exchanges between Israeli and Syrian forces in Lebanon during the first half of 1984. Some isolated Israeli shelling of Palestinian positions in the Beka'a took place in retaliation against the activities of Palestinian guerrilla squads which infiltrated the Israeli-occupied areas to make their attacks.

Major Sa'ad Haddad died in December 1983 and Maj.-Gen. Antoine Lahad replaced him as leader of the SLA in March 1984. In the same month, under the influence of Syria, President Gemayel abrogated the 17 May agreement with Israel. Although the agreement had effectively been a 'dead-letter' for some time, the rising cost of involvement in Lebanon and the unpopularity of that policy at home disposed Israel at least to consider withdrawing. It was clear, however, that, much as Israel would prefer to spare the expense of occupation and the lives of its people by leaving the policing of southern Lebanon to Maj.-Gen. Lahad's and other militias, it would not withdraw either until it felt secure within its existing boundaries against terrorist attacks launched from Lebanese territory, or until it was politically impossible for it to remain. The official policy of the Shamir Government was that Syrian withdrawal from Lebanon was a precondition of Israeli withdrawal. Shimon Peres, the Labour Party leader, had pledged to adopt a more flexible pragmatic approach to negotiations on an Israeli withdrawal if he came to power. However, Labour's failure to win an overall majority in the election, and the likely formation of a government of national unity with Likud, meant that Labour might have to make compromises, over controversial issues, in the very policies which distinguished it from Likud.

THE GOVERNMENT OF NATIONAL UNITY

Six weeks of negotiation were required before Peres and Itzhak Shamir could agree on the composition and policy of a coalition government. The new Government, whose component parties accounted for 97 of the 120 Knesset seats, was formed on 13 September. It contained representatives of the two major party groupings (Labour and Likud), four religious parties (the NRP, Shas, Agudat Israel and Morasha) and the Shinui, Yahad and Ometz parties. Under the terms of the coalition agreement, Shimon Peres was to hold the premiership for the first 25 months of the government, while Itzhak Shamir served as Deputy Prime Minister and Minister of Foreign Affairs, after which time they were to exchange their respective posts for a further period of 25 months. Within the Cabinet of 25 ministers,

an 'inner Cabinet' of 10 (including five members each from Labour and Likud) was formed.

ISRAEL'S WITHDRAWAL FROM LEBANON

The Government of national unity pledged itself to withdrawing the Israel Defence Force (IDF) from Lebanon, and to tackling the problems of the economy. Any withdrawal agreement with Lebanon was not to be without conditions. To ensure the security of its northern border, ideally, Israel sought Syrian commitments not to redeploy its forces in areas evacuated by the IDF; to prevent the infiltration of PLO terrorists into the south of Lebanon; to grant freedom of operation to the SLA; and to allow the UN Interim Force in Lebanon (UNIFIL) to deploy north of the SLA area up to Syrian lines in the Beka'a valley. Lebanon, for its part, demanded $10,000m. in reparations, and the unconditional withdrawal of the IDF. More realistically, Israel dropped its demand for simultaneous Syrian withdrawal, provided satisfactory military arrangements could be made, and Syria approved a series of talks, under UN auspices, between Lebanese and Israeli army representatives, to agree the terms of withdrawal. Talks began in an-Naqoura (Lebanon) in November but repeatedly foundered on the question of which forces should take the place of the IDF, to prevent intercommunal fighting. The Lebanese, influenced by Syria, wanted UNIFIL to police the Israel-Lebanon border (as it had been mandated to do in 1978), and the Lebanese army to deploy north of the Litani river, between UNIFIL and the Syrian forces. Israel was not convinced of the competence of the Lebanese army, and wanted UNIFIL to be deployed north of the Litani while the SLA patrolled the southern Lebanese border. In the absence of any agreement, Israel withdrew from talks, and on 14 January 1985 the Israeli Cabinet voted to take unilateral steps towards withdrawal, arousing fears of civil war in southern Lebanon when they departed. The Cabinet agreed a three-phase withdrawal plan whose final aim was the return of the IDF to the international border. The first phase took place in February 1985 and involved the evacuation of the IDF from the western occupied sector, around Sidon, to the Litani river area, around Nabatiyah. The UN force was asked to police the vacated area with the Lebanese army. In the second phase, the IDF was to leave the occupied central and eastern sector (including the southern Beka'a valley), and redeploy around Hasbayyah. The third and final phase, taking the IDF behind Israel's northern border and leaving an apparatus of control inside southern Lebanon (based on the SLA, with IDF backing), was to be completed some nine months after the first.

The cost of the withdrawal was estimated at $100m., and that of the entire 'Operation Peace for Galilee' at some $3,500m. The second stage of the withdrawal began on 3 March 1985, with no fixed duration. The Shi'ites of southern Lebanon, antipathetic towards the PLO, had initially welcomed the IDF, but now they attacked it in retreat. Guerrilla attacks increased the Israeli death toll in Lebanon during the invasion and occupation to more than 650 by April, with about 50 of these deaths having occurred during the withdrawal. In retaliation, Israel pursued an 'Iron Fist' policy, purging Shi'ite villages of suspected guerrillas or attacking them indiscriminately, killing innocent inhabitants. Instead of decreasing, the number of attacks on Israeli forces, orchestrated by the Shi'ite National Resistance Movement, Amal and Hezbollah (the Party of God), multiplied, and during March Israel accelerated the process of withdrawal. The second stage was completed with the evacuation of Tyre on 29 April.

On 4 April 1985 Israel released 750 Shi'ite prisoners, detained as part of the 'Iron Fist' policy, from Ansar camp, prior to withdrawing from that part of western Lebanon. At the same time, contrary to international conventions (as they were not prisoners of war), 1,200 Lebanese and Palestinian detainees were transferred to prisons in Israel. Then, on 20 May, 1,150 Lebanese and Palestinian prisoners were exchanged for three Israeli prisoners of war. The release of 766 Shi'ite prisoners, transferred from Lebanon to Atlit prison in Israel, became the central demand of Amal guerrillas who hijacked a TWA airliner and held it and its predominantly US crew and passengers at Beirut airport in June. Israel refused to release the prisoners unless requested to do so by the USA. Some 450 of them were freed at the end of June and in early July, though Israel denied that their release was related to the hostage crisis, and the rest by 10 September.

Israel announced the completion of the third and final stage of the withdrawal of the IDF, ahead of the original schedule, at the beginning of June, though it was common knowledge that about 500 Israeli troops and advisers remained in Lebanon to support the SLA in patrolling the defensive buffer zone which formed a strip, 11 km–20 km wide, inside the border. The SLA had been depleted by desertion and defections to the Shi'ite resistance during the withdrawal. Syria, the Lebanese Government and leaders of the Shi'ite and Druze communities in Lebanon did not recognize the SLA's role in policing the border with Israel. Despite a continued Israeli presence in Lebanon, Syria withdrew 10,000 of its troops from the Beka'a valley at the end of June and the beginning of July, leaving fewer than 25,000 men in the country. Attacks on the security zone, and on the SLA policing it, were frequent, but the zone remained intact.

After the initial euphoria of the Israeli withdrawal from Sidon in February, fighting erupted between the Christian Phalange (allegedly incited by Israel), the Lebanese army, Amal, and other Shi'ite groups, and Palestinians in the refugee camps. From the Israeli point of view, the return of some 2,000 PLO fighters to the Palestinian refugee camps around Sidon was a serious development. However, the Shi'ites of southern Lebanon and the Syrians had no desire to see a pro-Arafat PLO re-establish itself militarily in the region, and tried to prevent it from doing so.

Israel was confronted by a more firmly entrenched enemy in the Shi'ite community just across its northern border. After the final stage of the Israeli evacuation was completed, Shi'ite guerrilla attacks on the SLA continued and the PLO steadily re-established itself in southern Lebanon. Israeli forces repeatedly pursued PLO fighters across the border and raided PLO positions in Lebanon by land and air in retaliation for attacks on Israeli territory made by PLO guerrillas. According to Israel the 'frequency' of attempts by guerrillas to infiltrate northern Israel increased significantly after December 1987, when the Palestinian uprising (*intifada*) in the Occupied Territories began (see below).

DOMESTIC AND DIPLOMATIC ISSUES

The state of the economy presented the main domestic problem to the Government of National Unity and was the cause of considerable argument within the Cabinet between those convinced of the necessity for strict budgetary control and those concerned at the consequences such control might have for Israel's defensive capability and for civil order.

On the question of Jewish settlement of the occupied West Bank and Gaza Strip, the document establishing the Government of National Unity effectively allowed Shimon Peres and his fellow Labour ministers in the Cabinet to obstruct plans for new settlements. The coalition agreement provided for the establishment of five or six new settlements in each of the Government's four years in office. However, between October 1984 and October 1986 only two new settlements were opened in the West Bank, though the population of the 114 existing settlements increased from 42,500 in October 1984 to about 60,000 in mid-1986. Before his two-year period of office as Prime Minister terminated in October 1986, Shimon Peres said that no new settlements would be established in 1986/87, and that the budget for investments would be used to consolidate existing settlements. However, on assuming the premiership, Itzhak Shamir stated that the settlement programme would be carried out in accordance with the coalition agreement. By the end of 1987, the number of settlements in the Occupied Territories had risen to 139 (118 in the West Bank) and the number of Jewish settlers to 70,023 (67,648 in the West Bank). Of the total land area of the West Bank, 52% had been expropriated.

After 1974 and the fall of Emperor Haile Selassie, Israel had smuggled Falashas (Ethiopian Jews) out of Ethiopia. Between 1980 and 1982 some 2,000 were brought to Israel. In 1984 and 1985 respectively, with the co-operation of international Jewish organizations, 7,800 and 2,035 Falashas were airlifted via Europe to resettlement camps in Israel from Sudan, to which they travelled from famine-stricken Ethiopia. Owing to international publicity, criticism of the operation from Ethiopia's Marxist regime and the possibility of Arab opposition to it, the

Sudanese Government suspended the airlift in January 1985, leaving 1,000 Falashas awaiting transportation in Sudan and a further 12,000 stranded in Ethiopia. The USA secretly completed the airlift of Falashas from Sudan at the end of March.

In January 1985 Israel and Egypt embarked on a series of talks, the first for two years, to determine the sovereignty of the minute Taba coastal strip on the Red Sea, which Israel had not vacated when it left Sinai in 1982. The Taba issue threatened the survival of the fragile coalition on several occasions. Negotiations were not finally concluded until February 1989, when Israel agreed to return Taba to Egyptian control by 15 March. Israel was to continue providing Taba with water, electricity and telephone lines, and Israeli citizens with valid passports were to be granted free access.

THE FAILURE OF THE JORDANIAN-PALESTINIAN PEACE INITIATIVE

In 1984 Israel rejected a request by King Hussein of Jordan for a peace conference involving all the concerned parties in the Arab–Israeli conflict. The formal establishment by King Hussein and Yasser Arafat of a combined Jordanian-Palestinian position on future peace talks, on 23 February 1985 in Amman, providing for a joint Jordanian-Palestinian delegation to such talks, gave new impetus to the search for a diplomatic solution to the Palestinian question. Although Israel supported the involvement of the five permanent members of the UN Security Council in the peace process, it rejected the call for an international peace conference, which was reiterated in 1985 by King Hussein and President Mubarak of Egypt, and also their suggestion of preliminary talks between the USA, Egypt and a joint Jordanian-Palestinian delegation, if it contained PLO members. Israel was interested only in direct talks once an acceptable Palestinian delegation was agreed on. In July Israel rejected a list of seven Palestinians, all members or supporters of Yasser Arafat's Fatah, nominated by the PLO as members of a joint delegation with Jordan to hold talks with the USA prior to direct negotiations with Israel. Israel refused to talk to any members of the PLO or the Palestine National Council (PNC) and considered US participation in talks with them as a violation of their commitment not to deal with the PLO until it recognized Israel's right to exist. Peres subsequently accepted two men on the list who satisfied his requirement for 'authentic Palestinian representatives' from the Occupied Territories. The other major obstacle to progress at this time was the PLO's position regarding UN Security Council Resolution 242. The PLO consistently refused to accept this resolution as a basis for negotiations as it referred only to a Palestinian refugee problem and not to the right of Palestinians to self-determination and a state of Palestine. The PLO Executive Committee repudiated Resolution 242 again after the Amman agreement with Jordan, although it was King Hussein's contention that Arafat had privately acknowledged (and would, in time, publicly accept) the resolution. However, despite persistent cajoling by King Hussein, Arafat made no public declaration.

The peace process was further hampered by a series of terrorist incidents in which the PLO was implicated. Firstly, in September 1985, three Israelis were murdered by terrorists in Larnaca, Cyprus. Israel held the PLO's élite Force 17 responsible, and, at the beginning of October, bombed the organization's headquarters in Tunis. Then, in October, an Italian cruise ship, the *Achille Lauro,* was 'hijacked' in the eastern Mediterranean by members of the Palestine Liberation Front (PLF; one of two groups of that name, this being the pro-Arafat PLF, led by Muhammad Abbas—'Abu Abbas'). They killed a Jewish American passenger before surrendering to the Egyptian authorities in Port Said.

These incidents gave Israel further cause to reject the PLO as a prospective partner in peace negotiations, and raised doubts as to Arafat's desire for a peaceful settlement. Meanwhile, Jewish settlers in the Occupied Territories had asserted that any attempt to negotiate Israeli sovereignty over the disputed areas would provoke a campaign of civil disobedience.

In November, in Cairo, Yasser Arafat, under pressure from King Hussein of Jordan and President Mubarak of Egypt to renounce the use of violence, reiterated a PLO decision of 1974 to confine military operations to the Occupied Territories and Israel, though his aides immediately repudiated the statement.

In December 17 people were killed when terrorists, believed to belong to the anti-Arafat Fatah Revolutionary Council led by 'Abu Nidal', attacked passengers at the desks of the Israeli state airline, El Al, in Rome and Vienna airports.

King Hussein, who had already prepared the ground for an alternative approach to the Palestinian question by initiating a *rapprochement* with Syria, formally severed political links with the PLO on 19 February 1986, 'until such time as their word becomes their bond, characterized by commitment, credibility and constancy'. It emerged that, in January, the USA (without Israel's knowledge) had undertaken to invite the PLO to an international peace conference, on condition that the PLO publicly accepted UN Security Council Resolutions 242 and 338 as the basis for negotiation. Arafat refused to make such a commitment without a similar US acceptance of the Palestinians' right to self-determination.

After the collapse of the Jordanian-Palestinian peace initiative, Jordan resisted Israeli requests for direct talks excluding the PLO, and there was little prospect of a speedy revival of the peace process.

CABINET DISCONTENT

The coalition Government continued its precarious existence in 1986, beset by a number of contentious issues which divided Labour and Likud, its largest constituents. In February, after the success of the first seven months of the Government's economic stabilization programme, Prime Minister Peres drew criticism from the Minister of Finance, Itzhak Modai of Likud, when he expressed support for various reflationary measures. Their difference of opinion culminated in April, when Modai accused Peres of being a 'flying Prime Minister' with no understanding of economics. Peres demanded Modai's resignation as Minister of Finance (although he agreed to Modai's remaining in the Government), and the Likud members of the Cabinet threatened to resign en masse if Modai was dismissed or replaced. Modai offered to resign, rather than endanger the existence of the Government, but Likud refused to countenance this. The crisis lasted for 10 days until a compromise was agreed, whereby Modai exchanged cabinet portfolios with Moshe Nissim, the Minister of Justice. Itzhak Shamir, the leader of Likud, asserted that the exchange of cabinet posts would remain valid only until he took over the premiership from Peres in October.

SHAMIR ASSUMES THE PREMIERSHIP

In accordance with the terms of the agreement under which the coalition Government of National Unity was formed in September 1984, Shimon Peres, the leader of the Labour Party, resigned as Prime Minister on 10 October 1986, to allow Itzhak Shamir, the Minister of Foreign Affairs, to assume the premiership on 14 October. The transfer of power was delayed while the coalition parties negotiated the composition of the new Cabinet, which was approved by the Knesset on 20 October. The Labour group had objected to the reinstatement of Itzhak Modai, but his name was finally included in the Cabinet, in which he was one of five ministers without portfolio. The only unscheduled changes in the Cabinet were the replacement of Dr Josef Burg, who resigned as Minister of Religious Affairs, by Zvulun Hammer, and the naming of Shoshana Arbeli-Almoslino as Minister of Health, instead of Mordechai Gur, who refused to serve under Itzhak Shamir. (Mordechai Gur returned to the Cabinet in April 1988.) The composition of the 'inner Cabinet' was unchanged. Peres and Shamir duly exchanged posts on 20 October.

THE SHIN BET CONTROVERSY

The activities of Shin Bet, the Israeli internal military intelligence agency, came under scrutiny in 1986, when it was suggested that the deaths, under interrogation, of two Palestinians in April 1984 had been deliberately concealed. The official Shin Bet version of events was that all four Palestinians involved in the 'hijacking' of an Israeli bus had been killed at the time of the incident. Photographs revealed that two terrorists were captured alive. Two subsequent official inquiries, between April 1984 and August 1985, confirmed that the two terrorists had 'died at a later stage', and identified Brig.-Gen. Itzhak Morde-

chai as the prime suspect in their murders. Mordechai was acquitted by a military court in August 1985, and the Attorney-General, Itzhak Zamir, initiated investigations into the affair. He was told by leading Shin Bet officials that Avraham Shalom, the director of the agency, had ordered the prisoners' execution and had falsified evidence and suborned witnesses at the two official inquiries. Zamir insisted on a police investigation into the affair. In May 1986 the Cabinet refused to suspend Shalom, the Shin Bet director, and (though the Labour group, with the exception of Shimon Peres, supported some form of investigation) continued to resist the suggestion of a police inquiry. Likud, in particular, feared that such an investigation would reveal too much about the operations of Shin Bet, thus preventing the organization from functioning effectively and so endangering national security. On 1 June Itzhak Zamir, who had wanted to resign in February, was replaced as Attorney-General by Josef Harish. At the end of June Avraham Shalom resigned as director of Shin Bet, he and three of his deputies having been assured of a pardon and immunity from prosecution by the President of Israel, Chaim Herzog. In a letter to President Herzog, Shalom stated that his actions had been taken 'on authority and with permission', presumably from Itzhak Shamir, to whom, as Prime Minister at the time of the killings and the cover-up, he was responsible. In August a further seven Shin Bet agents were granted a presidential pardon for their alleged involvement in the killings or the subsequent subterfuge. In July the Supreme Court challenged the Government to explain why it had not instituted a police investigation into the affair. The Cabinet then voted, by a narrow margin, for a police inquiry (which was supported by Likud and the small religious parties), rather than a full judicial inquiry (supported by Labour). Later that month, after criticizing Shimon Peres for his handling of the Shin Bet affair, Itzhak Modai resigned from the Cabinet. In December a secret report, compiled by the Ministry of Justice and based on a three-month-long police investigation into the affair, absolved Itzhak Shamir from any blame for the deaths of the two Palestinians or for the subsequent attempts by Shin Bet to conceal the truth of the incidents in question; it also exonerated Shimon Peres and Moshe Arens, respectively the Prime Minister during one of the official inquiries, and the Minister of Defence when the killings occurred. Following further revelations of illegal Shin Bet practices in 1987, the Government established a commission of inquiry in June, under Moshe Landau, the former Supreme Court President, to investigate the agency.

In October 1986, using information supplied by Mordechai Vanunu, a former technician at Israel's nuclear research establishment at Dimona, *The Sunday Times* of London claimed that Israel had succeeded in developing thermonuclear weapons and was stockpiling them at Dimona. Vanunu subsequently disappeared from London, and at the end of October Israeli authorities admitted that he was in their custody and would be tried for breaching national security. It was alleged that Vanunu had been lured to Rome, by a female agent of Mossad (the Israeli external security agency), where he was kidnapped and smuggled to Israel. Vanunu's trial began in September 1987, and in March 1988 he was sentenced to 18 years' imprisonment (being kept in solitary confinement until early 1998).

Following the revelation in a Lebanese magazine, in November 1986, that the USA had made three deliveries of military equipment to Iran since September 1985, it emerged that the sale of weapons and spare parts had been effected through Israeli intermediaries, with the knowledge, and even partly at the instigation, of Prime Minister Peres. According to some reports, Israel had itself been supplying armaments to Iran since the outbreak of the Iran–Iraq War in 1980.

ATTEMPTS TO REVIVE THE MIDDLE EAST PEACE PROCESS

On 11 September 1986 President Mubarak of Egypt and Prime Minister Peres of Israel met in Alexandria, Egypt, to discuss ways of reviving the Middle East peace process. They agreed to form a committee to prepare for an international peace conference (though Peres did not have cabinet endorsement for this initiative), but failed to agree on the nature of the Palestinian representation at such a conference. Following the summit meeting (the first between Egypt and Israel since August 1981) and the signing of the Taba arbitration agreement, President Mubarak appointed a new Egyptian ambassador to Israel; the previous ambassador had been recalled from Israel in 1982, following the Israeli invasion of Lebanon.

Under the premiership of Itzhak Shamir, however, official Israeli policy regarding a Middle East peace settlement remained divided. Shamir opposed the concept of an international peace conference, involving the five permanent members of the Security Council, and instead proposed direct negotiations between Israel, Egypt, the USA and a joint Jordanian-Palestinian delegation, excluding the PLO. Although King Hussein resisted Shamir's advances, Jordan and Israel appeared to have a common interest in fostering a Palestinian constituency in the West Bank, which was independent of the PLO and with which they could deal, and, to this extent, their policy in the region coincided after the demise of the joint Jordanian-PLO peace initiative. In 1986, under the premiership of Shimon Peres (who said that the 'freeze' in the building of new Jewish settlements in the West Bank would continue), Israel revived a programme of limited Palestinian autonomy, with the appointment of Palestinians to replace Israeli officials in municipal government, though this resulted in civil protests by pro-PLO Palestinians and the intimidation or assassination of Israeli appointees. In August Jordan announced a major five-year investment programme in the Occupied Territories and gave its approval to an Israeli proposal for the establishment of branches of the Amman-based Cairo-Amman Bank in Nablus (Nabulus), under dual Jordanian/Israeli authority, to provide financial services to the Palestinian community. However, support for Yasser Arafat and the PLO remained strong in the West Bank.

In the less influential role of Minister of Foreign Affairs, Shimon Peres continued to pursue his own diplomatic initiative to secure international agreement on the terms for a peace conference. In February 1987, although Prime Minister Shamir warned him that he had no authority to enter into agreements with a foreign power on Israel's behalf, Peres revisited President Mubarak in Egypt, and, at the conclusion of their discussions, he and the Egyptian Minister of Foreign Affairs issued a joint statement urging 'the convening in 1987 of an international conference leading to direct negotiations' between the main protagonists in the Middle East conflict. The outstanding issues to be resolved remained those of Palestinian representation and the participation of the USSR. On the Israeli side, the main obstacle to any negotiated settlement remained the refusal of any Israeli leader to accept the participation of the PLO in peace negotiations. In May Peres claimed to have made significant progress on the issue of Palestinian representation with King Hussein of Jordan, and to have the consent of Egypt, Jordan and the USA for convening an international peace conference, including a delegation of Palestinians (presumably not PLO members) who rejected terrorism and violence and accepted UN Security Council Resolutions 242 and 338 as the basis for negotiations. King Hussein continued publicly to insist on the need for the PLO to be represented, but he appeared to have accepted (contrary to his long-standing view) that the conference would have no decision-making powers and be only a preliminary to direct negotiations.

However, Peres failed to gain the approval of the 10-member Israeli 'inner Cabinet' for his plan, and his Labour bloc did not have the necessary support in the Knesset to force an early general election on the issue, or to be sure of being able to form a coalition government, thereafter, which excluded Shamir's Likud bloc. Likud and other right-wing Israeli groups remained implacably opposed to the principle of an Israeli offer to exchange territory taken in 1967 for peace with its Arab opponents, which Peres would have sought to apply at a peace conference.

In July 1987 Egypt's Minister of Foreign Affairs, Dr Esmat Abd al-Meguid, on the first visit to Israel by a leading member of the Egyptian Government since the Israeli invasion of Lebanon in 1982, appealed to the Israeli Government to participate in an international peace conference, which must, he said, inevitably include a PLO delegation. He rejected Prime Minister Shamir's alternative proposal of direct peace negotiations between Israel, Egypt, Jordan, the USA and Palestinian representatives.

PALESTINIAN UPRISING

The frequency of anti-Israeli demonstrations and violent incidents in the Occupied Territories increased during 1987, in particular following the reunification of the PLO and its abrogation of the 1985 Jordanian-PLO accord in Algiers in April. However, the authorities were not prepared for the wave of violent demonstrations against Israeli rule (the worst since Israel occupied the Territories in 1967) which began in December. The rioting was apparently precipitated by the deaths of four Palestinians on 8 December 1987, when the two vehicles in which they were travelling were in collision with an Israeli army truck at a military checkpoint in the Gaza Strip. Rioting in the Gaza Strip soon spread to the other Occupied Territories, and the number of Palestinians shot dead by the heavily reinforced Israeli army and security forces rose to 38 by mid-January 1988. There was widespread international condemnation of the 'iron fist' tactics that Israeli forces employed to control rioters who hurled bricks, stones and petrol bombs. A series of strikes was widely observed in the Occupied Territories, and many of the estimated 120,000 Palestinians who commuted to work in Israel stayed at home. The uprising (*intifada*), which had probably begun more as a spontaneous expression of accumulated frustration at 20 years of occupation, degrading living conditions, overcrowding and declining opportunities in education and employment, than as a politically co-ordinated demonstration, was soon being exploited and orchestrated by an underground leadership, the Unified National Leadership of the Uprising (UNLU), comprising elements from across the Palestinian political spectrum (the PLO, the Communist Party and Islamic Jihad). The UNLU organized strikes, the closure of shops and businesses, and other forms of civil disobedience, including the non-payment of taxes. It also distributed regular bulletins, exhorting Palestinians to continue the struggle and instructing them in means of revolt.

On 22 December 1987 the USA abstained from a UN Security Council Resolution (No. 605) deploring Israel's violent methods of suppressing Palestinian demonstrations. On 5 January 1988, however, the USA voted in support of Resolution 607, which urged Israel to comply with the International Red Cross's fourth Geneva Convention of 1949, concerning the treatment of civilians in wartime, and to abandon its plans to deport nine Palestinian political activists from the Occupied Territories. (This was the first time since 1981 that the USA had supported a UN resolution which was critical of Israel.) However, on 13 January during a fact-finding mission to the Occupied Territories by a UN Under-Secretary-General, Marrack Goulding, four of the Palestinians were deported to Lebanon. By mid-January up to 1,000 Palestinians had been arrested, and 24-hour curfews were in force around 12 or more refugee camps in the Gaza Strip and the West Bank, preventing the entry of food and supplies. The Israeli Cabinet repeatedly endorsed the security forces' 'iron fist' policy but was divided over the long-term solution to the Palestinian question. Shimon Peres, in contrast to Itzhak Shamir's Likud bloc (which considered the Occupied Territories to be a non-negotiable part of 'Greater Israel'), believed that only a political solution could end the uprising, and favoured a demilitarization of those areas and the removal of Jewish settlements prior to a negotiated agreement.

At the end of January 1988, by order of Itzhak Rabin, the Minister of Defence, Israeli security forces adopted a policy of indiscriminate, pre-emptive beatings of Palestinians, allegedly to avoid shootings, which was internationally condemned. The new policy, combined with the periodic imposition of curfews on refugee camps, towns and villages, far from quelling unrest, appeared to provoke it and encouraged greater self-reliance and organization among the Palestinians, who established committees to oversee the collection and distribution of food and other supplies, and to co-ordinate resistance. In addition, the Israeli economy began to feel the effects of an absence of labour, as Palestinian workers from the Occupied Territories either boycotted their jobs in Israel or were prevented from travelling to them by curfew, so that production at industrial plants and fruit plantations declined. Equally worrying for the Israeli authorities was the prominent role which was adopted by Islamic fundamentalists in organizing demonstrations and appealing for a *jihad* (holy war) against Israel. The most powerful of the militant Islamic groups was the Islamic Resistance Movement, founded as a radical reincarnation of the Muslim Brotherhood, and known by its Arab acronym, Hamas (Harakat al-Muqawama al-Islamiyya). Meanwhile, Israeli Arabs (and some Jews) demonstrated in Nazareth and Tel-Aviv in opposition to the Government's treatment of the Palestinians in the Occupied Territories.

THE SHULTZ PLAN

At the end of February 1988 the US Secretary of State, George Shultz, embarked on a tour of Middle Eastern capitals, in an attempt to elicit support for a new peace initiative. The Shultz Plan, as the initiative came to be known, proposed the convening of an international peace conference, involving all parties to the Arab–Israeli conflict and the five permanent members of the UN Security Council, with the Palestinians represented in a joint Jordanian/Palestinian delegation, excluding the PLO. However, this conference would have no power to impose a peace settlement and would act only as a consultative forum prior to and during subsequent direct talks between Israel and each of its Arab neighbours, and between Israel and a joint Jordanian/Palestinian delegation. The latter talks would determine the details of a three-year transitional period of autonomy for the 1.5m. Palestinians in the Occupied Territories, leading (before the transitional period began) to negotiations to determine the final status of government in the Territories.

When Shultz returned to the USA at the beginning of March, his plan appeared to be, already, a hopeless cause. The plan's failure to provide for the participation of the PLO immediately made it impossible for the Arab nations to accept, while the divisions within the Israeli Government precluded a coherent response from that quarter. Having expressed initial reservations over the Shultz proposals, Shimon Peres had generally endorsed them. For Itzhak Shamir, however, they had 'no prospect of implementation'.

THE INTIFADA CONTINUES

Meanwhile, the demonstrations against Israeli occupation of the West Bank and the Gaza Strip continued, apparently unabated. The uprising had demonstrated a surprising resilience and, at the end of March, Israel redoubled its efforts to extinguish the Palestinian revolt by economic as well as military means. The flow of money into the Occupied Territories was restricted to prevent PLO funds from reaching the Palestinian resistance movement; a partial ban was imposed on the export of goods from the Occupied Territories to Jordan and Israel; telephone links between the Territories and the outside world were cut; access to the Territories for the media and the press was strictly curtailed; restrictions were placed on the freedom of movement between areas within the Territories; a 24-hour curfew was imposed on the entire Gaza Strip for three successive days; and the Occupied Territories were sealed off from each other and from Israel, for the first time since 1967, and declared 'closed military areas'. The restrictions on movement within, and on access to and from the West Bank and the Gaza Strip were primarily introduced as a temporary measure to prevent Palestinians in the Territories and Arabs in Israel joining forces in a massive demonstration which the UNLU had planned for Land Day on 30 March (commemorating the killing of six Israeli Arabs in 1976, who had been demonstrating against Israeli land seizures) and were lifted on 1 April. However, they could be reintroduced at any time and used in combination with the other economic and administrative sanctions as part of Israel's long-term strategy to starve the *intifada* of publicity and to force it into submission by depriving Palestinians of the funds and supplies they required to compensate for losses incurred by them in a campaign of strikes, shop and business closures, and civil disobedience. By the end of March more than 100 Palestinians had been killed during the uprising and an estimated 4,000 had been arrested and detained without trial for six months, under martial law. Once more, however, the result of these measures seemed to be to steel the Palestinians' resolve to continue the uprising.

George Shultz returned to the Middle East in mid-April but, in talks with Israeli leaders, with President Assad of Syria and with King Hussein of Jordan, he made no further progress towards the acceptance of his peace plan. His lack of success in Israel was partly due to the obstinacy of Israeli Prime Minister

Shamir and partly to the unwillingness of Shultz to exert persuasive pressure on him.

THE ASSASSINATION OF 'ABU JIHAD'

On 16 April 1988, in Tunis, an Israeli assassination squad murdered Khalil al-Wazir (alias 'Abu Jihad'), PLO leader Yasser Arafat's deputy, and the military commander of the Palestine Liberation Army (PLA). Although there was satisfaction in Israeli political circles at the success of the operation, the incident provoked the most violent demonstrations in the Occupied Territories since the uprising began, and 16 Palestinians were reportedly killed in a single day. New curfews were introduced in 17 towns and villages in the Occupied Territories for one week after the disturbances.

At the beginning of June 1988 an extraordinary summit of the League of Arab States was held in Algiers to discuss the *intifada* and the prospects for peace in the Middle East. The communiqué issued at the end of the summit effectively rejected the Shultz Plan by demanding the participation of the PLO in any future international peace conference and insisting on the Palestinians' right to self-determination and the establishment of an independent Palestinian state in the Occupied Territories. The summit hailed the 'heroic' *intifada* and pledged all necessary assistance (including an unspecified amount of financial aid) to ensure its continuance.

JORDAN SEVERS ITS LINKS WITH THE WEST BANK

During the Algiers summit, Bassam Abu Sharif, a close adviser of the PLO leader, Yasser Arafat, distributed a paper entitled *PLO View: Prospects of a Palestinian-Israeli Settlement*, which clearly stated that the PLO was seeking peace with Israel through direct negotiations within the context of a UN-sponsored international conference, on the basis of all relevant UN Security Council resolutions, including Resolutions 242 and 338. Although Arafat did not publicly endorse the document and it provoked fierce arguments within the PLO, it did give rise to speculation that a PLO peace initiative might be forthcoming. The suggestion that the PLO might be ready to take political responsibility for its own future and that of the Palestinian people, reflected the new confidence it had acquired since the *intifada* began and was substantiated by subsequent developments which affected the status of the West Bank.

The *intifada* increased Palestinian aspirations to statehood and reinforced support in the Occupied Territories for the PLO. The endorsement of the uprising that was expressed at the Arab summit in Algiers finally persuaded King Hussein of Jordan to end the speculation as to his intentions regarding the West Bank and to grant the PLO the larger role in determining the future of Palestine that it had sought. On 28 July 1988 Jordan cancelled its Five-Year Development Plan for the West Bank and, on 31 July, King Hussein officially severed Jordan's legal and administrative links with the West Bank. The House of Representatives, in which deputies representing the West Bank held 30 of the 60 seats, was dissolved (for further details, see chapter on Jordan).

King Hussein's action appeared finally to end hopes that the Shultz Plan could be implemented and to damage the prospects of a victory for Shimon Peres' Labour Alignment in the Israeli general election, which was scheduled to take place in November 1988. The peace plans of both Shultz and Peres had relied on the Palestinians being represented at negotiations in a joint Jordanian-Palestinian delegation (the so-called 'Jordanian option'). Without the participation of Jordan, which had voluntarily withdrawn from the West Bank and renounced any pretension to represent the Palestinians, the PLO could make a stronger claim to be, in the eyes of the world, as well as the Arab nations, the sole legitimate representative of the Palestinian people. The Israeli Government, however, was united in refusing to negotiate with the PLO. The possibility did exist, though, that the PLO might make the sort of concessions which would persuade Israel to reconsider its position. The severance of Jordanian links with the West Bank stimulated a heated debate within the PLO on the issues of recognizing Israel's right to exist, declaring an independent Palestinian state in the West Bank and proclaiming a Palestinian government-in-exile. To have done so would, by implication, have been to place the emphasis of the Palestinian independence movement on a diplomatic and political search for a solution, rather than on armed struggle. Israel's Prime Minister Shamir, however, immediately announced that he would use an 'iron fist' to prevent the creation of such a government or state. The Labour Party of Shimon Peres, on the other hand, bereft of the 'Jordanian option', offered to talk to 'any Palestinians' who renounced the use of violence and recognized the Jewish state.

NEW INITIATIVES BY THE PLO

In continuation of the spirit expressed at the June 1988 Arab summit, the Palestine National Council met in Algiers in November and the PLO declared an independent Palestinian state (notionally on the West Bank) and endorsed UN Security Council Resolution 242, thereby implicitly granting recognition to Israel. A month later, Yasser Arafat stated explicitly in Stockholm that 'the Palestine National Council accepted two states, a Palestinian state and a Jewish state, Israel'. Later in December, Arafat presented a three-point peace initiative to the UN General Assembly in Geneva. He proposed the convening of an international conference under UN auspices, the creation of a UN force to supervise Israeli withdrawal from the Occupied Territories, and the implementation of a comprehensive settlement based on UN Security Council Resolutions 242 and 338. Although the USA refused to accept the PLO proposals (alleging ambiguities), the PLO's explicit rejection of violence encouraged the US Government to open a dialogue with the PLO, implying a change in the direction of US-Israeli policy over Palestine. The United Kingdom and the USSR, among other countries, urged Israel to make a positive response to the change in the PLO's position.

ISRAELI PEACE PLANS

External initiatives appeared to have little impact on the daily operations of the *intifada* and by the time of the Israeli general election on 1 November 1988, it had claimed the lives of an estimated 300 Palestinians and six Israelis. The election once again produced a result whereby neither Likud (which won 40 of the 120 seats in the Knesset) nor Labour (with 39 seats) secured enough seats to be able to form a coalition with groups of smaller parties. The religious parties won 18 seats, gaining potential significance in the formation of a government either by Likud or Labour. After two changes of direction, Peres and the Labour Party eventually agreed to the formation in December of another government of national unity under the Likud leader, Itzhak Shamir, with Peres as Deputy Prime Minister and Minister of Finance. The protracted wrangling over forming a coalition had diverted attention from the PLO's peace initiative, and in the coalition accord no mention was made of an international peace settlement, nor were any new proposals advanced for solving the Arab–Israeli problem.

When municipal elections took place at the end of February 1989, Likud made sweeping gains, obtaining control of six of the 10 largest cities and also of many middle-sized towns. Likud regarded these election results as a vindication of their bitter opposition to the PLO. Shamir continued to maintain that the PLO remained a terrorist organization and presented his own four-point proposals for peace when he visited Washington in April. The proposals comprised: (i) reaffirmation by Egypt, Israel and the USA of their dedication to the 1978 Camp David accords; (ii) abandonment by Arab states of their hostility towards Israel; (iii) efforts to solve the Arab refugee problem; (iv) free democratic elections in the West Bank and Gaza to elect delegates who could negotiate self-rule under Israeli authority, but only if the violence ceased. A 20-point programme, developed from these proposals, was endorsed by both the Cabinet and the Knesset in May. Although Palestinian activists dismissed these proposals as unacceptable (because direct negotiations with the PLO were excluded), many observers felt that they offered a chance for negotiations to begin.

After a meeting of the Likud Central Committee on 5 July 1989, however, Shamir agreed to attach stringent conditions to the Government's peace initiative. He stated that Israel would never allow the establishment of a Palestinian state on the West Bank nor negotiate peace with the PLO, nor would it end Jewish settlements in the territories. This tougher approach threatened to cause the dissolution of the coalition, as Labour considered that it destroyed any chance of the plan's success.

This threat was averted, however, when the Cabinet reaffirmed the original peace initiative on 23 July.

The USA was, by now, exerting pressure on the PLO to consider the Israeli plan for elections in the West Bank and Gaza, but in August 1989 Yasser Abed Rabbo, a senior PLO spokesman, declared that 'the PLO does not consider, in any way, that elections can establish the basis for a political settlement'. In mid-September 1989 President Mubarak of Egypt invited Israeli clarification on 10 points connected with Shamir's election plans and at the same time offered to convene an Israeli-Palestinian meeting to discuss election details. Mubarak's 10-point plan was accepted by the Labour Party members of the inner Cabinet, but was vetoed in early October by the Likud ministers on the grounds that they did not want any direct contact with a Palestinian delegation. In early November the inner Cabinet provisionally accepted a five-point initiative proposed by the US Secretary of State, James Baker, regarding a preliminary Israeli-Palestinian meeting to discuss the holding of elections in the West Bank and Gaza Strip, on condition that Israel would not be required to negotiate directly with a Palestinian delegation, and that the talks would be concerned only with Israel's election proposals. However, the PLO continued to demand a direct role in talks with Israel.

At the end of July 1989, Israeli agents abducted Sheikh Obeid, a leading Shi'a Muslim, from a village in southern Lebanon, with the aim of securing the release of three Israeli soldiers held by Hezbollah (see chapter on Lebanon). Col William Higgins, a US hostage held by Hezbollah, was murdered in retaliation. World attention was then focused on the position of all Middle East hostages, and it seemed at first that some agreement leading to their release was imminent. However, no final solution to the problem was immediately forthcoming.

In January 1990 the dismissal from the Government of Ezer Weizman, the Labour Minister of Science and Technology, for unauthorized contact with the PLO, endangered the fragile Likud-Labour coalition. The Labour Party claimed that, under the coalition agreement, Prime Minister Shamir was not allowed to dismiss Labour ministers. A compromise was eventually reached, whereby Weizman resigned from the 'inner Cabinet' (recently expanded to 12 members), but retained the Science and Technology portfolio. The coalition was further undermined on 28 January when five disaffected members of the Knesset, led by Itzhak Modai, the Minister of Economic Affairs, split from the Likud to form an independent party, the Movement for the Advancement of the Zionist Idea (MAZI).

In February 1990 Ariel Sharon launched a campaign for the premiership after resigning the post of Minister of Trade and Industry in protest at Shamir's peace policy and the Government's failure to suppress the *intifada*. One obstacle to the progress of the peace negotiations was the question of whether residents of East Jerusalem should be allowed to participate in proposed elections in the Occupied Territories. On 28 February the USA suggested a compromise solution, which would allow East Jerusalem residents with second homes in the West Bank and some deported activists to stand in the elections. The USA attempted to apply further pressure to Israel to accelerate the pace of the peace process at the beginning of March, when President Bush opposed the grant to Israel of a $400m. loan for the housing of Soviet immigrants, since Israel would give no assurances that the housing in question would not be in the Occupied Territories, including East Jerusalem.

LIKUD-LABOUR COALITION COLLAPSES

On 11 March 1990 Shimon Peres and five Labour colleagues withdrew from a cabinet meeting in protest at further delays to a proposed vote on US plans for talks between an Israeli and a Palestinian delegation. Two days later Prime Minister Shamir dismissed Peres, the Labour leader and Minister of Finance, from the Government, prompting the resignation of all the Labour ministers. On 15 March a vote of 'no confidence' was upheld against Prime Minister Shamir, the first such vote against an Israeli Government to have succeeded. Shamir was left in charge of a transitional administration, since he had managed to ensure he would retain the premiership by preventing the vote of 'no confidence' from being brought forward to when the Labour ministers remained in office (all resignations and dismissals take 48 hours to come into effect). On 20 March President Herzog invited Peres to form a new coalition government after he had received assurances of the support of five members of the Knesset belonging to Agudat Israel. A two-month period of political wrangling ensued, however, during which both Likud and the Labour Party tried to establish a viable coalition government by soliciting the support of the minor religious parties represented in the Knesset.

The concessions extracted by the minor religious parties during the period of political manoeuvring aroused growing public resentment that became manifest in a demonstration in Jerusalem on 8 April 1990. The demands of the estimated 100,000 people present for electoral reform subsequently led to a ruling by the Supreme Court requiring all political parties to make public the details of coalition agreements before a government could be formed. By the end of April Peres acknowledged failure in his own attempts to form a new government. President Herzog accordingly invited Shamir to form a new administration. Although initially given 21 days to accomplish this task, this period was later extended by Herzog as it emerged that the announcement of a new Likud-led coalition was being delayed by arguments with potential coalition partners over cabinet posts. The political wrangling in Israel took place against a backdrop of ongoing unrest and violence. In mid-April riots engulfed parts of the Christian quarter of Jerusalem's Old City when 150 Orthodox Jewish settlers occupied the St John's Hospice, a Greek patriarchate building. Palestinian anger was fuelled by revelations that Israel's Ministry of Housing had financed the occupation. Tensions were exacerbated on 19 May when seven Palestinian workers were murdered in Rishon LeZiyyon by an Israeli civilian gunman. Reports that the killer was mentally unstable and politically unaffiliated failed to prevent three days of sustained demonstrations in the Occupied Territories resulting in the deaths of 21 Palestinians. At the end of the month, gunmen of the Palestine Liberation Front (PLF) were intercepted by Israeli forces as they attempted a sea-borne raid south of Tel-Aviv. The aim of the abortive raid was unclear, but the US Government immediately urged Yasser Arafat to issue a condemnation of the group. When he failed to do so in terms satisfactory to Washington, the US Department of State declared that it was suspending dialogue with the PLO. On 31 May the USA also vetoed a UN Security Council resolution urging the dispatch of international observers to the Occupied Territories.

THE RIGHT RETURNS TO POWER

On 8 June 1990 Itzhak Shamir announced the formation of a new Government, following the signing of a coalition agreement which gave him the support of 62 of the 120 members of the Knesset. A policy document underlined the uncompromising character of the new partnership. In it Shamir emphasized the right of Jews to settle in all parts of Greater Israel; his opposition to the creation of an independent Palestinian state; and his refusal to negotiate with the PLO, indeed with any Palestinians other than those resident in the Occupied Territories (excluding East Jerusalem). On 11 June in the Knesset the new Government won a vote of confidence by 62 votes to 57 with one abstention. The Government thus empowered was a narrow, right-wing coalition of Likud and five small parties (the MAZI, the NRP, Shas and the Tzomet and Tehiya parties), together with three independent members of the Knesset. Ariel Sharon was appointed Minister of Housing in the new Government; Moshe Arens Minister of Defence; and David Levy Minister of Foreign Affairs.

On 18 June Prime Minister Shamir invited President Assad of Syria to visit Israel for the purpose of peace negotiations, and on 22 June Jean-Claude Aimé, a special envoy of the UN Secretary-General, visited Israel to discuss issues related to the Occupied Territories. Shamir was believed to be seeking to appease the USA after US Secretary of State, James Baker, had expressed impatience at the lack of progress in the peace process. However, on 27 June Shamir wrote to US President Bush rejecting the principal elements of US proposals for direct talks between Israeli and Palestinian delegations.

Controversy surrounding the settlement of Soviet Jewish immigrants in the Occupied Territories intensified in June 1990 when Moshe Arens, the Minister of Defence, ordered the creation of a civil guard in the West Bank in order to protect Jewish

settlers. The huge influx of immigrants from the USSR (250,000 were expected to arrive in 1990 and 1m. by 1992, increasing Israel's population by one-fifth) gave rise to fears of the further erosion of Arab rights. On 16 June the EC criticized Israel for failing to respect the human rights of the Palestinian community in the Occupied Territories. Israel rejected the criticism, however, and on 18 July refused to sanction the establishment of an EC consulate in East Jerusalem. By the beginning of August 1990 it was estimated that 683 Palestinians had been killed by Israeli forces and 42 Israelis had died since the onset of the *intifada.*

Israel's relations with African countries, the USSR and other eastern European countries improved significantly in late 1989 and 1990. In September 1989 Hungary became the first 'eastern bloc' country to restore diplomatic relations (severed in 1967) with Israel. In January 1990 the USSR upgraded its diplomatic links with both Israel and the PLO, while Israeli and East German officials held secret talks on establishing diplomatic relations. In February Israel restored diplomatic relations with Poland and Czechoslovakia, and with Bulgaria in May. The Greek Government also formally recognized Israel in May 1990, the last member state of the EC to do so, following an Israeli High Court ruling that the settlers who had occupied the St John's Hospice in Jerusalem should evacuate the building (see above).

ISRAEL AND THE CONFLICT OVER KUWAIT

Iraq's invasion of Kuwait on 2 August 1990 led to improved relations between Israel and the USA, because it was vital, if a broad coalition of Western and Arab powers opposed to Iraq were to be maintained, that Israel did not become actively involved in the new conflict. On 12 August President Saddam Hussain of Iraq offered to withdraw his forces from Kuwait if Israel would withdraw from the Occupied Territories. Israel firmly rejected any analogy between the occupation of Kuwait and its presence in the Occupied Territories. As a crisis developed in the Gulf region, as a result of Iraq's invasion and annexation of Kuwait, there was support for Iraq from both Palestinians resident in the Occupied Territories and from the PLO. The PLO's support for Iraq led left-wing Israeli groups to cancel scheduled meetings with PLO representatives and other Palestinian leaders.

The improvement taking place in US–Israeli relations was seriously jeopardized in October 1990, when Israeli police shot and killed some 17 Palestinians on the Temple Mount in Jerusalem, after they had clashed with Jewish worshippers there. The killings provoked international outrage and sustained the arguments of those who sought to link Iraq's occupation of Kuwait with the Israeli presence in the Occupied Territories in any solution to the crisis in the Gulf region. There was intense pressure on the UN to respond to this outrage, since it was with UN authority that a multinational force had been deployed in Saudi Arabia for the protection of the Kingdom. To many Arabs, the disparity between the vigour with which the UN was seeking to implement successive resolutions pertaining to the occupation of Kuwait and its long-standing impotence with regard to successive resolutions pertaining to the Occupied Territories was now more conspicuous than before.

The UN Security Council voted to send a mission to the Occupied Territories to investigate the Temple Mount killings, but the Israeli Cabinet announced that it would not co-operate with any such UN delegation and rejected the UN's criticism of its decision. In early November 1990 the UN Secretary-General asked the Security Council to request the convening of an unprecedented international conference, with the aim of forcing Israel to accept that Palestinians in the Occupied Territories were protected by the provisions of the Fourth Geneva Convention (concerning the protection of civilians during wartime). On 13 November the Israeli Government announced that it would permit a UN emissary to visit Israel to discuss the situation in the Occupied Territories.

In late November 1990 there was increased concern in Israel about the security of its borders with Lebanon and Jordan, and about improvements in relations between the USA and Syria, which, it was feared, might damage Israel's interests.

In mid-December 1990 the USA resisted attempts by the UN Security Council to draft a resolution advocating the convening of a Middle East peace conference and an increase in the UN presence in the Occupied Territories. The USA feared that the holding of a peace conference, at this time, could be construed as a concession to Saddam Hussain's concept of 'linkage'.

In mid-December 1990 Shamir visited the USA to confer with President Bush. He was reported to have sought, and received, assurances from President Bush that any diplomatic solution of the crisis in the Gulf region would protect Israeli interests. Nevertheless, only days later, the USA proposed a UN Security Council resolution condemning Israel's reinstatement of a policy of deporting Palestinians, in response to violence in the Occupied Territories, as a violation of the Fourth Geneva Convention. The USA also supported further criticism by the UN of Israel's treatment of the Palestinian population in the Occupied Territories and supported a separate UN appeal for an 'active negotiating process' in the Middle East 'at an appropriate time'. However, in view of the crisis in the Gulf, the USA did not believe that such a time had arrived.

Attacks on Israel by Iraqi *Scud* missiles, beginning on 18 January 1991, created the most serious threat to the integrity of the multinational force which had commenced hostilities against Iraq on 16–17 January. It was widely expected that Israel would retaliate immediately, so risking the withdrawal of Arab countries from the multinational force. While Egypt implied that it would accept a measured degree of retaliation, Syria stated bluntly that it would change sides in response to any Israeli attacks on Iraq which violated Jordanian airspace. Graver still was the possibility of Iranian involvement on the side of Iraq in response to Israeli military action. US diplomacy, supported by the installation in Israel of advanced US air defence systems, succeeded in averting an immediate Israeli military response, although Israel vowed that it would, ultimately, retaliate for the attacks. By late February Iraq had launched 39 *Scud* missiles against Israel, killing two people and injuring more than 200.

Wider strategic considerations apart, a policy of restraint appeared to be in Israel's best interest. The Iraqi missile attacks, together with fears that similar attacks using chemical warheads might be launched, provoked a rare, open outburst of international sympathy for Israel. They also strengthened the Israeli case for rejecting any 'linkage' between the occupation of Kuwait and the Occupied Territories, and undermined the PLO's claim to be the only credible interlocutor in a future dialogue with the Israeli Government. In response to the widespread support, expressed by ordinary Palestinians and in the official policy of the PLO, for Saddam Hussain, the attitude of the Israeli Government hardened. Its new mood was symbolized by the appointment by Shamir, in February 1991, of Gen. Rechavam Ze'evi, the leader of the Moledet (Homeland) party, as Minister without Portfolio and a member of the policy-making 'inner Cabinet'. The appointment was strongly opposed by some cabinet members, as Ze'evi was known to advocate a policy of 'transfer' (i.e. the forcible, mass deportation of Palestinians) as a solution to the Arab–Israeli conflict. In early February, in a speech to the Knesset, Shamir again rejected, with more authority than he had been able to muster for many months, proposals for convening an international conference on the Palestinian issue, and promoted his own peace plan, formulated in 1989 (see above), as the only starting-point for any peace dialogue involving the Israeli Government.

RENEWED ATTEMPTS TO CONVENE A PEACE CONFERENCE

For Israel the defeat of Iraq by the multinational force in February 1991 had ambiguous implications, since it left President Saddam Hussain in power—Israel had openly urged his removal—as a potential threat to Israel's security. Israel's greatest gain from the conflict over Kuwait had been the renewed goodwill of the USA: in late February the US Secretary of State, James Baker, signed a guarantee for a loan to Israel—previously approved by the US Congress—of $400m. for the housing of immigrants. (Baker had previously refused to sign the guarantee, owing to his concern that the funds would be used to establish communities of immigrants in the Occupied Territories.) However, it was clear that the USA would seek to use its increased influence in the Middle East to achieve a resolution of the Arab–Israeli conflict, and that the USA's con-

tinued extension of goodwill and financial aid would require concessions by the Shamir Government.

At the beginning of March 1991 President Bush of the USA stated that a settlement of the Arab–Israeli conflict was one of the principal aims of US foreign policy in the post-war period, and in mid-March James Baker made his first visit, as US Secretary of State, to Israel, where he sought to initiate a 'confidence-building' process between Israelis and Arabs, as a preparatory step towards peace negotiations. The visit to Israel was followed by one to Syria, where Baker held talks with President Assad.

The USA's diplomatic efforts to initiate peace negotiations intensified in April 1991. In the first half of the month the US Secretary of State returned to the Middle East, visiting Israel, Egypt and Syria, in order to promote the idea of a regional peace conference. The proposal gained only limited support. While the Israeli Government tentatively endorsed the idea of a regional conference—comprising an initial, symbolic session, to be followed by direct negotiations with Arab states and a joint Jordanian-Palestinian delegation—its continued refusal to negotiate with any Palestinian delegation which comprised either residents of East Jerusalem or members of the PLO appeared to present an insurmountable obstacle to any further progress towards a settlement of the Arab–Israeli conflict. Syria, Egypt and the PLO, meanwhile, rejected the proposed regional conference outright, favouring instead an international conference fully supported by the UN and with the full participation of the PLO.

After the US Secretary of State had again failed, following further talks with Shamir in mid-April 1991, to extract any flexibility from the Israeli Government, the question of a settlement to the Arab–Israeli conflict appeared as intractable as it had before Iraq's invasion of Kuwait in August 1990. It was generally accepted that Shamir would seek to prevaricate to a degree which would allow him to continue to enjoy both the goodwill—and financial aid—of the USA and the support of the extreme right-wing elements of his coalition Government, which remained firmly opposed to peace negotiations. The continued settlement of Soviet Jewish immigrants to Israel in the Occupied Territories became increasingly controversial. Visiting the USA in late April 1991, the Israeli Minister of Housing and Construction, Ariel Sharon (with whom the settlement policy was most closely identified), was rebuffed when he sought meetings with senior members of the US Government. The US Secretary of State described the settlement of the immigrants in the Occupied Territories as the biggest obstacle to the convening of a Middle East peace conference.

On 18 July 1991, in a remarkable volte-face, President Assad of Syria agreed for the first time, following a meeting with the US Secretary of State, to participate in direct negotiations with Israel at a regional conference, for which the terms of reference would be a comprehensive peace settlement based on UN Security Council Resolutions 242 (see Documents on Palestine, p. 105) and 338 (ibid, p. 107). By agreeing to participate in a peace conference on the terms proposed by the USA, Syria decisively increased the intense diplomatic pressure on Israel to do likewise: the US initiative already enjoyed the express support of the 'G7' group of industrialized countries, the USSR, the UN Security Council and the EC; and, following Syria's concession, Egypt and Jordan indicated that they would also be willing to participate in direct negotiations with Israel.

On closer examination, however, substantive progress towards a resolution of the Arab–Israeli conflict appeared illusory. The publicly-stated positions of the Israeli and Syrian Governments remained as far apart as ever. Each claimed, towards the end of July 1991, to have received confidential (and incompatible) assurances from the USA: Israel with regard to the composition of a Jordanian-Palestinian delegation to the peace conference; and Syria with regard to the return of the Israeli-occupied Golan Heights. For its part, the US Government insisted that there were no preconditions for attending the peace conference, and that, with regard to the composition of the Jordanian-Palestinian delegation, only members of the PLO were excluded.

On 31 July 1991, at the conclusion of a summit meeting between Presidents Bush and Gorbachev, the USA and the USSR announced their intention to act as joint chairmen of a Middle East peace conference which they had scheduled—without having received the prior, formal consent of the Israeli Government—to take place in October 1991, and which representatives of the UN and the EC would attend in the capacity of observers. On 4 August 1991 the Israeli Cabinet formally agreed to attend a peace conference on the terms proposed by the USA and the USSR.

OTHER POST-WAR DEVELOPMENTS

The signing, in May 1991, by Syria and Lebanon of a treaty of 'fraternity, co-operation and co-ordination' was immediately denounced by Israel as a further step towards the formal transformation of Lebanon into a Syrian protectorate. The signing of the treaty appeared to reduce the likelihood that, in response to the deployment of the Lebanese army in southern Lebanon, Israel would comply with UN Security Council Resolution 425 (adopted in March 1978) and withdraw its forces from its self-declared security zone in southern Lebanon. As the Lebanese army began to deploy east of the coastal town of Sidon in July 1991, Israel continued to launch attacks on Palestinian and Hezbollah militia units which, it claimed, the Lebanese army (which it regarded as little more than a Syrian proxy force) was unable to suppress. A serious escalation of the conflict endemic to southern Lebanon occurred in February 1992, when Israeli armed forces advanced beyond Israel's self-declared security zone to attack the alleged positions of Hezbollah; and again in May, when the Israeli air force attacked Hezbollah villages to the north and west of Israel's self-declared security zone, in response to attacks by Hezbollah units on positions occupied by the South Lebanon Army.

In August 1991 Israel claimed that one of a number of conditions to which the USA had agreed in return for Israel's participation in the regional peace conference scheduled for October was the re-establishment of full diplomatic relations with the USSR. Soviet promotion of the USA's proposed regional peace conference had already led to closer contacts between Israel and the USSR. In April 1991 Shamir met the Soviet Prime Minister, Valentin Pavlov, in London, United Kingdom; and in May the Soviet Minister of Foreign Affairs, Aleksandr Bessmertnykh, made a visit to Israel, where he met the Israeli Prime Minister and the Minister of Foreign Affairs, David Levy. Full diplomatic relations with the USSR—superseded by the establishment of relations with some of the newly-independent, former Soviet republics—were formally re-established, after an interval of 24 years, in November; and in January 1992 Israel established diplomatic relations with the People's Republic of China for the first time.

DEADLOCKED NEGOTIATIONS

By March 1992, following an initial, 'symbolic' session of the conference, held in Madrid, Spain, in October 1991, four sessions of negotiations between Israeli, Syrian, Lebanese and Palestinian-Jordanian delegations had been held, but little progress had been achieved with regard to the substantive issues which the conference was intended to address, in particular the question of transitional Palestinian autonomy in the West Bank and Gaza Strip, pending negotiations on the 'permanent status' of those territories. Rather, these bilateral talks had become deadlocked over procedural issues. Israeli delegations, wary of making any gesture which might be construed as recognition of Palestinian independence, consistently questioned the status of the Palestinian-Jordanian delegation and the right of the Palestinian component to participate separately in negotiations; while Israel's refusal to halt the construction of new settlements in the Occupied Territories posed a constant threat to the faltering peace process. Israel's continued refusal to concede over the settlement issue further damaged its relations with the USA. As early as May 1991 the US Secretary of State, James Baker, had identified this issue as the main obstacle to US efforts to achieve a Middle Eastern peace settlement. In February 1992, immediately prior to the fourth session of the peace negotiations, Baker demanded a complete halt to Israeli settlement in the Occupied Territories as a condition for the granting of US $10,000m. in US-guaranteed loans for the housing of Jewish immigrants from the former USSR.

While the Israeli Government's refusal to halt the construction of new settlements was regarded as provocative by all the

other parties to the peace conference, and by the US Government, the right-wing minority members of Israel's governing coalition, which opposed any Israeli participation in the peace conference at all, threatened to withdraw from the coalition if funds were not made available for the settlement programme. In December 1991 the Government's majority in the 120-seat Knesset was reduced when the Minister of Agriculture, Rafael Eitan (a member of the right-wing, nationalist Tzomet Party), resigned his portfolio in protest at the Prime Minister's opposition to electoral reform; and in mid-January 1992 the majority was lost entirely when two other right-wing, nationalist political parties, Moledet and Tehiya (which together held five seats in the Knesset) withdrew from the coalition. Their withdrawal was a deliberate attempt to obstruct the third session of the Middle East peace conference in Moscow, Russia, where delegates had begun to address the granting of transitional autonomy to Palestinians in the West Bank and Gaza Strip. A general election was subsequently scheduled to be held in June 1992, and Itzhak Shamir remained the head of a transitional, minority government.

In late February 1992 Shamir retained the leadership of the Likud, receiving 46.4% of the votes cast at a party convention. At the same time, Itzhak Rabin, a former Israeli Prime Minister, was elected Chairman of the Labour Party, replacing Shimon Peres. Rabin's election was regarded as having significantly improved the Labour Party's prospects at the forthcoming general election, since, while he favoured the continuation of peace negotiations, he also enjoyed more popular confidence than Peres with regard to issues affecting Israel's security. A future Likud-Labour government of national unity, with Rabin as head of the Labour component, was thus viewed as more capable of conducting peace negotiations—and more likely to receive international, especially US, support—than another coalition composed of the Likud and minority, right-wing, nationalist and religious parties.

A fifth round of bilateral negotiations, between Israeli, Syrian, Lebanese and Palestinian-Jordanian delegations, was held in Washington, USA, at the end of April 1992. In this latest session of the peace conference procedural issues were reported to have been resolved, and, in its talks with the Palestinian component of the Palestinian-Jordanian delegation, the Israeli delegation presented proposals for the holding of municipal elections in the West Bank and Gaza Strip; and for the transfer of control of health amenities there to Palestinian authorities. The Palestinian delegation, for its part, did not reject the proposals outright, although they fell far short of Palestinians' ambition for full legislative control of the Occupied Territories. No progress was made in the meetings between Israeli and Syrian delegations to discuss the principal dispute between Israel and Syria—Israel's continued occupation of the Golan Heights.

In May 1992 the first multilateral negotiations between the parties to the Middle East peace conference commenced, as had been arranged at the third session of bilateral talks in Moscow in January. However, these negotiations were boycotted by Syria and Lebanon, which argued that they were futile until progress had been made in the bilateral negotiations. Various combinations of delegations attended meetings convened to discuss regional economic co-operation; regional arms control; the question of Palestinian refugees; water resources; and environmental issues. Israel boycotted the discussions on Palestinian refugees and regional economic development after the USA approved Palestinian proposals to allow exiles (i.e. non-residents of the Occupied Territories) to be included in the Palestinian delegations to these two meetings. The session of talks on Palestinian refugees became especially controversial after both the Palestinian and the Jordanian components of the Palestinian-Jordanian delegation asserted the right of Palestinian refugees to return to the Occupied Territories, in accordance with UN General Assembly Resolution 194 of 1948. However, the US Government subsequently indicated that the terms of reference for the peace conference were UN Security Council Resolutions 242 and 338 only.

A NEW LABOUR COALITION

In the general election, held on 23 June 1992, the Labour Party won 44 seats in the Knesset and Likud 32. Meretz—an alliance of Ratz (Civil Rights and Peace Movement), Shinui and the United Workers' Party which had won 12 seats in the Knesset—formally confirmed its willingness to form a coalition government with the Labour Party on 24 June. However, even with the support of the two Arab parties—the Arab Democratic Party and Hadash—which together had won five seats in the Knesset, such a coalition would have enjoyed a majority of only two votes over the so-called 'right bloc' (Likud, Tzomet, Moledet and Tehiya) and the religious parties which had allied themselves with Likud in the previous Knesset. Formally invited to form a government on 28 June, the Labour leader, Itzhak Rabin, was accordingly obliged to solicit support among those religious parties which, he had indicated on 24 June, he was willing to incorporate into a coalition led by Labour in return for their support of Labour's policies. On 13 July Rabin was able to present a new government for approval by the Knesset. The new coalition, an alliance of Labour, Meretz and the ultra-orthodox Jewish party, Shas, had a total of 62 seats in the 120-seat Knesset; and also enjoyed the unspoken support of five deputies from the two Arab parties.

Immediately after the election the Labour Party had re-affirmed its commitment to granting Palestinian autonomy within nine months, while maintaining Israel's control of defence and security measures in the Occupied Territories, and its responsibility for existing settlements there. It also expressed its desire for improved relations with the USA. However, it remained unclear precisely what the Party's policy would be with regard to the occupied Golan Heights and occupied areas of southern Lebanon. As it strove to form a coalition that included right-wing religious parties, the Labour Party became of necessity less outspoken in its commitment to some of its stated aims, giving rise to fears that improved relations with the USA might ultimately force Palestinians to accept limited autonomy entirely on Israel's terms.

A sixth round of bilateral negotiations between Israeli, Syrian, Lebanese and Palestinian-Jordanian delegations, the first since the new Israeli Government had taken office, commenced in Washington in late August 1992. Again, little progress was achieved on substantive issues. The Israeli delegation and the Palestinian component of the Palestinian-Jordanian delegation, for instance, were unable to agree terms for negotiating an initial, five-year period of Palestinian autonomy in the West Bank and Gaza Strip prior to a permanent settlement. Talks between the Israeli and the Syrian delegations remained deadlocked over the issue of the Golan Heights, and in private delegates were reported to have admitted that they were likely to remain so without the eventual diplomatic intervention of the USA.

In early October 1992, in a clear gesture of support for the new Israeli Government, the USA granted Israel the US $10,000m. in US-guaranteed loans for the housing of immigrants that it had previously withheld, owing to Israel's housing construction programme in the Occupied Territories. In late October a seventh round of bilateral negotiations between the parties to the Middle East peace conference commenced in Washington, USA. The negotiations were adjourned, pending the conclusion of the US presidential election, but multilateral negotiations on regional economic co-operation, in which an Israeli delegation participated, took place in Paris, France, at the end of October. The seventh round of bilateral negotiations resumed in early November, but, again, no tangible progress was achieved. Multilateral negotiations on the issue of refugees took place in Ottawa, Canada, on 11–12 November. In spite of the hopes that had been expressed for the prospects of the peace process since the election of the Labour-led Israeli Government, the months of October and November were marked by violent clashes between Palestinians and members of the Israeli security forces in the Occupied Territories. At the end of November it was reported that, since 1987, 959 Palestinians, 543 alleged Palestinian 'collaborators' and 103 Israelis had died in the Palestinian *intifada.*

DEPORTATIONS STALL TALKS

In early December 1992 an eighth round of bilateral negotiations between Israeli and Arab delegations commenced in Washington. However, the talks were quickly overtaken by events in the Occupied Territories, which led to the withdrawal of the Arab delegations. On 16 December, in response to the deaths

in the Occupied Territories of five members of the Israeli security forces, and to the abduction and murder by the Islamic Resistance Movement (Hamas) of an Israeli border policeman, the Israeli Cabinet ordered the deportation to Lebanon of more than 400 alleged Palestinian supporters of Hamas. Owing to the Lebanese Government's refusal to co-operate in this action, the deportees were stranded in the territory between Israel's self-declared southern Lebanese security zone and Lebanon proper.

The deportations caused international outrage, and intense diplomatic pressure was placed on Israel to revoke the expulsion order. On 18 December the UN Security Council unanimously approved a resolution (No. 799) condemning the deportations and demanding the return of the deportees to Israel. At the end of December, however, the Israeli Government announced that only 10 of the deportees had been unjustifiably expelled and could return to Israel. The remainder would continue in exile. The future of the Middle East peace process, meanwhile, remained in doubt. The Palestinian delegation to the eighth round of bilateral negotiations had indicated that it would not resume negotiations until all of the deportees had been allowed to return to Israel, and the PLO formally expressed the same position in mid-January 1993. At the beginning of February the Israeli Government was reported to have indicated its willingness to allow some 100 of the deportees to return to Israel, but insisted that the remainder should serve a period of exile lasting at least until the end of 1993. On 5 February the ninth round of bilateral negotiations was formally suspended, but later in the month the UN Security Council was reported to have welcomed the Israeli Government's decision to permit 100 of the deportees to return to Israel, and to be ready to take no further action over the issue. Palestinians party to the peace negotiations, however, insisted that UN Security Council Resolution 799 should be implemented in full before a Palestinian delegation would resume negotiations. In late February the US Secretary of State, Warren Christopher, made a tour of the Middle East, visiting Syria, Saudi Arabia, Kuwait, Lebanon and Israel, in an attempt to revive the peace negotiations.

During March 1993 the number of violent confrontations between Palestinians and the Israeli security forces in the Occupied Territories—especially in the Gaza Strip—increased to such an extent that, at the end of the month, the Israeli Cabinet responded by sealing off the West Bank and the Gaza Strip indefinitely. Also, in late March the Knesset elected Ezer Weizman, leader of the Yahad political party, to replace Chaim Herzog as President of Israel in May 1993; and Binyamin Netanyahu was elected leader of the opposition Likud in place of Itzhak Shamir.

On 27 April 1993 the ninth round of bilateral negotiations in the Middle East peace process, which had been formally suspended in February, resumed in Washington. It was reported that the Palestinian delegation had only agreed to attend the ninth round of talks following pressure from Arab governments, and after Israel had agreed to allow Faisal Husseini, the nominal leader of the Palestinian delegation, to participate. Israel had previously refused to grant this concession because Husseini was a resident of East Jerusalem, the status of which Israel regards as distinct from that of the West Bank, the Gaza Strip and the Golan Heights. Israel was also reported to have agreed that it would not, in future, resort to deportations as a punitive measure, and to have restated, together with the USA, its commitment to UN Security Council Resolutions 242 and 338 as the terms of reference for the peace process. However, as previously, the ninth round of bilateral talks achieved no progress on substantive issues. In particular, Israel and the Palestinian delegation were reported to have failed to agree on a statement of principles regarding Palestinian self-rule in the Occupied Territories.

In mid-May 1993 Ezer Weizman formally assumed the presidency of Israel. At the end of the month a minor reshuffle of the Cabinet averted the defection of the ultra-orthodox Jewish party, Shas, from the governing coalition.

A tenth round of bilateral negotiations, held in Washington on 15 June–1 July, concluded in deadlock, having achieved no progress on a statement of principles concerning Palestinian self-rule in the Occupied Territories, which was now regarded as the key element in the Middle East peace process. However, it was reported that a committee had been established in an attempt to facilitate progress on this issue. There was also no progress on the issues of contention between the Israeli delegation and its Syrian, Lebanese and Jordanian counterparts.

UNEXPECTED BREAKTHROUGH IN THE PEACE PROCESS

In late July 1993 Israeli armed forces mounted the most intensive air and artillery attacks on targets in Lebanon since 'Operation Peace for Galilee' in 1982. The attacks were mounted in retaliation for attacks by Hezbollah fighters on settlements in northern Israel, and provoked widespread international criticism for the high number of civilian casualties that they caused and for the perceived threat they posed to the Middle East peace process. At the eleventh round of bilateral negotiation, however, which commenced in Washington on 31 August, a major, unexpected breakthrough was achieved between Israel and the Palestinian delegation, which culminated in the signing, on 13 September, by Israel and the PLO, of a declaration of principles on Palestinian self-rule in the Occupied Territories. The agreement, which entailed mutual recognition by Israel and the PLO, had been elaborated during a series of secret negotiations mediated by Norwegian diplomacy (and was therefore commonly described as the Oslo accords). The Declaration of Principles established a detailed timetable for Israel's disengagement from the Occupied Territories and stipulated that a permanent settlement of the Palestinian question should be in place by December 1998. From 13 October 1993 Palestinian authorities were to assume responsibility for education and culture, health, social welfare, direct taxation and tourism in the Gaza Strip and the Jericho area of the West Bank, and a transitional period of Palestinian self-rule was to begin on 13 December 1993. (For full details of the Declaration of Principles on Palestinian Self-Rule, see Documents on Palestine, p. 120.)

REACTION TO THE DECLARATION OF PRINCIPLES

While it was welcomed as a major breakthrough in the Middle East peace process, the Declaration of Principles was nevertheless regarded as only a tentative first step towards the resolution of the region's conflicts that could be threatened from many directions. Although the Israeli Prime Minister was able to obtain the ratification of the Declaration of Principles, and of Israel's recognition of the PLO, by the Knesset on 23 September 1993, there was widespread opposition to it from right-wing Israeli political groups. By the same token, the conclusion of the agreement aggravated divisions within the PLO and the wider Palestinian liberation movement. Within the PLO some senior officials, hitherto loyal to Yasser Arafat's leadership, now declared their opposition to him, while dissident groups, such as the Democratic Front for the Liberation of Palestine, Hamas and Islamic Jihad denounced the Declaration of Principles as treason. Most observers regarded the future success of the agreement between Israel and the PLO as dependent on the ability of the mainstream PLO to gain popular support for it from Palestinians residing in the West Bank and the Gaza Strip. Reaction to the Declaration of Principles by other Arab governments engaged in peace negotiations with Israel was mixed. King Hussein welcomed the agreement and Jordan immediately agreed an agenda for direct negotiations with Israel, which was also ratified by the Knesset on 23 September. Lebanon, however, feared that the divisions that the Declaration of Principles had provoked within the Palestinian movement might in future lead to renewed conflict in Lebanese territory. It remained unclear, too, whether Syria—which neither condemned nor welcomed the Declaration of Principles—would continue to support those Palestinian groups opposed to the PLO's position.

In mid-September 1993 the resignation of Aryeh Der'i as Minister of the Interior, following allegations of corruption, provoked the resignation of other members of Shas from the Cabinet and meant that the governing coalition was now effectively reduced to an alliance between the Labour Party and Meretz; and the Government's majority in the Knesset to only two. It followed that it might prove more difficult to obtain the Knesset's approval for any controversial measures associated with the Middle East peace negotiations. In mid-March 1994, however, the Labour Party and Shas were reported to have

concluded a new coalition agreement. In early February 1994 the Minister of Health, Haim Ramon, resigned after the Government refused to endorse a health insurance bill that he had drawn up. Ephraim Sneh was appointed as his replacement in early June.

BEGINNING OF PALESTINIAN SELF-RULE

In early October 1993 Itzhak Rabin and Yasser Arafat held their first meeting in the context of the Declaration of Principles in Cairo, Egypt, where they agreed to begin talks on the implementation of the Declaration of Principles on 13 October, and to establish general liaison, technical, economic and regional co-operation committees.

On 13 October 1993 the PLO-Israeli joint liaison committee met for the first time, the delegations to it headed, respectively, by Mahmud Abbas and by Shimon Peres, the Israeli Minister of Foreign Affairs. It was agreed that the committee should meet at regular, short intervals to monitor the implementation of the Declaration of Principles. The technical committee also held three meetings during October in the Egyptian coastal resort of Taba. Its task was to establish the precise details of Israel's military withdrawal from the Gaza Strip and Jericho, which, under the terms of the Declaration of Principles, was scheduled to take place between 13 December 1993 and 13 April 1994. At the meetings that took place in October progress was reported to have been made on the creation of a Palestinian police force, although the issue of security measures to protect Israeli settlers in the Gaza Strip remained unresolved. Israel was also reported to have agreed to the gradual release of some of the Palestinian prisoners that it held. Also in early October the Central Council of the PLO formally approved the Declaration of Principles by a large majority.

The joint PLO-Israel technical committee met on several occasions during November 1993, but by the end of the month it appeared unlikely that it would have made sufficient progress for Israel's military withdrawal from the Gaza Strip and from Jericho to begin by 13 December. In particular, it was proving difficult to reach agreement on three issues: arrangements for border security; the delineation of the Jericho (Ariha) area; and the release of Palestinian prisoners.

At the beginning of October 1993 talks had taken place in Washington between Crown Prince Hassan of Jordan and Shimon Peres. Despite reports of subsequent secret negotiations, King Hussein of Jordan insisted, during visits to Egypt and Syria in November, that Jordan would not conclude a separate peace agreement with Israel.

As had been feared, it proved impossible satisfactorily to negotiate the details of Israel's military withdrawal from the Gaza Strip and Jericho by 13 December 1993. This failure cast doubt on the whole of the September agreement between Israel and the PLO. The main cause of the failure remained the issue of security arrangements for border crossings between the Gaza Strip and Jericho and Jordan and Egypt. The PLO continued to insist that the border crossings should come under full, exclusive Palestinian control. Israel opposed this claim since to grant it would imply at least a partial recognition of something like Palestinian sovereignty.

Following meetings between the US Secretary of State, Warren Christopher, and President Assad of Syria and the Syrian Minister of Foreign Affairs in Damascus in early December 1993, Syria announced its willingness to resume bilateral negotiations with Israel in early 1994. Syrian Jews wishing to leave Syria were also to be granted exit visas. In early January 1994, before a meeting between US President Clinton and Syria's President Assad took place, Israel appeared to indicate, tentatively, that it might be prepared to execute a full withdrawal from the Golan Heights in return for a comprehensive peace agreement with Syria. On 17 January it was reported that the Government would put the issue to a referendum before making such a withdrawal. This was interpreted as an attempt by the Government to deflect in advance any pressure for a swift move towards a peace agreement with Syria which might emerge at the forthcoming summit meeting between the US and Syrian Presidents. There was likely to be far less support in the Knesset for a peace agreement with Syria—in particular, for concessions regarding the Golan Heights—than there had been for an agreement with the PLO. Bilateral negotiations between Israeli and Syrian delegations resumed in Washington on 24 January after a four-month hiatus.

On 9 February 1994 Israel and the PLO appeared to achieve a breakthrough in their stalled negotiations when they signed an agreement to share control of the two future international border crossings. It was reported that security arrangements for Jewish settlers in the Gaza Strip had also been decided: three access routes to Jewish settlements there were to remain under Israeli control. However, the boundaries of the Jericho enclave remained undefined. Further talks began on 14 February to address the issues of the implementation of the first stage of Palestinian autonomy in the Gaza Strip and the Jericho area; the size, structure and jurisdiction of a future Palestinian police force; control of sea and air space; and the delineation of the Jericho enclave.

In late February 1994 the PLO, together with the other Arab parties, withdrew from the peace process with Israel, following the murder, by a right-wing Jewish extremist, of some 30 Muslim worshippers in a mosque in Hebron (Al-Khalil) on the West Bank. Negotiations between the PLO and Israel resumed at the end of March, when the two sides signed an agreement on security in Hebron and the whole of the Occupied Territories. Israel agreed, among other things, to allow a team of international observers to travel to Hebron, where they were to monitor efforts to restore stability. Earlier in the month the UN Security Council had adopted a resolution (No. 904) condemning the killings in Hebron, prompting Syria, Jordan and Lebanon to agree to resume negotiations with Israel in April.

In late April 1994 Israel and the PLO signed an agreement concerning economic relations between Israel and the autonomous Palestinian entity during the five-year period leading to self-rule. At the end of the month it was reported that the US Secretary of State, Warren Christopher, had submitted to President Assad of Syria Israel's proposals regarding a withdrawal from the occupied Golan Heights in exchange for a full peace agreement with Syria.

On 4 May 1994 in Cairo (Egypt), Israel and the PLO signed an agreement which set forth detailed arrangements for Palestinian self-rule in Gaza and Jericho. The agreement provided for Israel's military withdrawal from Gaza and Jericho and the deployment there of a 9,000-strong Palestinian police force. A nominated Palestinian National Authority (PNA) was to assume the responsibilities of the Israeli military administration in Gaza and Jericho, although Israeli authorities were to retain control in matters of external security and foreign affairs. It was also announced that elections for a Palestinian Council, which, under the terms of the Declaration of Principles, were to have taken place in Gaza and the West Bank in July 1994, had been postponed until October. Israel's military withdrawal from Gaza and Jericho was reported to have been completed on 13 May, and on 17 May the PLO formally assumed control of the Israeli civil administration's departments in Gaza and Jericho. On 18 May Yasser Arafat held talks with Israel's Minister of Foreign Affairs, Shimon Peres, regarding future negotiations on the extension of Palestinian self-rule in the West Bank. On 26–28 May an incomplete PNA held its inaugural meeting in Tunis, Tunisia, setting out a political programme and distributing ministerial portfolios. It had originally been Arafat's intention to appoint 24 members to the PNA (12 from within the Occupied Territories and 12 from the Palestinian diaspora). In the event, some of his chosen appointees refused to serve on the PNA—reflecting the extent of divisions within the mainstream Palestinian movement regarding the terms of the peace with Israel—and only 20 members assembled in Tunis. The PNA held its first meeting in Gaza in late June.

On 1 July 1994 Yasser Arafat returned to Gaza City, a homecoming that had far more symbolic than practical significance. Negotiations with Israel continued on the extension of Palestinian authority, the redeployment of Israeli armed forces in the West Bank and on the holding of Palestinian elections. In late July Israel and Jordan signed a joint declaration that formally ended the state of war between them and further defined the arrangements for future negotiations between the two sides. In late August Israel and the PLO signed an agreement which extended the authority of the PNA to include education, health, tourism, social welfare and taxation. In Sep-

tember the PNA was reported to have approved plans in preparation for elections in Gaza and the West Bank within three months. However, the size of the future Palestinian legislature remained unclear. The PLO was reported to wish to elect a 100-member council, while Israel insisted that its size should be restricted to no more than 25 members.

IMPROVED RELATIONS WITH THE ARAB WORLD

At the beginning of September 1994 Morocco became the second Arab state to establish diplomatic relations with Israel, albeit at a low level. Tunisia established diplomatic relations with Israel the following day. On 8 September Itzhak Rabin announced the details of a plan for a partial withdrawal of Israeli armed forces from the occupied Golan Heights, after which a three-year trial period of Israeli-Syrian 'normalization' would ensue. The proposals were rejected by President Assad of Syria; however, he did state his willingness, in an address to the Syrian People's Assembly on 10 September, to work towards peace with Israel. Israel also continued to enjoy rapidly improving relations with Jordan. King Hussein met with Itzhak Rabin in Aqaba at the end of September to draft a timetable to draw up a full Israeli-Jordanian peace treaty. This was achieved in late October when the two countries signed a formal peace agreement, fixing their borders and providing for normal relations. The treaty was criticized by the Syrian Government, which had long opposed such bilateral initiatives. Despite the belief in the Arab world that Jordan's move to normalize relations with Israel had been overly hasty, there were continuing signs of a less antagonistic attitude towards the Jewish State. On 29 September the six member states of the Co-operation Council for the Arab States of the Gulf (GCC) announced their decision to lift the subsidiary elements of the Arab economic boycott of Israel. At the end of October President Clinton visited Damascus in an attempt to break the deadlock in negotiations between Israel and Syria. In December it was reported that high-level military contacts had been made between the two countries. In February 1995 Israel completed its withdrawal from a small area of Jordanian territory it had occupied since the war of June 1967.

NEW CRISIS IN NEGOTIATIONS

A conference of international donors, sponsored by the World Bank, in Paris, France, on 8-9 September 1994, collapsed almost immediately owing to an Israeli–Palestinian dispute over Palestinian investment plans to fund projects in East Jerusalem. According to Israel, such plans would have compromised negotiations on the final status of Jerusalem which, under the terms of the Declaration of Principles, were not due to begin before May 1996. On 13 September Yasser Arafat and the Israeli Minister of Foreign Affairs met in Oslo, Norway, and negotiated a 15-point agreement whose aim was to accelerate economic aid to the PNA. The issue of economic aid was to assume increasing importance during the remaining months of 1994 and early 1995, as Arafat's leadership of the PNA and, indeed, the authority of the entire so-called moderate Palestinian movement that had negotiated the Declaration of Principles became ever more crisis-stricken as a result of what its opponents regarded as its increasingly conspicuous injustices. Within the mainstream Palestinian movement it would be argued that it was impossible for the newly-formed Palestinian police force to keep the peace in the volatile Gaza Strip without increased economic aid; while opponents of the Declaration of Principles would argue that economic conditions were merely a side issue, and that Arafat and the mainstream Palestinian movement had been ensnared by the Declaration of Principles. The failure of the Palestinian authorities to guarantee security in the areas over which they now had partial control provided Israel with an excuse not to allow them to extend their jurisdiction in the West Bank, even though Israeli armed forces had never been able to guarantee secure conditions in the Gaza Strip either. On 25 September Arafat and Rabin met at the Erez crossing point between Gaza and Israel to discuss the future Palestinian elections in the Gaza Strip and the West Bank. It was agreed to meet again in October to negotiate a compromise on the size of the Palestinian Council, Israel having rejected Arafat's proposal to hold the elections on 1 November 1994 as unrealistic. At the same time, Arafat agreed to 'take all measures' to prevent attacks on Israeli targets by opponents of the Declaration of Principles.

One reason for the growing crisis in negotiations between Israel and the Palestinians was the revival of the controversial issue of Jewish settlements in the West Bank. On 26 September Rabin approved a plan to construct some 1,000 new housing units at a Jewish settlement some 3 km inside the West Bank in an apparent reversal of the 'freeze' he had imposed on new constructions in 1992 in return for US loan guarantees. The PLO claimed that this decision contravened both the letter and the spirit of the Declaration of Principles; and it simply reinforced the objections of those who opposed the Declaration of Principles from the outset. (By the end of the year it was reported that there had been a 10% increase in the number of Jewish settlers in the West Bank during 1994.)

ISLAMIST ATTACKS THREATEN PEACE PROCESS

The Islamist organizations remained the most militant opponents of the Oslo accords and in the autumn of 1994 both Hamas and Islamic Jihad escalated their campaigns of violence. On 9 October Hamas claimed responsibility for an attack in Jerusalem, in which an Israeli soldier and a Palestinian died. On the same day another Israeli soldier was kidnapped by Hamas fighters near Tel-Aviv; they subsequently demanded the release from Israeli jails of their leader, Sheikh Ahmad Yassin, and other Palestinian prisoners in exchange for his life. Despite Palestinian action to detain some 300 Hamas members in the Gaza Strip, the kidnapped soldier was killed in the West Bank on 14 October during an abortive rescue attempt by the IDF. On 19 October an attack by a Hamas suicide bomber in Tel-Aviv, in which 22 people died, prompted Israel to close its borders with the West Bank and the Gaza Strip for an indefinite period.

On 2 November 1994 a member of Islamic Jihad was killed in a car bomb attack in Gaza. The attack was blamed on the Israeli security forces by many Palestinians. On 11 November three Israeli soldiers were killed in a suicide bomb attack near a Jewish settlement in the Gaza Strip. Islamic Jihad claimed responsibility for the attack, which it said had been to avenge the death of its member on 2 November. Inevitably the arrest by the PNA of Hamas and Islamic Jihad cadres increased tensions between the opposing factions. These tensions erupted into violence on 18 November when Palestinian security forces opened fire on Islamist demonstrators in the centre of Gaza. Twelve Palestinians were reportedly killed in the incident and the subsequent violence that broke out throughout the Gaza Strip. The shootings appeared to confirm the perception of opponents of the peace process that the PNA and its security forces were fast becoming a proxy of the State of Israel. The EU responded to the crisis by stating that it would expedite $125m. in loans and guarantees promised earlier in the month. For its part, the Palestinian opposition denied that the clashes had arisen as a result of economic factors, attributing the disturbances instead to the perceived intrinsic deficiencies of the Declaration of Principles. Further violence in the Gaza Strip on 19 November resulted in the deaths of two Palestinians and an Israeli soldier, prompting a UN official to claim that aid programmes to the PNA were failing and that the situation in Gaza was more explosive than it had been before the start of the Oslo process.

It became clear in December 1994 that Israel's concern about security would inevitably continue to delay the redeployment of its armed forces in the West Bank and the holding of Palestinian elections. In the middle of the month Rabin stated that the elections would either have to take place in the continued presence of Israeli armed forces, or be postponed for a year.

Perhaps the most serious blow yet to the peace negotiations between Israel and the PLO was the suicide bomb attack at Beit Lid in Israel on 22 January 1995, in which 21 people—mostly Israeli soldiers–died and more than 60 were injured. Islamic Jihad claimed responsibility for the attack, in response to which the Israeli Cabinet again closed Israel's borders with the Gaza Strip and the West Bank and postponed the planned release of some 5,500 Palestinian prisoners. The gravity of the situation was reflected in the opinion of the Israeli President, Ezer Weizman: 'I believe we should suspend the talks–not stop them but suspend them.' Opinion polls published in Israel on

27 January revealed that the majority of Israeli citizens now opposed the peace process; while the majority of Palestinians were shown to be in favour of increased suicide attacks against Israeli targets. The polls also revealed a drastic decline in support for the Israeli Labour Party. The leader of Likud, Binyamin Netanyahu, responding to public opinion, made an electoral promise to end the peace negotiations, take tougher measures against suspected terrorists and abandon the promised return of more land occupied in 1967.

At the beginning of February 1995 an emergency meeting of the leaders of Egypt, Israel, Jordan and the PLO was held in Cairo with the aim of lending support to the troubled peace process. A communiqué issued at the conclusion of the summit meeting condemned acts of terror and violence; and expressed support for the Declaration of Principles and the wider peace process. On 12 February 1995 US President Clinton held a meeting with the Israeli and the Egyptian Ministers of Foreign Affairs and the Palestinian (PNA) Minister of Planning and Economic Co-operation, Nabil Shaath, in Washington, DC. Shimon Peres, the Israeli Minister of Foreign Affairs, was reported to have stated after the meeting that any further expansion of Palestinian self-rule in the West Bank was conditional upon real progress by the PNA in suppressing terrorism. Elsewhere, fears were expressed in early February that the lack of democratic accountability of the PNA posed a significant threat to the peace process. In early March Yasser Arafat and the Israeli Minister of Foreign Affairs met in Gaza for talks. At the conclusion of the meeting it was announced that 1 July 1995 had been adopted as the date by which an agreement on the expansion of Palestinian self-rule in the West Bank should be concluded.

CABINET RESHUFFLES

On 21 February 1995 Rabin appointed ministers, in an acting capacity, to two portfolios which had been reserved for the Shas religious party. (Shas had announced at the beginning of the month that, owing to its fears regarding Jewish security and the peace process, it would not rejoin the coalition Government.) Uzi Baram became acting Minister of the Interior, while the Minister of the Economy and of Science and Technology, Shimon Sheetrit, assumed responsibility for religious affairs. In early June the Minister of Justice, David Libai, was appointed acting Minister of the Interior in place of Uzi Baram, who retained the tourism portfolio. The Likud party appeared to suffer a serious division in the same month, when one of its most prominent members, the former Minister of Foreign Affairs, David Levy, announced that he was forming a new party to contest the legislative elections scheduled for 1996. The division was reportedly the result of Levy's opposition to new selection procedures for general election candidates which Likud had formally adopted on 5 June. Levy's new, anonymous political movement (later identified as Gesher) was formally inaugurated on 18 June, although Levy himself remained a member of Likud.

ISRAEL–SYRIA TALKS RESUME

In mid-March 1995 it was announced that Israel and Syria had agreed to resume peace negotiations, talks between the two countries having been suspended since February 1994. The resumption of negotiations would initially involve the Israeli and Syrian ambassadors to the USA, meeting, at Syria's insistence, in the presence of US officials. At a later stage it was planned to introduce to the negotiations military technicians and, ultimately, the Syrian and Israeli Chiefs of Staff. Speculation that a breakthrough in the talks between Israel and Syria might shortly be achieved was subdued, however, in late April, when the Syrian Vice-President made it clear that Syria had no intention of renouncing its demand that Israel should withdraw from the Golan Heights to the border pertaining before the June 1967 war. Nevertheless, on 24 May Syria and Israel were reported to have concluded a 'framework understanding on security arrangements' which would facilitate negotiations on security issues. At the end of the month Shimon Peres made public the Government's position with regard to the talks with Syria. Israel, he stated, had proposed that its forces should withdraw from the Golan Heights over a four-year period. Syria, however, had insisted that the withdrawal should be effected over 18 months. Peace negotiations between Israel and Syria resumed in late December 1995 in Maryland, USA, and a second round of US-mediated talks took place there in early January 1996.

VIOLENCE PRECEDES AGREEMENT

In early April 1995 two suicide bomb attacks in the Gaza Strip killed seven Israeli soldiers and wounded more than 50 people. Hamas and Islamic Jihad subsequently claimed responsibility for the attacks, in the aftermath of which the Palestinian police force was reported to have arrested as many as 300 members of the two groups. The following day the Minister of Justice in the PNA announced that the Palestinian police force would disarm all members of 'rejectionist' groups opposed to the peace process. On 18 April PNA officials met representatives of Islamic Jihad and Hamas and demanded that the two groups should terminate all of their armed operations against Israeli targets in and from the autonomous areas. The Islamic Jihad and Hamas representatives were reported to be willing to agree to a limited cease-fire, provided that the PNA released members of the two organizations held in detention, did not disarm the groups, and undertook not to allow Israeli armed forces to carry out operations against them. Attention once again shifted to the issue of settlements, when in late April it was announced that the Israeli Government had approved a plan to take possession of some 54 ha of mainly Arab-owned land in two sections of East Jerusalem. The land was to be used by the Ministry of Housing for the construction of Jewish neighbourhoods and facilities. An emergency meeting of the Arab League condemned the Israeli Government's decision to expropriate the land. The UN Security Council subsequently convened and prepared a resolution which demanded that Israel rescind its decision. However, in spite of the support of all of the other 14 members of the Security Council for the resolution, the USA exercised its veto to prevent its adoption. On 22 May 1995, however, the Israeli Government announced that the plan had been suspended after Hadash and the Democratic Arab Party drafted a 'no-confidence' motion in response, which Likud was likely to have supported. (The Arab Democratic Party subsequently forced a confidence vote in the Knesset which the Government won.)

Despite intensive efforts to achieve a breakthrough, it proved impossible to conclude an agreement on expansion of Palestinian self-rule in the West Bank by the target date of 1 July 1995. The principal obstacles to an agreement were the question of to where, exactly, Israeli troops in the West Bank would redeploy; and the precise nature of security arrangements to be made for the approximately 130,000 Jewish settlers who were to remain in the West Bank.

On 21 August 1995 a suicide bomb attack on a bus in Jerusalem killed six people. Hamas claimed responsibility for the attack, which raised the number of deaths in bombings over the previous 16 months to 77 and inevitably provoked further demands from those Israeli elements opposed to the Declaration of Principles that the talks should be suspended. Some opponents of the peace process argued that there was now little point in proceeding with interim agreements, and that final status negotiations between Israel and the Palestinians should begin immediately. This was the general consensus of the nationalist Right and derived from a belief that the less land that was under Palestinian control at the time of final status talks, the weaker the PNA's bargaining position would be over such crucial issues as settlement and Jerusalem.

It was not until 28 September 1995 that the Israeli-Palestinian Interim Agreement on the West Bank and the Gaza Strip was finally signed by Israel and the PLO (see Documents on Palestine, p. 127). Its main provisions were the withdrawal of Israeli armed forces from a further six West Bank towns (Nablus (Nabulus), Ramallah (Ram Allah), Jenin (Janin), Tulkaram (Tulkarm), Kakilya (Qalqilya) and Bethlehem (Beit Lahm)) and a partial redeployment away from the town of Hebron; national Palestinian legislative elections to an 82-member Palestinian Council, and for a Palestinian Executive President; and the release, in three phases, of Palestinian prisoners detained by Israel. There were many criticisms of the new agreement, many of which focused on the sheer complexity–and corresponding vagueness–of the 400-page document. It was inevitable, too, that the agreement would raise further, serious doubts about

precisely what kind of entity the PNA might be at the conclusion of 'final status' negotiations, given Israel's clear desire to maintain jurisdiction over the West Bank settlements. Opposition Palestinian groups condemned the agreement as inadequate, whilst Israeli hardliners denounced the agreement because they believed that too much had been conceded to the Palestinians. In mid-October, meanwhile, Israeli armed forces launched an intensive military operation in southern Lebanon after a bomb attack by Hezbollah had caused the deaths of six Israeli soldiers on 16 October 1995.

RABIN'S ASSASSINATION AND ITS AFTERMATH

The peace process was once again jeopardized on 4 November 1995 when the Israeli Prime Minister was assassinated while leaving a peace rally in Tel-Aviv. His assassin, Yigal Amir, was a young religious nationalist who opposed the peace process, and in particular Israeli withdrawal from the West Bank. While it was apparently an independent act, the assassination seemed certain further to marginalize those on the extreme right wing of Israeli politics who had advocated violence as a means of halting the implementation of the Declaration of Principles on Palestinian self-rule. The assassination also provoked criticism of Likud which, it was widely felt, had not sufficiently distanced itself from such extremist elements. Following the assassination, Shimon Peres, hitherto the Minister of Foreign Affairs, became acting Prime Minister. On 15 November, with the agreement of the opposition Likud, Peres was invited to form a new government. On 21 November the leaders of the outgoing coalition parties—Labour, Meretz and Yi'ud—signed a new coalition agreement, and Peres announced a new Cabinet, which was formally approved by the Knesset on the following day. An opinion poll conducted on the eve of Peres' appointment showed the Labour leader enjoying a lead of more than 30% over Binyamin Netanyahu, his Likud rival.

In spite of Rabin's assassination, Israeli armed forces completed their withdrawal from the town of Jenin, in the West Bank, on 13 November 1995, and during December they withdrew from Tulkaram, Nablus, Kakilya, Bethlehem and Ramallah. With regard to Hebron, Israel and the PNA signed an agreement transferring jurisdiction in some 17 areas of civilian affairs from Israel to the PNA. In early December Shimon Peres and Yasser Arafat held talks at the Erez border point between Israel and the Gaza Strip for the first time since the assassination of Rabin. Peres confirmed at the talks that Israel would release some 1,000 Palestinian prisoners before the Palestinian legislative and presidential elections scheduled for January 1996. In February 1996 Peres announced that elections to the Knesset and—for the first time—the direct election of the Prime Minister, would take place as soon as electoral legislation allowed—in late May 1996.

RELATIONS WITH JORDAN

On 10 January 1996 King Hussein of Jordan began a public visit to Tel-Aviv, during the course of which Israel and Jordan signed a number of agreements relating to the normalization of economic and cultural relations. These included a transport agreement dealing with road links between Israel, Jordan and the Palestinian Autonomous Areas and providing for an air link between Israel and Jordan. However, the attempted assassination of Hamas leader Khalid Meshaal by Israeli Mossad agents in Amman, Jordan, in late September 1997 provoked a flurry of diplomatic activity to preserve cordial relations between Israel and Jordan (see below).

SUICIDE BOMB ATTACKS RESUME

Palestinian legislative and presidential elections were held in late January 1996 and, in the normal course of events, Palestinian and Israeli negotiators would, on their completion, have initiated the final stage of the peace process, addressing such issues as Jerusalem, the rights of Palestinian refugees, the status of Jewish settlements in the Palestinian Autonomous Areas and the extent of that autonomy. In late February and early March, however, suicide bomb attacks in Jerusalem, Ashkelon and Tel-Aviv caused the death of more than 50 Israelis and led to a further suspension of the peace process. Following the attacks in Jerusalem and Ashkelon, Israel ordered the indefinite closure of the West Bank and the Gaza Strip and demanded that the Palestinian authorities should suppress the activities of Hamas and Islamic Jihad in the areas under their control. It was unclear, however, whether either of these groups was responsible for the bomb attacks. A hitherto unknown group, the 'Yahya Ayyash Units', claimed responsibility for the first attacks on 25 February, which were apparently carried out to avenge the assassination—allegedly by Israeli agents—of a leading member (Yahya Ayyash) of Hamas in January 1996. Yasser Arafat, now the elected Palestinian President, condemned the bombings and in late February more than 200 members of Hamas were reported to have been detained by the Palestinian security forces.

The two suicide bomb attacks carried out at the beginning of March 1996 (for which the 'Yahya Ayyash Units' again claimed responsibility) led Israel to impose even more stringent security measures and Israel asserted the right of its armed forces to enter the areas under Palestinian jurisdiction when its security was at stake. The Palestinian authorities were reported to have held emergency talks with the leadership of Hamas and Islamic Jihad and to have outlawed their armed wings and other, unspecified Palestinian paramilitary groups.

The suicide bomb attacks also affected the talks taking place between Israeli and Syrian negotiating teams in the USA. Following the second attacks in March 1996 the Israeli team returned to Israel. On 18 March Peres revealed that peace negotiations with Syria had effectively been suspended because Syria had refused to condemn the bombings in precisely the way the USA had indicated that it should; and to give an assurance that it would not sponsor terrorist activities. Syria claimed that it did condemn terrorism in all forms, but drew a distinction between terrorism and legitimate resistance against occupation.

'OPERATION GRAPES OF WRATH'

Syria and Lebanon both declined an invitation to attend a summit meeting, held in the Egyptian town of Sharm esh-Sheikh on 13 March 1996, at which representatives of 27 countries expressed their support for the Middle East peace process and pledged to redouble their efforts to combat terrorism. On 10 April Israel launched a 16-day bombing operation ('Grapes of Wrath') to destroy Hezbollah bases in southern Lebanon, resulting in the displacement of some 400,000 civilians (see chapter on Lebanon). The military campaign ended suddenly after Israeli shells hit a UN base at Qana and killed more than 100 Lebanese civilians sheltering there. On 27 April a partial cease-fire was agreed between the two sides, stipulating that neither side should target civilians. An international monitoring committee, consisting of French, Israeli, Syrian, Lebanese and US officials, was established in order to oversee adherence to the terms of the cease-fire. The Israeli authorities insisted that the Qana shelling had been an accident, and on 14 June 1997 Israel rejected a UN resolution proposing that it should pay a total of $1.7m. in compensation for the victims of the incident.

In early April 1996 Israel and Turkey signed a number of military co-operation agreements, one of which provided for the establishment of a joint organization for research and strategy. Syria condemned the agreement as a threat to its own security and to that of all Arab and Islamic countries. A visit by Peres to Oman and Qatar at the beginning of the month resulted in an agreement between Israel and Qatar to increase co-operation in trade.

Israel welcomed the decision of the Palestine National Council in late April 1996 to amend the Palestinian National Charter, or PLO Covenant (the constitution of the Palestinian resistance movement), thereby removing all of its clauses which demanded the destruction of Israel. Indeed, the Israeli Government had demanded that the Covenant be amended by 7 May 1996 as a precondition for its participation in the final stage of peace negotiations with the PLO.

LIKUD RETURNS TO POWER

In the months following the assassination of Itzhak Rabin the victory of the Labour Party and the Labour leader, Shimon Peres, in the legislative and prime ministerial elections held on 29 May 1996 was widely regarded as a foregone conclusion. Most significantly the US Administration appeared to exclude

the possibility of any other outcome, even after the suicide bomb attacks during February and March 1996 led to increased support—expressed in opinion polls—for Likud and other right-wing political groups. No party gained an outright majority of the 120 seats in the new Knesset, but the Likud leader, Binyamin Netanyahu, gained a marginal and unexpected victory over Shimon Peres in the direct election of the Prime Minister in which they were the only candidates. Prior to the legislative election a formal alliance between Likud, the Tzomet party and Gesher had been announced. The success of the religious parties, Shas and the NRP—even though they probably gained seats at the expense of the Likud-led alliance—was the key factor in determining that the new Government would be formed by Likud. Some 79.7% of the 3.9m.-strong Israeli electorate were reported to have participated in the elections.

The election of a new, Likud-led Israeli Government appeared to have grave implications for the future of the peace negotiations between Israel and the Palestinian authorities since, during the election campaign, the Likud alliance had explicitly stated that it would never agree to the establishment of a Palestinian state and even, at times, seemed to indicate that it was prepared to renege on some aspects of agreements which Israel had already concluded with the Palestinians. On 31 May 1996 the Palestinian Council of Ministers (formed after the Palestinian legislative elections in January 1996) and the Executive Committee of the PLO held a joint meeting in Gaza and urged any new Israeli Government to implement all agreements which had already been concluded and to commence the final stage of the peace negotiations.

Prime Minister Netanyahu commenced negotiations to form a cabinet on 2 June 1996, and on 16 and 17 June signed a series of agreements between the Likud alliance and Shas, the NRP, Israel B'Aliyah, United Torah Judaism and the Third Way to incorporate their representatives into a coalition which would command the support of 66 deputies in the 120-member Knesset. In addition, Moledet agreed to support the Government, but did not formally enter the coalition. On 18 June the new Government received the approval of the Knesset and presented a summary of the policies it would pursue in office. This excluded the possibility of granting Palestinian statehood or, with regard to Syria, of relinquishing *de facto* sovereignty of the occupied Golan Heights.

On 21–23 June 1996, in response to Likud's electoral victory, a summit meeting of the leaders of all Arab countries with the exception of Iraq was convened in Cairo. The meeting issued a final communiqué in which the participants reiterated Israel's withdrawal from all occupied territories (including East Jerusalem) as a basic requirement for a comprehensive Middle East peace settlement. In July the intransigent character of the new Israeli Government was enhanced by the incorporation into the Cabinet of Ariel Sharon—who had played a leading role in the creation and expansion of controversial Jewish settlements in the West Bank—although his appointment as Minister of Infrastructure was made only after the Minister of Foreign Affairs had forced it by threatening to resign, thus endangering Likud's alliance with Gesher.

IDF–PNA CLASHES THREATEN PEACE PROCESS

By late August 1996 Palestinian frustration at what were regarded as deliberate attempts by the new Israeli Government to slow down the peace process was increasingly evident. In June it was reported that Prime Minister Netanyahu had postponed further discussion of the withdrawal of Israeli armed forces from the West Bank town of Hebron—where they remained in order to provide security for a community of some 400 Jewish settlers. An agreement for their withdrawal by 20 March 1996 had been concluded with the Palestinian authorities, but had been suspended by Shimon Peres following the suicide bomb attacks in February and March. Furthermore, Netanyahu had refused to meet Yasser Arafat and had stated he would never do so. As a sign of their growing dissatisfaction with the new Likud-led Government, the PNA organized a short general strike at the end of the month. The strike was held in particular protest at the refusal of the Israeli authorities to allow Palestinian Muslims to participate in Friday prayers at the al-Aqsa mosque in Jerusalem and also at a government decision to construct more housing units at existing Jewish settlements in the West Bank. In response to US pressure Netanyahu and Arafat met, for the first time, at the Erez crossing point between Israel and Gaza, on 4 September. At a press conference, following the meeting, they confirmed their commitment to the interim agreement and their determination to implement it. Reports persisted, however, that Israel was seeking to modify some of the agreements concluded within its framework.

In mid-September 1996, at a meeting of the Arab League member states, the Syrian Minister of Foreign Affairs stated that the Arab states represented there had agreed in future to link relations with Israel to progress made in the peace process. Shortly afterwards it was announced that the Israeli Ministry of Defence had approved plans to construct some 1,800 new housing units at existing Jewish settlements in the West Bank.

On 25 September 1996 violent confrontations began between members of the Palestinian security forces, Palestinian civilians and members of the Israeli armed forces in which at least 50 Palestinians and 18 Israelis were killed and hundreds wounded. The West Bank town of Ramallah was the initial point of confrontation and the cause of the disturbances was attributed to the decision of the Israeli Government to open the north end of the Hasmonean tunnel which ran beneath the al-Aqsa mosque in East Jerusalem. Most observers, however, viewed the violent confrontations as the inevitable culmination of Palestinian anger at the Israeli Government's apparent determination not to abide by some of the agreements it had signed with the Palestinian authorities. There was speculation that the violence, the most serious in the West Bank and Gaza since 1967, marked the beginning of a new Palestinian *intifada* and signalled the end of the peace process. The Israeli military authorities declared a state of emergency in the Gaza Strip and the West Bank and threatened military intervention to suppress the disturbances. A special session of the UN Security Council was convened and intense international diplomacy led to the holding of a crisis summit meeting in Washington, DC, hosted by US President Clinton and attended by Binyamin Netanyahu, Yasser Arafat and King Hussein of Jordan. The meeting reportedly achieved nothing, but on 6 October it was announced that, following further US mediation, Israel had agreed to resume negotiations on the partial withdrawal of its armed forces from Hebron. On 7 October, at the opening of the winter session of the Knesset, Netanyahu stated that once the question of the redeployment from Hebron had been settled, Israel would reopen its borders with the West Bank and the Gaza Strip—which had remained closed since February 1996—and move quickly towards seeking a final settlement with the Palestinians.

HEBRON AGREEMENTS

In mid-January 1997 Israel and the PNA finally concluded an agreement on the withdrawal of Israeli armed forces from Hebron. The principal terms of the agreement, which had been negotiated with the help of US diplomacy, were that Israeli armed forces should withdraw from 80% of the town of Hebron within ten days, and that the first of three subsequent withdrawals from the West Bank should take place six weeks after the signing of the agreement, and the remaining two by August 1998. With regard to security arrangements for Jewish settlers in central Hebron, Palestinian police patrols would be armed only with pistols in areas close to the Jewish enclaves, while joint Israeli-Palestinian patrols would secure the heights above the enclaves. The 'final status' negotiations on borders, the Jerusalem issue, Jewish settlements and Palestinian refugees—arguably the most intractable elements of the entire Arab–Israeli dispute—were to commence within two months of the signing of the agreement on Hebron. As guarantor of the agreements, the USA undertook to obtain the release of some Palestinian prisoners, and to ensure that Israel continued to engage in negotiations for the establishment of a Palestinian airport on the Gaza Strip and for safe passage between the West Bank and the Gaza Strip for Palestinians. The USA also undertook to ensure that the Palestinians would continue to combat terrorism, complete the revision of the Palestinian Covenant and consider Israeli requests to extradite Palestinians suspected of involvement in attacks in Israel.

HAR HOMA

The conclusion of the agreement on the withdrawal of Israeli armed forces from Hebron marked the first significant progress in the peace process since Netanyahu's election as Prime Minister. However, renewed hopes for the future of the process appeared to be short-lived. The Israeli decision of February 1997 to proceed with the construction of 6,500 housing units at Har Homa in East Jerusalem attracted international criticism, but two UN Security Council resolutions, submitted during March, urging Israel to reconsider its construction plans were vetoed by the USA. The first veto was issued at a time of increasing tension between Israel and the PNA after a unilateral decision was made by Israel to redeploy its troops from only 9% of the West Bank. The Israeli decision angered not only Yasser Arafat, who rejected the proposal, but also King Hussein of Jordan who sent a personal letter to Netanyahu, accusing him of being 'intent on destroying' efforts made to restore the peace process. Anti-Israeli sentiments intensified throughout the Arab world, but the Arab cause continued to be undermined by violent atrocities, including the massacre by a Jordanian soldier of seven Israeli schoolgirls in Nayarayim, an enclave between Israel and Jordan, on 13 March. On 14 March King Hussein visited the families of the deceased to express his condolences. Continuing Israeli intransigence over Har Homa prompted the Palestinians to abandon the 'final status' talks, scheduled to begin on 17 March, and on the following day construction at the site began. Riots erupted immediately, reaching a climax on 21 March when a bomb, planted by Hamas, exploded in a north Tel-Aviv café, killing four and wounding more than 60 people. Netanyahu accused Arafat of extending an invitation to Islamist activists to resume terrorist attacks, and the Israeli Cabinet immediately ordered a general closure of the West Bank and Gaza Strip. At the end of the month the League of Arab States voted to resume their economic boycott of Israel, suspend moves to establish diplomatic relations with that country, and withdraw from multilateral peace talks. (Jordan, the PNA and Egypt were excluded from the legislation owing to their binding bilateral agreements with Israel.) On 1 April it was reported that two suicide bombers had succeeded only in killing themselves in an attempted attack on two buses containing schoolchildren travelling from Jewish settlements in the Gaza Strip. Despite the claims of an anonymous caller that the bombers were members of Hamas, both Hamas and Islamic Jihad denied responsibility for the attack, and the PNA claimed that one of the alleged bombers had been, in fact, the victim of an Israeli grenade attack. Meanwhile, in New York, Arab states continued to petition the UN General Assembly to appeal for a halt to the Har Homa development. On 7 April Netanyahu met President Clinton in Washington and insisted that he would not 'freeze' construction. Riots erupted in Hebron the following day after an Arab man was allegedly murdered by Jewish settlers. Three people died and more than 100 were wounded in the clashes. Demonstrations continued during the rest of the month but eventually subsided, and at the end of April the Gaza Strip and the West Bank were reopened.

The intensity of Palestinian opposition to the construction of Jewish settlements became increasingly apparent when, despite the opposition of human rights groups, at the beginning of May 1997 the Palestinian Minister of Justice, Furayh Abu Middayn, announced that the PNA would sentence to death any Palestinian who was found to have sold land to Jews. This proclamation provoked a spate of unlawful killings: within one month three Arab land dealers were reportedly executed by a newly established vigilante group called 'The Guardians of the Holy Land'. The extent of renewed Israeli–Palestinian hostility was made evident also during May when the USA's chief peace process negotiator, Dennis Ross, returned to the USA following a nine-day mediation initiative in the region, having failed to secure any hope of a resumption of peace talks.

Both the Har Homa construction and the limited redeployment of the West Bank supported by the Israeli Government were regarded by many as a vitiation of the 1993 Declaration of Principles. The agreement was further undermined in May 1997 when the Minister of National Infrastructure, Ariel Sharon, proposed to deny Palestinians the right to drill for water and suggested that Israel should assume authority for one-half of the water resources on the West Bank. Hopes for the future resumption of the Oslo peace process were further frustrated when the Israeli daily newspaper, *Ha'aretz* reported the results of a US study which claimed that more than 25% of the Jewish settlers' homes in the Gaza Strip and West Bank were uninhabited (a claim which was rejected by the Israeli Central Board of Statistics which argued that only 12% of the settlements were unoccupied). The same newspaper later reported that Netanyahu's original plan, evolved within the framework of the Oslo accords, to relinquish an eventual 90% of the West Bank had been revised in a new proposal—the so-called 'Allon plus' plan—to a 40% redeployment.

In mid-June 1997 the US House of Representatives voted in favour of recognizing Jerusalem as the undivided capital of Israel and of transferring the US embassy there, from Tel-Aviv. President Clinton was reported to have strongly disapproved of the vote and of its possible implications for the peace process. The decision coincided with violent clashes between Palestinian civilians and Israeli troops in both Gaza and Hebron: within one week more than 150 Palestinians were reportedly shot and wounded. Fighting continued, reaching a climax in Hebron at the end of the month when anti-Islamic posters displayed in the town caused popular outrage. Meanwhile Yasser Arafat, fearing Israeli reoccupation of Hebron, assigned 200 police officers to patrol the streets. Although the police presence appeared to have a largely positive effect in Hebron, four police officers were arrested by Israeli police outside Nablus on suspicion of conspiring to attack Israeli targets. At the same time the Palestinian police force announced the discovery of large stocks of ammunition in Beit Sahur on the West Bank, alleged to belong to Hamas.

JERUSALEM BOMBS THWART HOPES FOR RENEWED TALKS

At the beginning of July 1997 a series of meetings were held between the US Under-Secretary of State for Political Affairs, Thomas Pickering, and Israeli and Palestinian officials with the aim of resuming negotiations between the PNA and the Israeli Government. On 28 July both sides announced that peace talks were to be resumed in early August. However on 30 July, the eve of Dennis Ross' visit to reactivate the negotiations, two Hamas suicide bombers killed 14 civilians and wounded more than 150 others at an outdoor Jewish market in Jerusalem. The event effectively paralysed the peace process: Ross cancelled his visit and Israel immediately halted payment of tax revenues to the PNA and closed the Gaza Strip and the West Bank. The sanctions provoked furious protest from the Palestinians as well as widespread international condemnation. Nevertheless Binyamin Netanyahu insisted that restrictions would remain until increased efforts to combat the activities of such terrorist groups became evident. On 18 August 30% of some $50m. in tax revenue owed to the Palestinians was released by the Israeli Government. Rather than condemning Palestinian political organizations, Arafat convened a two-day forum in August during which he publicly embraced Hamas leaders and urged them, together with Islamic Jihad to unite with the Palestinian people against Israeli policies. On 26 August Hamas rejected a request from Palestinian leaders to suspend their attacks. Nevertheless, Israel relaxed its closure of the West Bank and the Gaza Strip on 1 September. Sanctions were reinforced on 4 September, however, after a triple suicide bombing took place in West Jerusalem, killing eight people (five Israelis and the bombers), and wounding more than 150 others. The bombing, followed one day later by the death of 12 Israeli commandos in Lebanon (see below), prompted warnings from the Israeli Security Cabinet that possible military attacks on Palestinian and Arab territories might be launched. The security forces' statement cast doubt on the viability of a planned visit by Madeleine Albright, US Secretary of State, to the Middle East in mid-September, when it was hoped that substantive political issues would be discussed. However, Albright's tour of the region, undertaken during 10–15 September, was positively received, and renewed diplomatic activity resulted, in early October, in the first direct discussions between the Israeli Prime Minister and the Palestinian leader for eight months.

ISRAELI CASUALTIES IN LEBANON

The deterioration in relations between Israel and the PNA coincided with renewed hostilities in the north of the country, after Hezbollah launched their first major rocket attack for 16 months on civilians in the Israeli town of Kiryat Shmona in early August 1997. The barrage, in retaliation for attacks by Israeli commandos in which five Hezbollah members were killed, prompted further air-strikes against targets in southern Lebanon. Violence escalated and on 18 August the Israeli military proxy, the South Lebanon Army (SLA) shelled the Lebanese port of Sidon, killing at least six and wounding more than 30 civilians. Israeli denials of responsibility, claiming that the attack was the sole initiative of the SLA, were rejected by Hezbollah. The international monitoring committee convened in mid-August in response to the escalating violence but failed to achieve a reconciliation. Indeed, any hopes for an immediate restoration of peace were shattered when, on 5 September, 12 Israeli marines, who were alleged to be planning to assassinate Shi'ite leaders, were killed in the village of Insariyeh, south of Sidon. The Israeli commandos were reportedly killed by the joint forces of Hezbollah, Amal, and Lebanese soldiers. The death toll, the highest since 1985 when troops receded to the buffer zone, was expected to have grave implications for regional security.

NETANYAHU'S DOMESTIC PROBLEMS

In addition to the escalating security crisis in the region (see above), Netanyahu also faced increasing domestic difficulty in April 1997, after police recommended that he be charged with fraud and breach of trust following his appointment in January 1997 of an undistinguished lawyer, Roni Bar-On, as Attorney-General. Bar-On resigned within 12 hours of his appointment after it was alleged that his promotion had been made in order to facilitate a plea bargain for Aryeh Der'i, leader of the orthodox Shas party, who was facing separate corruption charges. There were suggestions that in return for Bar-On's appointment, Der'i had pledged Shas party support for the Cabinet's decision regarding the withdrawal from Hebron. In early May Aryeh Der'i was indicted for obstruction of justice but Elyaqim Rubenstein, Bar-On's successor, ruled that, owing to lack of evidence, charges would not be brought against Netanyahu. Despite Netanyahu's acquittal, there were strong demands for his resignation, and his credibility was further undermined by the resignations of the Finance Minister, Dan Meridor, and the Minister of Communications, Limor Livnat, who, although retaining her ministerial position, resigned from her post as Cabinet Spokeswoman. (On 9 July Michael Eitan was approved as Minister of Science, following the resignation of Binyamin Begin, and Yaacov Ne'eman was appointed Minister of Finance.) The extent of Netanyahu's declining popularity was made apparent on 21 July, when the Government was defeated by five votes in a motion of 'no confidence'. The Government survived, however, since legislation demands that an absolute majority of 61, which was not achieved, is required before change can be implemented.

In June Ehud Barak, a former cabinet minister and chief of staff of the army, won the Labour Party leadership election (to replace Shimon Peres), with 51% of the votes.

FLUCTUATING RELATIONS WITH JORDAN

On 25 September 1997 two Israeli Mossad agents, travelling on forged Canadian passports, were detained in the Jordanian capital, Amman, in connection with the attempted assassination, by poisoning, of the local Hamas chief, Khalid Meshaal. The two agents were apprehended by bodyguards at the scene of the incident, immediately after the attack. In response to the incident, which caused severe embarrassment to the Israeli Government, Canada withdrew its ambassador to Tel-Aviv, while King Hussein of Jordan threatened to try the arrested men for murder and to sever diplomatic relations with Israel unless the Israeli authorities promptly supplied an antidote for the potentially lethal chemical agent used in the attack. The antidote was duly dispatched by Israel, and in late September diplomats and senior government officials engaged in frantic efforts to preserve cordial relations between the two countries. In early October the release from Israeli prisons of dozens of Arab detainees, including Sheikh Ahmad Yassin, one of the founders of Hamas, was thought to have been negotiated with the Jordanian authorities in exchange for the return of the Mossad agents apprehended at the scene of the attack. Yassin's return to Gaza on 6 October prompted scenes of popular jubilation, and proved a further embarrassment for Netanyahu, who had persistently exhorted the PNA to distance itself from the Hamas leadership. The bungled Mossad attempt and its aftermath reportedly created tensions within Netanyahu's Cabinet; it was alleged that the Minister of Foreign Affairs, David Levy, and the Minister of Defence, Itzhak Mordechai, were furious with Netanyahu for not having consulted them over the decision to attempt Meshaal's assassination. However, the Minister of Infrastructure, Ariel Sharon, defended the Prime Minister, praising him for his 'leadership and control' during the crisis. Although Sharon's sympathetic intervention may have appeared surprising (his personal antipathy towards Netanyahu had been widely reported), some observers regarded his timely support for the beleaguered Netanyahu as a bid to advance the fortunes of cabinet hardliners (and his stewardship of the faction) at the expense of the pragmatists led by Levy and Mordechai. The report of a commission of investigation into the incident, appointed by the Government, was published in February 1998 and was highly critical of the planning and execution of the 'mission', though not of the wider strategy. The head of Mossad, Maj.-Gen. Danny Yatom, resigned as a result of the report, and was replaced, in March, by Ephraim Halevy, a former diplomat. A series of high-level ministerial meetings between Jordanian and Israeli delegations (including direct contacts between Netanyahu and Crown Prince Hassan) were conducted in early March, resulting in renewed commitments to co-operate in the fields of bilateral trade, water and electricity resources and tourism. Netanyahu described the thaw in relations between the two sides as 'a new beginning'.

INTERNAL PROBLEMS

An attempt by Netanyahu to consolidate his leadership of Likud at a party conference convened in November 1997 prompted a crisis within the party and within the governing coalition, after the conference endorsed a proposal to reform the electoral system. According to the proposed reform, Likud candidates standing for election to the Knesset would henceforth be selected by the party's 2,700-strong Central Committee (dominated by Netanyahu's supporters) rather than the 200,000 registered members of the party. However, following numerous press reports that Likud party opponents and coalition party members alike were considering the creation of new parties in an attempt to arrest this consolidation of Netanyahu's support at the expense of the democratic process, Netanyahu retracted the plan, stating that the reform issue would be the subject of a future referendum. Meanwhile, also in November, a number of speakers, including the Labour Party leader, Ehud Barak, addressed a crowd of some 200,000 Israelis who had gathered to commemorate the second anniversary of the assassination of Itzhak Rabin. Barak pledged to continue Rabin's pursuit of a Middle East peace.

REDEPLOYMENT PROPOSALS

Bilateral negotiations between Israel and Palestinian negotiators resumed in early November 1997. Israel offered to decelerate its construction of Jewish settlements in return for Palestinian approval of a plan to delay further redeployments of Israeli troops from the West Bank. At the same time, the Israeli Government announced plans to build 900 new housing units in the area, frustrating both the USA and the PNA. The virtual stalemate in the peace process prompted several Arab states to boycott the Middle East and North Africa economic conference, held in Doha, Qatar, on 16–18 November. Separate peace talks, held between Madeleine Albright, Netanyahu and Arafat in mid-November, were inconclusive. Albright urged Israel to present plans for a significant withdrawal from the West Bank in the near future. On 30 November the Israeli Cabinet agreed in principle to a partial withdrawal from the West Bank, but specified neither its timing nor its scale; implementation would be dependent on the PNA meeting its security commitments. The withdrawal proposals also affirmed Israel's right to continue 'reinforcement of settlements in Judaea and Samaria'. In addi-

tion to the agreement, the Cabinet undertook to create a team of ministers to decide which areas of the West Bank would be permanently retained by Israel, before the implementation of the second redeployment. Such a unilateralist initiative directly contravened the Oslo accords, which stated that the final settlement agreement was to be negotiated with the PNA. A subsequent statement issued by Likud mayors in the West Bank settlements expressed support for the principle of 'separation' in Judaea, Samaria and Gaza. The statement not only bolstered Netanyahu's argument with nationalist hardliners in the Knesset (Likud municipal chiefs represented some 80% of Jewish settlers in the West Bank) but also marked a significant departure for Likud, which had previously adhered very firmly to the belief that all of historic Palestine was an indivisible part of the Jewish State. However, the Palestinians and much of the international community deemed the proposal to be an unacceptable departure from the Oslo and Hebron protocols. The Labour leader, Ehud Barak, dismissed the Government's proposals as 'irrelevant' and the Clinton administration in the USA also signalled that the latest initiative was inadequate.

INDUSTRIAL UNREST, 1997

Meanwhile, the stringent fiscal and economic policies being pursued by the Minister of Finance, Yaacov Ne'emen, were increasingly bringing the Government into confrontation with the Histadrut (Israel's General Federation of Labour). Since his appointment, Ne'emen had enthusiastically promoted a campaign of privatization and public-spending cuts, measures which were welcomed by the business community but mistrusted by the Histadrut, which drew attention to rising unemployment figures and the threat of deteriorating social services. Of particular concern to the unions was speculation that Ne'emen was planning to revise the terms of new pensions legislation, endorsed by the previous administration, which he considered to be 'excessively generous'. Tensions were exacerbated in early December 1997 following Ne'emen's comparison of the critics who were seeking to undermine his monetary policy to the Palestinian suicide bombers who had frustrated recent peace initiatives. Despite issuing an apology for the ill-advised comparison, Ne'emen's confrontational style appeared to provide the final provocation for the organization, by union officials, of a general strike on 3 December. (A half-day general strike organized on 29 September, also in protest at the Government's economic policies, had been observed by an estimated 500,000 workers.) The industrial action, which was thought to involve some 700,000 mainly public sector employees, resulted in the closure of government offices, banks, schools and the Tel-Aviv stock exchange, and the suspension of many public transport facilities. Employees returned to work on 7 December following assurances from Ne'emen that the fundamental principles of the pensions reform proposal would be adhered to by the Likud-led coalition.

THE COALITION WEAKENED

Evidence of further divisions within the coalition emerged at the end of December 1997, owing to the forthcoming 1998 budget vote, effectively a demonstration of confidence in the Prime Minister. In order to muster the necessary support, Netanyahu granted concessions to various parties, in particular to right-wing members of the coalition. These included such financial rewards as increased funding for construction on the West Bank and for Orthodox schools. Opposition parties claimed that the Prime Minister had bribed coalition members in order to remain in power. David Levy, the leader of Gesher, also denounced the budget, claiming it to be an infringement of social principles; and on 4 January 1998 Levy resigned and Gesher withdrew from the Government, attributing the departure to dissatisfaction with the budget and with the slow rate of progress in the peace talks. The withdrawal of Gesher left Netanyahu with a majority of 61–59, and prompted speculation about the Government's imminent collapse. However, on the following day the budget was approved by a 58–52 majority. Later in the same month the Deputy Prime Minister and Minister of Education, Culture and Sport, Zevulun Hammer (the leader of the NRP), died. His cabinet responsibilities were assumed by Itzhak Levi, the NRP Minister of Transport and Energy. Levi was confirmed as Minister of Education and Culture, and of Religious Affairs (as well as new leader of the NRP) in February. Levi was replaced as Minister of Transport and Energy by Shaul Yahalom, also of the NRP. Plans to form a government of national unity for a period of six months, proposed by Shimon Peres, were rejected after the former Labour leader failed to secure sufficient support from party members. In October Ariel Sharon was appointed Minister of Foreign Affairs, and was to retain his duties as Minister of National Infrastructure for a further three months. Sharon's promotion was widely regarded as an attempt by Netanyahu to secure the support of settler groups and right-wing nationalists, since he was known to be opposed to redeployment from a further 13% of the West Bank.

REJECTION OF US REDEPLOYMENT PROPOSALS

The departure of David Levy from the Cabinet reinforced a perceived shift to the right in the balance of power in the Israeli Government, and did little to ease mounting US concerns over the future of the peace process. A visit to Israel and the Occupied Territories undertaken by Dennis Ross on 6–9 January 1998 failed to ease relations between the Israelis and the Palestinians sufficiently to prepare for negotiations on further Israeli redeployment. Indeed, ignoring the exhortations of the US Secretary of State to suspend all construction activities in the Occupied Territories, the Israeli Government announced expansion plans for two West Bank settlements during Ross's visit. Netanyahu responded to criticism of these decisions by asserting that the Israeli Government was not bound to cease settlement activity by the terms of the Oslo accords. In January 1998 President Clinton invited Netanyahu and Arafat to attend separate meetings in Washington, DC, on 20 and 22 of the month respectively. Prior to discussions with the President and the Secretary of State, Netanyahu attended a series of high-profile meetings with pro-Israeli opponents of the Clinton administration, including the Speaker of the House of Representatives, Newt Gingrich, other senior Republicans and representatives of the evangelical Christian movement. During the discussions with President Clinton, Netanyahu was reported to have rejected a US proposal for a phased second redeployment from the West Bank involving 10%–15% of the territory (a proposal which Arafat was reported to have reluctantly agreed to, despite initial indications that the PNA would not contemplate acceptance of redeployment from less than 30% of the land) in return for the Palestinians' further revision of the Palestinian National Charter and fulfilment of Israeli security requirements.

Netanyahu was insistent that any second stage of redeployment would have to involve less than 10% of the territory. The Israeli Prime Minister's departure from the USA coincided with the announcement in Israel of the finalization of a $1,400m. loan agreement with the US Government and the delivery, from the USA, of two highly advanced combat aircraft, purchased under favourable terms. By late January it was reported that direct contacts between the Palestinian delegation and the Israeli Prime Minister had been broken off. In late March the Israeli Cabinet rejected a new US proposal, delivered in Jerusalem by Dennis Ross, for an Israeli withdrawal from slightly more than 13% of West Bank territory, prompting US Secretary of State Albright to state that the peace process was on the verge of collapse, indicating that the USA was considering ending its involvement as a mediator. It had become increasingly evident that even if agreement could be reached between the Palestinians and the Israelis on the scale of a proposed second redeployment from the West Bank, the issue of whether the withdrawal should take place prior to the commencement of 'final status' talks remained far more contentious.

WEIZMAN RE-ELECTED PRESIDENT

On 4 March 1998 the Knesset re-elected Ezer Weizman as President for a further five-year term, by 63 votes to 49. Weizman defeated Shaul Amor, a Likud member of the Knesset whose candidacy had been sponsored by Prime Minister Netanyahu.

PROPOSED WITHDRAWAL FROM LEBANON

In late 1997 and early 1998 Israel's Minister of Defence, Itzhak Mordechai, indicated that Israel would be prepared to withdraw from Lebanon, in accordance with UN Security Council Resolu-

tion 425 (of March 1978), but with the stipulation that Lebanon provide guarantees of the security of Israel's northern border. On 1 April 1998 the Israeli Security Cabinet voted to adopt Resolution 425, on this condition. However, Lebanon emphasized that Resolution 425 demanded an unconditional withdrawal, and stated that neither would it be able to guarantee Israel's immunity from attack, nor would it be prepared to deploy the Lebanese army in southern Lebanon for this purpose; furthermore, Lebanon could not support the continued presence there of the SLA (whose integration with the Lebanese army was sought by the Israelis). Concern was also expressed that a unilateral withdrawal from Lebanon in the absence of a comprehensive Middle East peace settlement might foment regional instability. Israel's demand that Hezbollah be disarmed prior to any Israeli withdrawal was, moreover, unacceptable not only to Lebanon but also to Syria, which regarded its support for the resistance in southern Lebanon as essential leverage in its efforts to secure a parallel Israeli withdrawal from the Golan Heights.

INCREASED EU INVOLVEMENT

In early 1998 the European Commission published a detailed report on EU policies towards the Middle East, urging the adoption of a higher profile in the peace process. The report was highly critical of Israeli policies towards the PNA, and made particular reference to 'obstacles to trade and economic activity' being responsible for economic deterioration in Palestinian areas. In February the President of the European Commission, Jacques Santer, visited the Middle East and questioned Israel's obstructionism towards economic development in the West Bank and Gaza, and, in particular, its blocking of a free-trade agreement between the EU and the PNA. Although Santer ruled out the imposition of any form of EU sanctions against Israel, this concession did little to allay Likud's traditional suspicions of Europe. In March the British Secretary of State for Foreign and Commonwealth Affairs, Robin Cook, visited Israel and the Occupied Territories, representing the UK presidency of the EU. A proposed visit by Cook to the site of the Har Homa settlement in the company of Faisal Husseini, the PNA Minister with Responsibility for Jerusalem Affairs was declared 'unacceptable' by Netanyahu. Cook eventually agreed to be escorted to Har Homa by Israel's Cabinet Secretary, David Naveh, a compromise that satisfied neither the Israelis nor the Palestinians. Cook subsequently travelled to East Jerusalem where he met Husseini and laid a wreath to commemorate the Palestinian victims of the 1948 massacre at Deir Yassin. Netanyahu responded by cancelling a planned dinner engagement with Cook and cutting short another scheduled meeting to a symbolic 15 minutes. Relations between Europe and Israel deteriorated further in June 1998 after the Commission instructed Israel not to award 'made in Israel' certificates to goods originating from Israeli settlements in the Occupied Territories, as these were not entitled to receive the tax exemptions intended for goods produced in the State of Israel. The Commission also instructed Israeli exporters to desist from claiming that goods made by Palestinians in the West Bank and Gaza originated in Israel. In late June EU foreign ministers met in Luxembourg and urged Israel to provide 'clarification' of its application of the EU's 'rules of origin' regulations. The British Prime Minister, Tony Blair, visited Israel and the Occupied Territories as part of a tour of the Middle East undertaken in April. Blair invited Netanyahu and Arafat to attend talks in London, scheduled for the following month, in an attempt to break the deadlock over redeployment.

LIMITED POPULARITY SUSTAINED AND REDEPLOYMENT TALKS REACTIVATED

Netanyahu's rejectionist position with regard to redeployment was unpopular with centrists within the governing coalition as well as with broad sections of the Israeli public. (In April 1998 the Council for Peace and Security, an influential grouping of retired senior officers from the army, police and security services, placed a full page advertisement in the Israeli press supporting a withdrawal from 10%–13% of the West Bank.) However, threats made by Itzhak Mordechai to resign as Minister of Defence over the lack of movement on the redeployment issue were not carried out as Netanyahu maintained his lead in the opinion polls. The Israeli Premier's buoyancy was aided by ongoing disarray within the Labour Party. Barak's decision to court the right-wing vote had caused dismay and disaffection among many party members, and support for the party consequently declined. In May he made a highly controversial visit to two ultra-nationalist settlements, once considered hostile territory for Labour officials, where he pledged strong support for the settlement movement. Following the tour his chief aide, Tsali Reshef, resigned stating that there was currently little ideological disparity between the Likud and Labour leaders.

At the beginning of May 1998 Israeli and Palestinian leaders met US Secretary of State, Madeleine Albright, for separate talks, held in London, aimed at reactivating negotiations concerning redeployment. The discussions ended inconclusively but with a further invitation for Israeli and Palestinian delegations to visit Washington in mid-May for another round of talks with President Clinton and the US Department of State. Once again, these talks concluded with no obvious sign of progress but not before Netanyahu had again demonstrated to the Clinton administration the depth of support in the US Congress for his own Government and its uncompromising security agenda. Newt Gingrich was especially responsive to Netanyahu and reportedly advised the Israeli Prime Minister to defy US pressure over the redeployment issue. Moreover, Gingrich described Madeleine Albright as 'an agent for the Palestinians'. His comments were strongly rebuked by the US Department of State.

RENEWED FRICTION IN JERUSALEM

Developments in Jerusalem also served to sustain frictions between the US and Israeli Governments: at the end of May 1998 a Jewish settler organization began constructing a new religious complex on disputed land in the Muslim quarter of East Jerusalem's Old City. (The site had previously been occupied by a Palestinian charitable organization but dwellings were demolished by the Jerusalem municipality on the grounds that they had been built without a licence.) According to press reports, the head of the group had met with Netanyahu, Ariel Sharon and Israel's police chief, Yehuda Wilk, prior to commencement of the building work, prompting speculation that there had been high-level government collusion with the settler operation. Peace groups promptly condemned the settler activity and a protest march to the site by Palestinian parliamentarians erupted into violence, with several of the politicians sustaining injuries. Building work was suspended in June after a restraining order was obtained from the Antiquities Authority on the grounds that the Old City walls were being damaged. The settlers agreed to abandon the construction on condition that they would be able to submit a tender to build a religious school and 12 apartments after the Antiquities Authority had surveyed the site. In the mean time it was agreed that the settlers would guard the site during excavation work. James Rubin, spokesman for Madeleine Albright, denounced the Israeli settlers and their supporters for undermining the creation of an environment necessary for any Israeli-Palestinian reconciliation. In mid-June Jerusalem once again became a focus of international concern after Netanyahu won cabinet approval for a draft plan to widen the municipal boundaries of Jerusalem to encompass suburbs lying to the west of the city and also part of the territory of the West Bank. The Prime Minister attempted to avert criticism of the proposals by describing them as being aimed principally at rationalizing service provision and tax efficiency; nevertheless, he conceded that his strategic goal was to guarantee 'an absolute Jewish majority of at least 70%' in the city. The PNA complained that the proposals would alter the demography of the city by increasing the Jewish population by 30,000 and also expressed fears that the plan was the precursor to the eventual extension of city boundaries to incorporate such large urban settlements as Ma'aleh Edomin, an eventuality which would effectively split the West Bank in two. A decision by the Jerusalem and Ma'aleh Edomin municipalities to create a joint industrial zone in a strategic location between the borders of their jurisdictions had already heightened suspicions of Israel's long-term intentions.

BREAKTHROUGH ON REDEPLOYMENT?

By mid-1998 US exasperation with Israeli procrastination and intransigence had become increasingly apparent. Speaking at a news conference with the Egyptian Minister of Foreign Affairs

on 10 July, Madeleine Albright stated that the existing stalemate 'couldn't go on indefinitely'. Three days later James Rubin expressed the view that Israel was responsible for sustaining the impasse and urged the Israeli Government to work with the Palestinians, who according to Rubin were willing to reactivate negotiations. On 19 July Israeli negotiators met their Palestinian counterparts directly for the first substantive talks in many months. After three days, however, Arafat withdrew his team from the negotiations, accusing the Israeli side of creating 'obscure formulations' on the US initiative. According to Israeli press reports the Palestinians had been angered by an Israeli proposition that 3% of the 13.1% of the West Bank territory subject to discussion under the US proposals should be transformed into a 'nature reserve' on which both Palestinian and Israeli construction would be prohibited. In late July a prominent Likud Knesset member and former intelligence chief, Gideon Ezra, exacerbated existing tensions by stating on Israeli television that Netanyahu wanted the 'final status' negotiations to continue for a minimum of 15 years in order to test Palestinian goodwill. Speculation that an unexpected breakthrough had been achieved on the issue of redeployment emerged in late September following renewed contacts between the Israeli and Palestinian leaders at a US-mediated meeting in Washington, DC. The adoption of a more conciliatory stance by both sides in early October encouraged hopes for significant progress at a new round of talks convened in mid-October at the Wye Plantation in Maryland (see below), near Washington, DC.

NO PROGRESS ON THE SYRIA TRACK

The possibility of a resumption of negotiations on peace between Israel and Syria emerged after it was reported that the two countries had agreed to a French initiative to resume dialogue, based on an Israeli acceptance of the 'land-for-peace' formula and Syrian acceptance of Israel's security needs. However, prior to a visit to Paris by the Syrian President, Hafiz al-Assad, in mid-July 1998, it was reported that Netanyahu had retracted his decision to accept the French initiative, reportedly owing to opposition from coalition partners. Later in July the Knesset gave preliminary approval to a bill which would require a majority vote in the Knesset and a referendum to be held prior to allowing an Israeli withdrawal from either the Golan Heights or Jerusalem. The legislation, which was fiercely denounced in Syria, was finally passed in January 1999.

Syria, Iran, Iraq and Egypt were among a number of Middle Eastern states to react angrily to joint military exercises, codenamed 'Reliant Mermaid', conducted by Israeli, Turkish and US forces in the Mediterranean in January 1998.

THE WYE RIVER MEMORANDUM

The Wye Plantation talks began on 15 October 1998, following a ceremonial meeting at the White House between President Clinton, Yasser Arafat and Binyamin Netanyahu. The intensive nine-day talks were conducted behind a US-imposed media 'blackout', although the Israeli and Palestinian spokesmen frequently made their positions known to the press. Negotiators for the USA included Secretary of State Albright, Special Envoy Ross and the Director of the CIA, George Tenet; President Clinton spent an estimated 70 hours in discussions. President Mubarak of Egypt and King Hussein of Jordan were kept informed of progress in the talks, the latter playing a significant role as mediator. On 23 October Arafat and Netanyahu signed the Wye River Memorandum (see Documents on Palestine, p. 134) in the presence of President Clinton and King Hussein. In essence, the Memorandum outlined a three-month timetable for the implementation of earlier agreements, notably the Interim Agreement of 28 September 1995 and the Hebron Protocol of 15 January 1997. The signing of the agreement ended a 19-month deadlock in the Israeli-Palestinian track of the peace process, and was achieved in spite of a grenade attack carried out by Hamas on 19 October in Beersheba (in which at least 60 people were injured), which had threatened to bring about the collapse of negotiations. Under the terms of the agreement (based on a 'land-for-security' exchange), Israel agreed to redeploy its troops from 13.1% of the West Bank (in three stages), while the Palestinians agreed to intensify measures to guarantee Israel's security by eradicating terrorist activity and revising the Palestinian National Charter (PLO Covenant). Both sides also agreed to the immediate resumption of 'final status' talks (which were originally scheduled to have begun in May 1996), with the aim of concluding a permanent agreement by 4 May 1999, and made commitments to refrain from taking any unilateral actions that would alter the status of the West Bank or Gaza.

REACTION TO THE MEMORANDUM

On Netanyahu's return to Israel on 25 October 1998, Jewish settlers organized demonstrations in the West Bank to protest against the signing of the Wye River Memorandum. In an attempt to reassure settler groups, the Israeli Prime Minister announced plans to proceed with settlement expansion, declaring on 26 October that Israel's commitments under the terms of the Wye River Memorandum did not preclude the construction of new settlements or the confiscation of Palestinian land. At the end of October Netanyahu approved the construction of some 1,025 new housing units at the Har Homa settlement in East Jerusalem. In the days following the Wye agreement the PNA appeared to be taking immediate action to meet its obligations on security issues, provoking occasional riots and prompting accusations of human rights abuses in the West Bank and Gaza. However, on 27 October Netanyahu postponed cabinet and Knesset ratification of the Memorandum, claiming that the Palestinians were already failing to meet their obligations. On 11 November, following considerable US pressure, the Israeli Cabinet finally reconvened and approved the Memorandum by a majority of eight votes to four (with several abstentions). Four previous scheduled meetings had been postponed owing to a suicide bombing by Islamic Jihad in central Jerusalem on 6 November and Israeli fears of further terrorist attacks. Netanyahu angered the Palestinian authorities by attaching a number of conditions to Israel's approval of the Memorandum (primarily the annulment of those clauses in the Palestinian National Charter concerning Israel's destruction), and by threatening effective Israeli annexation of areas of the West Bank if Palestinian statehood were to be declared unilaterally on 4 May 1999 (a move which Arafat had long been threatening to make).

IMPLEMENTATION OF THE FIRST STAGE OF WYE

On 17 November 1998 the Israeli Knesset ratified the Wye River Memorandum by 75 votes to 19. Three days later the Israeli Government implemented the first stage of renewed redeployment from the West Bank, also releasing 250 Palestinian prisoners and signing a protocol allowing for the inauguration of an international airport at Gaza.

DISSOLUTION OF THE KNESSET

During December 1998 it became increasingly evident that divisions within Netanyahu's coalition over implementation of the Wye River Memorandum were making effective government untenable. Attempts to rescue the coalition (and thereby avoid an early general election) by offering to reappoint David Levy to the Government were frustrated when the Gesher leader refused the terms proposed by Netanyahu. Moreover, on 16 December Yaacov Ne'eman, the Minister of Finance, announced his resignation, stating that the coalition was no longer functioning. Netanyahu's term of office had been particularly acrimonious, and Likud itself had been riven by bitter internal rivalries. On 21 December Netanyahu was forced to support an opposition motion demanding the dissolution of the Knesset and the organization of early elections to the legislature and premiership in the spring of 1999. A general election was subsequently scheduled for 17 May 1999.

SUSPENSION OF PEACE PROCESS

There was considerable unrest in the West Bank and Gaza prior to a visit by President Clinton in mid-December 1998. Palestinians demonstrated in support of almost 700 of their prisoners who began a nine-day hunger strike to protest against Israel's failure to honour commitments agreed at the Wye Plantation to release Palestinians detained on political charges (rather than criminal charges). On 14 December Clinton attended a meeting of the PLO's Palestine National Council (PNC), at which the removal from the Palestinian National

Charter of all clauses seeking Israel's destruction was reaffirmed. President Clinton also attended the formal inauguration of the new airport at Gaza. At a meeting between Clinton, Arafat and Netanyahu at the Erez checkpoint during Clinton's visit, Netanyahu reiterated accusations that the Palestinians had not adequately addressed their security commitments and announced that he would not release Palestinian prisoners considered to have 'blood on their hands'. Netanyahu also demanded that Arafat renounce his intention to declare Palestinian statehood in May 1999. Arafat, for his part, conveyed his own security concerns and reasserted demands for a 'freeze' on the construction of Jewish settlements in disputed territory. Following the meeting Netanyahu announced that the second phase of Israeli troop deployment envisaged by the Wye River Memorandum, scheduled for 18 December, would not be undertaken. On 20 December the Knesset voted to suspend implementation of the Wye River Memorandum. In late December Hamas leader Sheikh Ahmad Yassin was released from house arrest in Gaza. Yassin had been detained as part of a high-profile initiative by the PNA security forces to subdue Hamas activists following a failed suicide bomb attack on settler schoolchildren in late October.

SETTLEMENT PROGRAMME CONTINUES

Within three weeks of the signing of the Wye River Memorandum, in mid-November 1998 the Minister of Foreign Affairs, Ariel Sharon, had publicly called upon settler groups to 'grab' as much West Bank land as possible to prevent it from remaining in Arab hands. In mid-1999 it was estimated that since the Wye agreement, Israel had established 17 new 'hilltop' settlements in the West Bank, all located close to areas specified for transfer to the PNA under the terms of the Wye agreement.

ELECTION CAMPAIGN

Following the vote to dissolve the Knesset (see above), Israel's politicians embarked upon an election campaign that further undermined the political stability of the country, prompting the emergence of several new political parties and considerable realignment of political allegiances. The disintegration of Likud continued, as Netanyahu's leadership was challenged by senior party members, including Binyamin Begin, the son of Menahem Begin, who left Likud to form his own right-wing party. On 23 January Netanyahu dismissed the Minister of Defence, Itzhak Mordechai, after the latter had discussed the formation of a new centrist party with the former Army Chief of Staff, Amnon Lipkin-Shahak and the former Likud Minister of Finance, Dan Meridor; they were subsequently joined by the outgoing mayor of Tel-Aviv, Roni Milo, another of Netanyahu's former allies. (Mordechai had been highly critical of Netanyahu's inability to negotiate with the Palestinians.) On 26 January Mordechai became the leader of the new Centre Party, which hoped to attract the support of moderate, centrist Israelis, appealing in particular to secular and middle-class voters. Mordechai also joined Ehud Barak, Binyamin Begin, Azmi Bishara (an Arab Israeli) and Rabbi Israel Bagad in the contest for the premiership. Meanwhile, on 27 January Netanyahu appointed Moshe Arens as Minister of Defence. On 23 February Meir Shitrit, Likud's Knesset leader, became Minister of Finance. A further humiliation for Netanyahu was the decision of his former foreign minister, Gesher leader David Levy, to enter into an alliance with the Labour leader, Ehud Barak. By the end of March 1999 a record 33 parties had registered with Israel's Central Election Committee.

DEATH OF KING HUSSEIN OF JORDAN

Following the death of King Hussein of Jordan on 7 February 1999, Israeli flags were flown at half-mast and Israeli newspapers carried portraits of the King, together with eulogizing obituaries. Netanyahu attended King Hussein's funeral in Amman, although Hussein, who was a personal friend of Itzhak Rabin, was never on good terms with Netanyahu, believing him to have undermined the peace process. King Hussein was genuinely popular in Israel and there was a sense of loss among the Israeli people, together with a sense of apprehension about the future direction of Jordan under its new King, Abdullah II. Nevertheless, following the death of Hussein, Moshe Arens stated that he expected there to be 'continuity' in Israel's relations with Jordan. An agreement signed between the two countries in December 1998 had, for the first time, allowed foreign airlines en route to Jordan to travel through Israeli airspace. However, during 1999 an ongoing dispute over Israel's proposals to reduce, by 40%, its supply of water to Jordan (in contravention of the terms of the 1994 peace treaty) in order to compensate for a shortage of rainfall in Israel contributed to a slight deterioration in relations.

RELATIONS WITH WESTERN STATES

In early 1999 relations between the Israeli Government and the USA also continued to deteriorate. In early January it was reported that US Secretary of State Albright had signalled her disinclination to meet Ariel Sharon during a visit to the USA, owing to US frustration with Israel's suspension of the peace process. Moreover, the Clinton administration threatened to withhold US $1,200m. promised to Israel to cover the cost of its redeployment in the West Bank (in accordance with a bilateral agreement signed shortly after the Wye River Memorandum, while speculating that it might soon award $400m. in aid to the PNA. The US authorities urged Israel to reactivate the peace process and comply with the terms of the Wye agreement. Clinton further angered Israelis by refusing, for several months, to hold a private meeting with Netanyahu, while agreeing to meet Arafat at the White House on 23 March to discuss Arafat's threatened unilateral declaration of Palestinian statehood on 4 May. (The declaration was postponed on 29 April, following intense international pressure.)

At the same time relations between Israel and the EU deteriorated once again, largely as a result of EU annoyance over Likud's settlement expansion programme, which the EU deemed to be illegal, and also owing to continuing disagreement over the status of Jerusalem. In mid-March 1999 the EU strongly condemned official Israeli instructions to foreign delegations not to visit Orient House, the PLO's *de facto* headquarters in Jerusalem. Earlier in the month the German Government, which was responsible for the EU presidency at that time, made official representations to Ariel Sharon, emphasizing the fact that the EU regarded Jerusalem as a *corpus separatum* in accordance with the terms of UN resolution 181 (1947), and was therefore outside Israeli sovereignty. The EU communication provoked a condemnatory response from the Israeli Government, and in mid-March a cabinet resolution reaffirmed Israel's sovereignty over a 'united Jerusalem', while Sharon declared the UN Resolution to be 'null and void'.

PROTEST BY ULTRA-ORTHODOX JEWS

On 14 February 1999 some 200,000 ultra-Orthodox Jews staged a mass prayer meeting in front of the Supreme Court in Jerusalem, in protest against recent rulings by the judiciary which, they claimed, amounted to religious persecution. It was claimed that the influence of Orthodoxy in many areas of civil law, including those governing marriage and exemption from military service would be severely undermined by the pronouncements. Earlier in the month the spiritual leader of the ultra-Orthodox Shas party, Rabbi Ovadia Yosef, had been fiercely critical of Aharon Barak, the President of the Supreme Court. Secular Jews held a counter-demonstration in Jerusalem on the same day.

CONVICTION OF DER'I

In March 1999 the Shas party leader, Aryeh Der'i (a close associate of Prime Minister Netanyahu and an invaluable ally in the Likud-led coalition), was found guilty of bribery, fraud and breach of public trust by the Jerusalem District Court (see above). Der'i immediately announced his intention to appeal to the Supreme Court against the verdict. Although on 15 April he was sentenced to four years' imprisonment and asked to pay a 250,000-shekel fine, the District Court ruled that Der'i's sentence would be suspended until after the outcome of his appeal, thus enabling the Shas leader to campaign for the 17 May general election. In mid-June, however, Der'i resigned as the Chairman of the Shas party.

NEW LABOUR COALITION

By mid-May 1999 Ehud Barak and Binyamin Netanyahu were the only remaining candidates for the premiership, four nominated contestants having withdrawn their candidacy. Following a decision by Itzhak Mordechai to transfer his support to Barak, who in late March had established the 'One Israel' movement including Gesher and the moderate Meimad party, victory for the Labour leader appeared to be assured. On 17 May Ehud Barak was elected Prime Minister with 56.08% of the votes cast, compared with 43.92% for Netanyahu. In the elections to the Israeli Knesset, Barak's One Israel grouping secured 26 seats, while Likud's strength declined from 32 seats to 19. Shas, meanwhile, increased its representation from 10 to 17 seats. The newly-elected Knesset contained an unprecedented 15 factions. Some 78.8% of Israel's 4.3m.-strong electorate were reported to have participated in the elections.

In an unexpected move, Netanyahu conceded defeat less than 40 minutes after the close of voting, when exit polls indicated a sizeable defeat for the Likud leader. Netanyahu subsequently resigned from both the Knesset and the Likud leadership. In late May 1999 Ariel Sharon (whose indictment on charges relating to bribery, witness-tampering and obstruction of justice had been recommended by an Israeli police spokesman in April) became Chairman of the Likud party; Sharon's position was confirmed following a party ballot in early September.

The election campaign had been bitter and divisive. Most observers believed that the election was lost by Netanyahu and Likud, rather than won by the Labour-led One Israel grouping. Netanyahu had become increasingly unpopular and had disappointed significant sections of his traditional support base, particularly right-wing nationalists and settler groups. Furthermore, many in Israel's business community attributed responsibility for the economic recession on his 'freezing' of the peace process and his monetarist policies. (In October 1998 the Ministry of Finance reported that 1998 had witnessed Israel's worst economic performance of the decade.)

Despite having gained no overall majority in the Knesset, Ehud Barak had, by Israeli standards, received a clear mandate to form a broad coalition government that would attempt to restart the stalled Middle East peace process, tackle the secular–religious rift in Israeli society and seek to improve Israel's economic situation. Israel's Prime Minister-Elect was, however, careful not to commit himself to more than a pledge to seek a formula for regional peace. In his victory speech of 18 May 1999, Barak stated that he would observe four 'security red lines' concerning the Palestinian track: Jerusalem would remain under Israeli sovereignty; there would be no return to the pre-1967 borders; most West Bank settlers would stay in settlements under Israeli sovereignty (although in early June Barak pledged to establish no new settlements); and no 'foreign armies' would be based west of the Jordan river. The last stage of the Oslo process, the 'final status' talks, were expected to begin shortly after the formation of a new Israeli government.

On 6 July 1999, after making full use of the 45 interim days allowed by law and following lengthy and complex negotiations, Barak presented his Cabinet to the Knesset. He had formed a broad-based coalition, with the inclusion of the Centre Party, Shas, Meretz, Israel B'Aliyah and the NRP in ministerial positions (talks with Likud having collapsed). Although largely honouring his election pledges, all indications were that the new Prime Minister intended to maintain firm control of his ministries: the most influential posts were reserved for himself (Barak was also appointed Minister of Defence) and for loyalists such as David Levy of Gesher, who became Minister of Foreign Affairs. Itzhak Mordechai was made one of three Deputy Prime Ministers (the others being David Levy and Binyamin Ben-Eliezer of One Israel) and was awarded the transport portfolio. In early August legislation to expand the Israeli Cabinet from 18 to 23 ministers was adopted, despite opposition from Barak's own Minister of Justice, Yossi Beilin, and from the new Knesset Speaker, Avraham Burg. (A future expansion to 24 ministers is also envisaged.) Despite the formation of a fairly broad coalition, Barak received some criticism from women's groups and Arab Israelis, who claimed that they were under-represented. The new Cabinet included only two women, at the environment and immigrant absorption posts, and no Arab Israelis (although in early August there was a minor reshuffle in which Nawaf Masalha was named as Deputy Foreign Minister). Barak's coalition could expect to receive the support of a vast majority in the Knesset: not only from its 75 represented members, but also from an additional 10 members representing Arab parties. (In an overtly conciliatory gesture, in July 1999 the Speaker of the Palestinian Legislative Council (PLC), Ahmad Quray, was invited by Avraham Burg to address the Knesset— the first visit to the Israeli parliament by a leading Palestinian official.)

ISRAELI WITHDRAWAL FROM LEBANON?

Israel's costly occupation of southern Lebanon grew increasingly unpopular during the spring of 1999. On the night of 22–23 February three Israeli army officers were killed during fighting with Hezbollah guerrillas inside Israel's 'security zone': these were Israel's first fatalities of 1999 in southern Lebanon. Some 23 Israeli soldiers were killed in the zone during 1998. On 28 February Brig.-Gen. Erez Gerstein, the commander of the Israeli army's liaison unit with the SLA, was killed (together with three other Israelis) by a Hezbollah roadside bomb inside the 'security zone': Gerstein was the most senior Israeli officer to be killed in Lebanon since the 1982 occupation. This loss was a particular blow to the morale of the Israeli army, which responded by launching its heaviest air bombardments against Lebanon since the 1996 'Grapes of Wrath' operation, and the two sides teetered on the brink of another major conflict. However, Israel's Minister of Defence, Moshe Arens, stated that Israel had no intention of escalating the conflict as long as the Syrians refrained from encouraging Hezbollah rocket attacks on northern Israel. Meanwhile, on 18 February it was reported that Israeli forces had annexed the village of Arnoun, located just outside the 'security zone'. Arnoun was subsequently 'liberated' from Israeli control by Lebanese students, although in mid-April Israel was reported to have reannexed the village.

In mid-April 1999 Arens announced that 80% of Israel's army posts in southern Lebanon had been transferred to the SLA, thus enabling additional Israeli troops to withdraw from their 'security zone'. In mid-May, for the first time, senior Israeli commanders in southern Lebanon urged an immediate withdrawal. Meanwhile, the new Israeli Prime Minister-Elect, Ehud Barak, was reminded of his campaign pledge that, if elected, he would remove the IDF from Lebanon by June 2000. In early June 1999 the SLA completed a unilateral withdrawal from the Jezzine enclave, north of the 'security zone'. However, in late June Prime Minister-Elect Barak was reportedly angered when the outgoing Netanyahu administration launched a massive series of air attacks on Lebanon, destroying Beirut's main power station, a number of bridges and a communications centre. The raids, undertaken in response to Hezbollah rocket attacks on northern Israel, were reported to be the largest carried out by Israel since 1996. On 15 July Barak announced that he would propose to his Cabinet a unilateral withdrawal from Lebanon if no peace accord had been reached (in the context of an agreement with Syria over the Golan Heights) within one year.

NEGOTIATIONS ON THE SYRIAN AND PALESTINIAN TRACKS

Speaking at the inauguration of the new Israeli Cabinet on 6 July 1999, Barak promised to negotiate a bilateral peace with Syria, based on UN Resolutions 242 and 338. Observers interpreted this as a signal to Damascus of his intention to return most of the occupied Golan Heights in exchange for peace and normalized relations. Shortly after the formation of his Government, Barak began a series of summit meetings with Arab and European leaders, starting with President Mubarak of Egypt on 9 July and culminating with direct discussions with President Clinton in mid-July. The USA, Syria and Israel were all encouraged by renewed prospects for a breakthrough in Israeli–Syrian relations and a resumption of peace talks between the two countries. Damascus had welcomed Barak's election as Israeli Prime Minister. On 20 July Syria ordered a 'cease-fire' with Israel: however, serious difficulties were yet to be resolved, especially regarding a suitable starting point for renewed negotiations.

Meanwhile, the first direct talks between Yasser Arafat and Prime Minister Barak were held at the Erez checkpoint in Gaza on 11 July 1999, during which both sides reaffirmed their

commitment to peace. By late July, however, relations had deteriorated somewhat, after Barak expressed the desire to combine the Israeli land withdrawals agreed under the terms of the Wye River Memorandum with 'final status' negotiations. The Palestinians were angered by this proposed delay in implementing the Wye deal. Talks reached a further crisis in early August when the Palestinian negotiators walked out of discussions after Barak had accused them of refusing to compromise. However, in mid-August negotiations were resumed, after Israel agreed to withdraw its demand to postpone further land withdrawals. On 4 September 1999, during a visit to the region by the US Secretary of State, Madeleine Albright, Israel and the PNA signed the Sharm esh-Sheikh Memorandum (or Wye Two accords—see Documents on Palestine, p. 136). The Memorandum outlined a revised timetable for implementation of the outstanding provisions of the original Wye River Memorandum (see above). On 8 September the Israeli Knesset ratified the Wye Two accords, by 54 votes to 23 (with two abstentions). On the following day, under the terms of the Wye deal, Israel released some 200 Palestinian 'security' prisoners, and on 10 September a futher 7% of the West Bank was transferred from Israeli to Palestinian civilian control. A ceremony marking the launch of 'final status' negotiations between Israel and the Palestinians was held at the Erez checkpoint on 13 September, and a few days later it was reported that Ehud Barak, and Yasser Arafat had held a secret meeting to discuss an agenda for such talks.

Economy

Revised for this edition by ALAN J. DAY

INTRODUCTION

In 1995 Israel's gross domestic product (GDP), measured at constant prices, increased by 7.1%, compared with average annual growth of about 6% during the previous five years. The business sector recorded real growth of 8.3% in 1995, compared with an average annual rate of growth of 7% in 1990–94.

In 1995 private consumption increased by 7.2% in real terms. Relatively high growth was recorded in the consumption of durable goods. Consumption per head, which reflects the standard of living, increased by 4.6% in 1995, compared with an increase of 6.3% in 1994. The decline in per-caput growth in private consumption was accompanied by an upturn in the rate of private savings, following a continued fall in private savings during 1992–94. As the economy grew at an accelerated rate, the number of persons in employment increased by some 5.4%. Some 80% of this increase was accounted for by the business sector. The rate of unemployment continued to decline for the third consecutive year, falling to 6.9% of the labour force at the end of 1995.

In 1995 consumer prices increased at an average annual rate of 10.0%, compared with an increase of 12.3% in 1994. Price increases in 1995 were not uniform, however. Ignoring seasonal factors, there was a significant deceleration in the pace of inflation during the first third of the year, but inflation rose during the remainder of the year. The reasons for the decline in prices in the first part of the year were, primarily, significant falls in the prices of fruit and vegetables; and, to a lesser extent, a slower rate of increase in house prices. These increased by an overall rate of 13.6%. The wholesale price index of industrial output rose by some 10% during 1995, a rate of increase similar to that recorded in 1994.

During 1995 the expansion of almost all economic sectors continued. The output of the construction sector increased by some 12% in real terms, mainly because of expanded public residential construction. The output of the industrial sectors—which accounts for approximately one-third of total business production—grew, in real terms, by 8%. Industrial exports, however, increased at a lower rate of about 6% in real terms, and this erosion of profitability was attributed to the continued appreciation in the value of Israel's currency, the shekel, in 1995. Output in the trade and services sectors increased, in real terms, by some 8%, while output in the public and community services sectors grew by some 4%, in real terms, in 1995.

In 1995 the country's central bank, the Bank of Israel, reduced the rate of interest on monetary tenders from an annual rate of 17% (an effective rate of 18.5%) at the beginning of the year to an annual nominal rate of 13.2% (an effective rate of 14.1%) in August. In October-November the Bank of Israel raised interest rates on monetary tenders by a cumulative rate of 1% to an annual nominal rate of 14.2%.

In 1995 the capital market was characterized by extreme volatility in share prices, together with a sharp decline in the volume of trading. For the year as a whole, the general index of share prices recorded a slight increase.

In 1996 Israel's GDP growth, in real terms, slowed to 4.5%, equivalent to a rise of 1.7% per head (compared with an increase of 4.2% per head in 1995). Business sector production increased by 5.2% in 1996, compared with 8.9% growth in the previous year. In the first half of 1996 the consumer price index increased by 15.4% (in annual, seasonally-adjusted terms) but slowed in the last six months resulting in an average annual increase of 11.3%. In 1996 the inflationary trend was accordingly uneven; its rapid acceleration in the first six months caused the Bank of Israel to adopt a restrictive monetary policy and to raise its interest rates on sources. Consequently, inflation decreased in the second half of 1996 to an annual average of 6.2%. In 1996 high rates of interest, compared with overseas rates, contributed to an inflow of foreign capital. In relation to a 'basket' of five major foreign currencies, the shekel depreciated by a mere 1.6% in 1996—in contrast to the rate of increase of consumer prices.

While the deceleration of economic growth in 1996 was largely the result of significant reduction in the rate of growth of both exports and investment, private consumption expanded by 6.1% in 1996—equivalent to an increase of 3.4% per head.

The unemployment rate continued to decline from its record level of 11.2% in 1992 to 6.6% in June 1996. The reduction of unemployment concurrent with the process of immigrant absorption was regarded as a highly impressive achievement. Despite the apparent reduction in unemployment, the number of job-seekers actually increased in 1996, owing mainly to the large influx of immigrants into Israel. In the final quarter of 1996 the unemployment level began to increase, rising to 7% at the end of the year. Real wages per labour hour increased by 1.4% in 1996, while wages in the business sector rose by 2.1%: a significant contrast to the annual average decrease of 1.7% in 1991–95. Labour productivity in the business sector also grew by 1.4% during 1996.

In 1996, as in previous years, there was a substantial deficit in the operations of the state budget. Total revenue (including borrowings from the National Insurance Institute) in 1996 was 116,648m. shekels. This amount excludes grants received from abroad (12,985m. shekels) and proceeds from the sale of government assets (349m. shekels). Total expenditure (including repayments to the National Insurance Institute) in the same year was 141,099m. shekels. This excludes net lending operations of the Government (807m. shekels).

In the first four months of 1996 the Bank of Israel's reduced interest rates on monetary tenders stabilized to a nominal annual average of 13.9% (an effective rate of 14.9%). Between May and July, however, the central bank raised its lending rate to 17% (an effective rate of 18.5%) on an annual basis. In the last months of 1996 this was reduced by a cumulative 1.8%, and in March 1997 the rate returned to 13.9%. In mid-June, after the resignation of the Minister of Finance, Dan Meridor, an additional reduction of 1% in the interest rate was announced. However, in August 1997 the central bank announced that the rate would be increased to 13.4% in order to curb rising inflation.

After various adjustments, the rate was reduced in May 1998 to 11.6%, its lowest level for four years.

During 1996 the stock market remained relatively stable and experienced a reduction in the volume of activity. High interest rates in local currency, large withdrawals from provident funds, and increased activity from non-resident investors made a significant impact on the capital market. Issues of capital on the Tel-Aviv Stock Exchange during 1996 totalled more than 758m. shekels. During 1996 the general share index decreased in real terms. The multi-sided index declined by 8.5%. In terms of December 1996 prices, average daily trade in that year was 108m. shekels, having decreased by 16.9% from the 130m. shekels recorded in 1995. At the end of 1996 the current market value of shares and negotiable securities was 117,000m. shekels at current prices. By the end of 1997 the current market value was 163,810m. shekels at current prices. According to Bank of Israel data, foreign financial investment in securities listed on the Stock Exchange and abroad dropped to US $525m. in 1998 from $1,900m. in 1997. During that period overall foreign investment fell by 42%, to $2,000m., from $3,450m., although the level of foreign domestic borrowing increased to $542m., from $174m. The Central Bank also reported a steady increase in overseas investment from $694m. in 1994 (when the Oslo accords were signed) to $3,276m. in 1997.

In 1996 the means of payments expanded by 12%, matching the nominal GDP growth rate. In order to counteract the effects of the 66,000m. shekels allocated to finance the budget deficit, the Bank of Israel was authorized to increase the quota of its short-term debt certificates to 25% more (in nominal terms) than the 1995 limit. In addition, the central bank cancelled its monetary tenders. In 1996 the volume of unrestricted credit increased by 21%, in nominal terms, while the foreign currency component rose by 38%, its expansion having been encouraged by high interest in the local currency segment. In April 1998 foreign-exchange restrictions were removed in order to increase competition in the financial services sector and encourage foreign investment in Israel's economy.

Between 1986 and 1996 the Israeli Government sold part or all of its shareholding in 79 companies. In 1996 revenue from privatization was equivalent to US $109.3m. In 1997 a total of $2,463m. was generated from privatization; this amount included $2,156m. from sales in the banking sector and $193.94m. from the sale of Israel Chemicals. In 1998 proceeds from privatization were reported to be approximately equivalent to the budgetary deficit of some 2.4% of GDP.

In 1997 Israel's GDP increased, in real terms, by only 1.9%. As the country's population increased by more than 2%, there was a decline in real GDP per head during the year. According to Bank of Israel estimates, the average rate of unemployment in 1998 reached 8.6% of the labour force, compared with 7.7% in 1997. Real wages per employee continued to rise by an average of 2.4% in 1998 (and by an average of 3.2% in the business sector) despite the high unemployment rate. Business sector production declined by 1.5% in 1997, compared with growth of 1.5% in 1996. Between 1990 and 1997 consumer prices increased by an annual average rate of 12.0%; in 1997 the consumer price index recorded an average annual increase of 7%. Private consumption expanded by 4% in that year, which was equivalent to an increase of 1.5% per capita. Inflation decreased from 10.6% in 1996 to 7% in 1997, to reach the lower limit of the 1999 inflation target (the Ministry of Finance claimed that this was the lowest inflation rate since 1969, as a result of its continuing restrictive monetary policy). This trend continued in the first seven months of 1998, when inflation slowed to 3%. According to provisional figures, state budget revenue in 1997 totalled 133,946m. shekels (with foreign grants providing a further 10,390m. shekels), while total expenditure was 153,801m. shekels. State budget revenue in 1998 totalled 165,058m. shekels, while total expenditure was 173,341m. shekels. The draft budget for 1999 set both total revenue and total expenditure at 214,975m. shekels.

AREA AND POPULATION

The total area of the State of Israel, within its 1949 armistice frontiers, amounts to 20,700 sq km. This compares with the area of Palestine under the British mandate, which totalled 27,090 sq km. At the census of 4 June 1983 the population of Israel (including East Jerusalem and the Golan Heights) was 4,037,620, of whom 3,349,997 (83%) were Jews. In addition, there were about 1m. persons in other areas which were brought under Israeli administration as a result of the 1967 war, and after the Sinai peninsula was evacuated at the end of April 1982. According to official estimates, the population (*de jure*) of Israel at 31 December 1997 was 5,896,400, of whom 4,703,700 (79.8%) were Jews. At 31 December 1998 the population was estimated by the Ministry of Finance to have increased to 5.9m., of whom 80.5% were Jews.

The population density of Israel was 184 per sq km at the June 1983 census and 263.5 per sq km at mid-1997. The population is heavily concentrated in the coastal strip, with about three-quarters of the Jewish inhabitants and nearly two-thirds of the non-Jewish population located between Ashkelon and Naharia. According to official estimates at the end of 1996, the Tel-Aviv District had a population of 1,139,700, accounting for 19.8% of the total population. A further 1,257,500 (21.8%) lived in the Central District, 758,200 (13.2%) in the Haifa District, 798,700 (13.9%) in the Southern District (comprising almost two-thirds of Israel's land area, but including the Negev Desert, which is largely uninhabited except for nomads), 977,900 (17%) in the Northern District (including 32,600 in the Golan Heights) and 677,200 (11.8%) in the Jerusalem District. The remaining 150,200 were Israelis residing at Jewish localities in the West Bank and the Gaza Strip. Of the 1996 population, 5,246,900 (comprising 4,204,100 Jews and 1,042,900 non-Jews), or 91.1% of the total, were defined as urban, i.e. resident in localities with 2,000 or more inhabitants. The remaining 433,300 Jews and 79,200 non-Jews were rural residents. Within this total there were 47,300 persons (7,000 Jews and 40,300 non-Jews), including Bedouin tribes, who were living outside localities.

The main reason for the growth of the Jewish population has been immigration, accounting for 58% of the yearly increase between 1948 and 1977. On 31 December 1996, 38.4% of the Jewish population had been born abroad. These included 1,202,200 born in Europe and America, 327,100 in Africa and 249,900 in Asia. Of the 2,858,200 Israeli-born Jews, 1,198,400 were second-generation Israelis. Immigration up to 1948 totalled 482,857 persons, of whom nearly 90% came from Europe and America. The biggest wave of immigrants arrived within six years of the founding of the new state. These were refugees from war-torn Europe, followed by Jews emigrating from the Arab states. Large numbers have come from North Africa as a result of political developments there, and during 1955–64 more than 200,000 emigrated from Africa into Israel. Since 1956 immigration from Eastern Europe has resumed. In the mid-1960s immigration declined, falling from 55,036 in 1964 to 14,469 in 1967, but the level of immigration rose considerably after the 1967 war, bringing the total numbers of immigrants between 1965 and 1974 to more than 300,000. Almost 70% of these came from Europe and America. After the Yom Kippur war, immigration declined again, falling from 54,886 in 1973 to 31,981 in 1974, and to 19,754 in 1976. Immigrants totalled 12,599 in 1981, rising to 19,981 in 1984, including 7,800 Ethiopian Jews (Falashas). In 1988 the number of people who emigrated from Israel totalled 18,900 (including Israelis who had spent more than one year abroad), while 13,034 people settled in Israel. In 1989 the number of immigrants, mainly from the USSR, rose sharply, to 24,050 people; a further increase, to 199,516 people, was reported in 1990. However, since 1990 immigrant numbers have decreased, falling to 70,919 in 1996 and 65,982 in 1997.

In 1997 the Israeli civilian labour force averaged 2,210,000, or 53% of the population aged 15 years and over. The growth in the labour force from 735,800 in 1960 was due chiefly to the rise in total population, since the participation rate declined slightly. On average, unemployment affected 6.7% of the labour force in 1996, and totalled 144,100 individuals. Unemployment averaged 7.7% of the labour force in 1997 and 8.6% in 1998.

During 1997, of 2,210,000 employees, some 48,900 were employed in agriculture, forestry and fishing; 398,300 in mining and manufacturing; 18,800 in electricity and water; 146,200 in construction; 353,200 in trade, maintenance, restaurants and hotels; 124,300 in transport, storage and communications; 278,000 were engaged in financing and business services;

672,000 in other services; and 12,800 in activities not adequately defined.

AGRICULTURE

The agricultural sector is relatively small, accounting for about 3.4% of gross domestic product and employing 2.4% of the employed labour force in 1997. In spite of this, Israeli agriculture has attracted a great deal of international attention and more than any other sector of the economy, has been the focus of ideological pressure. For centuries, Jews in the Diaspora were barred from owning land and the Zionist movement therefore saw land settlement as one of the chief objectives of Jewish colonization. Since the establishment of the state, government agricultural policy has centred chiefly on the attainment of self-sufficiency in foodstuffs, in view of military considerations and Israel's possible isolation from its chief foreign food supplies; on the saving of foreign exchange through import substitution and the promotion of agricultural exports; and on the absorption of the large numbers of immigrants in the agricultural sector. In line with these objectives, the promotion of mixed farming and of co-operative farming settlements has also been an important element in government policy. Although the increase in agricultural production (which rose by an annual average of 0.05% during 1985–96) has resulted in Israel becoming largely self-sufficient in foodstuffs—it is seriously deficient only in grains, oils and fats—and important savings have been made in foreign exchange, government intervention in the agricultural sector has been criticized as having resulted in a misallocation of resources and in the impairment of the economic efficiency of agriculture.

Cultivation has undergone a profound transformation and from an extensive, primitive and mainly dry-farming structure it has developed into a modern intensive irrigated husbandry. A special feature of Israel's agriculture is its co-operative settlements which have been developed to meet the special needs and challenges encountered by a farming community new both to its surroundings and its profession. While there are a number of different forms of co-operative settlements, all are derived from two basic types: the *moshav* and the *kibbutz*. The *moshav* is a co-operative smallholders' village. Individual farms in any one village are of equal size and every farmer works his own land to the best of his ability. He is responsible for his own farm, but his economic and social security is ensured by the co-operative structure of the village, which handles the marketing of his produce, purchases his farm and household equipment, and provides him with credit and many other services. On 31 December 1997 a total of 183,700 people inhabited 455 *moshavim* and collective *moshavim* (3.2% of the total population).

The *kibbutz* is a collective settlement of a unique form developed in Israel. It is based on common ownership of resources and on the pooling of labour, income and expenditure. Every member is expected to work to the best of his ability; he is paid no wages but is supplied by the *kibbutz* with all the goods and services he needs. The *kibbutz* is based on voluntary action and mutual liability, equal rights for all members, and assumes for them full material responsibility. On 31 December 1997 a total of 268 *kibbutzim* were inhabited by 119,100 people (2.1% of the total population). The large co-operatives are heavily subsidized, although the introduction of structural reforms in the agricultural sector (which included the abolition of production quotas for major categories) opened the market to wider competition from individual units which receive fewer subsidies.

During the years following the establishment of the State of Israel, a large-scale expansion of the area under cultivation took place. This was caused by the heavy influx of immigrants and the recultivation and rehabilitation of land from which Arabs had been forced to flee. The cultivated area increased from 1,650,000 dunums (1 dunum = 1,000 sq m) in the 1948/49 agricultural year to 4,110,000 dunums in 1958/59 and to 4,402,000 dunums in 1978/79. The cultivated area in 1997 totalled 4,230,000 dunums, including 1,993,000 dunums of irrigated crops.

Without taking into consideration the cost or availability of irrigation water, it is estimated that the land potential ultimately available for farming under irrigation is 5.3m. dunums, while an estimated 4.1m. dunums are potentially available for dry farming. There are also 8.5m. dunums available for natural pasture and 0.9m. dunums for afforestation.

The main factor limiting agricultural development is not land, but the availability of water. It was reported that Israel could face severe water shortages in the summer of 1999 since resources were 60% below the yearly average. (In April the Ministry of Agriculture declared 1999 an official drought year.) Further development of the sector will involve intensifying the yield of existing land and the re-use of treated wastewater to preserve freshwater essential for household consumption. Production of water reached 2,188m. cu m in 1997, of which amount more than one-half was attributable to agriculture. The state-owned Mekorot Water Co Ltd, which supplies 60% of Israel's fresh water, spent approximately 2,300m. shekels on capital investment between 1992 and 1997. Moreover, the Government established a special Water Administration, headed by a Water Commissioner who has statutory powers to control and regulate both the supply and the consumption of water.

The Water Administration has been charged, among other tasks, with the implementation of the national water project. The purpose of this project is to convey a substantial part of the waters of the Jordan river and of other water sources from the north to southern Judaea and to the Negev, to store excess supplies of water from winter to summer and from periods of heavy rainfall to periods of drought, and to serve as a regulator between the various regional water supply systems. Essential to the national water project is the main conduit from Lake Tiberias to Rosh Haayin (near Tel-Aviv), known as the National Water Carrier, which has an annual capacity of 320m. cu m. Two other large schemes, also in operation, are the Western Galilee–Kishon and the Yarkon–Negev projects. As reported in January 1999, Israel and Jordan are to proceed (in accordance with the provisions of the 1994 peace treaty) with a project to build a US $150m.-desalination plant in the Jordan Valley in order to produce 50m. cu m of water per year. A new working structure is proposed to examine the feasibility of the Dead Sea–Red Sea canal project, which envisages the production of 851m. cu m of water per year, at an estimated cost of $4,500m.

In 1997 agricultural production generated revenue of 12,150m. shekels. The main categories are livestock and poultry, vegetables, fruits (particularly citrus, see below), flowers and flower products and field products. In 1997 production of cows' milk was 1,123.8m. litres (compared with 1,100m. in 1996); egg production reached 1,880.3m. (1,547m. in 1996) and output of poultry meat totalled 345,800 tons (279,249 tons in 1996). Potato production reached 276,800 tons in 1997 (of which 12% were exported); avocado production was 77,700 tons (of which over 50% were exported); production of table grapes totalled 53,500 tons, wine grapes reached 36,300 tons, and banana production increased to 111,900 tons. In the same year production of cotton lint and seed rose to 151,400 tons (from 147,500 tons in 1996), with 44,600 tons being exported; wheat production decreased to 116,000 tons. In mid-1999 it was reported that 98% of Israel's wheat crop had been destroyed owing to drought, and that 150,000 extra tons of flour were to be imported from the USA.

Cultivation of citrus fruit is one of the oldest and most important agricultural activities, and produces the main export crop. In 1996 Israel exported 341,535 tons of citrus fruit, valued at US $170m., which declined to 338,600 tons (valued at $166m.) in 1997. Total area under cultivation in 1996 was 246,800 dunums. The Citrus Marketing and Control Board supervises all aspects of the growing and marketing of the fruit, particularly exports. The principal markets for citrus exports are the United Kingdom, Germany and France.

Increasing emphasis is being laid on the cultivation of floral plants. About 90% of production is usually exported to the European Union (EU). In 1997 Israel exported 1,475.7m. flowers and ornamental branches (mainly roses, carnations and gypsophilia), earning US $198.1m., compared with $196.6m. in 1997. The state-owned Flower Marketing Board is increasing the number of its packing-houses, and is investing heavily in modern equipment. In 1995, 11,298 dunums were under glasshouse cultivation. Agricultural exports totalled $806m. in 1997, representing 5.6% of total merchandise exports (the export of exotic fruits, winter vegetables and flowers has increased significantly in recent years).

CONSTRUCTION AND INDUSTRY

Once the leading sector in Israel, construction, with affiliated industries (cement, wood, glass and ceramics), now accounts for about 7.3% of GNP (the Ministry of Finance attributing the decrease from 30% in 1950 to falling immigration levels). During 1997 there were 12.55m. sq m of building area completed, of which 3.65m. sq m were public buildings and 8.9m. sq m private constructions.

In 1997 there were 19,174 establishments, which engaged employees whose number totalled 374,200. Of these establishments, 450 engaged between 100 and 300 persons, and 138 more than 300 persons. In the latter category 112,800 were employed. On the other hand, 9,295 establishments engaged four or fewer persons, and 3,869 between five and nine persons; 18,756 establishments belonged in 1997 to the private sector, 391 to the Histadrut (the National Labour Federation) and 27 to the public sector (mainly government companies). The main branches of these establishments were: metal products; wood and its products; clothing and made-up textiles; food, beverages and tobacco.

Israel's industry was originally developed to supply such basic commodities as soap, vegetable oil and margarine, bread, ice, printing and electricity. It used raw materials available locally to produce citrus juices and other citrus by-products, canned fruit and vegetables, cement, glass and bricks. In order to save foreign exchange, imports of manufactured goods were curtailed, thus giving local industry the opportunity of adding local labour value to semi-manufactures imported from abroad.

Although most of Israel's industrial production is still for domestic consumption, industrial exports (excluding diamonds) constituted 90% of total exports in 1997. In this area also, there has been a very rapid expansion as a result of tax and investment incentives from the government. The value of Israeli industrial exports, only US $18m. in 1950, had risen to $780m. by 1971, and by 1997 had reached $14,420.8m. (excluding diamonds).

Israel's most important industrial export product is cut and polished diamonds, most of the expertise for the finishing of which was supplied by immigrants from the Low Countries. In 1997 Israel exported US $5,695.1m.-worth of cut diamonds, compared with $5,260.5m.-worth supplied in 1996, and was one of the world's largest traders, second only to Belgium in processing diamonds, with approximately three-quarters of the international market in medium-sized stones, Israel's speciality. Israel obtains about 50% of its rough diamonds directly from the Central Selling Organization (the marketing arm of De Beers).

Excluding diamonds (which accounted for almost 28% of industrial exports in 1997), industrial exports consisted of 4% foodstuffs; 5% textiles, clothing and leather; 1.8% mining and quarrying products; 13.7% chemical and chemical products; 30.5% metal products, machinery and electrical and electronic equipment. The value of all exports rose by 277% between 1980 and 1996.

The food, beverage and tobacco industries accounted for 12.3% of manufactures in 1997. About 90% of output was sold on the local market; the rest, such as juices, wines, chocolate and coffee, was sold abroad. The value of manufactured food exports totalled US $527.3m. in 1997, compared with $608.5m. in 1996.

The textiles and clothing industry, which was developed chiefly because of its low capital-labour ratio, accounted for some 6% of industrial production in 1997, when it exported goods worth some US $997.8m.

Israel also has a rapidly expanding electronics industry, specializing in equipment for military and communications purposes. The value of exports from this sector and of metal products and machinery rose from US $12.8m. in 1970 to $5,606.1m. in 1997.

In view of the heavy power needs of irrigation and the water installations, agriculture as well as industry is a large-scale consumer of electricity. Almost all electric power is provided by the state-owned Israel Electric Corporation (IEC), although the 1996 Electricity Industry Law granted separate licences for generation, distribution and transmission to private power producers to sell up to 20% of Israel's electricity through IEC's network. In 1997 the Government announced plans to establish a natural gas infrastructure in Israel: at the first stage IEC would purchase natural gas to be used in its existing power stations. In 1999 IEC commenced a project to build new gas turbines in order to generate an additional 740 MW capacity by 2005. Total installed generating capacity at the end of 1997 was 7,804 MW. Generation during 1997 totalled 35,098m. kWh. Out of 30,404m. kWh total sales of electricity, industry used about 31%. Total water production during 1997 reached 2,188m. cu m. (of which 26% was consumed domestically).

MINERALS

The Petroleum Law of 1952 regulates the conditions for the granting of licences for petroleum prospecting, divides the country into petroleum districts and fixes a basic royalty of 12.5%. Petroleum was discovered in 1955 at the Heletz-Bror field on the coastal plain and later at Kokhav, Brur and Negba. Signs of petroleum were also discovered near Ashdod. From the time of the 1967 war to the 1975 disengagement agreement, Israel was able to exploit the petroleum resources of the Sinai and, during 1978–79, those of the Suez Gulf (Alma fields). In July 1988 the Israeli Government awarded an offshore oil-prospecting concession of 7,000 sq km, about 16 km from Israel's southern Mediterranean coast, to a consortium of local and foreign companies headed by the late Dr Armand Hammer, chairman of Occidental Petroleum Inc. The consortium, Negev Joint Venture, invested US $25.5m. in test drilling over a three-year period from autumn 1988. Givot Olam Oil Exploration Company reported in 1999 the discovery of potential oil reserves in central Israel and is to fund the $4m. drilling cost through a rights issue.

Output of natural gas from Rosh-Zohar in the Dead Sea area, Kidod, Hakanaim and Barbur is transported through a 29-km pipeline (diameter 15 cm) to the Dead Sea potash works at Sodom and through a 49-km line (diameter 10 cm or 15 cm) to towns in the Negev and to the Oron phosphate plant. Production totalled 21.3m. cu m in 1994.

Lacking large scale resources of fuel and power, Israel is forced to import more than 90% of its energy requirements. Imports of petroleum and petroleum products, which rose in value from US $210.6m. in 1973 to $597m. in the following year and to $775m. in 1978, reached about $2,000m. in 1980 and cost $2,259.9m., at current prices, in 1997. In the same year petroleum constituted 7.8% of all goods imports (or 20% of the trade deficit). The large increases in the petroleum import bill since 1979 are directly attributable to the peace agreement with Egypt. In 1978 Israel produced one-quarter of its oil requirements from the Alma oilfields which it discovered in Sinai. The Alma fields were handed over to Egypt in 1979, in accordance with the terms of the peace treaty. Israel now imports most of its crude oil requirements of about 48m. barrels per year under long-term contracts with Egypt (which provides about 25% of the total), Mexico (35%) and Norway (10%), and buys the remainder on the 'spot' market. Most imported crude oil is refined at the Haifa oil refinery, which has a capacity of more than 6m. tons per year.

The Dead Sea, which contains potash, bromides, magnesium and other salts in high concentration, is the country's chief source of mineral wealth. The potash works on the southern shore of the Dead Sea are owned by Dead Sea Works Ltd. The works are linked by road to Beersheba, from where a railway runs northward. Phosphates are mined at Oron in the Negev, and in the Arava. A total of 2.45m. metric tons of phosphate rock was produced in 1996. In the same year Israel produced 12,243 tons of sodium hydrochlorate, 40,892 tons of caustic soda, 34,630 tons of chlorine, 8,324 tons of paraffin, and 2,939 tons of potassium carbonate.

Gold in potentially commercial quantities was discovered near the Negev copper mines in 1988, and further exploration is under way.

BALANCE OF PAYMENTS AND TRADE

Israel's balance-of-payments deficit on trade in goods and services stood at US $10,185m. in 1996, declining to $8,490m. in 1997. The value of exports of goods and services in 1997 amounted to $30,320m., compared with $28,800m. in 1996, while the value of imports amounted to $38,810m., compared with $38,984m. in 1996.

Israel's deficit on merchandise trade, which relates to goods only, amounted to US $5,848m. in 1997, compared with the record deficit of $7,646m. incurred in 1996.

In 1997 net transfer payments, most of which consisted of US aid, were worth $6,267m., compared with $6,370m. in 1996. They covered 73.8% of the deficit on goods and services in 1997, compared with 62.5% in 1996. Israel recorded a deficit on the current account of the balance of payments (goods, services, income and transfers) in each of the years 1990–97. The deficit increased from $6,205m. in 1995 to a record $6,646m. in 1996 (owing to an increase in the net trade and services deficit, despite the growth in exports of goods and services for the fourth consecutive year), but was reduced to $5,014m. in 1997. Israel's foreign currency reserves, held by the Bank of Israel, stood at $20,600m. at the end of 1997, compared with $11,800m. at the end of 1996. By mid-1999 they totalled $21,930m.

The value of Israel's merchandise exports increased from US $20,758m. in 1996 to $21,894m. in 1997. Meanwhile, imports of goods (valued f.o.b.) declined from $28,404m. in 1996 to $27,742m. in 1997. The focus of Israel's foreign trade is mainly the EU (formerly EC) and North America. An Israeli-EC Chamber of Commerce was founded in June 1986. Duties on goods imported from the EC and the USA were reduced by an average of 60% on 1 January 1987, under the terms of separate bilateral trade agreements. Spain refused to sign the draft agricultural goods access agreement between the EC and Israel in December 1986, demanding the reduction by Israel of tariffs on Spanish industrial exports in line with the reductions on EC goods implemented on 1 January 1987. In October 1988 the European Parliament approved three trade protocols, giving Israel privileged access to EC markets, having withheld its approval in March and July and delayed further votes, in protest against Israel's treatment of Palestinians during the *intifada* in the Occupied Territories. The Israeli Government, in an attempt to placate the EC, had undertaken to allow Palestinian farmers in the West Bank to export their produce directly to the EC, unimpeded by the occupation authorities. In July 1995 Israel concluded a free-trade agreement with the EU regarding financial services, government procurement, co-operation in research and development, additional agricultural products and an improvement in Israel's access to European markets in the high technology sector.

BANKING, TRANSPORT AND COMMUNICATIONS

Israel possesses a highly developed banking system, consisting of a central bank (Bank of Israel), 14 commercial banks, five mortgage banks, and other financial institutions. Nevertheless, three bank-groups—namely Bank Leumi group, Bank Hapoalim and Bank Discount—hold 92% of the total assets of the banking system. Their subsidiaries are represented all over the world and enjoy a growing reputation; due to devaluation their share in the consolidated balance sheet is increasing markedly. Long-term credits are granted by mortgage banks, the Israel Agricultural Bank, the Industrial Development Bank and the Maritime Bank. At the end of 1997 the amount of outstanding credit allocated by the banks to the public stood at 152,014m. shekels in Israeli currency and 71,821m. shekels in foreign currency.

The function of the central bank is to issue currency (and commemorative coins), to accept deposits from banking institutions and extend temporary advances to the government, to act as the government's sole fiscal and banking agent and to manage the public debt. Its Governor supervises the liquidity position of the commercial banks and regulates the volume of bank advances. Central recommendations to reform and restructure the banking system, including the appointment of independent governors to hold the Government's shares in banks, and the sale of its interests and shares in banks, have been adopted. Since October 1997 some US $2,156m. has been raised in privatization revenue from share sales in Bank Hapoalim (worth $1,434m.), United Mizrahi Bank ($131m.), Bank Leumi ($407m.) and Israel Discount Bank ($184m.).

The significant changes that have characterized the financial world and international capital markets in recent years have also affected the Israeli banking system. The banks are gradually losing their traditional monopoly as financial intermediaries, as other financial entities assume this role. One consequence of this development has been to encourage the banks to enter other fields of financial activity, hitherto closed to them.

Since 1949 Israel has operated its own international air carrier—El Al Israel National Airlines Ltd. Regular scheduled services to Europe, the USA, Canada, Cyprus, and parts of Africa and Asia are maintained. In June 1997 the Government announced plans to privatize the airline by the end of 1998. It was proposed that 10% of El Al's shares would be offered to employees and the remainder would be sold to the public. In 1976 a new private company—CAL, which specializes in cargo air transportation to Europe—was constituted. In addition, 14 international airlines call at Ben-Gurion Airport, near Tel-Aviv (the largest of Israel's three international airports). The number of passengers carried in 1997 reached 7.67m., compared with 7.36m. in 1996. Financing for the planned Terminal 2000 expansion of Ben-Gurion airport (to carry approximately 16m. passengers) is expected to be derived from Airports Authority revenue and project financing. Israel's merchant navy has been undergoing expansion, while the passenger fleet has been practically abolished. The number of ships under the Israeli flag at 31 December 1997 totalled 55. Their combined displacement was 793,890m. gross tons. Israel Shipyards Ltd, at Haifa, can build ships with a capacity of as much as 10,000 dwt. In the north, the port of Haifa and its Kishon harbour extension provide Israel's main port facilities. The south is served by the port at the head of the Gulf of Aqaba, and mainly by the deep-water port at Ashdod, some 50 km south of Tel-Aviv. The amount of cargo loaded at seaports in 1997 totalled 12.2m. metric tons, while the amount unloaded was 29.3m. tons (including coal).

Israeli railways operate some 610 km of main lines and 355 km of branch lines. The service extends from Nahariya, north of Haifa to Jerusalem and Tel-Aviv and then southwards through Beersheba. In 1965 it reached Dimona and in 1970 the phosphate works at Oron. Traction is wholly by diesel locomotives. In 1997 traffic consisted of 5.9m. passengers and 8.3m. tons of freight. In April 1996 a state-owned company was established to plan and promote the construction of a mass transportation system in Tel-Aviv.

Roads are the chief means of transport. In 1997 there were 15,464 km of paved roads, of which 5,647 km were inter-urban, out of which 56 km were motorways with four or more lanes. Travelling them at the end of 1997 were 1,240,382 private vehicles, 11,095 buses and coaches and 292,938 lorries and vans. The first privatized bus lines came into operation in 1997.

At September 1997 96% of Israeli households had at least one direct telephone line. Two cellular networks were in operation and a third was granted an operating licence in 1998.

TOURISM

The decline in the number of tourists entering Israel which began in 1973 (a slowdown had already been recorded in the second half of 1972), continued in 1975; 1976 witnessed a recovery, and the number of tourists rose, reaching 1,175,800 in 1980. Then, in 1981, a slight drop, to 1,137,055, was recorded, and in 1982 the industry slumped by 12%, with only 997,510 tourists entering Israel. The war in Lebanon, labour disputes at El Al and less favourable exchange rates for tourists were responsible for the situation. These reasons also contributed to the number of Israeli tourists leaving the country; in 1982 they totalled about 600,000, spending some US $600m. abroad. Nevertheless, 1984 witnessed a recovery, when 1,260,000 tourists visited the country, and income from tourism doubled in the six years up to 1984, reaching $1,000m. per year. In 1985 a total of 1,264,367 tourists visited Israel. In 1986 the total declined by 13%, to 1,101,481, and revenue from tourism fell by $107m. In 1987 the number of tourists rose by 25%, to 1,378,742, and revenue increased to a record $1,635m. In 1988, however, the number of tourists declined to 1,169,582, mainly as a result of continued unrest in the Occupied Territories. In 1989 the number of tourists rose slightly, to reach 1,176,500, with revenue totalling $1,467.7m. This increase continued throughout the first half of 1990. However, following Iraq's invasion of Kuwait in August 1990 and the ensuing crisis in the Persian (Arabian) Gulf region, the number of tourist arrivals declined sharply. The total for the year was 1,131,700. Revenue amounted to $1,381.7m. Tourism revived again in 1992, when 1,509,520 tourist arrivals were recorded, and revenue from tourism amounted to $1,891m. In 1995 tourist arrivals totalled 2,215,552, an increase of 20% on the previous year's figure. Total revenue from tourism amounted to $2,784m. in that year. In 1996 tourism declined once again, however, with approxi-

mately 2,100,552 tourist arrivals generating revenues of $2,771m. This trend continued the following year: in 1997 there were some 2,010,432 tourist arrivals. The Ministry of Finance reported that receipts from tourism represented some 12.7% of the total value of exports (about 2.8% of GDP) in that year.

Overall administration of Israeli tourism is sponsored by the Ministry of Tourism which maintains 20 offices abroad. It is also in charge of regulating tourist services in Israel, including arrangement of 'package' tours and the provision of multilingual guides. In 1976 the Ministry promoted the inauguration of charter flights from the USA and Europe to Israel. During 1997 a total of 5,575 charter flights landed in Israel, bringing some 1,588,743 passengers into the country.

1996 ('000 metric tons, unless otherwise indicated): Margarine 35; Cigarettes (metric tons) 4,793; Rubber tyres ('000) 900; Chlorine 35; Caustic soda 41; Paints 58.0; Cement 6,723; Commercial vehicles (number) 1,199; (Source: UN, *Industrial Commodity Statistics Yearbook*).

1997: Commercial vehicles (number) 1,082 (Source: International Road Federation, *World Road Statistics*).

Finance

CURRENCY AND EXCHANGE RATES

Monetary Units

100 agorot (singular: agora) = 1 new sheqel (plural: sheqalim) or shekel.

Sterling, Dollar and Euro Equivalents (30 April 1999)

£1 sterling = 6.700 new shekels;
US $1 = 4.155 new shekels;
€1 = 4.403 new shekels;
100 new shekels = £14.93 = $24.07 = €22.71.

Average Exchange Rate (new shekels per US $)

1996 3.1917
1997 3.4494
1998 3.8001

Note: The new shekel, worth 1,000 of the former units, was introduced on 1 January 1986.

STATE BUDGET (million new shekels)

Revenue*	1996	1997†	1998†
Tax revenue‡	93,941	111,365	121,100

Directory

The Constitution

There is no written constitution. In June 1950 the Knesset voted to adopt a state constitution by evolution over an unspecified period. A number of laws, including the Law of Return (1950), the Nationality Law (1952), the State President (Tenure) Law (1952), the Education Law (1953) and the 'Yad-va-Shem' Memorial Law (1953), are considered as incorporated into the state Constitution. Other constitutional laws are: The Law and Administration Ordinance (1948), the Knesset Election Law (1951), the Law of Equal Rights for Women (1951), the Judges Act (1953), the National Service and National Insurance Acts (1953), and the Basic Law (The Knesset) (1958). The provisions of constitutional legislation that affect the main organs of government are summarized below:

THE PRESIDENT

The President is elected by the Knesset for a maximum of two five-year terms.

Ten or more Knesset members may propose a candidate for the Presidency.

Voting will be by secret ballot.

The President may not leave the country without the consent of the Government.

The President may resign by submitting his resignation in writing to the Speaker.

The President may be relieved of his duties by the Knesset for misdemeanour.

The Knesset is entitled to decide by a two-thirds majority that the President is too incapacitated owing to ill health to fulfil his duties permanently.

The Speaker of the Knesset will act for the President when the President leaves the country, or when he cannot perform his duties owing to ill health.

THE KNESSET

The Knesset is the parliament of the state. There are 120 members.

It is elected by general, national, direct, equal, secret and proportional elections.

Every Israeli national of 18 years or over shall have the right to vote in elections to the Knesset unless a court has deprived him of that right by virtue of any law.

Every Israeli national of 21 and over shall have the right to be elected to the Knesset unless a court has deprived him of that right by virtue of any law.

The following shall not be candidates: the President of the State; the two Chief Rabbis; a judge (shofet) in office; a judge (dayan) of a

religious court; the State Comptroller; the Chief of the General Staff of the Defence Army of Israel; rabbis and ministers of other religions in office; senior state employees and senior army officers of such ranks and in such functions as shall be determined by law.

The term of office of the Knesset shall be four years.

The elections to the Knesset shall take place on the third Tuesday of the month of Marcheshvan in the year in which the tenure of the outgoing Knesset ends.

Election day shall be a day of rest, but transport and other public services shall function normally.

Results of the elections shall be published within 14 days.

The Knesset shall elect from among its members a Chairman and Vice-Chairman.

The Knesset shall elect from among its members permanent committees, and may elect committees for specific matters.

The Knesset may appoint commissions of inquiry to investigate matters designated by the Knesset.

The Knesset shall hold two sessions a year; one of them shall open within four weeks after the Feast of the Tabernacles, the other within four weeks after Independence Day; the aggregate duration of the two sessions shall not be less than eight months.

The outgoing Knesset shall continue to hold office until the convening of the incoming Knesset.

The members of the Knesset shall receive a remuneration as provided by law.

THE GOVERNMENT

The Government shall tender its resignation to the President immediately after his election, but shall continue with its duties until the formation of a new government. After consultation with representatives of the parties in the Knesset, the President shall charge one of the members with the formation of a government. The Government shall be composed of a Prime Minister (directly elected from May 1996) and a number of ministers from among the Knesset members or from outside the Knesset. After it has been chosen, the Government shall appear before the Knesset and shall be considered as formed after having received a vote of confidence. Within seven days of receiving a vote of confidence, the Prime Minister and the other ministers shall swear allegiance to the State of Israel and its Laws and undertake to carry out the decisions of the Knesset.

The Government

HEAD OF STATE

President: EZER WEIZMAN (took office 13 May 1993; re-elected 4 March 1998).

The Jewish Agency for Israel

POB 92, Jerusalem 91000; tel. 2-6202222; fax 2-6202303.

Organization: The governing bodies are the Assembly which determines basic policy, the Board of Governors which sets policy for the Agency between Assembly meetings and the Executive responsible for the day-to-day running of the Agency.

Chairman of Executive: SALLAI MERIDOR.

Chairman of Board of Governors: ALEX GRASS.

Director-General: AHARON ABRAMOWITZ.

Secretary-General: ILAN RUBIN.

Functions: According to the Agreement of 1971, the Jewish Agency undertakes the immigration and absorption of immigrants in Israel, including absorption in agricultural settlement and immigrant housing; social welfare and health services in connection with immigrants; education, youth care and training; neighbourhood rehabilitation through project renewal.

Budget (1999): US $350m.

Judicial System

The law of Israel is composed of the enactments of the Knesset and, to a lesser extent, of the acts, orders-in-council and ordinances that remain from the period of the British Mandate in Palestine (1922–48). The pre-1948 law has largely been replaced, amended or reorganized, in the interests of codification, by Israeli legislation. This legislation generally follows a pattern which is very similar to that operating in England and the USA.

Attorney-General: ELYAQIM RUBENSTEIN.

CIVIL COURTS

The Supreme Court: Sha'arei Mishpat St, Kiryat David Ben-Gurion, Jerusalem 91950; tel. 2-6759666; fax 2-6759648; e-mail marcia@supreme.court.gov.il; internet http://www.court.gov.il. This is the highest judicial authority in the state. It has jurisdiction as an Appellate Court over appeals from the District Courts in all matters, both civil and criminal (sitting as a Court of Civil Appeal or as a Court of Criminal Appeal). In addition it is a Court of First Instance (sitting as the High Court of Justice) in actions against governmental authorities, and in matters in which it considers it necessary to grant relief in the interests of justice and which are not within the jurisdiction of any other court or tribunal. The High Court's exclusive power to issue orders in the nature of *habeas corpus, mandamus*, prohibition and *certiorari* enables the court to review the legality of and redress grievances against acts of administrative authorities of all kinds and religious tribunals.

President of the Supreme Court: AHARON BARAK.

Deputy-President of the Supreme Court: SH. LEVIN.

Justices of the Supreme Court: Y. KEDMI, Mrs D. BEINISCH, Y. TURKEL, M. CHESHIN, Mrs T. STRASBERG-COHEN, T. OR, E. MAZZA, Y. ENGLARD, Mrs D. DORNER, Y. ZAMIR, ABD AR-RAHMAN ZU'BI.

Registrars: Judge MICHAL AGMON; Attorney HAGIT MACK-KALMANOWITZ.

The District Courts: There are five District Courts (Jerusalem, Tel-Aviv, Haifa, Beersheba, Nazareth). They have residual jurisdiction as Courts of First Instance over all civil and criminal matters not within the jurisdiction of a Magistrates' Court, all matters not within the exclusive jurisdiction of any other tribunal, and matters within the concurrent jurisdiction of any other tribunal so long as such tribunal does not deal with them. In addition, the District Courts have appellate jurisdiction over appeals from judgments and decisions of Magistrates' Courts and judgments of Municipal Courts and various administrative tribunals.

Magistrates' Courts: There are 29 Magistrates' Courts, having criminal jurisdiction to try contraventions, misdemeanours and certain felonies, and civil jurisdiction to try actions concerning possession or use of immovable property, or the partition thereof

whatever may be the value of the subject matter of the action, and other civil claims not exceeding one million shekels.

Labour Courts: Established in 1969. Regional Labour Courts in Jerusalem, Tel-Aviv, Haifa, Beersheba and Nazareth, composed of judges and representatives of the public. A National Labour Court in Jerusalem. The Courts have jurisdiction over all matters arising out of the relationship between employer and employee or parties to a collective labour agreement, and matters concerning the National Insurance Law and the Labour Law and Rules.

RELIGIOUS COURTS

The Religious Courts are the courts of the recognized religious communities. They have jurisdiction over certain defined matters of personal status concerning members of their respective communities. Where any action of personal status involves persons of different religious communities the President of the Supreme Court decides which Court will decide the matter. Whenever a question arises as to whether or not a case is one of personal status within the exclusive jurisdiction of a Religious Court, the matter must be referred to a Special Tribunal composed of two Justices of the Supreme Court and the President of the highest court of the religious community concerned in Israel. The judgments of the Religious Courts are executed by the process and offices of the Civil Courts. Neither these Courts nor the Civil Courts have jurisdiction to dissolve the marriage of a foreign subject.

Jewish Rabbinical Courts: These Courts have exclusive jurisdiction over matters of marriage and divorce of Jews in Israel who are Israeli citizens or residents. In all other matters of personal status they have concurrent jurisdiction with the District Courts.

Muslim Religious Courts: These Courts have exclusive jurisdiction over matters of marriage and divorce of Muslims who are not foreigners, or who are foreigners subject by their national law to the jurisdiction of Muslim Religious Courts in such matters. In all other matters of personal status they have concurrent jurisdiction with the District Courts.

Christian Religious Courts: The Courts of the recognized Christian communities have exclusive jurisdiction over matters of marriage and divorce of members of their communities who are not foreigners. In all other matters of personal status they have concurrent jurisdiction with the District Courts.

Druze Courts: These Courts, established in 1963, have exclusive jurisdiction over matters of marriage and divorce of Druze in Israel, who are Israeli citizens or residents, and concurrent jurisdiction with the District Courts over all other matters of personal status of Druze.

Religion

JUDAISM

Judaism, the religion of the Jews, is the faith of the majority of Israel's inhabitants. On 31 December 1996 Judaism's adherents totalled 4,616,100, equivalent to 80.17% of the country's population. Its basis is a belief in an ethical monotheism.

There are two main Jewish communities: the Ashkenazim and the Sephardim. The former are the Jews from Eastern, Central, or Northern Europe, while the latter originate from the Balkan countries, North Africa and the Middle East.

There is also a community of about 10,000 Falashas (Ethiopian Jews) who have been airlifted to Israel at various times since the fall of Emperor Haile Selassie in 1974.

The supreme religious authority is vested in the Chief Rabbinate, which consists of the Ashkenazi and Sephardi Chief Rabbis and the Supreme Rabbinical Council. It makes decisions on interpretation of the Jewish law, and supervises the Rabbinical Courts. There are 8 regional Rabbinical Courts, and a Rabbinical Court of Appeal presided over by the two Chief Rabbis.

According to the Rabbinical Courts Jurisdiction Law of 1953, marriage and divorce among Jews in Israel are exclusively within the jurisdiction of the Rabbinical Courts. Provided that all the parties concerned agree, other matters of personal status can also be decided by the Rabbinical Courts.

There are 195 Religious Councils, which maintain religious services and supply religious needs, and about 405 religious committees with similar functions in smaller settlements. Their expenses are borne jointly by the State and the local authorities. The Religious Councils are under the administrative control of the Ministry of Religious Affairs. In all matters of religion, the Religious Councils are subject to the authority of the Chief Rabbinate. There are 365 officially appointed rabbis. The total number of synagogues is about 7,000, most of which are organized within the framework of the Union of Israel Synagogues.

Head of the Ashkenazi Community: The Chief Rabbi Israel Meir Lau.

Head of the Sephardic Community: Jerusalem; tel. 2-244785; The Chief Rabbi Eliahu Bakshi-Doron.

Two Jewish sects still loyal to their distinctive customs are:

The Karaites, a sect which recognizes only the Jewish written law and not the oral law of the Mishna and Talmud. The community of about 12,000, many of whom live in or near Ramla, has been augmented by immigration from Egypt.

The Samaritans, an ancient sect mentioned in 2 Kings xvii, 24. They recognize only the Torah. The community in Israel numbers about 500; about one-half of this number live in Holon, where a Samaritan synagogue has been built, and the remainder, including the High Priest, live in Nablus, near Mt Gerazim, which is sacred to the Samaritans.

ISLAM

The Muslims in Israel are mainly Sunnis, and are divided among the four rites of the Sunni sect of Islam: the Shafe'i, the Hanbali, the Hanafi and the Maliki. Before June 1967 they numbered approx. 175,000; in 1971, approx. 343,900. On 31 December 1996 the total Muslim population of Israel was 839,900.

Mufti of Jerusalem: POB 19859, Jerusalem; tel. 2-283528; Sheikh Abd al-Qadir Abidin (also Chair. Supreme Muslim Council for Jerusalem). The Palestinian National Authority also claims the right to appoint the Mufti of Jerusalem and has named Sheikh Akram Sa'id Sabri as its choice.

There was also a total of 94,500 Druzes in Israel at 31 December 1996.

CHRISTIANITY

The total Christian population of Israel (including East Jerusalem) at 31 December 1998 was 130,000.

United Christian Council in Israel: POB 116, Jerusalem 91000; tel. 2-6714351; fax 2-6721349; e-mail kopp@galanet.net; f. 1956; 27 mems (churches and other bodies); Chair. Charles Kopp.

The Roman Catholic Church

Armenian Rite

The Armenian Catholic Patriarch of Cilicia is resident in Beirut, Lebanon.

Patriarchal Exarchate of Jerusalem: POB 19546, Via Dolorosa 36, Jerusalem; tel. 2-6274545; fax 2-6272123; f. 1885; about 280 adherents (1997); Exarch Patriarchal Antreas Bedogholian.

Chaldean Rite

The Chaldean Patriarch of Babylon is resident in Baghdad, Iraq.

Patriarchal Exarchate of Jerusalem: Chaldean Patriarchal Vicariate, POB 20108, Chaldean St, Saad and Said Quarter, Jerusalem 91200; Exarch Patriarchal Mgr Paul Collin.

Latin Rite

The Patriarchate of Jerusalem covers Palestine, Jordan and Cyprus. At 31 December 1997 there were an estimated 77,000 adherents.

Bishops' Conference: Conférence des Evêques Latins dans les Régions Arabes, Patriarcat Latin, POB 14152, Jerusalem 91142; tel. 2-6288554; fax 2-6288555; f. 1967; Pres. His Beatitude Michel Sabbah; Patriarch of Jerusalem.

Patriarchate of Jerusalem: Patriarcat Latin, POB 14152, Jerusalem 91142; tel. 2-6282323; fax 2-6275392; e-mail latinpatr@isdn.co.il; Patriarch: His Beatitude Michel Sabbah; Vicar-General for Israel: Boulos Giaccinto (Titular Bishop of Emmaus), Vicariat Patriarcal Latin, Nazareth; tel. 6-6554075; fax 6-6452416; e-mail latinpat@rannet.com.

Maronite Rite

The Maronite community, under the jurisdiction of the Maronite Patriarch of Antioch (resident in Lebanon), has about 7,000 members.

Patriarchal Exarchate of Jerusalem: Vicariat Maronite, POB 14219, 25 Maronite Convent St, Jaffa Gate, Jerusalem 91141; tel. 2-6282158; fax 2-6272821; about 380 adherents (1997); Exarch Patriarchal Mgr Paul Nabil Sayah (also the Archbishop of Haifa and the Holy Land).

Melkite Rite

The Greek-Melkite Patriarch of Antioch (Maximos V Hakim) is resident in Damascus, Syria.

Patriarchal Vicariate of Jerusalem: Patriarcat Grec-Melkite Catholique, POB 14130, Porte de Jaffa, Jerusalem 91141; tel. 2-6282023; fax 2-6286652; about 3,300 adherents (1997); Vicars Patriarchal Mgr Hilarion Capucci (Titular Archbishop of Caesarea in Palestine), Mgr Lutfi Laham (Titular Archbishop of Tarsus).

Archbishop of Akka (Acre): Most Rev. Pierre Mouallem, Archevêché Grec-Catholique, POB 279, 33 Hagefen St, 31002 Haifa; tel. 04-8523114; fax 04-8520798; 54,000 adherents at 31 December 1997.

Syrian Rite

The Syrian Catholic Patriarch of Antioch is resident in Beirut, Lebanon.

Patriarchal Exarchate of Jerusalem: Vicariat Patriarcal Syrien Catholique, POB 19787, Chaldean St 6, Jerusalem 91190; tel. 2-6282657; fax 2-6284217; 10,298 adherents (Dec. 1997); Exarch Patriarchal Mgr GRÉGOIRE PIERRE ABD AL-AHAD.

The Armenian Apostolic (Orthodox) Church

Patriarch of Jerusalem: TORKOM MANOOGIAN, St James's Cathedral, Jerusalem; tel. 2-6264853; fax 2-6264862 .

The Greek Orthodox Church

The Patriarchate of Jerusalem contains an estimated 260,000 adherents in Israel, the Israeli-occupied territories, Jordan, Kuwait, the United Arab Emirates and Saudi Arabia.

Patriarch of Jerusalem: DIODOROS I, POB 19632-633, Greek Orthodox Patriarchate St, Old City, Jerusalem; tel. 2-6271657; fax 2-6282048.

The Anglican Communion

Episcopal Church in Jerusalem and the Middle East: POB 1248, St George's Close, Jerusalem; tel. 2-6271670; fax (2) 6273847; e-mail ediosces@netvision.net.il; President-Bishop The Rt. Rev. RIAH ABU AL-ASSAL.

Other Christian Churches

Other denominations include the Coptic Orthodox Church (700 members), the Russian Orthodox Church, the Ethiopian Orthodox Church, the Romanian Orthodox Church, the Lutheran Church and the Church of Scotland.

The Press

Tel-Aviv is the main publishing centre. Largely for economic reasons, there has developed no local press away from the main cities; hence all papers regard themselves as national. Friday editions, issued on Sabbath eve, are increased to as much as twice the normal size by special weekend supplements, and experience a considerable rise in circulation. No newspapers appear on Saturday.

Most of the daily papers are in Hebrew, and others appear in Arabic, English, French, Polish, Yiddish, Hungarian and German. The total daily circulation is 500,000–600,000 copies, or 21 papers per hundred people, although most citizens read more than one daily paper.

Most Hebrew morning dailies have strong political or religious affiliations. *Al-Hamishmar* is affiliated to Mapam, *Hatzofeh* to the National Religious Party—World Mizrachi. Most newspapers depend on subsidies from political parties, religious organizations or public funds. The limiting effect on freedom of commentary entailed by this party press system has provoked repeated criticism. There are around 400 other newspapers and magazines including some 50 weekly and 150 fortnightly; over 250 of them are in Hebrew, the remainder in 11 other languages.

The most influential and respected daily, for both quality of news coverage and commentary, is *Ha'aretz*. This is the most widely read of the morning papers, exceeded only by the popular afternoon press, *Ma'ariv* and *Yedioth Aharonoth*. The *Jerusalem Post* gives detailed and sound news coverage in English.

The Israeli Press Council (Chair. ITZHAK ZAMIR), established in 1963, deals with matters of common interest to the Press such as drafting the code of professional ethics which is binding on all journalists.

The Daily Newspaper Publishers' Association represents publishers in negotiations with official and public bodies, negotiates contracts with employees and purchases and distributes newsprint.

DAILIES

The Histadrut

Hahistadrut Haklalit shel Haovdim Beeretz Israel (General Federation of Labour in Israel): 93 Arlosoroff St, Tel-Aviv 62098; tel. 3-6921111; telex 342488; fax 3-6969906; e-mail histint@netvision.net.il; f. 1920.

The General Federation of Labour in Israel, usually known as the Histadrut, is the largest voluntary organization in Israel, and the most important economic body in the state. It is open to all workers, including the self-employed, members of co-operatives and of the liberal professions, as well as housewives, students, pensioners and the unemployed. Members of two small religious labour organizations, Histadrut Hapoel Hamizrahi and Histadrut Poale Agudat Israel, also belong to the trade union section and social services of the Histadrut, which thus extend to *c.* 85% of all workers. Dues—between 3.6% and 5.8% of wages—cover all its trade union, health insurance and social service activities. The Histadrut engages in four main fields of activity: trade union organization (with some 50 affiliated trade unions and 65 local labour councils operating throughout the country); social services (including a comprehensive health insurance scheme 'Kupat Holim', pension and welfare funds, etc.); educational and cultural activities (vocational schools, workers' colleges, theatre and dance groups, sports clubs, youth movement); and economic development (undertaken by Hevrat Haovdim (Labour Economy), which includes industrial enterprises partially or wholly owned by the Histadrut, agricultural and transport co-operatives, workers' bank, insurance company, publishing house etc.). A women's organization, Na'amat, which also belongs to the Histadrut, operates nursery homes and kindergartens, provides vocational education and promotes legislation for the protection and benefit of working women. The Histadrut publishes its own daily newspaper, *Davar*, in Hebrew. The Histadrut is a member of the ICFTU and its affiliated trade secretariats, APRO, ICA and various international professional organizations.

Chair: AMIR PERETZ.

Secretary-General: HAIM RAMON.

ORGANIZATION

In 1989 the Histadrut had a membership of 1,630,000. In addition some 110,000 young people under 18 years of age belong to the Organization of Working and Student Youth, a direct affiliate of the Histadrut.

All members take part in elections to the Histadrut Convention (Veida), which elects the General Council (Moetsa) and the Executive Committee (Vaad Hapoel). The latter elects the 41-member Executive Bureau (Vaada Merakezet), which is responsible for day-to-day implementation of policy. The Executive Committee also elects the Secretary-General, who acts as its chairman as well as head of the organization as a whole and chairman of the Executive Bureau. Nearly all political parties are represented on the Histadrut Executive Committee.

The Executive Committee has the following departments: Trade Union, Organization and Labour Councils, Education and Culture, Social Security, Industrial Democracy, Students, Youth and Sports, Consumer Protection, Administration, Finance and International.

TRADE UNION ACTIVITIES

Collective agreements with employers fix wage scales, which are linked with the retail price index; provide for social benefits, including paid sick leave and employers' contributions to sick and pension and provident funds; and regulate dismissals. Dismissal compensation is regulated by law. The Histadrut actively promotes productivity through labour management boards and the National Productivity Institute, and supports incentive pay schemes.

There are unions for the following groups: clerical workers, building workers, teachers, engineers, agricultural workers, technicians, textile workers, printing workers, diamond workers, metal workers, food and bakery workers, wood workers, government employees, seamen, nurses, civilian employees of the armed forces, actors, musicians and variety artists, social workers, watchmen, cinema technicians, institutional and school staffs, pharmacy employees, medical laboratory workers, X-ray technicians, physiotherapists, social scientists, microbiologists, psychologists, salaried lawyers, pharmacists, physicians, occupational therapists, truck and taxi drivers, hotel and restaurant workers, workers in Histadrut-owned industry, garment, shoe and leather workers, plastic and rubber workers, editors of periodicals, painters and sculptors and industrial workers.

Histadrut Trade Union Department: Dir SHLOMO SHANI.

ECONOMIC ACTIVITIES AND SOCIAL SERVICES

These include Hevrat Haovdim (employing 260,000 workers in 1983), Kupat Holim (the Sick Fund, covering almost 77% of Israel's population), seven pension funds, and Na'amat (see above).

Other Trade Unions

General Federation of West Bank Trade Unions: Sec.-Gen. SHAHER SAAD.

Histadrut Haovdim Haleumit (National Labour Federation): 23 Sprintzak St, Tel-Aviv 64738; tel. 3-6958351; fax 3-6961753; f. 1934; 170,000 mems; Chair. HIRSHZON ABRAHAM.

Histadrut Hapoel Hamizrahi (National Religious Workers' Party): 166 Even Gavirol St, Tel-Aviv 62023; tel. 3-5442151; fax 3-5468942; 150,000 mems in 85 settlements and 15 kibbutzim; Sec.-Gen. ELIEZER ABTABI.

Histadrut Poale Agudat Israel (Agudat Israel Workers' Organization): POB 11044, 64 Frishman St, Tel-Aviv; tel. 3-5242126; fax 3-5230689; has 33,000 members in 16 settlements and 8 educational insts.

Transport

RAILWAYS

Freight traffic consists mainly of grain, phosphates, potash, containers, petroleum and building materials. Rail service serves Haifa and Ashdod ports on the Mediterranean Sea, while a combined rail-road service extends to Eilat port on the Red Sea. Passenger services operate between the main towns: Nahariya, Haifa, Tel-Aviv and Jerusalem. In 1988 the National Ports Authority assumed responsibility for the rail system, although Israel Railways is expected to become a separate state concern in 1999.

Israel Railways: POB 18085, Central Station, Tel-Aviv 61180; tel. 3-6937401; telex 46570; fax 3-6937480; the total length of main line is 530 km and there are 170 km of branch line; gauge 1,435 mm; Dir-Gen. A. UZANI; Gen. Man. EHUD HADAR.

Underground Railway

Haifa Underground Funicular Railway: 122 Hanassi Ave, Haifa 34633; tel. 04-8376861; fax 04-8376875; opened 1959; 2 km in operation; Man. AVI TELLEM.

ROADS

In 1997 there were 15,464 km of paved roads, of which 56 km were motorways, 5,647 km highways, main or national roads and 10,361 km other roads.

Ministry of National Infrastructure: POB 13198, Public Works Dept, Jerusalem; tel. 2-584711; fax 2-823532.

SHIPPING

At 31 December 1997 Israel's merchant fleet consisted of 55 vessels amounting to 793,990 grt.

Haifa and Ashdod are the main ports in Israel. The former is a natural harbour, enclosed by two main breakwaters and dredged to 45 ft below mean sea-level. In 1965 the deep water port was completed at Ashdod which had a capacity of about 8.6m. tons in 1988.

The port of Eilat is Israel's gateway to the Red Sea. It is a natural harbour, operated from a wharf. Another port, to the south of the original one, started operating in 1965.

Israel Ports and Railways Authority: POB 20121, 74 Petach Tikva Rd, Tel-Aviv 61201; tel. 3-5657000; fax 3-5617142; e-mail dovf@israports.org.il; internet http://www.israports.org.il; f. 1961; to plan, build, develop, maintain and operate Israel's commercial ports and Israel Railways. In 1999 a US $1,000m.-development plan was under way at Haifa and Ashdod ports. Cargo traffic in 1998 amounted to 33.8m. tons (oil excluded); Chair. AZRIEL FEUCHTWANGER; Dir-Gen. GIDEON SHAMIR.

Ofer Brothers (Management) Ltd: POB 1755, Haifa 31000; tel. 4-8610610; telex 46610; fax 4-8675666; runs cargo and container services; operates some 15 vessels; Chair. Y. OFER; Man. Dir E. ANGEL.

ZIM Israel Navigation Co Ltd: POB 1723, 7–9 Pal-Yam Ave, Haifa 31000; tel. 4-8652111; telex 46501; fax 4-8652956; e-mail zimpress@zim.co.il; internet http://www.zim.co.il; f. 1945; provides cargo and container services in the Mediterranean and northern Europe, North, South and Central America, the Far East, Africa and Australia; operates some 80 vessels; total cargo carried: 1,051,200 TEUs in 1998; Chair. U. ANGEL; Pres. and CEO Dr YORAM SEBBA.

CIVIL AVIATION

Israel Airports Authority: Ben-Gurion International Airport, Tel-Aviv; tel. 3-9712804; telex 381050; fax 3-9712436; Dir-Gen. AVI KOSTELITZ.

El Al Israel Airlines Ltd: POB 41, Ben-Gurion International Airport, Tel-Aviv 70100; tel. 3-9716111; telex 381007; fax 3-9716040; internet http://www.elal.com; f. 1948; 100% state-owned; total assets US $305m. (Dec. 1996); daily services to most capitals of Europe; over 20 flights weekly to New York; services to the USA, Canada, China, Egypt, India, Kenya, South Africa, Thailand and Turkey; Chair. JOSEPH CIECHANOVER; Pres. JOEL FELDSCHUH.

Arkia Israeli Airlines Ltd: POB 39301, Sde-Dov Airport, Tel-Aviv 61392; tel. 3-6902222; telex 341749; fax 3-6991390; e-mail income@arkia.co.il; internet http://www.arkia.co.il; f. 1980 through merger of Kanaf-Arkia Airlines and Aviation Services; scheduled passenger services linking Tel-Aviv, Jerusalem, Haifa, Eilat, Rosh Pina, Kiryat Shmona and Yolveta; charter services to European destinations; Chair. and CEO Prof. ISRAEL BOROVICH.

Tourism

In 1997 some 2,010,432 tourists visited Israel. Tourist receipts in 1996 totalled US $2,771m.

Ministry of Tourism: POB 1018, 24 Rehov King George, Jerusalem 91009; tel. 2-6754811; fax 2-6733593; Minister of Tourism AMNON LIPKIN-SHAHAK; Dir-Gen. DAVID LITVAK.

Defence

The General Staff: This consists of the Chiefs of the General Staff, Manpower, Logistics and Intelligence Branches of the Defence Forces, the Commanders of the Air Force and the Navy, and the officers commanding the three Regional Commands (Northern, Central and Southern). It is headed by the Chief of Staff of the Armed Forces.

Chief of Staff of the Armed Forces: Lt-Gen. SHAUL MOFAZ.

Head of Ground Forces Command: Maj.-Gen. ISRAEL TAL.

Commander of the Air Force: Maj.-Gen. AVIHU BIN-NUN.

Commander of the Navy: Rear-Admiral AVRAHAM BEN SHOSHAN.

Defence Budget (1998): 25,100m. shekels.

Military Service (Jewish and Druze population only; Christians and Arabs may volunteer): Officers are conscripted for regular

service of 48 months, men 36 months, women 21 months. Annual training as reservists thereafter, to age 42 for men (54 for some specialists), 24 (or marriage) for women.

Total Armed Forces (August 1998): an estimated 175,000: including some 138,500 conscripts; this can be raised to 605,000 by mobilizing the 430,000 reservists within 48–72 hours; army 134,000 (114,700 conscripts; navy an estimated 9,000 (2,000–3,000 conscripts); air force 32,000 (21,800 conscripts).

Paramilitary Forces (August 1998): an estimated 6,050.

Education

The present-day school system is based on the Compulsory Education Law (1949), the State Education Law (1953), the School Inspection Law (1969) and on certain provisions of the 1933 Education Ordinance dating back to the British Mandatory Administration. The first of these introduced free compulsory primary education for all children aged between the ages of five and 13 (one year kindergarten, eight years' elementary schooling). This law was extended, with the school reform of 1968, to include the ninth and tenth grades. In the 1979/80 school year free, but not compulsory, education was extended up to and including the 12th grade. Further legislation was passed in early 1999 allowing for the introduction of free education for pre-primary children.

The State Education Law abolished the old complicated Trend Education System, and vested the responsibility for education in the Government, thus providing a unified state-controlled elementary school system. The law does, however, recognize two main forms of Primary Education—*(a)* State Education; *(b)* Recognized Non-State Education. State Education may be sub-divided into two distinct categories of schools—State Schools and State Religious Schools where the language of instruction is Hebrew, and State Schools where the language of instruction is Arabic. Schools and kindergartens of the state system are in the joint ownership of the state and the local authorities, while the recognized non-state institutions are essentially privately-owned and mainly religious, although they are subsidized, and supervised by the state and the local authorities.

The largest 'recognized' school system is the Agudat Israel Schools (ultra-orthodox religious). The others are mainly Christian denominational schools.

State Primary Education is financed by a partnership of the central government and the local authorities. Since 1953 the salaries of all teachers of State Schools have been paid by the central government, while the cost of maintenance and of maintenance services, and the provision of new buildings and equipment have been the responsibility of the local authorities. The state does not impose an education tax but local authorities may, with the Ministry's approval, levy a rate on parents for special services.

The State provides schools in which the language of instruction is either Hebrew or Arabic according to the language spoken by the majority of the local population. Nevertheless, some Arab children attend Jewish secondary, vocational, agricultural and teacher-training colleges. In the Jewish sector there is a distinct line of division between the secular State Schools and the religious State Schools, which are established on the demand of parents in any locality, provided that a certain minimum number of pupils have first been enrolled. In the Arab Schools all instruction is in Arabic, and there is a special Department for Arabic Education in the Ministry of Education and Culture. The administration of Arab education is in the process of being decentralized. Some 90% of the Arab children attend school regularly.

The Compulsory Education Law and the institutions it established for absorbing weak students have cancelled the need for special systems for working youth. The law provides special education for emotionally or physically handicapped children. In addition, special attention is given to those children who are culturally deprived and a great variety of methods are being devised to bring them up to the level of the other children.

Post-Primary Education is free, lasts six years, four of which are compulsory, and is divided into an intermediate and a higher level. The intermediate level provides general education and the higher level is roughly divided into academic; technical and vocational; and agricultural. The last two categories also have pre-academic streams lasting from one to two years and receive all the benefits of the regular post-primary schools. The pupils graduating from academic high school receive either a school leaving certificate or *bagrut* (matriculation). The *bagrut* certificate entitles the pupil to enter university, although the university is not obliged to accept him or her.

The frameworks offered by vocational and technical schools can be divided into three types: practical-technical; general-technical; and secondary-technical. All three types are of three or four years' duration, depending on whether they are run under the Reform or under the old system. Very few of the practical-technical schools still offer a two-year course, i.e. a total of 11 years' schooling. The practical-technical schools train their pupils mainly for a profession and the ratio between general studies and vocational-technical studies is 40:60. The general-technical schools award a school leaving certificate to those pupils who complete the course successfully. This entitles them to continue their studies in the third level of education after some complementary examinations, either for one additional year to obtain a technician's certificate (Techna'i), or for two additional years to obtain the certificate of a practical engineer (Handessa'i). The ratio between general studies and vocational studies in these schools is 50:50. All graduates of the secondary-technical schools may sit for the *bagrut* examinations. Even without achieving the *bagrut* certificate the pupils may continue their studies in the short-cycle post-secondary schools, described above, without further examination and obtain the technician or practical engineer certificate. The ratio between general studies and technical-vocational studies in these schools is 60:40. Those who graduate and complete their matriculation (*bagrut*) examinations are eligible for admission to any Israeli university.

Agricultural post-primary courses are of either three or four years' duration (again depending on the Reform) and some schools offer an additional year or year-and-a-half (13th and 14th grade) leading to a practical engineer certificate. The holders of this certificate are eligible, without further examinations, for study in agricultural engineering or general agricultural higher studies in the Technion (the Israel Institute of Technology) at Haifa or the Faculty of Agriculture at the Hebrew University of Jerusalem. Unlike pupils at vocational-technical post-primary schools, all those completing agricultural courses may sit for the *bagrut* examinations. By and large, agricultural post-primary schools are boarding schools although some, mainly those of the kibbutz and the moshav movements, are regional day schools.

Adult Education. There is an extensive adult education programme. Programmes extend from literacy courses through primary and secondary level studies up to second-chance university facilities. There are post-army preparatory courses for entry into the university. High school courses may be completed in the army and in 1976 the Everyman's University began, based on the British model of Open University.

Teacher Training. Almost all kindergarten and primary school teachers are trained in three to three-and-a-half year courses at post-secondary teacher training institutions (Mossadot Le-Hakhsharat Morim Ve Gananot). The Ministry's policy is to have only three-year teacher training colleges and to extend the training period to four years for a B.Ed. degree. Government regulations require that teachers for grades seven to 10 have a BA and a university teaching certificate, while for grades 11 and 12 they are required to have a master's degree and a university teaching certificate. The *bagrut* certificate and a passing grade in the psychometric examination are required for admittance to the above teacher training institutions. In some of the teacher training schools there are special courses for instruction in Arabic education, in addition to separate Arab teacher training schools.

Occupied Territories

THE GOLAN HEIGHTS

Location, Climate

The Golan Heights, a mountainous plateau which formed most of Syria's Quneitra Province (1,710 sq km) and parts of Dera'a Province, was occupied by Israel after the 1967 Arab–Israeli War. Following the Disengagement Agreement of 1974, Israel continued to occupy some 70% of the territory (1,176 sq km), valued for its strategic position and abundant water resources (the headwaters of the Jordan river have their source on the slopes of Mount Hermon). The average height of the Golan is approximately 1,200 m above sea-level in the northern region and about 300 m above sea-level in the southern region, near Lake Tiberias (the Sea of Galilee). Rainfall ranges from about 1,000 mm per year in the north to less than 600 mm per year in the southern region.

Administration

Prior to the Israeli occupation, the Golan Heights were incorporated by Syria into a provincial administration of which the city of Quneitra, with a population at the time of 27,378, was capital. The disengagement agreement that was mediated in 1974 by the US Secretary of State, Henry Kissinger, after the 1973 Arab–Israeli War, provided for the withdrawal of Israeli forces from Quneitra. Before they withdrew, however, Israeli army engineers destroyed the city. In December 1981 the Israeli Knesset enacted the Golan Annexation Law, whereby Israeli civilian legislation was extended to the territory of Golan, now under the administrative jurisdiction of the Commissioner for the Northern District of Israel. The Arab-Druze community of the Golan immediately responded by declaring a three-day strike and appealed to the UN Secretary-General to force Israel to rescind the annexation decision. At the seventh round of multilateral talks between Israeli and Arab delegations in Washington in August 1992, the Israeli Government of Itzhak Rabin for the first time accepted that UN Security Council Resolution 242, adopted in 1967, applied to the Golan Heights. In January 1999 the Knesset passed legislation which stated that any transfer of land under Israeli sovereignty (referring to the Golan Heights and East Jerusalem) was conditional on the approval of at least 61 of the 120 Knesset members and of the Israeli electorate in a subsequent national referendum. Following the election of Ehud Barak as Israel's Prime Minister in May 1999, both Syria and Israel expressed their willingness to resume peace negotiations. The withdrawal of Israel from the Golan Heights is one of President Assad of Syria's primary objectives in any future peace agreement with Israel.

Demography and Economic Affairs

As a consequence of the Israeli occupation, an estimated 93% of the ethnically diverse Syrian population of 147,613, distributed across 163 villages and towns and 108 individual farms, was expelled. The majority were Arab Sunni Muslims, but the population also included Alawite and Druze minorities and also some Circassians, Turcomen, Armenians and Kurds. Approximately 9,000 Palestinian refugees from the 1948 Arab–Israeli War also inhabited the area. At the time of the occupation, the Golan was a predominantly agricultural province, 64% of the labour force being employed in agriculture. Only one-fifth of the population resided in the administrative centres. By 1991 the Golan Heights had a Jewish population of approximately 12,000 living in 21 Jewish settlements (four new settlements had been created by the end of 1992), and a predominantly Druze population of approximately 16,000 living in the only six remaining villages, of which Majd ash-Shams is by far the largest. According to official figures, in 1996 the Golan Heights had a total population of 31,600 (including 13,800 Jews, 15,700 Druze and 1,600 Muslims). The Golan Heights have remained predominantly an agricultural area, and, although large numbers of the Druze population now work in Israeli industry in Eilat, Tel-Aviv and Jerusalem, the indigenous economy relies almost solely on the cultivation of apples, for which the area is famous. The apple orchards benefit from a unique combination of fertile soils, abundance of water and a conducive climate.

EAST JERUSALEM

Location, Climate

Greater Jerusalem includes Israeli West Jerusalem (99% Jewish), the Old City and Mount of Olives, East Jerusalem (the Palestinian residential and commercial centre), Arab villages declared to be part of Jerusalem by Israel in 1967 and Jewish neighbourhoods constructed since 1967, either on land expropriated from Arab villages or in areas requisitioned as 'government land'. Although the area of the Greater Jerusalem district is 627 sq km, the Old City of Jerusalem covers just 1 sq km.

Administration

Until the 1967 Arab–Israeli War, Jerusalem had been divided into the new city of West Jerusalem—captured by Jewish forces in 1948—and the old city, East Jerusalem, which was part of Jordan. Israel's victory in 1967, however, reunited the city under Israeli control. Two weeks after the fighting had stopped, on 28 June, Israeli law was applied to East Jerusalem and the municipal boundaries were extended by 45 km (28 miles). Jerusalem had been, in effect, annexed. Israeli officials, however, still refer to the 'reunification' of Jerusalem.

Demography and Economic Affairs

In June 1993 the Deputy Mayor of Jerusalem, Avraham Kahila, declared that the city now 'had a majority of Jews', based on population projections which estimated the Jewish population at 158,000 and the Arab population at 155,000. This was a significant moment for the Israeli administration, as this had been a long-term objective. Immediately prior to the June 1967 Arab–Israeli War, East Jerusalem and its Arab environs had an Arab population of approximately 70,000, and a small Jewish population in the old Jewish quarter of the city. By contrast, Israeli West Jerusalem had a Jewish population of 196,000. As a result of this population imbalance, in the Greater Jerusalem district as a whole the Jewish population was in the majority even prior to the occupation of the whole city in 1967. Israeli policy following the occupation of East Jerusalem and the West Bank consisted of encircling the eastern sector of the city with Jewish settlements. In contrast to the more politically sensitive siting of Jewish settlements in the old Arab quarter of Jerusalem, the Government of Itzhak Rabin concentrated on the outer circle of settlement building. Official statistics for the end of 1996 reported that Greater Jerusalem had a total population of 613,600, of whom 426,200 (69%) were Jews.

The Old City, within the walls of which are found the ancient quarters of the Jews, Christians, Muslims and Armenians, has a population of approximately 25,500 Arabs and 2,600 Jews. In addition, there are some 600 recent Jewish settlers in the Arab quarter.

Many imaginative plans have been submitted with the aim of finding a solution to the problem of sharing Jerusalem between Arabs and Jews, including the proposal that the city be placed under international trusteeship, under the auspices of the UN. However, to make the implementation of such plans an administrative as well as a political quagmire, the Israeli administration, after occupying the whole city in June 1967, began creating 'facts on the ground'. Immediately following the occupation, all electricity, water and telephone grids in West Jerusalem were extended to the east. Roads were widened and cleared, and the Arab population immediately in front of the 'Wailing Wall' was forcibly evicted. Arabs living in East Jerusalem became 'permanent residents' and could apply for Israeli citizenship if they wished (in contrast to Arabs in the West Bank and Gaza Strip). However, few chose to do so. None the less, issued with identity cards (excluding the estimated 25,000 Arabs from the West Bank and Gaza Strip living illegally in the city), the Arab residents were taxed by the Israeli authorities, and their businesses and banks became subject to Israeli laws and business regulations. Now controlling approximately one-half of all land in East Jerusalem and the surrounding Palestinian villages (previously communally, or privately, owned by Palestinians), the Israeli authorities allowed Arabs to construct buildings on only 10%–15% of the land in the city; and East Jerusalem's commercial district has been limited to three streets. The Palestinian economy was quite seriously affected by the drop in tourism during the *intifada* and by curfews, enforced tax collections and confiscations of property exercised by the Israeli authorities.

Since the 1993 signing of the Declaration of Principles on Palestinian Self-Rule, the future status of Jerusalem and the continuing expansion of Jewish settlements in East Jerusalem have emerged as two of the most crucial issues affecting the peace process. In May 1999 the Israeli Government announced its refusal to grant Israeli citizenship to several hundred Arabs living in East Jerusalem, regardless of their compliance with the conditions stipulated under the Citizenship Law.

Emerging Palestinian Autonomous Areas

Physical and Social Geography

The Emerging Palestinian Autonomous Areas are located in the West Bank and the Gaza Strip. A currently undetermined part of these areas form the territory in which an independent State of Palestine may be declared. The West Bank lies in western Asia, to the west of the Jordan river and the Dead Sea. To the north and south is the State of Israel, to the west the State of Israel and the Gaza Strip. The Israeli-Palestinian Interim Agreement on the West Bank and the Gaza Strip of September 1995 (see below and Documents on Palestine, p. 127) provides for the creation of a corridor, or safe passage, linking the Gaza Strip with the West Bank. Including East Jerusalem, the West Bank covers an area of 5,633 sq km (2,175 sq miles). The West Bank can be divided into three major sub-regions: the Mount Hebron massif, the peaks of which rise to between 700 m and 1,000 m above sea-level; the Jerusalem mountains, which extend to the northernmost point of the Hebron-Bethlehem massif; and the Mount Samaria hills, the central section of which—the Nablus mountains—reaches heights of up to 800 m before descending to the northern Jenin hills, of between 300 m and 400 m. The eastern border of the West Bank is bounded by the valley of the Jordan river, leading to the Dead Sea (part of the Syrian–African rift valley), into which the Jordan drains. The latter is 400 m below sea-level. Precipitation ranges between 600 mm and 800 mm on the massif and averages 200 mm in the Jordan valley; 36% of the area is classified as cultivable land, 32% grazing land, 27% desert or rocky ground and 5% natural forest. Apart from the urban centres of Bethlehem (Beit Lahm) and Hebron (Al-Khalil) to the south, the majority of the Palestinian population is concentrated in the northern localities around Ramallah (Ram Allah), Nablus (Nabulus), Jenin (Janin) and Tulkarm. In November 1988 the Palestine National Council proclaimed Jerusalem as the capital of a newly-declared independent State of Palestine. In fact, West Jerusalem has been the capital of the State of Israel since 1950. In 1967 East Jerusalem was formally annexed by the Israeli authorities, although the annexation has never been recognized by the UN (see Occupied Territories, p. 662). Under the terms of the Declaration of Principles on Palestinian Self-Rule, concluded by Israel and the Palestinians in September 1993 (see Documents on Palestine, p. 120), negotiations on the 'final status' of the city were scheduled to begin not later than the beginning of the third year of the five-year transitional period following the completion of Israel's withdrawal from the Gaza Strip and the Jericho (Ariha) area. By mid-1999, however, 'final status' negotiations had still not commenced, despite the signing of the Wye River Memorandum (see Documents on Palestine, p. 134) in October 1998 (see below). The future of Jerusalem is probably the most bitterly contentious of all the issues subject to 'final status' talks, and, in the opinion of some observers, may elude agreement by negotiation.

The Gaza Strip, lying beside the Mediterranean Sea and Israel's border with Egypt, covers an area of 364 sq km (140.5 sq miles). Crossed only by two shallow valleys, the Gaza Strip is otherwise almost entirely flat, and has no surface water. Annual average rainfall is 300 mm. Gaza City is the main population centre and the centre of administration for the Palestinian National Authority (PNA).

The language of the Palestinians of the West Bank and the Gaza Strip is Arabic. The majority of the Palestinian population of the West Bank and the Gaza Strip are Muslims. A Christian minority represents about 2% of the Palestinian population of the West Bank and the Gaza Strip. This minority, in turn, represents about 45% of all Palestinian Christians.

Recent History

Revised for this edition by Nur Masalha

Until the end of the 1948 Arab–Israeli War, the West Bank formed part of the British Mandate of Palestine, before becoming part of the Hashemite Kingdom of Jordan under the Armistice Agreement of 1949. It remained under Jordanian sovereignty, despite Israeli occupation in 1967, until King Hussein of Jordan formally relinquished legal and administrative control on 31 July 1988. Under Israeli military occupation, the West Bank was administered by a military government, which divided the territory into seven sub-districts. The Civil Administration, as it later became known, did not extend its jurisdiction to the many Israeli settlements that were established under the Israeli occupation; settlements remained subject to the Israeli legal and administrative system. By July 1998 approximately 26% of the West Bank was under Israeli military control, with responsibility for civil administration transferred to the Palestinian authorities; about 2% was under full Palestinian control; and the remainder under complete Israeli control.

An administrative province under the British Mandate of Palestine, Gaza was transferred to Egypt after the 1949 armistice and remained under Egyptian administration until June 1967, when it was invaded and occupied by Israel. Following Israeli occupation, the Gaza Strip, like the West Bank, became an 'administered territory'. Until the provisions of the Declaration of Principles on Palestinian Self-Rule began to take effect, the management of day-to-day affairs was the responsibility of the area's Israeli military commander. Neither Israeli laws nor governmental and public bodies—including the Supreme Court—could review or alter the orders of the military command to any great extent. In 1993 it was estimated that approximately 50% of the land area was under Israeli control, either through the establishment of Jewish settlements or through the closure of areas by the military authorities.

TOWARDS AN INDEPENDENT PALESTINE

In accordance with the Declaration of Principles on Palestinian Self-Rule of September 1993, and the Cairo Agreement on the Gaza Strip and Jericho, the Palestine Liberation Organization (PLO) assumed control of the Jericho area of the West Bank, and of the Gaza Strip on 17 May 1994. In November and December 1995, under the terms of the Israeli-Palestinian Interim Agreement on the West Bank and the Gaza Strip (the 'Oslo Agreement') signed by Israel and the PLO on 28 September 1995, Israeli armed forces withdrew from the West Bank towns of Nablus, Ramallah, Jenin, Tulkarm, Qalqilya and Bethlehem. In late December the PLO assumed responsibility in some 17 areas of civil administration in the town of Hebron. Under the terms of the Oslo Agreement, the PLO was eventually to assume full responsibility for civil affairs in the 400 surrounding villages, but the Israeli armed forces were to retain freedom of movement to act against potential hostilities there. In Hebron Israel effected a partial withdrawal of its armed forces in January 1997, but retained responsibility for the security of some 400 Jewish settlers occupying about 15% of the town. Responsibility for security in the rest of Hebron passed to the Palestinian police force, but Israel retained responsibility for security on access roads. Under the terms of the Oslo Agreement, Israel was to retain control over a large area of the West Bank (including Jewish settlements, rural areas, military installations and the majority of junctions between Palestinian roads and those used by Israeli troops and settlers until July 1997. Following the first phase of the redeployment and the holding, on its completion, of elections to a Palestinian Legislative Council (PLC) and for a Palestinian executive president, Israel was to effect a second redeployment from rural areas, to be completed by July 1997. The Israeli occupation was to be maintained in Jewish settlements, military installations, East Jerusalem and the Jewish settlements around Jerusalem until the conclusion of 'final status' negotiations between Israel and the Palestinians, scheduled for May 1999.

Subsequent postponements, and further negotiations within the context of the Oslo peace process, resulted in a new timetable for Israeli redeployment which envisaged two phases, subsequent to the Hebron withdrawal, to be completed by October 1997 and August 1998. 'Final status' negotiations on borders, the Jerusalem issue, Jewish settlements and Palestinian refugees were to commence within two months of the signing of the agreement on Hebron. As guarantor of the agreements, the USA undertook to obtain the release of some Palestinian prisoners, and to ensure that Israel continued to engage in negotiations for the establishment of a Palestinian airport in the Gaza Strip and for safe passage for Palestinians between the West Bank and the Gaza Strip. The USA also undertook to ensure that the Palestinian authorities would

continue to combat terrorism, complete the revision of the Palestinian National Charter (or PLO Covenant), adopted in 1964 and amended in 1968, and consider Israeli requests to extradite Palestinians suspected of involvement in attacks in Israel. By July 1998, however, conflicting interpretations of the extent of both the phased and total final redeployment (90% of the West Bank, according to the Palestinians; less than 50%, according to the Israelis) had resulted in a seemingly intractable impasse in the Oslo peace process. Those within the wider Palestinian movement who had never accepted the Oslo peace process argued that an essential weakness of the Oslo Agreement had made such a situation inevitable: while it, and subsequent revisions, detailed timetables for the withdrawals of Israeli armed forces, the Agreement did not stipulate the precise area of the territory over which the Palestinian authorities should thereby assume control. The implemention of the Agreement was further complicated by the election, in May 1996, of Binyamin Netanyahu as Israeli Prime Minister. Netanyahu formed a new coalition Government, in which his party, Likud, was the dominant force. Likud had never sought to conceal its opposition to the Oslo Agreement negotiated by the previous Labour Government.

By July 1998 progress on the redeployment of Israeli armed forces had been impeded for some 15 months. This paralysis emerged from the decision of the Israeli Government, announced in February 1997, to begin the construction of a new Jewish settlement on Jabal Abu Ghunaim (Har Homa in Hebrew), near Beit Sahur. Construction in this area was particularly controversial because, if completed, the new settlement would make it impossible to reach East Jerusalem from the West Bank without crossing Israeli territory, thereby prejudicing 'final status' negotiations concerning Jerusalem. In response, the Palestinians withdrew from 'final status' talks which had been scheduled to commence on 17 March. The beginning of construction work at Jabal Abu Ghunaim on 18 March provoked rioting among the Palestinian population and a resumption of attacks by the military wing of the Islamic Resistance Movement (Hamas) on Israeli civilian targets. The Israeli Cabinet responded by ordering a general closure of the West Bank and the Gaza Strip.

Both the Jabal Abu Ghunaim (Har Homa) construction and Israel's unilateral decision to redeploy its armed forces from only 9% of West Bank territory (announced in March 1997) were regarded by many observers as a vitiation of both the Oslo and the subsequent post-Hebron agreements. These were further undermined by the publication, in the Israeli daily newspaper *Ha'aretz*, of the results of a US study which claimed that more than 25% of Jewish settlers' homes in the Gaza Strip and the West Bank were uninhabited (a claim rejected by the Israeli Central Bureau of Statistics, which argued that only 12% of the settlements were unoccupied). The same newspaper later reported that Netanyahu's original plan, evolved within the framework of the Oslo Agreement, eventually to relinquish 90% of the West Bank, had been revised in a new proposal—the so-called 'Allon plus' plan—to a 40% redeployment.

In June 1997 the US House of Representatives voted in favour of recognizing Jerusalem as the undivided capital of Israel and of transferring the US embassy to the city from Tel-Aviv. US President Bill Clinton was reported to have strongly disapproved of the vote, owing to its possible implications for the peace process. The decision coincided with violent clashes between Palestinian civilians and Israeli troops in both Gaza and Hebron, which reached a climax in Hebron at the end of the month, when anti-Islamic posters, displayed in the town, caused popular outrage.

At the beginning of July 1997 a series of meetings took place between the US Under-Secretary of State for Political Affairs, Thomas Pickering, and Israeli and Palestinian officials, with the aim of resuming negotiations between the Palestinian National Authority (PNA) and the Israeli Government. On 28 July both sides announced that peace talks were to be resumed in early August. However, on 30 July, on the eve of Dennis Ross's visit to reactivate the negotiations, Hamas carried out a 'suicide bomb' attack at an outdoor Jewish market in Jerusalem, in which 14 civilians were killed and more than 150 were injured. Ross cancelled his visit and the Israeli Government immediately halted payment of tax revenues to the PNA and closed the Gaza Strip and the West Bank. These sanctions provoked furious protest from the Palestinians, and widespread international condemnation. In the aftermath of the suicide bombing, the Palestinian authorities commenced a campaign to detain members of Hamas and another militant group, Islamic Jihad. In late August, however, President Yasser Arafat convened a Palestinian national dialogue conference in Gaza, in response to the Israelis' imposition of sanctions. On this occasion, representatives of Hamas, who had boycotted a similar conference held in the previous year, agreed to participate, on the condition that the Palestinian authorities would address the issue of the Hamas members whom they were holding in detention. During the conference Arafat publicly embraced Hamas leaders and urged them, and representatives of Islamic Jihad, to unite with the Palestinian people against Israeli policies. On 26 August Hamas rejected a request from Palestinian leaders to suspend their attacks on Israeli targets.

At the beginning of September 1997, in anticipation of a visit to the Middle East in mid-September by the US Secretary of State, Madeleine Albright, the Israeli authorities relaxed the closure they had imposed on the Gaza Strip and the West Bank on 30 July. On 4 September, however, a further 'suicide bomb' attack in Jerusalem, in which eight people died (including the bombers themselves), led to the reimposition of Israeli sanctions. Hamas claimed responsibility for the attack, and the Israeli Prime Minister immediately renewed his demand that the Palestinian authorities should take effective action against the 'terrorist infrastructure', referring to Arafat's willingness to embrace representatives of Hamas in the previous month.

The visit to the Middle East in September 1997 by the US Secretary of State failed to reactivate the peace process. During her visit, Albright reportedly stated that Israel should halt the construction of Jewish settlements on Arab lands, cease confiscations of land and the demolition of Arab dwellings, and end its policy of confiscating Palestinian identity documents. At the same time, she endorsed Netanyahu's demand that the Palestinian authorities should take more effective measures to suppress the military wing of Hamas. (In late September the Israeli authorities claimed to have traced the origin of four of the five Hamas members responsible for the bomb attack in Jerusalem earlier in the month to the West Bank village of Azira Shamaliya.) Impatience within the US Administration at the Israeli Government's apparently provocative acts was demonstrated Albright's criticism of Netanyahu's decision, announced in late September 1997, to permit the construction of 300 new homes for Jewish settlers in Efrat in the West Bank. According to some observers, the decision reduced US–Israeli relations to their lowest point since Netanyahu's election in May 1996.

On 28 September 1997 it was announced that, as a result of US diplomatic efforts, Israeli and Palestinian officials had agreed to recommence negotiations in early October. The first round of talks, scheduled to commence on 6 October, would reportedly focus on the outstanding issues of the Oslo Agreement, in particular the opening of an airport and seaport facilities in the Gaza Strip, the establishment of a safe corridor linking the Gaza Strip with the West Bank and the release of Palestinian prisoners being detained by the Israeli authorities. A second round of talks was to commence on 13 October, at which the participants were to address the issues of security co-operation between the Palestinian and the Israeli authorities; the long-delayed redeployment of Israeli armed forces from the West Bank; Israeli expansion and construction of settlements; and questions pertaining to 'final status' negotiations.

In late September 1997 it was reported that the Palestinian authorities had closed some 16 institutions—mainly providers of social welfare services—with links to Hamas, and arrested 'scores' of its officials since the recent bomb attack in Jerusalem. Hamas officials who remained at liberty, however, insisted that the organization's campaign against Israeli civilian targets would continue. In particular, the attempted assassination in the Jordanian capital, Amman, in late September of Khalid Meshaal, the head of the Hamas political bureau in Jordan, provoked warnings of retaliation both before and after official confirmation that agents of the Israeli security service, Mossad, had been responsible for the attack. In order to secure the release of its agents by the Jordanian authorities, Israel was obliged, on 1 October, to free (together with other Arab political prisoners) Sheikh Ahmad Yassin, the founder and spiritual leader of Hamas, who had been sentenced to life imprisonment in Israel in 1989 for complicity in attacks on Israeli soldiers. As had been widely predicted, Israel's release of Sheikh Yassin into Jordanian custody was swiftly followed by his return, on 6 October 1997, to Gaza, where his presence further complicated co-operation between the Israeli and the Palestinian authorities on security issues. The return of Sheikh Yassin to Gaza, where he received an enthusiastic welcome from the local population, also prompted speculation concerning the possible benefits which the Palestinian leadership might derive from increased political co-operation with Hamas. However, it appeared in late October that Yassin, while prepared to promote Palestinian unity, would not approve the acceptance of even the original terms of the Oslo Agreement.

On 7 October 1997 talks resumed between Palestinian and Israeli negotiators on the outstanding issues of the Oslo Agreement, and on the following day the Palestinian President and the Israeli Prime Minister held their first meeting for eight months at the Erez checkpoint between Israel and the Gaza Strip. In mid-November, however, the talks remained deadlocked.

In early December 1997, following further US pressure, it was reported that the Israeli Cabinet had agreed in principle to withdraw troops from an unspecified area of West Bank territory. Some two weeks later, however, it remained uncertain whether Netanyahu would be able to persuade intransigent elements within his Government to endorse this decision. In early January 1998 the US special envoy to the Middle East, Dennis Ross, visited Israel in a further attempt to break the deadlock regarding the redeployment of Israeli armed forces from the West Bank. However, in the second week of January the Israeli Government declared that it would not conduct

such a redeployment until the Palestinian authorities had fulfilled a series of conditions. Among these were requirements that the Palestinian leadership should make a 'systematic and effective' effort to counter terrorism; that it should reduce the strength of its security forces from 40,000 to 24,000; and that the Palestinian National Charter should be revised to recognize explicitly Israel's right to exist. Palestinian officials maintained that these conditions had already been met when the agreement regarding the withdrawal of Israeli forces from Hebron was concluded one year earlier. There was further evidence of a hardening of the Israeli position prior to a summit meeting, scheduled to take place in Washington, DC, in the third week of January. The Israeli Cabinet issued a communiqué detailing 'vital and national interests' in the West Bank which it was not prepared to relinquish. The document asserted that Israel would, among other areas, retain control of the territory surrounding the Jerusalem region. In total, areas listed as 'vital and national interests' to Israel amounted to some 60% of all West Bank territory.

On 20 January 1998 President Clinton held discussions with the Israeli Prime Minister in Washington, DC. During the course of the talks it was reported that the USA was seeking to persuade Israel to effect a second withdrawal of its armed forces from some 12% of the West Bank over a period of 80 days, in exchange for increased co-operation on security issues by the Palestinian authorities. On 25 January, however, Mahmud Abbas reported that direct contacts between the Palestinian delegation and the Israeli Prime Minister had collapsed. President Arafat was reported to be seeking to convene an Arab summit meeting to discuss the deadlocked Middle East peace process.

In early March 1998 it was reported that Israeli armed forces had seized a consignment of weapons that was being smuggled from Jordan across the Dead Sea, prompting speculation that the PNA had begun to store arms in preparation for armed conflict with Israel in the event of an irrevocable collapse of the peace process. On 11 March widespread rioting erupted among Palestinians in the West Bank, following the shooting, by Israeli soldiers, of three Palestinian workers at a military checkpoint, apparently as the result of a misunderstanding.

In late March 1998 it emerged that the USA planned to present new proposals regarding the withdrawal of Israeli armed forces at separate meetings between the US Secretary of State and Arafat and Netanyahu in Europe. On 26 March Dennis Ross arrived in Jerusalem in order to present details of the latest US initiative. Although no details had officially been made public, it appeared that the US proposals would involve an Israeli withdrawal from slightly more than 13% of West Bank territory, and a suspension of settlement construction in return for further efforts by the PNA to combat organizations, such as Hamas, engaged in campaigns of violence against Israeli targets. President Arafat sought an Israeli withdrawal from a further 30% of West Bank territory, but there were indications that he might be prepared to accept an initial withdrawal from some 13% of the West Bank. However, it was evident that, even if agreement could be reached between the two sides, the issue of whether a subsequent withdrawal should take place prior to the commencement of 'final status' negotiations remained far more contentious. In any case, the Israeli Cabinet rejected the reported details of the new US initiative. At the end of March US Secretary of State Albright stated that the peace process was on the verge of collapse, and indicated that the USA was considering ending its involvement as a mediator.

In late April 1998 it emerged that the EU was seeking to play a greater role in the stalled Middle East peace process. On 20 April it was reported that, during a visit to Gaza City, the British Prime Minister, Tony Blair, had obtained the agreement of President Arafat to attend a conference in London, based on the most recent US initiative for restarting the peace process. A summit meeting, hosted by Blair and attended by Netanyahu, Arafat and the US Secretary of State, took place in early May. At its conclusion Albright invited Netanyahu and Arafat to attend a summit meeting with US President Clinton in Washington, DC, on 12 May. The USA had reportedly proposed that the parties could proceed to 'final status' negotiations as soon as the scope of the next Israeli withdrawal from the West Bank had been agreed. However, the Israeli Government subsequently rejected the US initiative in advance of Clinton's direct participation. Further discussions in mid-May, involving the US Secretary of State, achieved no progress.

In early June 1998 the details of the latest US initiative were unofficially disclosed in the Israeli press. Israel would have to agree to 'no significant expansion' of Jewish settlements and relinquish slightly more than 13% of West Bank territory over a period of 12 weeks in exchange for increased Palestinian co-operation. The adoption by the Israeli Cabinet, in late June 1998, of a plan to extend the boundaries of Jerusalem and construct homes there for a further 1m. people prompted incredulity at the US Department of State, and accusations by Palestinian officials that the proposal amounted to a *de facto* annexation of territories that were officially subject to 'final status' negotiations. It was subsequently reported that the Israeli Government was considering holding a popular referendum on a further withdrawal of Israeli armed forces from West Bank territory.

On 7 July 1998 the United Nations General Assembly, in defiance of objections from the USA and Israel, approved a resolution, by a vote of 124–4, to upgrade the status of the PLO at the UN. The new provision allows the PLO to participate in debates, to co-sponsor resolutions, and to raise points of order during discussions on Middle Eastern affairs.

On 19–22 July 1998 Israeli and Palestinian delegations held direct negotiations for the first time since March 1997. They discussed the most recent US initiative to reactivate the peace process, which had been disclosed in June, but the proposal was deemed unacceptable by the Israelis. In late August Netanyahu was reported to have presented a compromise plan to his Cabinet, whereby Israel would effect a full redeployment from a further 10% of the West Bank and a partial withdrawal from 3% of the Judaean desert. Arafat cautiously welcomed the plan on the following day. In late September Netanyahu and Arafat met for the first time since October 1997, at the White House in Washington, DC, and agreed to participate in a peace conference in the USA in the following month. The summit meeting, also attended by US President Bill Clinton, began at the Wye Plantation, Maryland, on 15 October 1998 (see chapter on Israel), and culminated in the signing, on 23 October, of the Wye River Memorandum (see Documents on Palestine, p. 134), which was intended to facilitate the implementation of the Oslo Agreement of September 1995.

Under the terms of the Wye Memorandum, which was to be implemented within three months of its signing, Israel was to transfer a further 13.1% of West Bank territory from exclusive Israeli control to joint Israeli-Palestinian control. An additional 14% of the West Bank was to be transferred from joint Israeli-Palestinian control to exclusive Palestinian control. The Wye Memorandum also stipulated that negotiations with regard to a third Israeli redeployment under the Oslo Agreement should proceed concurrently with 'final status' talks; that the Palestinians should reinforce anti-terrorism measures under the supervision of the US Central Intelligence Agency (CIA); that the strength of the Palestinian police force should be reduced by 25%; that the Palestinians should arrest 30 suspected terrorists (a detailed list was attached to the text); that Israel should carry out the phased release of 750 Palestinian prisoners (including political detainees); that the Palestine National Council (PNC) should annul those clauses of the PLO Covenant deemed to be anti-Israeli; that Gaza International Airport should become operational, with an Israeli security presence; and that an access corridor linking the West Bank and the Gaza Strip should be opened.

The Memorandum was endorsed by the Israeli Cabinet on 11 November 1998, and was approved by the Knesset on 17 November. Three days later Israel redeployed its armed forces from about 500 sq km of the West Bank. Of this area, some 400 sq km came under exclusive Palestinian control for both civil and security affairs. In the remaining 100 sq km the PNA assumed responsibility for civil affairs, while Israel retained control over security. At the same time, Israel released some 250 Palestinian prisoners (although a majority were non-political prisoners) and signed a protocol for the opening of Gaza International Airport. Israel retained the right to decide which airlines could use the airport, which was officially inaugurated by President Arafat on 24 November. However, implementation of the Wye Memorandum did not proceed smoothly, with mutual accusations of failure to observe its terms.

In the weeks prior to a visit to Israel and the Gaza Strip by the US President on 12–15 December, violent clashes erupted in the West Bank between Palestinians and Israeli security forces. One cause of the unrest was a decision by the Israeli Cabinet to suspend further releases of Palestinian prisoners under the terms of the Wye Memorandum, and its insistence that Palestinians convicted of killing Israelis, together with members of Hamas and Islamic Jihad, would not be freed. On 14 December, meanwhile, in the presence of President Clinton, the PNC voted to annul articles of the Palestinian National Charter which were deemed to be anti-Israeli. While the Israeli Prime Minister welcomed the vote, he insisted that several further conditions had to be met before Israel would further implement its commitments under the Wye Memorandum. At a summit meeting between the US President, Netanyahu and Arafat at the Erez checkpoint between Israel and the Gaza Strip on 15 December, Netanyahu reiterated Israel's stance regarding the release of Palestinian prisoners (see above). He further demanded that the Palestinians should cease incitement to violence and formally relinquish plans unilaterally to declare Palestinian statehood on 4 May 1999, the original deadline as established by the Oslo Agreement. (On 14 November 1998 Arafat had reasserted his intention to declare statehood on that date, which in 1999 he repeatedly insisted was 'sacred'.) At the conclusion of the meeting Netanyahu announced that Israel would not proceed with the second scheduled redeployment of its armed forces (under the Wye agreement) on 18 December 1998, claiming once again that the Palestinians had failed to honour the commitments agreed at the Wye Plantation. On 20 December

the Israeli Cabinet voted to suspend implementation of the Wye Memorandum.

In early January 1999 President Arafat was still assessing his options concerning a declaration of Palestinian independence. There were indications that remonstrances from the Israeli Government and intense international pressure had prompted the Palestinian leader to consider a postponement of any unilateral declaration of statehood. In particular, the USA, the countries of the EU, Egypt and Jordan had requested that Arafat delay any declaration, at least until after the Israeli elections, scheduled for 17 May. Moreover, Arafat apparently considered that making such a declaration during the Israeli election campaign might actually strengthen Netanyahu's chances of re-election. Late in the month Arafat indicated that he might postpone a declaration of Palestinian statehood if he were to receive certain assurances from Israel and the international community (notably the USA and EU), particularly with regard to the question of settlement expansion. During a tour of several European countries, Arafat was counselled by EU governments that a declaration of statehood could well result in victory in the Israeli elections for those parties which rejected the Oslo peace process outright. In a further attempt to influence the Palestinian leader, in the second week of February the German Vice-Chancellor and Minister of Foreign Affairs, Joseph Fischer, headed an official EU delegation which visited several Middle Eastern capitals. Their visit to the Palestinian territories coincided with mounting controversy over the provision of EU funding to the Palestinian authorities. (In late April the European Parliament accused both its Commission and the PNA of financial mismanagement, while the Commission denied reports that funds intended for housing projects in Gaza had been used to build luxury apartments for associates of Arafat.) Meanwhile, at the end of January it was reported that more than 80% of deputies in the PLC were opposed to a unilateral declaration of Palestinian statehood on 4 May. In mid-March Arafat embarked on a further round of intensive international missions of diplomacy, beginning with a tour of Gulf states and further visits to European capitals. On 23 March he met privately with President Clinton in Washington, DC. During the meeting it was reported that the US President had promised to press Israel for 'final status' negotiations to be commenced soon after the elections of 17 May. Meanwhile, at a summit meeting in Berlin, Germany, on 26 March, EU leaders issued their firmest commitment to date to support the creation of an independent Palestinian state. The 'Berlin Declaration' called on Israel to conclude 'final status' talks with the Palestinians within one year, and insisted that 'the creation of a democratic, viable, peaceful sovereign Palestinian state on the basis of the existing agreements and through negotiations would be the best guarantee of Israel's security and Israel's acceptance as an equal partner in the region'.

As the deadline for a final decision regarding the 4 May declaration approached, it became increasingly apparent that Arafat would be forced to capitulate under the weight of both international and domestic opinion. During April the Palestinian leader had completed an exhausting world tour, visiting, among other countries, Canada, Turkey, Russia, China, India, Egypt and Jordan. In late April PLO chief negotiators Mahmud Abbas and Saeb Erekat visited Washington, DC, in order to secure certain assurances from the USA in return for an extension of the Oslo deadline. On 27 April the PLO Central Council, together with Hamas representatives, met in Gaza for final discussions. On 29 April 1999 the Council announced a postponement of any declaration on statehood until after the Israeli elections. The announcement was welcomed by Israel, the USA, and EU and Arab states; however, many Palestinians in the West Bank, Gaza Strip and East Jerusalem demonstrated violently against the PLO's decision.

Palestinians extended a cautious welcome to Ehud Barak's victory over Netanyahu in the Israeli premiership elections of 17 May 1999 (see chapter on Israel). PNA officials immediately urged Barak to break the deadlock in the Middle East peace process. However, in his victory address on 18 May, the new Israeli Prime Minister insisted that he would not offer the Palestinians any fundamental concessions, prompting the Palestinian leadership to revise its expectations of immediate progress. Since the elections there has been a Palestinian consensus that a halt to Israel's programme of settlement expansion in the Israeli-occupied territories (which Palestinians maintain is part of an attempt to predetermine the 'final status' borders) must be a precondition for any meaningful resumption of the peace process. On 3 June Palestinians in the West Bank declared a 'day of rage' against continuing settlement expansion there; the mass demonstrations, which were particularly violent in Hebron, followed an announcement in late May that the population of the West Bank's largest Jewish settlement, Ma'aleh Edomin, was to be expanded from 25,000 to 50,000 settlers.

The first direct meeting between Prime Minister Barak and Arafat was held at the Erez checkpoint on 11 July 1999. Despite the seemingly relaxed nature of the talks and the fact that both leaders repeated their commitment to restarting the peace process, Arafat was reported to have been somewhat alarmed by Barak's apparent opposition to full implementation of the Wye Memorandum, his evasiveness on the issue of settlements and his seeming preoccupation with the Syrian track of the peace process (see below). During the second meeting between the Israeli and Palestinian leaders on 27 July at Erez, Barak angered Palestinians by seeking to win Arafat's approval to postpone implementation of the Wye agreement until it could be combined with 'final status' negotiations (thereby implying a delay in further redeployments of Israeli armed forces of 15 months). On 1 August Barak promised to bring forward the release of 250 Palestinian prisoners if Arafat agreed to a postponement. On the same day, however, talks between the Israeli and Palestinian delegations broke down when Arafat rejected the Israeli position, prompting the Palestinian Minister of Parliamentary Affairs, Nabil Amr, to declare there to be a 'major crisis' in the peace talks with Israel. Discussions were resumed in mid-August, when Israel agreed to pursue implementation of the Wye River Memorandum, and on 4 September Barak and Arafat signed the Sharm esh-Sheikh Memorandum (or Wye Two accords—see Documents on Palestine, p. 136), in the presence of US Secretary of State Albright and President Mubarak of Egypt. Under the terms of the Memorandum (which outlined a revised timetable for implementation of the outstanding provisions of the Wye agreement), on 9 September Israel released some 200 Palestinian 'security' prisoners; on the following day Israel effected the transfer of a further 7% of West Bank territory to PNA control. A ceremonial opening of 'final status' talks between Israel and the Palestinians took place at the Erez checkpoint on 13 September; shortly afterwards details emerged that a secret meeting had been held between the Israeli and Palestinian leaders to discuss an agenda for such talks. Meanwhile, the inauguration of the first 'safe passage' between the West Bank and the Gaza Strip was due to take place in early October.

Since Barak's victory in May 1999, one of Arafat's principal concerns has been the Israeli concentration of efforts on the Lebanese and, especially, Syrian tracks of the Middle East peace process. This possible shift of focus away from Israeli-Palestinian talks, with the possibility of a breakthrough in negotiations between Israel and Syria, would leave the Palestinian leadership in an acutely vulnerable and isolated position. In mid-June Arafat was reported to have accused both the Jordanian and Syrian leaders of having turned their backs on the PNA. On 3 August a political crisis developed after the Syrian Deputy Prime Minister and Minister of Defence, Maj.-Gen. Mustafa Tlass, was reported to have made highly insulting remarks about Yasser Arafat – including a claim that Arafat had 'sold Jerusalem and the Arab nation' in peace deals concluded with Israel since 1993 – leading to Palestinian demands for Tlass' resignation, and the issuing, by Fatah, of a death warrant for him.

Palestinians reacted to the death of King Hussein of Jordan on 7 February 1999 with great sorrow. (Of the Kingdom's more than four million inhabitants, an estimated 65% are believed to be of Palestinian origin.) Three days of mourning were declared in the Palestinian territories, while Arafat travelled to Amman to pay his last respects to the man he once called a 'Zionist agent' but later praised as 'the wise man of the Arabs'. Public grief was particularly apparent in the West Bank, which King Hussein had ruled for 15 years until June 1967. For Arafat, the death of Hussein was a political disaster; the King had frequently supported Arafat in times of crisis, especially when the peace process with Israel appeared to be on the verge of collapse. Hamas leaders also paid tribute to King Hussein, recalling his efforts in Septermber 1997 to free Sheikh Ahmad Yassin from an Israeli jail after the failed assassination attempt on Khalid Meshaal (see above). Only a few days after Hussein's death, on 12 February 1999, Arafat surprised many Jordanians by proposing the establishment of a Palestinian-Jordanian confederation. The proposal (which had been put forward as part of a peace initiative in 1985, but was subsequently rejected by Hussein) was not welcomed in Jordan, where it was considered to be somewhat premature, given the fact that the West Bank was still largely occupied by Israel.

INTERNAL AFFAIRS

Elections to a Palestinian Legislative Council (PLC) took place on 20 January 1996. Some 75% of the estimated 1m. eligible Palestinian voters were reported to have participated in the elections, returning 86 deputies to the 89-seat Council. Of the remaining three seats, one was automatically reserved for the president of the Council's executive body – the Palestinian President. The remaining two seats were not filled at the elections of January 1996 and one seat remained vacant in mid-1999. The election of a Palestinian Executive President was held at the same time as the elections to the PLC. Yasser Arafat, who was opposed by one other candidate, received 88.1% of the votes cast in the election and took office as President on 12 February 1996. Deputies returned to the PLC automatically became members of the PNC, the existing 483 members of which were subsequently permitted to return from exile by

the Israeli authorities. The PLC held its first session in Gaza City on 7 March, electing Ahmad Quray as its Speaker.

On 22-24 April 1996 the PNC held its 21st session in Gaza City. At the meeting the PNC voted to amend the Palestinian National Charter by annulling all of the Charter's clauses that sought the destruction of the State of Israel. The PNC also voted to amend all clauses contained within the Charter that were not in harmony with an agreement of mutual recognition concluded by Israel and the PLO in September 1993. On the final day of its meeting the PNC elected a new Executive Committee. In May 1996 it was reported that President Arafat had appointed the members of a Palestinian Cabinet. The appointments were approved by the PLC in July.

In late April 1997 President Arafat's audit office reported the misappropriation by PNA ministers of some US $326m. of public funds. Khalid al-Qidram, the General Prosecutor of the PNA, who promptly resigned in response to the findings of the audit office, was reportedly placed under house arrest in early June. At the end of July a parliamentary committee, appointed by Arafat to conduct an inquiry into the affair, concluded that the Cabinet should be dissolved and that some of its members should be prosecuted. In early August the Cabinet submitted its resignation, but this was not accepted by Yasser Arafat until December. However, the Cabinet was to remain in office in a provisional capacity until new ministerial appointments were made in early 1998. There was further disruption to the Cabinet in March and April 1998, following the deaths of the Minister of Tourism, Elias Furayz, and the Minister of Awqaf (Religious Endowments), Hassan Tahboob. Arafat's long-awaited new Cabinet was announced on 5 August and was promptly denounced by all sides. Only one prominent minister had been completely removed from the Cabinet, many others assuming alternative responsibilities or becoming ministers of state without portfolios. (The size of the Cabinet was increased significantly by the appointment of a number of PLC members to minister-of-state status.) Despite the immediate resignations of the newly-appointed Ministers of Higher Education (Hanan Ashrawi) and Agriculture (Abd al-Jawad Saleh), on 10 August the new Cabinet was approved by 55 votes to 28 in the PLC. Although the Cabinet was criticized by officials of the principal international organizations granting funds to the PNA, in November donors agreed to grant the PNA more than US $3,000m., to be disbursed over the next five years.

In addition to persistent allegations of corruption within the PNA, President Arafat himself has been the target of criticism from within the Palestinian leadership, which has accused him of autocracy. In October 1997 Haider Abd ash-Shafi, who had played a prominent role in the peace negotiations with Israel and who was reportedly held in high popular esteem, resigned in protest at the style of Arafat's leadership and at the way in which talks with Israel were being conducted. It was reported in mid-November that potential successors to Arafat had initiated political manoeuvres amid enduring rumours that the President was in poor health. Among those cited as possible successors were Djibril Rajoub, the head of the Palestinian preventive security services in the West Bank, and Muhammad Dahlan, his counterpart in the Gaza Strip. It has frequently been claimed that the Palestinian security forces resort to intimidation and torture in their treatment of Palestinian detainees. Such allegations were contained in a report published by a prominent human rights organization, Human Rights Watch, in mid-1998. In February, in its annual report, the Palestinian Independent Commission for Citizens' Rights accused security personnel of the mistreatment of prisoners in Palestinian jails. In the same month the results of the first census conducted by the Palestinian authorities, in December 1997, were released.

In March 1998 the PLC threatened to organize a vote of 'no confidence' in President Arafat's leadership, in protest at alleged corruption within the PNA, the long delay in approval of the 1998 budget and the failure to hold local government elections. There was speculation that the PNA had postponed these elections because it feared that they would reveal widespread dissatisfaction over the lack of progress in the peace process with Israel. The PLC renewed its threat in mid-1998, when it issued an ultimatum to the Palestinian President and the Cabinet, demanding that they respond to allegations of corruption and mismanagement and approve budget proposals for 1998 within two weeks.

In February 1998 President Arafat took firm action to suppress popular demonstrations in support of Iraq, which had exposed itself to threats of military action by the USA in a dispute over UN-conducted weapons inspections. It was reported that many members of Arafat's own political movement, Fatah, had been arrested for disregarding a ban on such demonstrations, and that the publication and broadcasting of reports in support of President Saddam Hussain of Iraq had been forbidden.

In March 1998 US officials reportedly confirmed that the US CIA was assisting the Palestinian security forces in the spheres of espionage, information-gathering and interrogation, in an attempt to reassure the Israeli Government of their ability to take effective action against groups involved in attacks on Israeli targets. Later in the month the death, in mysterious circumstances, of Muhi ad-Din Sharif, the second-highest ranking member of the military wing of Hamas, the Izz ad-Din Qassim Brigades, prompted accusations by Hamas of PNA collusion with Israeli security forces in his murder, and fears that a new wave of retributive bomb attacks would be unleashed against Israeli targets. However, a succession of conflicting accusations and confessions surrounding Sharif's murder (including a number which alleged that it was the result of an internal dispute amoung the organization's leadership) appeared to defuse the immediate tensions in the region. In April Hamas' political leader in Jordan retracted the allegation that the PNA had collaborated with Israel. In the same month it was reported that Hamas had become the dominant political force in Palestinian universities, where the organization claimed to command the allegiance of some 40% of students.

In August 1998 the Palestinian Ministry of the Interior dissolved the Palestinian Ahd Party, the Palestinian Labour Party, the Ahrar Party, and the Popular Forces party, claiming that, as small individual entities which were unsuccessful in the previous legislative elections, the groups were not financially viable. According to a spokesman at the Ministry of the Interior, plans to merge small parties with similar ideologies were announced, in order to increase activity.

Meanwhile, during September 1998 the PNA chief negotiator at the peace process talks and Minister of Local Government, Saeb Erekat, and the PNA Minister of State for the Environment, Yousuf Abu Saffieh, were both persuaded by Arafat to withdraw their resignations, tendered in protest at inefficiency and incompetence within the PNA. On 19 October the PLC reconvened after the summer recess; topics of discussion included problems in the health service, increased instances of illegal water tapping owing to the continuing drought, and further accusations of financial mismanagement by the PNA (some US $70m. in customs revenues was alleged to have been collected at border crossings but never deposited in the PNA treasury).

On 24 October 1998, shortly after the signing of the Wye River Memorandum, the PNA detained 11 journalists for attempting to obtain an interview with the spiritual leader of Hamas, Sheikh Ahmad Yassin (who was placed under house arrest on 29 October). On the same day the Palestinian authorities also arrested the outspoken al-Asqa cleric Sheikh Hamid Bitawi and Islamic Jihad's chief spokesman for publicly criticizing the Wye agreement. In the weeks following the Wye agreement there was a steady erosion of press freedom in the West Bank and the Gaza Strip: several radio and television stations as well as press offices were closed down by the PNA, and journalists and cameramen were imprisoned for crimes ranging from 'endangering the national interest' to reporting 'illegal' demonstrations. There was also a marked increase in self-censorship in the pro-government printed and electronic media and at the radio and television stations controlled by the PNA.

The PNA's dubious human rights record remained a major concern for Palestinians in 1999. In January the PLC approved a motion urging an end to political detention and the release of all those imprisoned on exclusively political charges. (The motion demanded the formation of a special committee to assess the case of every political prisoner in the Palestinian territories and submit recommendations as to which prisoners should be released; this committee was duly appointed on 15 February, and was to be headed by the Minister of Justice.) The PNA responded to the PLC's immediate demands by releasing 37 political prisoners (36 Islamists and one PFLP member). However, on 24 January scores of detainees linked to Hamas and Islamic Jihad began a hunger strike in Jericho and Nablus, in protest at their continued detention without trial by the Palestinian authorities. During early and mid-February thousands of Palestinians — mostly Hamas supporters — demonstrated in support of the detainees. On 6 February some 3,000 protesters marched to the PNA headquarters, chanting slogans criticizing the PNA's alleged 'subservience to Israel and the CIA'. (Under the terms of the Wye agreement, the US CIA was charged with monitoring the PNA's compliance with the security provisions as part of a trilateral 'watchdog' committee involving the PNA and Israel; the committee was to verify the extent to which the PNA was engaged in the arrest and trial of suspected terrorists, the collection of illegal weapons and the prevention of 'incitement to violence'.)

Also in February 1999 Ghazi al-Jabali, a Gaza-based chief of police known as an outspoken opponent of Hamas, alleged that that organization had received some US $35m. from Iran in order to carry out 'suicide bomb' attacks against Israeli targets in order to undermine the prospects of Israeli moderates and assist Netanyahu's May 1999 election campaign (see chapter on Israel). However, both Iran and Hamas leaders vehemently denied the allegations. Relations between the PNA and Hamas were further strained following the murder of a Palestinian intelligence officer in Rafah on 1 February. On 10 March a security agent and former member of Hamas' military wing was sentenced to death for the attack, while two accomplices received lengthy prison sentences. The verdict

provoked serious clashes between Palestinian police and protesters in the Gaza Strip, during which two teenagers were shot dead by police and Arafat was forced to curtail an official visit to Jordan in order to address the domestic security crisis.

Throughout May 1999 lawyers and jurists in the West Bank and the Gaza Strip organized a series of strikes and protests against the alleged 'virtual collapse of the Palestinian judicial system'. The protests followed an appeal made to Yasser Arafat by the head of the Palestinian Bar Association, Abd ar-Rahim Abu an-Nasser, to resolve the problem of continuing lawlessness in Palestinian society, to increase the number of lawyers in the territories and improve their legal training, and to appoint a new General Prosecutor of the PNA (the post having been vacant for many months). On 19 June Zuheir as-Surani was appointed General Prosecutor.

In early June 1999 security surrounding Yasser Arafat was tightened, after a group of Palestinian dissidents calling themselves 'the Free Officers and the Honest People of Palestine' released a statement in which they accused leading Palestinian officials of corruption and of collaboration with Israel, and indirectly threatened to assassinate the President. Nine arrests were made by the security forces following the statement. On 1 August a Palestinian national dialogue conference was held in Cairo, Egypt, and included representatives of Fatah and PFLP organizations. On 22–23 August Arafat and the DFLP's Secretary-General, Naif Hawatmeh, met, in Cairo, for the first time since 1993. At the end of the month representatives of nine Palestinian political factions, meeting in Ramallah, agreed on an agenda for a comprehensive national dialogue; Hamas and Islamic Jihad, however, refused to enter the dialogue. (In late August the Palestinian authorities were reported to have arrested several suspected activists of these two organizations in the West Bank and the Gaza Strip.)

Economy

Revised for this edition by the Editor

INTRODUCTION

Economic conditions in the Gaza Strip, the West Bank and East Jerusalem (see Occupied Territories, p. 662) have significantly deteriorated since the signing of the Israeli–Palestinian Interim Agreement on the West Bank and the Gaza Strip (the 'Oslo Agreement') in September 1993. As illustrated below, the dominant characteristic of these economies has been their dependence on Israeli markets and their consequent vulnerability to the closures imposed at various times during 1993–99 by the Israeli authorities, mainly in response to attacks on Israeli civilians by members of Palestinian organizations which reject the Oslo Agreement. In November 1998 an international airport was inaugurated at Gaza; however, further measures to reduce the dependence of the Palestinian economy, such as the opening of seaport facilities in the Gaza Strip, and of a safe corridor between the Strip and the West Bank, had not materialized by mid-1999, owing to the prolonged delay in implementing the Oslo Agreement. In 1998 the Palestinian Central Bureau of Statistics (PCBS) estimated that 11.5% of the labour force in the West Bank and 20.9% of the labour force in the Gaza Strip were unemployed. Corresponding figures for underemployment were, respectively, 8.4% and 2.3%. Other sources indicated that in March 1997 Israeli border closures had cost the Palestinian economy some US $5m.–$6m. per day, amounting, on an annual basis, to more than the sum of funds pledged—but not necessarily disbursed—to the Palestinian National Authority (PNA) by international donors.

Perhaps the strongest link with the Israeli economy, and the one which proved the most difficult to break, was the employment that Palestinians found within the 'Green Line', which provided many families with their livelihoods. In 1992 some 35% of the West Bank's and 45% of the Gazan labour force was employed in Israel, mainly in unskilled and semi-skilled occupations—especially in the construction industry. In 1993, following a series of attacks on Jews within Israel, the Israeli Prime Minister, Itzhak Rabin, ordered the closure of Israel's borders with the West Bank and the Gaza Strip, preventing an estimated 70,000 West Bank and some 50,000 Gazan Palestinians from travelling to work. Significantly, controls on cross-border movement were relaxed only after considerable pressure from Israeli employers; the 'reserve labour force' of some 100,000 unemployed Israelis had been reluctant to do the Palestinians' work, which was often of a low-paid, menial nature.

Since February 1996 Israel and East Jerusalem have been closed to most Palestinian residents of the West Bank and the Gaza Strip. As the closures affect movement in both directions, the economy of East Jerusalem (see Occupied Territories, p. 662), deprived of West Bank markets for its goods and services, has all but collapsed. Closures have had a similarly disruptive effect within the West Bank, since they restrict communications between Palestinian towns via Israeli-controlled Jewish areas of the West Bank. Such areas comprise most of the territory of the West Bank outside Palestinian population centres.

POPULATION

According to the final results of the first census conducted by the PCBS, the Palestinian population of the West Bank and Gaza Strip totalled 2,895,683 (males 1,470,506; females 1,425,177) at 9 December 1997. Of the total population, 1,663,267 were resident in the West Bank (excluding East Jerusalem), 1,022,207 in the Gaza Strip and an estimated 210,209 in East Jerusalem. According to the census, 54% of the population (excluding the 16% of the population resident in refugee camps) were located in urban areas, and 30% in rural areas.

LABOUR FORCE

At December 1997, according to the PCBS, the strength of the Palestinian labour force (excluding East Jerusalem) aged 10 years and over was 602,092: 400,637 in the West Bank and 201,455 in the Gaza Strip. The rate of unemployment was 14.7% in the West Bank and at 24.2% in the Gaza Strip. Corresponding figures for the whole of 1998 were, respectively, 11.5% and 20.9% of the labour force aged 15 years and over. The labour survey conducted in the third quarter of 1997 indicated that there were more Palestinians working in Israel than the number of work permits issued by the Israeli authorities, and that the importance of Israel as a source of employment had declined in recent years. In July 1997 the Israeli authorities issued 60,000 work permits to Palestinians, the highest number for the year to July. All permits were cancelled in the month of August, and for most of the month of September. After 21 September 33,000 work permits were issued to Palestinians by the Israeli authorities.

NATIONAL ACCOUNTS

In 1997, according to the PCBS, the gross national product (GNP) of the West Bank and Gaza Strip, measured in current prices, totalled US $4,906m. Net factor income from abroad comprised $625m. in wage income, mainly from Palestinian workers in Israel, and $108m. in net property income from abroad. Gross domestic product (GDP) in market prices amounted to $4,173m. GDP at factor cost totalled 10,602m. new Israeli shekels in 1996. Of this total, private services (including trade, rental services and transport) contributed 38%, public services (including central and local government) 23%, industry (manufacturing, quarrying and the supply of utilities) 16%, agriculture and fishing 14%, and construction 9%. On the basis of these figures and surveys by the PCBS of the population in 1997, average GNP per head in the West Bank and the Gaza Strip amounted to $1,779 in that year, while average GDP per head was $1,537. On the basis of these figures and conjectural price deflators, the World Bank has calculated that Palestinian GDP increased by 10% in real terms in 1994, but declined by 6% in 1995 and remained static in 1996. Real GNP rose by an estimated 8% in 1994, declining by 5% in 1995 and by 1% in 1996. On the same basis, the World Bank estimates that real GDP per head increased by 4% in 1994, but fell by 12% in 1995 and by 6% in 1996. Real GNP per head increased by 2% in 1994, but declined by 10% in 1995 and by 7% in 1996. Over the period 1994–96 real GDP per head fell by 14%, and real GNP per head by 16%. According to IMF estimates (expressed in Israeli new shekels at constant 1986 prices), in 1995–97 the GNP of the West Bank and the Gaza Strip declined by an annual average of 0.8%, while per-caput GNP declined by an annual average of 5.4% and GDP declined by an annual average of 1.3% over the same period.

CONSUMER PRICES

In 1998, according to the PCBS, annual consumer price inflation in the Palestinian economy averaged 5.6%, compared with 7.6% in 1997. In the Gaza Strip an annual average inflation rate of 5.9% was recorded in 1998, while inflation averaged 4.9% in the West Bank and 6.6% in East Jerusalem. The highest price increases in the Palestinian territories in 1998 were for clothing (8.1%) and food (7.3%).

AGRICULTURE

According to the PCBS, agriculture and fishing contributed 7.2% of GDP in the West Bank and the Gaza Strip in 1997. At the census conducted by the Palestinian authorities in December 1997, agricul-

ture, hunting, forestry and fishing were reported to employ 10.7% of the total labour force of the West Bank (excluding East Jerusalem) and the Gaza Strip. Citrus fruits are the principal export crop, and horticulture also makes a significant contribution to trade. Other important crops are olives, tomatoes, cucumbers, grapes and potatoes. The livestock sector is also significant. Agro-industrial production is focused on the dairy and olive oil sectors. Although about one-half of Palestinian exports are derived from agricultural production, the sector remains orientated towards supplying local needs. Like other sectors of the economy, agricultural production and export trade are characterized by a high degree of dependence on Israel, and consequent vulnerability to Israeli border policy: some 60% of the Gaza Strip's agricultural production is exported via Israel as originating in Israel. One example is the lucrative, export-orientated production of carnations in Gaza. In 1994, of total production of 120m. flowers, only 2m. were exported directly to European markets, the remainder being distributed through Israel. Border closures and delays in the issue of transport permits have a devastating effect on the sector. Carnation production is also heavily reliant on water resources controlled by the Israeli authorities.

Expansion of agricultural production in the West Bank and Gaza Strip is severely limited by problems with irrigation. Traditionally, wells and cisterns have accounted for some 66% of all water consumed, highland springs for some 27% and surface run-off water and water purchased from the Israeli water utilities for the remainder. Some 75% of annual rainfall is lost to evaporation. Agriculture uses about 70% of water consumed in the West Bank, but only 4% of the total land area in the West Bank is irrigated, compared with 45% within Israel. In the mid-1990s Palestinian agricultural production consumed some 152m. cu m of water annually, compared with consumption (for the same purpose) of 56m. cu m by the approximately 120,000 Jewish settlers in the West Bank. In the Gaza Strip irrigation of the important citrus crop has been affected by rising salinity in the ground-water supply. In central Gaza ground-water salinity levels are three times as high as the World Health Organization's recommended safety level. The area also suffers from a water deficit. Estimated annually at approximately 50m. cu m, the water deficit could reach 150m. cu m by 2000. It was reported that a drought during the 1998/99 season had seriously affected the Palestinian economy.

The fishing industry, formerly one of the Gaza Strip's most profitable activities, has been severely constricted by Israeli military control over the area in which Palestinian boats may fish, including the prohibition of any fishing beyond a 30-km radius, established by the Israeli authorities.

INDUSTRY

According to Palestinian sources, industrial activity has contributed, on average, about 10% of Palestinian GDP since the 1970s, employing some 9% of the West Bank labour force and 14% of the Gazan labour force over the same period. The IMF and the Palestinian Economic Council for Development and Reconstruction (PECDAR) estimated the contribution of industry (excluding construction) to Palestinian GDP at 8.2% in 1994. According to the PCBS, industry (mining and quarrying, manufacturing, electricity and water supply, and construction) contributed 24.6% of the GDP of the West Bank and the Gaza Strip in 1996, and 30.0% in 1997. At the census conducted in December 1997 the sector (including gas utilities) employed 40.9% of the labour force in the West Bank (excluding East Jerusalem) and the Gaza Strip.

A World Bank study, conducted in 1993, indicated the potential competitiveness, at free-market prices, of a sample of Palestinian enterprises. Food-processing and the production of textiles, footwear, cosmetics, cigarettes, household detergents and construction materials have all been identified as suitable for expansion through import-substitution. According to the PCBS, manufacturing enterprises in the West Bank and Gaza Strip totalled 11,559 in 1994, including 39 foreign-owned companies. According to the IMF and PECDAR, the contribution of the construction sector to Palestinian GDP in 1994 was 16.8%. The PCBS estimated the contribution of the construction sector to the GDP of the West Bank and the Gaza Strip at 8.4% in 1996, and 10.0% in 1997. According to the PCBS, the construction sector employed 25.6% of the labour force in those areas (excluding East Jerusalem) in 1997.

The frequent closure of the West Bank and the Gaza Strip by the Israeli authorities in 1993–99 has prompted the development of free-trade industrial zones on the Palestinian side of the boundaries separating Israel from the West Bank and the Gaza Strip. Israeli and Palestinian enterprises can continue to take advantage of low-cost Palestinian labour at times of closure, and the zones also benefit from tax exemptions and export incentives. Small and medium-sized enterprises dominate production in the three Gazan and six West Bank industrial zones. At the Erez zone, adjacent to the crossing between Israel and the Gaza Strip, textile production has emerged as a significant industry. In January 1998 the World Bank announced a loan of US $10m. to the PNA for the development of the Gaza Industrial Estate project. The second phase of construction of the estate, which required total financing of $84.5m. and was expected to create as many as 50,000 jobs in the Gaza Strip, was due to commence in mid-1999. Other donors included the International Finance Corporation and the European Investment Bank.

SERVICES

In 1997 the services sector contributed 63% of the GDP of the West Bank and the Gaza Strip. Within the services sector, real estate and business services contributed 16.0% of GDP, and wholesale and retail trade 13.4%. At the census conducted in December 1997 the services sector employed 48.3% of the total labour force of the West Bank (excluding East Jerusalem) and the Gaza Strip. The census reported that 13.7% of the total labour force were employed in the wholesale and retail trade and repair branch of the services sector, and almost 12% in public administration and defence and compusory social security.

In 1991 the official financial services sector, comprising mainly banks and insurance companies, was estimated to employ slightly more than 1% of the Palestinian labour force. In February 1997 a stock exchange, the Palestine Securities Exchange (PSE), was inaugurated. With an initial listing of 23 companies, the aim is to develop the PSE as the foundation of a Palestinian capital market and to facilitate the investment of expatriate funds.

EXTERNAL TRADE

Israel remains by far the largest market for goods and services from the West Bank. Trade with Israel represents some 75% of exports from, and 87% of imports to, the Territories. Prior to the *intifada*, in 1987, the West Bank recorded a trade deficit with Israel of US $420.2m.; the value of exports to Israel amounted to $160.5m., compared with imports worth $580.7m. During 1988–90 exports of goods and services from the West Bank decreased at an average annual rate of 16%, and the overall trade deficit was aggravated by the 1990–91 crisis in the Persian (Arabian) Gulf region, when the closure of borders and reduced demand affected the export of agricultural goods and manufactures to Arab markets. In 1992 the Gaza Strip recorded a trade deficit with Israel of $264.7m. (exports $63.8m., imports $328.5m.). In its trade with all countries the Gaza Strip recorded a deficit of $286.9m. (exports $79.3m., imports $366.2m.) in 1992. The value of Gazan exports to Jordan in 1992 amounted to $11.9m., while that of imports from Jordan was negligible. In its trade with all other countries, the Gaza Strip recorded a deficit of $34.1m. (exports $3.6m., imports $37.7m.) in 1992. According to the Palestine Monetary Authority (PMA), in 1997 the West Bank and the Gaza Strip recorded a trade deficit of an estimated $1,775m., and a deficit of $755m. on the current account of the balance of payments. During that year, according to PCBS figures, the value of exports (f.o.b.) to Israel was estimated at $358m., while the value of imports (c.i.f.) amounted to an estimated $1,803m.

In January 1998 Israel opened its borders (in accordance with the 1994 economic agreement signed with the PLO), allowing Palestinians to export various items of agricultural produce to Israel. According to the UN Special Co-ordinator in the Occupied Territories, the volume of exports from the West Bank and the Gaza Strip rose by 37.3% in the first six months of 1998, while that of imports increased by 32.4%.

PUBLIC FINANCES

In January 1998 the PNA drafted a Palestinian Development Plan for the period 1998–2000, envisaging investment expenditure of US $3,500m. The budget, expected to be completely financed by donor countries, was to allocate $1,690m. to infrastructure projects, $856m. to the public sector, $604m. to manufacturing and $304m. to private institutions. According to data released by the Israeli Ministry of Foreign Affairs in July 1997, more than 60% of the PNA's revenues are derived from tax transfers by the Israeli authorities. In the 1996 budget projected capital expenditure was $160m. In 1997 the budget of the Palestinian Authority forecast revenues totalling US $816m. and current expenditure of $866m. The aim of the Palestinian Authority is to achieve current budget surpluses from 1998, and to focus public expenditure on health, education and on investment in infrastructure. From 1998 capital expenditure under the Palestinian public investment programme was to be included in the Palestinian Authority's budget. The 1999 budget forecast revenues totalling $1,589m. and total expenditure of $1,740m., projecting an increased deficit of $151m.

Sanctions imposed on the West Bank and the Gaza Strip by the Israeli authorities in August 1997 included the partial suspension of transfers of tax revenues. One month after the closures, according to the World Bank, losses in the West Bank and Gaza Strip were

reported to total \$4m.–\$5m. per day, and tax and customs transfers suspended by the Israeli authorities amounted to \$65m. The PNA was reported to have been obliged to borrow heavily from local banks in order to pay the salaries of its 81,000 employees. Some funds were, in fact, released in August and September 1997, and Israel announced in October that it would release the balance of suspended transfers.

ENERGY

The power sector — electricity and water supply — contributed 0.9% of the GDP of the West Bank and the Gaza Strip in 1997. At the census conducted in December 1997, electricity, gas and water utilities employed 0.2% of the total labour force of the West Bank (excluding East Jerusalem) and the Gaza Strip. The Palestinian Energy Authority (PEA) has been established to develop the energy and power sectors. Apart from the Jerusalem District Electric Company (which supplies the cities of Jerusalem, Jericho, Bethlehem, Ramallah and Al-Birah), there is no utility supplying electric power, although it was agreed to establish the Palestine Electricity Company in August 1997. In Gaza the distribution of electric power supply is the responsibility of 16 municipalities and village councils, which purchase electricity from the Israel Electric Corporation (IEC). In the West Bank, distribution is the responsibility of 252 municipalities and village councils, of which 110 purchase electricity from the IEC, 67 receive partial supplies from village generator systems, and 75 have no formal supplies.

AID AND ECONOMIC DEVELOPMENT

Following the signing of the Declaration of Principles on Palestinian Self-Rule in the Occupied Territories in September 1993, hopes were raised in the West Bank that future economic reconstruction would be financed from abroad. A World Bank report on the Occupied Territories estimated that a 10-year programme to construct essential infrastructure and social facilities would cost US \$3,000m. The Palestine Liberation Organization (PLO), with a more ambitious Palestine Development Programme, estimated that the reconstruction of the Palestinian economy during 1994–2000 would cost \$11,600m. The planners expected to generate \$2,000m. from domestic savings, and the remainder from external donors; however, it was unclear how much of the total would be allocated to the West Bank if the plan were to be implemented. Following the signing of the Declaration of Principles in 1993, international donors pledged to invest some \$2,900m. in the Gaza Strip and the West Bank. However, only \$1,348m. of the \$2,490m. pledged between 1994 and 1996 actually reached the Palestinian authorities, owing to the vicissitudes of the peace process and to donors' concerns about the accountability of the Palestinian institutions involved. In December 1997, following a meeting of the Consultative Group of donors (to the Palestinian authorities), held under the auspices of the World Bank, a three-year economic development plan, involving projected expenditure of some \$2,600m., was approved. The scheme aimed to rehabilitate the Palestinian economy and to reduce dependence on Israel. The most substantial investments that the plan envisaged were to be made in infrastructure projects, including improvements to irrigation, road construction, and waste disposal. Private-sector projects, including agriculture and tourism, would also receive funds. The donor countries committed some \$750m.-worth of aid for 1998, which would help to finance projects during the initial year of the development plan. For 1999 the donor countries pledged aid worth about US \$770m.; in May the PNA requested an additional \$40m. in emergency aid, following the 1998/99 drought.

In January 1998 the European Commission reported that member states and institutions of the European Union had pledged 1,700m. European currency units to the Palestinian authorities since the signing of the Oslo Agreement in September 1993. Total international donor commitments since September 1993 amounted to US \$2,800m.

According to a study by the World Bank, programmes operated by the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA, see p. 232) form the basis of the social welfare system in the West Bank and the Gaza Strip, since about 41% of the population there are registered refugees. A number of these programmes are directed at particularly vulnerable groups, such as the aged and the physically disabled. Palestinians working for Israeli employers are required to participate in Israel's national social security scheme. However, taxes deducted from Palestinian workers finance only very limited benefits to Palestinians because residency in Israel is a prerequisite for most Israeli schemes.

Health services in the West Bank (excluding those areas where jurisdiction has been transferred to the PNA) are provided by the Israeli Civil Administration, UNRWA, private voluntary organizations and private, profit-making organizations. Institutions operated by the Israeli Civil Administration in the West Bank derive from Jordanian systems. Until 1974, when a government health insurance scheme was introduced, residents of the West Bank were entitled to free health care from these facilities. Now only members of the government health insurance scheme may receive comprehensive care at government facilities without charge. Pre-natal care and preventive services are provided by the Civil Administration free of charge to all children under the age of three years. UNRWA has traditionally provided basic health care free of charge to some 940,000 registered refugees in the West Bank and the Gaza Strip. It has also reimbursed refugees for 60% of the cost of hospital treatment obtained outside the UNRWA system. In 1991 UNRWA spent about US \$8m. on health programmes in the West Bank, and \$12m. on those in the Gaza Strip. UNRWA provides its services through a network of 33 health centres in the West Bank, where some 61 physicians care for about 400,000 refugees. UNRWA also operates feeding centres, dental clinics, maternity centres and a 34-bed hospital. Nine health centres in the Gaza Strip provide UNRWA services. There are 82 physicians serving more than 500,000 refugees. According to the PCBS, there were nine PNA-operated hospitals in the West Bank, and five in the Gaza Strip. In the combined territories more than 700 physicians (about one-third of all physicians practising there) work at clinics in the voluntary and private sectors.

In August 1997 UNRWA was confronted by a financial crisis (a budget deficit of some \$70m. in 1997), which obliged the agency to give notice of its intention to abolish free education services, cancel 218 teaching jobs, suspend job vacancies, combine school classes, introduce charges for books and medicine, and cancel treatment allowances and special financial support. In October 1997 the Commissioner-General of UNWRA disclosed that the organization was close to bankruptcy, and urged international donors to address a crisis in morale in the Gaza Strip, brought about by severe economic and social hardship.

Statistical Survey of the West Bank and the Gaza Strip

Directory

Administration

PALESTINIAN NATIONAL AUTHORITY*
(September 1999)

Appointed in May 1994, the Palestinian National Authority (PNA) has assumed some of the civil responsibilities formerly exercised by the Israeli Civil Administration in the Gaza Strip and parts of the West Bank.

CABINET

(September 1999)

Minister of Civil Affairs: JAMIL AT-TARIFI (Fatah).

Minister of the Interior: AHMAD TAMIMI (Fatah).

Minister of Planning and International Co-operation: NABIL SHAATH (Fatah).

Minister of Finance: MUHAMMAD ZOHDI AN-NASHASHIBI (Independent).

Minister of Justice: FURAYH ABU MIDDAYN (Fatah).

Minister of Sports and Youth: (vacant).

Minister of Culture and Information: YASSER ABD AR-RABBUH (Democratic Party).

Minister of Awqaf (Religious Endowments): (vacant)

Minister of Local Government: Dr SAEB EREKAT (Fatah).

Minister of Social Affairs: INTISAR AL-WASIR (Fatah).

Minister of Housing: ABD AR-RAHMAN HAMAD (Fatah).

Minister of Posts and Telecommunications: IMAD AL-FALLOULI (Islamist).

Minister of Public Works: AZZAM AL-AHMAD (Fatah).

Minister of Supply: ABD AL-AZIZ SHAHEEN (Fatah).

Minister of Health: RIYAD AZ-ZAANOUN (Fatah).

Minister of Education: (vacant).

Minister of Higher Education: MUNZER SALAH.

Minister of Transport: ALI AL-KAWASMEH (Fatah).

Minister of Economy and Trade: MAHER AL-MASRI (Fatah).

Minister of Industry: SAADI AL-KARNAZ.

Minister of Labour: RAFIK AN-NATSHA.

Minister of Tourism and Antiquities: METRI ABU ATTIA.

Minister of Agriculture: HEKMAT ZAID.

Minister of Bethlehem 2000 Affairs: NABIL QAIS.

Minister of Parliamentary Affairs: NABIL AMR.

Ministers of State: HISHAM ABD AR-RAZZAK (Prisoners' Affairs), ZIAD ABU ZIAD (Jerusalem Affairs), HASSAN ASFOUR, TALAL SADR, YOUSUF ABU SAFFIEH (Environment), SALAH AT-TAMARI.

President

President: YASSER ARAFAT (took office 12 February 1996).

The first election for a Palestinian Executive President was contested on 20 January 1996 by two candidates: Yasser Arafat and Samiha Khalil. Arafat received 88.1% of the votes cast and Samiha Khalil 9.3%. The remaining 2.6% of the votes cast were spoilt.

Legislature

PALESTINIAN LEGISLATIVE COUNCIL

Speaker: AHMAD QURAY

General Election, 20 January 1996

Party	Seats
Fatah	55
Independent Fatah	7
Independent Islamic	4
Independent Christian	3
Independent	15
Samaritan	1
Other	1
Total	86*

* The total number of seats in the Palestinian Legislative Council—including one which is automatically reserved for the Palestinian President—is 89. Two seats were not filled at the general election and one remained vacant in September 1999.

The first Palestinian legislative elections took place in 16 multi-member constituencies—including East Jerusalem—on 20 January 1996. Some 75% of the estimated 1m. eligible Palestinian voters were reported to have participated in the elections. During the approach to the elections European Union observers criticized the election commission appointed by Yasser Arafat—and, indeed, Arafat himself—for late alterations to electoral procedure, which, it was felt, might prejudice the prospects of some candidates at the forthcoming polls. Some irregularities were reported to have occurred during voting, but these were not regarded as sufficiently serious to compromise the final outcome. The elections were officially boycotted by all sections of the so-called Palestinian 'rejectionist' opposition, including Hamas and Islamic Jihad, although Hamas did endorse a list of 'approved' candidates for those voters who chose not to boycott the elections. All deputies elected to the Legislative Council automatically became members of the Palestine National Council, the existing 483 members of which were subsequently permitted to return from exile by the Israeli authorities, in order, among other things, to consider amendments to the Palestinian National Charter, which has in many ways been superseded by the agreements concluded between Israel and the PLO since September 1993.

Political Organizations

Palestine Liberation Organization (PLO): Hammam ash-Shaat, Tunis, Tunisia; since the conclusion of the Cairo Agreement on the

Gaza Strip and Jericho, signed by the PLO and Israel on 4 May 1994, the PLO has been in the process of transferring its administrative infrastructure and its officers from Tunis to the Gaza Strip, where its headquarters are in Gaza City; f. 1964; the supreme organ of the PLO is the Palestine National Council (PNC), while the Palestine Executive Committee deals with day-to-day business. Fatah (the Palestine National Liberation Movement) joined the PNC in 1968, and all the guerrilla organizations joined the Council in 1969; Chair. YASSER ARAFAT.

The most important guerrilla organizations are:

Fatah (The Palestine National Liberation Movement): f. 1957; the largest single Palestinian movement, embraces a coalition of varying views from conservative to radical; Leader YASSER ARAFAT; Sec.-Gen. FAROUK KADDOUMI; Central Cttee (elected by Fatah's 530-member Congress, 31 May 1980): YASSER ARAFAT, SALAH KHALAF, FAROUK KADDOUMI, MAHMUD ABBAS, KHALID AL-HASSAN, HAYIL ABD AL-HAMID, MUHAMMAD GHUNAIM, SALIM AZ-ZANUN, RAFIQ AN-NATSHAH, HANI AL-HASAN.

Popular Front for the Liberation of Palestine (PFLP): Box 12144, Damascus, Syria; f. 1967; Marxist-Leninist; publ. *Democratic Palestine* (monthly, in English); Leader GEORGE HABASH; Dep. Leader ABU ALI MOUSTAFA; in 1994 the PFLP announced the formation of the Democratic National Action Front (DNAF), which it described as an open political, popular forum, an extension of the PFLP.

Democratic Front for the Liberation of Palestine (DFLP): Damascus, Syria; Marxist; split from the PFLP in 1969; Sec.-Gen. NAIF HAWATMEH.

Arab Liberation Front (ALF): f. 1969; Iraqi-backed; Leader MAHMOUD ISMAIL.

Palestine Popular Struggle Front (PPSF): f. 1967; Sec.-Gen. SAMIR GHOUSHA.

Palestine People's Party (PPP): e-mail shaab@planet.edu; internet http://www.palpeople.org; formerly Palestine Communist Party, admitted to the PNC at its 18th session in 1987; Sec.-Gen. SULEIMAN NAJJAB.

Palestine Liberation Front (PLF): split from PFLP-GC in April 1977; the PLF split into two factions at the end of 1983, both of which retained the name PLF; one faction (leader 'ABU ABBAS') based in Tunis and Baghdad and remaining nominally loyal to Yasser Arafat; the other faction belonging to the anti-Arafat National Salvation Front and having offices in Damascus, Syria, and Libya. A third group derived from the PLF was reported to have been formed by its Central Cttee Secretary, Abd al-Fattah Ghanim, in June 1986. At the 18th session of the PNC, a programme for the unification of the PLF was announced, with Talaat Yaqoub (died November 1988) named as Secretary-General and 'Abu Abbas' appointed to the PLO Executive Committee, while unification talks were held. The merging of the two factions was announced in June 1987, with 'Abu Abbas' becoming Deputy Secretary-General.

The anti-Arafat **National Salvation Front** includes the following organizations:

Popular Front for the Liberation of Palestine-General Command (PFLP-GC): Damascus, Syria; split from the PFLP; pro-Syrian; Leader AHMAD JIBRIL.

Saiqa (Vanguard of the Popular Liberation War): f. 1967; Syrian-backed; Leader ISSAM AL-QADI.

Palestine Revolutionary Communist Party: Damascus; Sec.-Gen. ARBI AWAD.

Alliance of Palestinian Forces: f. 1994; 10 members representing the PFLP, the DFLP, the PLF, the PPSF, the Palestine Revolutionary Communist Party and the PFLP-GC; opposes the Declaration of Principles on Palestinian Self-Rule signed by Israel and the PLO in September 1993, and subsequent agreements concluded within its framework. The **Fatah Revolutionary Council**, headed by Sabri Khalil al-Banna, alias 'Abu Nidal', split from Fatah in 1973. Its headquarters were formerly in Baghdad, Iraq, but the office was closed down and its staff expelled from the country by the Iraqi authorities in November 1983 and a new base was established in Damascus, Syria, in December. Al-Banna was readmitted to Iraq in 1984, having fled Syria. With 'Abu Musa' (whose rebel Fatah group is called **Al-Intifada**, or 'Uprising'), 'Abu Nidal' formed a joint rebel Fatah command in February 1985, and both had offices in Damascus until June 1987, when those of 'Abu Nidal' were closed by the Syrian Government. In 1989 the Fatah Revolutionary Council was reported to have disintegrated, and in June 1990 forces loyal to Abu Nidal surrendered to Fatah forces at the Rashidiyeh Palestinian refugee camp near Tyre, northern Lebanon.

The Islamic fundamentalist organizations, Islamic Jihad (Gen. Sec. RAMADAN ABDALLAH SHALLAH) and the Islamic Resistance Movement (Hamas; Spiritual Leader Sheikh AHMAD YASSIN), are also active in the Gaza Strip and the West Bank, where they began to play an increasingly prominent role in the *intifada* during 1989. Like the organizations represented in the Alliance of Palestinian Forces, they are strongly opposed to the Declaration of Principles on Palestinian Self-Rule. The formation of the Right Movement for Championing the Palestinian People's Sons by former members of Hamas was announced in April 1995. The Movement, based in Gaza City, was reported to support the PNA.

Diplomatic Representation

Countries with which the PLO maintains diplomatic relations include:

Afghanistan, Albania, Algeria, Angola, Austria, Bahrain, Bangladesh, Benin, Bhutan, Botswana, Brunei, Bulgaria, Burkina Faso, Burundi, Cambodia, Cameroon, Cape Verde, Central African Republic, Chad, China (People's Rep.), Comoros, Congo (Dem. Rep.), Congo (Rep.), Cuba, Cyprus, Czechoslovakia (former), Djibouti, Egypt, Equatorial Guinea, Ethiopia, Gabon, Gambia, Ghana, Guinea, Guinea-Bissau, Hungary, India, Indonesia, Iran, Iraq, Jordan, Korea (Dem. People's Rep.), Kuwait, Laos, Lebanon, Libya, Madagascar, Malaysia, Maldives, Mali, Malta, Mauritania, Mauritius, Mongolia, Morocco, Mozambique, Nepal, Nicaragua, Niger, Nigeria, Norway, Oman, Pakistan, Philippines, Poland, Qatar, Romania, Russia, Rwanda, São Tomé and Príncipe, Saudi Arabia, Senegal, Seychelles, Sierra Leone, Somalia, Sri Lanka, Sudan, Swaziland, Sweden, Tanzania, Togo, Tunisia, Turkey, Uganda, United Arab Emirates, Vanuatu, the Vatican City, Viet Nam, Yemen, Yugoslavia, Zambia, Zimbabwe.

The following states, while they do not recognize the State of Palestine, allow the PLO to maintain a regional office: Belgium, Brazil, France, Germany, Greece, Italy, Japan, the Netherlands, Portugal, Spain, Switzerland, the United Kingdom.

A Palestinian passport has been available for residents of the Gaza Strip and the Jericho area only since April 1995. In September 1995 the passport was recognized by 29 states, including: Algeria, Bahrain, Bulgaria, China (People's Rep.), Cyprus, Egypt, France, Germany, Greece, India, Israel, Jordan, Malta, Morocco, the Netherlands, Pakistan, Qatar, Romania, Saudi Arabia, South Africa, Spain, Sweden, Switzerland, Tunisia, Turkey, the United Arab Emirates, the United Kingdom and the USA.

Judicial System

In the Gaza Strip, the West Bank towns of Jericho, Nablus, Ramallah, Jenin, Tulkarm, Qalqilya, Bethlehem and Hebron, and in other, smaller population centres in the West Bank, the PNA has assumed limited jurisdiction with regard to civil affairs. However, the situation is confused owing to the various, sometimes conflicting legal systems which have operated in the territories occupied by Israel in 1967: Israeli military and civilian law; Jordanian law; and acts, orders-in-council and ordinances that remain from the period of the British Mandate in Palestine. Religious and military courts have been established under the auspices of the PNA. In February 1995 the PNA established a Higher State Security Court in Gaza to decide on security crimes both inside and outside the PNA's area of jurisdiction; and to implement all valid Palestinian laws, regulations, rules and orders in accordance with Article 69 of the Constitutional Law of the Gaza Strip of 5 March 1962. As of June 1998 the PLC had drafted a total of 43 laws, of which nine had been approved by the President and enacted.

General Prosecutor of the PNA: ZUHEIR AS-SURANI.

The Press

NEWSPAPERS

Filastin ath-Thawra (Palestine Revolution): normally published in Beirut, but resumed publication from Cyprus in November 1982; weekly newspaper of the PLO.

Al-Hadaf: organ of the PFLP; weekly.

BANKING

Palestine Monetary Authority

It is intended to develop the Palestine Monetary Authority (PMA) into the Central Bank of Palestine. In July 1995 the PMA began to license, inspect and supervise the Palestinian and foreign commercial banks operating in the Gaza Strip and the Jericho enclave in the West Bank at that time. In December 1995 the PMA assumed responsibility for 13 banks in the Palestinian autonomous areas over which the Central Bank of Israel had hitherto exercised control. Three currencies circulate in the Palestinian economy—the Jordanian dinar, the Israeli shekel and the US dollar. The PMA, which is seeking a reserve base of US $10m. from donors, currently has no right of issue. According to the Ministry of Finance, there were 21 banks with a total of 90 branches operating in the West Bank and the Gaza Strip in December 1998. In November 1998 the banks' deposit base amounted to US $2,200m. Gov. FOUAD BESEISO; fax (7) 86414.

National Banks

Bank of Palestine Ltd: POB 50, Omar al-Mukhtar St, Gaza City; tel. (7) 2843029; fax (7) 2820157; e-mail info@bankofpalestine.com; internet http://www.bankofpalestine.com; f. 1960; cap. US $2.2m., dep. US $145m., res US $12m., total assets US $165.3m. (Dec. 1997); Pres., Chair. and Gen. Man. HASHEM ATA SHAWA; brs in Gaza, Rafah, Ar-Rimal, Khan Yunus, Jericho, Nablus and Ramallah.

Commercial Bank of Palestine PLC: POB 1799, Ramallah; tel. (2) 2954141; fax (2) 2953888; e-mail cbp@cbpal.palnet.com.

Palestine International Bank: Al-Birah/Ramallah; tel. (2) 9983300; fax (2) 9983333.

Investment Banks

Arab Palestine Investment Bank: f. 1996; Arab Bank of Jordan has a 51% share; cap. p.u. US $15m.

Jerusalem Bank for Development and Investment: Ramallah.

Palestine Investment Bank: POB 3675, Al-Birah/Ramallah; tel. (2) 2987882; fax (2) 2987887; f. 1995 by the PNA; some shareholders based in Jordan and the Gulf states; cap. p.u. US $20m.; provides full commercial and investment banking services throughout the Gaza Strip and the West Bank; 6 brs.

Islamic Banks

Arab Islamic Bank: Ramallah.

Palestinian Islamic Bank: Ramallah.

Foreign Banks

Arab Bank plc (Jordan): Regional Management: POB 1476, Ramallah; tel. (2) 2982400; fax (2) 9954815; internet http://www.arabbank.com; dep. of some US $800m. held by 12 brs in the West Bank and the Gaza Strip at Sep. 1996; Regional Man. SHUKRI BISHARA.

Other foreign banks include ANZ Grindlays Bank Ltd, the Arab Real Estate Bank (Egypt), the Bank of Jordan, the Cairo-Amman Bank (Jordan), the Development and Agricultural Credit Bank (Egypt), HSBC Bank Middle East (United Kingdom), the Jordan Gulf Bank, the Jordan-Kuwait Bank, the Jordanian Housing Bank, the Jordanian National Bank and the Union Savings and Investment Bank (Jordan).

STOCK EXCHANGE

Palestine Securities Exchange (PSE): POB 128, Nablus; tel. (9) 2375946; fax (9) 2375945; e-mail psexchng@palnet.com; internet http://www.p-s-e.com; f. 1997; Chair. SABEIH MASRI; Gen. Man. Dr SULAYMAN ABADDI.

INSURANCE

A very small insurance industry exists in the West Bank.

Arab Insurance Establishment Co (AIEC): Nablus; Man. Dir IBRAHIM ABD AL-HADI.

DEVELOPMENT FINANCE ORGANIZATION

Palestinian Economic Council for Development and Reconstruction (PECDAR): Gov. NABIL SHAATH, Dir-Gen. MUHAMMAD ISHTAYAH.

Trade and Industry

CHAMBERS OF COMMERCE

Bethlehem Chamber of Commerce: Bethlehem; tel. (2) 742742; fax (2) 741327.

Hebron Chamber of Commerce and Industry: POB 272, Hebron; tel. (2) 2228218; fax (2) 2227490; internet http://www.pal-chambers.com.

Jenin Chamber of Commerce: Jenin; tel. (6) 503388.

Jericho Chamber of Commerce: Jericho; tel. and fax (2) 922394.

Jerusalem Chamber of Commerce: Jerusalem; tel. (2) 282351; fax (2) 272615.

Nablus Chamber of Commerce: Nablus; tel. (9) 379615; fax (9) 377605.

Palestinian Chamber of Commerce (Gaza): Gaza; tel. (7) 866919; fax (7) 821172.

Palestinian-European Chamber of Commerce: tel. (2) 894883.

Qalqilya Chamber of Commerce: Qalqilya; tel. (6) 940164.

Ramallah Chamber of Commerce: POB 256, Ramallah; tel. (2) 2956043; fax (2) 2954691; e-mail ramcom@palnet.com; internet http://www.pal-chambers.com; f. 1950; Chair. MUHAMMAD AHMAD AMIN; Vice-Chair. YOUSUF ASH-SHARIF.

Tulkarm Chamber of Commerce: POB 51, Tulkarm; tel. (9) 2671010; fax (9) 2675623; e-mail tulkarem@palnet.com; f. 1945.

TRADE AND INDUSTRIAL ORGANIZATIONS

Union of Industrialists: Gaza.

UTILITIES

Electricity

Palestine Electric Co (PEC): Gaza; f. 1999.

Water

Palestinian Water Authority: Gaza; Dir Eng. NABIL ASH-SHARIF.

Transport

CIVIL AVIATION

Palestinian Civil Aviation Authority (PCAA): Gaza International Airport, Gaza; e-mail capf@rannet.com; internet http://www.rannet.com/palestinian; Gaza International Airport was formally inaugurated in November 1998 to operate services by Palestinian Airlines (its subsidiary), Egypt Air and Royal Jordanian Airline; Royal Air Maroc began to operate a service from February 1999; airlines currently operate services to Amman, Cairo and Jeddah, and intend to expand their network to the Gulf States and European countries; Chair. and Dir-Gen. FAYEZ ZAIDAN.

Defence

Dir-Gen. of the Palestinian National Security Forces: Maj-Gen. NASSER YOUSSEF.

Estimated Security Budget (1998): US $300m.

Paramilitary Forces (August 1998): an estimated 35,000: including Public Security Force 14,000; Civil Police Force 10,000; General Intelligence Force 3,000; Preventive Security Force 3,000; Military Intelligence 500; Presidential Security 3,000. In addition there are small forces belonging to Coastal Police, Civil Defence, Air Force, Customs and Excise Police Force and the University Security Service.

Education

According to the World Bank, Palestinians are among the most highly educated of any Arab group. However, basic and secondary education facilities in the West Bank and the Gaza Strip are described as poor. In the West Bank the Jordanian education system is in operation. Services are provided by the Israeli Civil Administration, the UNRWA and private, mainly charitable, organizations. In the West Bank and the Gaza Strip schools operated by the Civil Administration enrol some 62% of all primary and secondary school students. The UNRWA provides education to about 31%. In 1991 enrolment in primary schools was equivalent to about 102% of the estimated population aged 6–12 years (due to either underestimation of that population or the enrolment of over-age students). Education has been severely disrupted since 1987. Vocational education is offered by both the Civil Administration and the UNWRA. All university and most community college education is provided by private, voluntary organizations. There are 20 community and teachers' training colleges in the West Bank, and six universities, including an open university. In the 1997/98 school year UNRWA operated 267 schools in the West Bank and the Gaza Strip. The number of pupils receiving education through the UNRWA programme in that year was 200,886. Education personnel numbered 3,682. In addition, UNRWA operated four vocational training centres and provided 410 university scholarships.

In 1996/97, according to UNESCO, 69,134 pupils in total attended 705 pre-primary institutions, and 656,353 attended 1,118 primary institutions. The number of teachers at pre-primary institutions was 2,377 and that at primary institutions 15,903. In the same year, 56,467 students attended secondary institutions, at which the number of teachers was 7,950. The number of students attending universities or equivalent third-level institutions was 36,921. Teachers at universities numbered 1,966.

Educational facilities in the Gaza Strip are broadly the same as those described in the West Bank. The Egyptian system of education operates in the Gaza Strip, where there are two universities and one teacher training college. Palestinian universities have played a major role in the political activities of the West Bank and the Gaza Strip and were closed by the Israeli Civil Administration between 1987 and 1992. In 1991 the UNRWA budgeted about US $35m. for spending on education in the Gaza Strip. Per-student expenditure was about $334.

Since May 1994 the Palestinian National Authority (PNA) has assumed responsibility for education in the Gaza Strip and parts of the West Bank.

Bibliography

A very large literature on the Palestinian question exists and many works belonging to it are included in the bibliography which concludes the chapter on Israel. The following are mainly volumes which have appeared since the signing of the Declaration of Principles on Palestinian Self-Rule by Israel and the PLO in September 1993.

Abu-Amr, Ziad. *Islamic Fundamentalism in the West Bank and Gaza: Muslim Brotherhood and Islamic Jihad.* Bloomington, Indiana University Press, 1995.

JORDAN

Physical and Social Geography

W. B. FISHER

The Hashemite Kingdom of Jordan (previously Transjordan) came officially into existence under its present name in 1947 and was enlarged in 1950 to include the districts of Samaria and part of Judaea that had previously formed part of Arab Palestine. The country is bounded on the north by Syria, on the north-east by Iraq, on the east and south by Saudi Arabia, and on the west by Israel and the emerging Palestinian autonomous areas. The total area of Jordan is 97,740 sq km (37,738 sq miles). The territory west of the Jordan river (the West Bank)—some 5,600 sq km (2,160 sq miles)—has been occupied by Israel since June 1967, but since May 1994 the Palestinian National Authority (PNA) has assumed jurisdiction for civil affairs in some areas. The population of the East and West Banks at mid-1997 was estimated by the UN to be 5,774,000. According to a census in December 1994, the population of the East Bank (area 89,206 sq km—34,443 sq miles) was 4,095,579, compared with 2,100,019 at the census of November 1979. In June 1998 there were 1,463,064 Palestinian refugees registered with the United Nations Relief and Works Agency (UNRWA) in Jordan, and a further 555,057 in the West Bank.

PHYSICAL FEATURES

The greater part of the State of Jordan consists of a plateau lying some 700 m–1,000 m above sea-level, which forms the north-western corner of the great plateau of Arabia (see chapter on Saudi Arabia). There are no natural topographical frontiers between Jordan and its neighbours Syria, Iraq, and Saudi Arabia, and the plateau continues unbroken into all three countries, with the artificial frontier boundaries drawn as straight lines between defined points. Along its western edge, facing the Jordan Valley, the plateau is uptilted to give a line of hills that rise 300 m–700 m above plateau-level. An old river course, the Wadi Sirhan, now almost dry with only occasional wells, fractures the plateau surface on the south-east and continues into Saudi Arabia.

The Jordanian plateau consists of a core or table of ancient rocks, covered by layers of newer rock (chiefly limestone) lying almost horizontally. In a few places (e.g. on the southern edge of the Jordan Valley) these old rocks are exposed at the surface. On its western side the plateau has been fractured and dislocated by the development of strongly marked tear faults that run from the Red Sea via the Gulf of Aqaba northwards to Lebanon and Syria. The narrow zone between the faults has sunk, to give the well-known Jordan rift valley, which is bordered both on the east and west by steep-sided walls, especially in the south near the Dead Sea, where the drop is often precipitous. The valley has a maximum width of 22 km (14 miles) and is now thought to have been produced by lateral shearing of two continental plates that on the east have been displaced by about 80 km (50 miles).

The floor of the Jordan Valley varies considerably in level. At its northern end it is just above sea-level; the surface of Lake Tiberias (the Sea of Galilee) is 209 m below sea-level, with the deepest part of the lake over 200 m lower still. Greatest depth of the valley is at the Dead Sea (surface 400 m below sea-level, maximum depth 396 m).

Dislocation of the rock strata in the region of the Jordan Valley has had two further effects: firstly, earth tremors are still frequent along the valley (Jerusalem has minor earthquakes from time to time); and secondly, considerable quantities of lava have welled up, forming enormous sheets that cover wide expanses of territory in the state of Jordan and southern Syria, and produce a desolate, forbidding landscape. One small lava flow, by forming a natural dam across the Jordan Valley, has impounded the waters to form Lake Tiberias.

The Jordan river rises just inside the frontiers of Syria and Lebanon—a recurrent source of dispute between the two countries and Israel. The river is 251 km (156 miles) long, and after first flowing for 96 km (60 miles) in Israel, it lies within Jordanian territory for the remaining 152 km (94 miles). Its main tributary, the Yarmouk, is 40 km (25 miles) long, and close to its junction with the Jordan forms the boundary between the state of Jordan, Israel and Syria. A few kilometres from its source, the Jordan river used to open into Lake Huleh, a shallow, marsh-fringed expanse of water which was previously a breeding ground of malaria, but which has now been drained. Lake Tiberias, also, like the former Huleh, in Israel, covers an area of 316 sq km (122 sq miles) and measures 22 km (14 miles) from north to south, and 26 km (16 miles) from east to west. River water outflowing from the lake is used for the generation of hydroelectricity.

The river then flows through the barren, inhospitable country of its middle and lower valley, very little of which is actually, or potentially, cultivable, and finally enters the Dead Sea. This lake is 65 km (40 miles) long and 16 km (10 miles) wide. Owing to the very high air temperatures at most seasons of the year, evaporation from the lake is intense, and has been estimated as equivalent to 8.5m. tons of water per day. At the surface the Dead Sea water contains about 250g of dissolved salts per litre, and at a depth of 110 m the water is chemically saturated (i.e. holds its maximum possible content). Magnesium chloride is the most abundant mineral, with sodium chloride next in importance; but commercial interest centres on the less abundant potash and bromide salts.

Climatically, Jordan shows close affinity to its neighbours. Summers are hot, especially on the plateau and in the Jordan Valley, where temperatures up to 49°C have been recorded. Winters are fairly cold, and on the plateau frost and some snow are usual, though not in the lower Jordan Valley. The significant element of the climate of Jordan is rainfall. In the higher parts (i.e. the uplands of Samaria and Judaea and the hills overlooking the eastern Jordan Valley) 380 mm–630 mm of rainfall occur, enough for agriculture; but elsewhere as little as 200 mm or less may fall, and pastoral nomadism is the only possible way of life. Only about 25% of the total area of Jordan is sufficiently humid for cultivation.

Hence the main features of economic life in Jordan are subsistence agriculture of a marginal kind, carried on in Judaea-Samaria and on the north-eastern edge of the plateau, close to Amman, with migratory herding of animals—sheep, goats, cattle and camels—over the remaining and by far the larger portion of the country. As a result, the natural wealth of Jordan is small, and tribal ways of life exist in parts. Before the June 1967 war, tourism (with which must be included religious pilgrimage, mainly to the holy Christian places of Jerusalem) had developed into a very important industry but was then seriously jeopardized by the Israeli occupation of the West Bank territory and annexation of Jerusalem. However, the civil war in Lebanon and the reopening of the Suez Canal (which greatly affects the Jordanian port of Aqaba) were very favourable factors. The war between Iran and Iraq also had a very beneficial effect at first, since Aqaba, with the denial of Gulf ports to Iraq, became a major supply base. Iraq was Jordan's most important export market between 1980 and 1983 but the cost of continuing the war later severely curtailed the purchase by Iraq of goods from Jordan. By August 1990, when Iraq temporarily occupied Kuwait, Iraq had again become Jordan's principal trading

partner; and the economic sanctions imposed on Iraq as a consequence of its invasion of Kuwait had a disastrous effect on the Jordanian economy (see Economy).

The shift of trade from Lebanon, a very much better economic and political relationship with Egypt and Iraq, continuing (though cool) relations with Syria, the inflow of remittances from Jordanians working abroad, and subventions from Arab funds together greatly improved the Jordanian economy. However, the growth of the economy slowed in the 1980s. Foreign aid of various kinds continues to account for more than 40% of budgetary revenues, and workers in the service sector greatly outnumber those in directly productive activities. With so many Jordanians working abroad, local activities are hampered by lack of managerial and technical skills.

RACE, LANGUAGE AND RELIGION

A division must be drawn between the Jordanians living east of the Jordan river who, in the main, are ethnically similar to the desert populations of Syria and Saudi Arabia, and the Arabs of the Jordan Valley and Samaria-Judaea. These latter are slightly taller, more heavily built, and have a broader headform. Some authorities suggest that they are descendants of the Canaanites, who may have originated far to the north-east, in the Zagros area. An Iranian racial affinity is thus implied—but this must be of very ancient date, as the Arabs west of the Jordan Valley have been settled in their present home for many thousands of years. Besides the two groups of Arabs, there are also small colonies of Circassians from the Caucasus of Russia, who settled in Jordan as refugees during the 19th and 20th centuries AD.

Arabic is spoken everywhere, except in a few Circassian villages, and, through contacts with Britain, some English is understood in the towns.

Over 90% of the population are Sunni Muslims, and King Adbullah can trace unbroken descent from the Prophet Muhammad. There is a Christian minority, and there are smaller numbers of Shi'a Muslims.

History

Revised for this edition by RICHARD I. LAWLESS

Jordan, as an independent state, is a 20th-century development. Before then it was seldom more than a rugged and backward appendage to more powerful kingdoms and empires, and indeed never existed alone. In biblical times the area was covered roughly by Gilead, Ammon, Moab and Edom, and the western portions formed for a time part of the Kingdom of Israel. During the sixth century BC the Arabian tribe of the Nabateans established their capital at Petra in the south and continued to preserve their independence when, during the fourth and third centuries, the northern half was incorporated into the Seleucid province of Syria. It was under Seleucid rule that cities such as Philadelphia (the Biblical Rabbath Ammon and the modern Amman) and Gerasa (now Jerash) rose to prominence. During the first century BC the Nabateans extended their rule over the greater part of present-day Jordan and Syria; they then began to recede before the advance of Rome, and in AD 105–6 Petra was incorporated into the Roman Empire. The lands east of the Jordan shared in a brief blaze of glory under the Palmyrene sovereigns Odenathus (Udaynath) and Zenobia (az-Zabba') in the middle of the third century AD, and during the fifth and sixth centuries formed part of the dominions of the Christian Ghassanid dynasty, vassals of the Byzantine Empire. Finally, after 50 years of anarchy in which Byzantine, Persian and local rulers intervened, Transjordania was conquered by the Arabs and absorbed into the Islamic empire.

For centuries nothing more is heard of the country; it formed normally a part of Syria, and as such was generally governed from Egypt. From the beginning of the 16th century it was included in the Ottoman *vilayet* (administrative district) of Damascus, and remained in a condition of stagnation until the outbreak of the First World War in 1914. European travellers and explorers of the 19th century rediscovered the beauties of Petra and Gerasa, but otherwise the desert tribes were left undisturbed. Even the course of the war in its early stages gave little hint of the upheaval that was to take place in Jordan's fortunes. The area was included in the zone of influence allocated to Britain under the Sykes-Picot Treaty of May 1916 (see Documents on Palestine, p. 98), and Zionists held that it also came within the area designated as a Jewish National Home in the promise contained in the Balfour Declaration of November 1917 (see Documents on Palestine, p. 99). Apart from these somewhat remote political events the tide of war did not reach Jordanian territory until the capture of Aqaba by the Arab armies under Faisal, the third son of King Hussein of the Hedjaz, in July 1917. A year later, in September 1918, they shared in the final push north by capturing Amman and Deraa.

The end of the war thus found a large area, which included almost the whole of present-day Jordan, in Arab hands under the leadership of Faisal. To begin with, the territory to the east of the Jordan river was not looked on as a separate unit. Faisal, with the assistance of British officers and Iraqi nationalists, established an autonomous government in Damascus, a step encouraged by the Anglo-French Declaration of 7 November 1918, favouring the establishment of indigenous governments in Syria and Iraq. Arab demands, however, as expressed by Faisal at the Paris Peace Conference in January 1919, went a good deal further in claiming independence throughout the Arab world. This represented a challenge to both French and Zionist claims in the Near East, and when, in March 1920, the General Syrian Congress in Damascus declared the independence of Syria and Iraq, with Faisal and Abdullah, Hussein's second son, as kings, the decisions were denounced by France and Britain. In the following month the San Remo Conference awarded the Palestine Mandate to Britain, and thus separated it effectively from Syria proper, which fell within the French share. Faisal was forced out of Damascus by the French in July and left the country.

THE KINGDOM OF TRANSJORDAN

The position of Transjordania was not altogether clear under the new dispensation. After the withdrawal of Faisal the British High Commissioner informed a meeting of notables at es-Salt that the British Government favoured self-government for the territory with British advisers. In December 1920 the provisional frontiers of the Mandates were extended eastwards by Anglo-French agreement so as to include Transjordania within the Palestine Mandate, and therefore presumably within the provisions regarding the establishment of a Jewish National Home. Yet another twist of policy came as the result of a conference in Cairo in March 1921 attended by Winston Churchill, the new British Colonial Secretary, Abdullah, T. E. Lawrence and Sir Herbert Samuel, High Commissioner for Palestine. At this meeting it was recommended that Faisal should be proclaimed King of Iraq, while Abdullah was persuaded to stand down in his favour by the promise of an Arab administration in Transjordania. He had in fact been in effective control in Amman since his arrival the previous winter to organize an uprising against the French in Syria. This project he now abandoned, and in April 1921 he was officially recognized as *de facto* ruler of Transjordan. The final draft of the Palestine Mandate confirmed by the Council of the League of Nations in July 1922 contained a clause giving the Mandatory Power considerable latitude in the administration of the territory east of the Jordan (see Documents on Palestine, p. 101). On the basis of this clause, a memorandum was approved in the following September, expressly excluding Transjordan from the clauses relating to the establishment of the Jewish National Home, and, although many Zionists continued to press for the reversal

of this policy, the country thenceforth remained, in practice, separate from Palestine proper.

Like much of the post-war boundary delineation, the borders of the new state were somewhat arbitrary. Although they lay mainly in desert areas, they frequently cut across tribal areas and grazing grounds, with small respect for tradition. Of the 300,000–400,000 inhabitants, only about one-fifth were town-dwellers, and these confined to four small cities ranging in population from 10,000 to 30,000. Nevertheless, Transjordan's early years were destined to be comparatively peaceful. On 15 May 1923 Britain formally recognized Transjordan as an independent constitutional state under the rule of the Amir Abdullah with British tutelage, and with the aid of a British subsidy it was possible to make some slow progress towards development and modernization. A small but efficient armed force, the Arab Legion, was built up under the guidance of Peake Pasha and later Glubb Pasha; this force distinguished itself particularly during the Iraqi rebellion of May 1941. It also played a significant role in the fighting with Israel during 1948. Other British advisers assisted in the development of health services and schools.

The Amir Abdullah very nearly became involved in the fall of his father, King Hussein, in 1924. It was in Amman on 5 March 1924, that the latter was proclaimed Caliph, and during the subsequent fighting with Ibn Sa'ud Wahhabi troops penetrated into Transjordanian territory. They subsequently withdrew to the south, and in June 1925, after the abdication of Hussein's eldest son, Ali, Abdullah formally incorporated Ma'an and Aqaba within his dominions. The move was not disputed by the new ruler of the Hedjaz and Najd, and thereafter the southern frontier of Transjordan remained unaltered.

INDEPENDENCE

In February 1928 a treaty was signed with Great Britain granting a still larger measure of independence, though reserving for the advice of a British Resident such matters as financial policy and foreign relations. The same treaty provided for a Constitution, and this was duly promulgated in April 1928, the first Legislative Council meeting one year later. In January 1934 a supplementary agreement was added permitting Transjordan to appoint consular representatives in Arab countries, and in May 1939 Britain agreed to the conversion of the Legislative Council into a regular Cabinet with ministers in charge of specified departments. The outbreak of war delayed further advances towards independence, but this was finally achieved, in name at least, by the Treaty of London of 22 March 1946. On 25 May 1946 Abdullah was proclaimed king and a new Constitution replaced that of 1928.

Transjordan was not slow in taking its place in the community of nations. In 1947 King Abdullah signed treaties with Turkey and Iraq and applied for membership of the United Nations (UN); this last, however, was thwarted by the Soviet veto and by lack of US recognition of Transjordan's status as an independent nation. In March 1948 Britain agreed to the signing of a new treaty in which virtually the only restrictive clauses related to military and defence matters. Britain was to have certain peacetime military privileges, including the maintenance of airfields and communications, transit facilities and co-ordination of training methods. It was also to provide economic and social aid.

Transjordan had, however, not waited for independence before making its weight felt in Arab affairs in the Middle East. It had not been very active before the war, and, in fact its first appearance on the international scene was in May 1939, when Transjordanian delegates were invited to the Round Table Conference on Palestine in London. Transjordan took part in the preliminary discussions during 1943 and 1944 that finally led to the formation of the League of Arab States (Arab League, see p. 264) in March 1945, and was one of the original members of that League. During the years immediately following it seemed possible that political and dynastic differences would be forgotten in this common effort for unity. Under the stresses and strains of 1948, however, the old contradictions began to reappear. Abdullah had long favoured the project of a 'Greater Syria', that is, the union of Transjordan, Syria and Palestine, as a step towards the final unification of the Fertile Crescent by the inclusion of Iraq. This was favoured on dynastic grounds by various parties in Iraq, and also by some elements in Syria and Palestine. On the other hand, it met with violent opposition from many Syrian nationalists, from the rulers of Egypt and Saudi Arabia—neither of whom were disposed to favour any strengthening of the Hashemite house—and of course from the Zionists and the French. It is in the light of these conflicts of interest that developments subsequent to the establishment of the State of Israel must be considered.

FORMATION OF ISRAEL

On 14–15 May 1948 British troops were withdrawn to the port of Haifa as a preliminary to the final evacuation of Palestine territory, the State of Israel was proclaimed, and Arab armies entered the former Palestinian territory from all sides. Only those from Transjordan played any significant part in the fighting, and by the time that major hostilities ceased in July they had succeeded in occupying a considerable area. The suspicion now inevitably arose that Abdullah was prepared to accept a *fait accompli* and to negotiate with the Israeli authorities for a formal recognition of the existing military boundaries. Moreover, whereas the other Arab countries refused to accept any other move that implied a tacit recognition of the status quo—such as the resettlement of refugees—Transjordan seemed to be following a different line. In September 1948 an Arab government was formed at Gaza under Egyptian tutelage, and this was answered from the Transjordanian side by the proclamation in December at Jericho of Abdullah as King of All Palestine. In the following April the country's name was changed to Jordan and three Palestinians were included in the Cabinet. In the mean time, armistices were being signed by all the Arab countries, including Jordan, and on 31 January 1949 Jordan was finally recognized by the USA.

On the three major problems confronting the Arab states in their dispute with Israel, Jordan continued to differ more or less openly with its colleagues. It refused to agree to the internationalization of Jerusalem, it initiated plans for the resettlement of the Arab refugees, and it showed a disposition to accept as permanent the armistice frontiers. In April 1950, after rumours of negotiations between Jordan and Israel, the Arab League Council in Cairo succeeded in securing Jordan's adherence to resolutions forbidding negotiations with Israel or annexation of Palestinian territory. Nevertheless, in the same month elections were held in Jordan and Arab Palestine, the results of which encouraged Abdullah formally to annex the latter territory on 24 April 1950. This step was immediately recognized by Britain.

At the meeting of the Arab League that followed, Egypt led the opposition to Jordan, which drew support, however, from Iraq. The decisions reached by the Council were inconclusive, but thereafter Jordan began to deviate from Arab League policy. Jordan supported UN policy in Korea, in contradistinction to the other Arab states, and signed a four-point agreement with the USA in March 1951. Although at the same time there was constant friction between Jordan and Israel, the unified opposition of the Arab states to the new Jewish state seemed to have ended, and inter-Arab differences were gaining the upper hand.

ABDULLAH ASSASSINATED

On 20 July 1951 King Abdullah was assassinated in Jerusalem. Evidence which emerged at the trial of those implicated in the plot revealed that the murder had been partly motivated by opposition to Adbullah's Greater Syria policy, and it was significant that Egypt refused to extradite some of those convicted. Nevertheless, the stability of the young Jordanian state revealed itself in the calm in which the King's eldest son Talal succeeded to the throne, and the peaceful elections held shortly afterwards. In January 1952 a new Constitution was promulgated. Even more significant, perhaps, was the dignity with which, only one year after his accession, King Talal, whose mental condition had long been a cause for anxiety, abdicated in favour of his son, Hussein—still a minor. In foreign policy Talal had shown some signs of rejecting his father's ideas in favour of a *rapprochement* with Syria and Egypt, one example being Jordan's signature of the Arab Collective Security Pact which it had failed to join in the summer of 1950.

This policy was continued during the reign of his son, King Hussein, notably by the conclusion of an economic and financial

agreement with Syria in February 1953, and a joint scheme for the construction of a dam across the Yarmouk river to supply irrigation and hydroelectric power. One problem which became pressing in 1954 was the elaborate scheme sponsored by the USA for the sharing of the Jordan waters between Jordan, Iraq, Syria and Israel, which could make no progress in the absence of political agreement.

During December 1954 a financial aid agreement was signed in London with the United Kingdom, and the opportunity was taken to discuss the revision of the Anglo-Jordanian Treaty of 1948. Agreement over this was not possible owing to British insistence that any new pact should fit into a general Middle East defence system. In May 1955 Premier Abu'l-Huda was replaced by Sa'id al-Mufti, while an exchange of state visits with King Sa'ud hinted at a *rapprochement* with Saudi Arabia. Nevertheless, in November Jordan declared its unwillingness to adhere either to the Egyptian-Syrian-Saudi Arabian bloc or to the Baghdad Pact.

DISMISSAL OF GLUBB PASHA

On 15 December 1955, following a visit to General Sir G. Templer, Chief of the Imperial General Staff, Sa'id al-Mufti resigned and was replaced by Hazza al-Majali, known to be in favour of the Baghdad Pact. The following day there were violent demonstrations in Amman, and on 20 December Ibrahim Hashim became Prime Minister, to be succeeded on 9 January 1956 by Samir Rifai. In February the new Prime Minister visited Syria, Lebanon, Iraq, Egypt and Saudi Arabia, and shortly after his return, on 2 March, King Hussein announced the dismissal of Glubb Pasha, Commander-in-Chief of the Jordanian armed forces, replacing him with Maj.-Gen. Radi Annab. The Egyptian-Syrian-Saudi Arabian bloc at this juncture offered to replace the British financial subsidy to Jordan; but the latter was not in fact withdrawn, and King Hussein and the Jordanian Government evidently felt that they had moved far enough in one direction, and committed themselves to a policy of strict neutrality. In April, however, the King and the Prime Minister paid a visit to the Syrian President in Damascus, and in May Maj.-Gen. Annab was replaced by his deputy, Lt-Col Ali Abu Nuwar, generally regarded as the leader of the movement to eliminate foreign influence from the Jordanian army and government. This coincided with the reappointment of Sa'id al-Mufti as Prime Minister. During the same period discussions culminated in agreements for military co-operation between Jordan and Syria, Lebanon and Egypt, and in July Jordan and Syria formed an economic union. At the beginning of the same month al-Mufti was replaced by Ibrahim Hashim.

RELATIONS WITH ISRAEL AND WITH THE OTHER ARAB STATES

Meanwhile, relations with Israel, including the problem of the Arab refugees, the use of Jordan waters, the definition of the frontier, and the status of Jerusalem, continued to provide a cause for anxiety. Tension between Jordan and Israel was further increased after the Israeli, British and French military action in Egypt. A new Cabinet, headed by Sulayman Nabulsi, had taken office in October, and new elections were followed by the opening of negotiations for the abrogation of the Anglo-Jordanian Treaty of 1948, and the substitution of financial aid from the Arab countries, notably Saudi Arabia, Egypt and Syria. Owing to subsequent political developments, however, the shares due from Egypt and Syria were not paid. On 13 March 1957 an Anglo-Jordanian agreement was signed abrogating the 1948 treaty, and by 2 July the last British troops had left. In the mean time, Nabulsi's evident leanings towards the Soviet connection, clashing with the recently enunciated Eisenhower doctrine, led to his breach with King Hussein and his resignation on 10 April, to be succeeded by Ibrahim Hashim. All political parties were suppressed, and plans to establish diplomatic relations with the USSR were dropped. Gen. Ali Abu Nuwar was removed from the post of Commander-in-Chief, and the USA announced its determination to preserve Jordan's independence—a policy underlined by a major air-lift of arms to Amman in September in response to Syria's alignment with the USSR. In May Syrian troops serving under the joint Syro-Egypto-Jordanian command were withdrawn from Jordanian territory at Jordan's request, and in June there was a partial rupture of diplomatic relations with Egypt.

On 14 February 1958 the merger of the kingdoms of Iraq and Jordan in a federal union to be called the Arab Federation was proclaimed in Amman by King Faisal of Iraq and King Hussein. This new federation proved abortive. Samir Rifai became Prime Minister of Jordan in May, on the resignation of Ibrahim Hashim who took up the appointment of vice-premier in the short-lived Arab Federation.

British troops were flown to Amman from Cyprus on 17 July 1958, in response to an appeal by King Hussein. They had all been withdrawn by the beginning of November—under UN auspices—and in the two years that followed Jordan settled down to a period of comparative peace. Hazza al-Majali succeeded Rifai as Prime Minister on 6 May 1959. Firm measures were taken against communism and subversive activities and collaboration with the West was, if anything, encouraged by the country's isolation between Iraq, Israel and the two halves of the United Arab Republic (UAR). American loans continued to arrive at the rate of about US $50m. per year, and there was also technical aid of various kinds from Britain, West Germany and other countries. An important development was the official opening of the port of Aqaba on the Red Sea.

Relations with Jordan's Arab neighbours continued to be uneasy, although diplomatic relations with the UAR, broken off in July 1958, were resumed in August 1959. Incidents on the Syrian border were almost as frequent as those on the Israeli border, and there were no signs of a *rapprochement* with Iraq. In January 1960 both the King and the Prime Minister condemned the Arab leaders' approach to the Palestine problem, and in February Jordanian citizenship was offered to all Arab refugees who applied for it. There was little change in the general position that Jordan wished for formal recognition of its absorption of the Palestinian territory west of the Jordan, while the UAR and other Arab countries favoured the establishment of an independent Palestine Arab government.

On 29 August 1960 the Jordanian Prime Minister, Hazza al-Majali, was assassinated; he was succeeded by several prime ministers during the next five years. In April 1965 a constitutional uncertainty was resolved, with the nomination of the King's brother Hassan as Crown Prince; the King's own children were thus excluded from the succession to the throne, at this time.

Meanwhile, in September 1963 the creation of a unified 'Palestinian entity' was approved by the Council of the Arab League, despite opposition from the Jordanian Government, which regarded the proposal as a threat to Jordan's sovereignty over the West Bank. The first congress of Palestinian Arab groups was held in the Jordanian sector of Jerusalem in May–June 1964, when the participants unanimously agreed to form the Palestine Liberation Organization (PLO) as 'the only legitimate spokesman for all matters concerning the Palestinian people'. The PLO was to be financed by the Arab League and was to recruit military units, from among refugees, to constitute a Palestine Liberation Army (PLA). From the outset, King Hussein refused to allow the PLA to train forces in Jordan or the PLO to levy taxes from Palestinian refugees in his country.

WAR WITH ISRAEL

During the latter part of 1966 Jordan's deteriorating foreign relations were exacerbated by the widening breach with Syria. Charges and counter-charges of plots to subvert each other's governments were made, and while the UAR and the USSR supported Syria, Jordan looked to Saudi Arabia and the USA for backing. This situation made it increasingly difficult for Jordan's relations with Israel to be regularized. During 1965–66 the principal guerrilla organization to emerge from the PLO, the Palestine National Liberation Movement (al-Fatah—'Conquest'), unleashed a series of terrorist attacks against Israel, usually across the Jordanian border, which, in turn, provoked violent reprisal attacks by Israeli forces. In July 1966 Jordan suspended support for the PLO, accusing its Secretary, Ahmad Shukairi, of pro-communist activity. While Jordan introduced conscription and Saudi Arabia promised military aid, Syria and the PLO appealed to Jordanians to revolt against King Hussein. Negotiations to implement the resolution of the Supreme Council for Arab Defence that Iraqi and Saudi troops should be

sent to Jordan, to assist in its defence, collapsed in December. This was followed by clashes on the Jordanian–Syrian frontier, by PLO-sponsored bomb outrages in Jordan (resulting in the closure of the PLO headquarters in Jerusalem), and by worsening relations between Jordan and the UAR and a ban by the latter on aircraft carrying British and American armaments to Jordan. In retaliation, Jordan withdrew recognition of the Sallal regime in Yemen, and boycotted the next meeting of the Arab Defence Council. On 5 March Wasfi at-Tal resigned and was succeeded by Hussein bin Nasser at the head of an interim government.

As the prospect of war with Israel drew nearer, King Hussein composed his differences with Egypt, and personally flew to Cairo to sign a defence agreement. Jordanian troops, together with those of the UAR, Iraq and Saudi Arabia, went into action immediately on the outbreak of hostilities in June 1967. By the end of the Six-Day War, however, all Jordanian territory west of the Jordan river had been occupied by Israeli troops, and a steady stream of West Bank Jordanians began to cross the river to the East Bank. Estimated at between 150,000 and 250,000 persons, they swelled Jordan's refugee population and presented the Government with intractable social and economic problems.

In August 1967 King Hussein formed a nine-man Consultative Council, composed of former premiers and politicians of varying sympathies, to meet weekly and to participate in the 'responsibility of power'. Later a Senate was formed, consisting of 15 representatives from the inhabitants of the West Bank area and 15 from eastern Jordan. Several changes of government took place and the King took over personal command of the country's armed forces.

Meanwhile, the uneasy situation along the frontier with Israel persisted, aggravated by the deteriorating economic situation in Jordan. Reprisal actions by Israel, after numerous commando raids directed against its authority in Jerusalem and the West Bank and operating from Jordanian territory, provoked Jordan to appeal for UN intervention. In June 1969 Israeli commandos blew up the diversion system of the Ghor Canal, Jordan's principal irrigation project.

THE GUERRILLA CHALLENGE

The instability in Amman after the June war was reflected in the short life of Jordanian cabinets—it became rare for one to remain unchanged for more than three months. A careful balance had to be struck between the Palestinians and the King's traditional supporters. Thus, in the new Cabinet announced after the June 1970 crisis (see below), Palestinians were given more of the key ministries, including the interior portfolio. Abd al-Munem Rifai, Jordan's senior diplomat, became Prime Minister for the second time.

The main factor in Jordan's internal politics between June 1967 and 1971 was the rivalry between the Government and Palestinian guerrilla organizations, principally al-Fatah, which from 1968 was led by Yasser Arafat, the Chairman of the PLO. These organizations gradually assumed effective control of the refugee camps and commanded widespread support amongst the Palestinian majority of Jordan's population. They also received armaments and training assistance from other Arab countries, particularly Syria, and finance from the oil-rich states bordering the Persian (Arabian) Gulf. The *fedayeen* ('martyrs') movement virtually became a state within a state. Its leaders stated that they 'have no wish to interfere in the internal affairs of Jordan provided it does not place any obstacles in the way of our struggle to liberate Palestine'. In practice, however, its popularity and influence represented a challenge to the Government, whilst its actions attracted Israeli reprisals that did serious damage to the East Bank, now the only fertile part of Jordan, and generally reduced the possibilities of a peace settlement on which Jordan's long-term future depended.

A major confrontation between the two forces occurred in November 1968, after massive demonstrations in Amman on the anniversary of the Balfour Declaration. Extensive street fighting broke out between guerrillas and the army, and for a short period a civil war seemed possible, but both sides soon backed down. Similar confrontations followed in February and June 1970, and on both occasions the Government was forced to yield to Palestinian pressures. King Hussein and Arafat (whose own position was threatened by the rise of small extremist groups in Jordan) concluded an agreement redefining their respective spheres of influence. The guerrillas appeared to have granted little or nothing, but Hussein was forced to dismiss his Commander-in-Chief and a cabinet minister, both relatives. These were regarded as the leaders of the anti-*fedayeen* faction, which remained strong amongst the Bedouin sheikhs. Despite the agreement, the tension between the Government and the guerrillas continued, aggravated by opposition to the Government's concessions from intransigent army officers.

A new and dangerous stage in the relations between the two sides in Jordan was reached in July 1970 with the acceptance by the Government of the US peace proposals for the Middle East. The guerrilla groups, with few exceptions, rejected these, and, as the cease-fire between the UAR and Israel came into operation on 7 August, it was clear that the Jordanian Government was preparing for a full-scale confrontation with them.

CIVIL WAR

Bitter fighting between government and guerrilla forces broke out at the end of August 1970. This escalated into full civil war in the latter half of September, with thousands of deaths and injuries. On 16 September a military Cabinet was formed under Brig. Muhammad Daoud—in any case martial law had been in force since the end of the June 1967 war—and immediately Field Marshal Habis Majali replaced as Commander-in-Chief Lt-Gen. Mashour Haditha, who had been sympathetic to the commandos and had tried to restrain their severest opponents in the army.

In the fighting that followed, the guerrillas claimed full control in the north, aided by Syrian forces and, it was later revealed, three battalions of the PLA sent back by President Nasser from the Suez front. The Arab states generally appealed for an end to the fighting. Libya threatened to intervene and later broke off diplomatic relations, while Kuwait stopped its aid to the Government; however, the Iraqi troops stationed on the eastern front against Israel notably failed to intervene. On the government side talks were held with the USA about direct military assistance. In the event such a dangerous widening of the Palestinian confrontation was avoided by the scale of the casualties in Jordan and by the diplomacy of Arab Heads of State (reinforced by President Nasser's reported threat to intervene on the guerrillas' behalf) who prevailed upon King Hussein and Yasser Arafat to sign an agreement in Cairo on 27 September 1970, ending the war. The previous day a civilian Cabinet had been restored under Ahmad Toukan. Five military members were retained.

A definitive agreement, very favourable to the liberation organizations, was signed by Hussein and Arafat on 13 October 1970 in Amman, but this proved to be simply the beginning of a phase of sporadic warfare between the two parties, punctuated by new agreements, during which the commandos were gradually forced out of Amman and driven from their positions in the north back towards the Syrian frontier. At the end of October a new Government, still containing three army officers, was formed under Wasfi at-Tal. By January 1971 army moves against the Palestine guerrillas had become much more blatant, and the UAR, Syria and Algeria all issued strong protests at the Jordanian Government's attempt to 'liquidate' the liberation movements. All but two brigades of Iraqi troops were, however, withdrawn from Jordan.

By April 1971 the Jordanian Government seemed strong enough to set a deadline for the guerrillas' withdrawal of their remaining men and heavy armaments from the capital. On 13 July a major government attack began on the guerrillas entrenched in the Jerash-Ajloun area, which lasted four days. The Government claimed that all the bases had been destroyed and that 2,300 of 2,500 guerrillas in them had been captured. Most of the Palestinians taken prisoner by the Jordanian Government were released a few days later, either to leave for other Arab states or to return to normal life in Jordan.

The 'solution' (in King Hussein's word) of the guerrilla 'problem' provoked strong reaction from other Arab governments. Iraq and Syria closed their borders with Jordan; Algeria suspended diplomatic relations; and Egypt, Libya, Sudan and both Yemens voiced public criticism. Relations with Syria deteriorated fastest of all, but normal trading and diplomatic relations were restored by February 1972.

Meanwhile, Saudi Arabia had been attempting to bring together guerrilla leaders and Jordanian Government representatives to work out a new version of the Cairo and Amman agreements. Meetings did take place in Jeddah but were fruitless, and the Palestinians responded in their own way to the events of July. Three unsuccessful attempts were made in September to hijack Jordanian airliners. Then, on 28 September 1971, Wasfi at-Tal, the Prime Minister and Minister of Defence, was assassinated by members of a Palestinian guerrilla group, the Black September organization, and other assassination attempts were made.

HUSSEIN'S ANSWER

Throughout the period since the liquidation of the guerrillas in July 1971 Hussein had been seeking to strengthen his political position. In August he announced the creation of a tribal council—a body of sheikhs or other notables, appointed by him and chaired by the Crown Prince—which was to deal with the affairs of tribal areas. A month later the formation of the Jordanian National Union was announced. This (renamed the Arab National Union in March 1972) was to be Jordan's only legal political organization. It was not a party in the usual sense; proponents of 'imported ideologies' were debarred from membership; the King became president, and the Crown Prince vice-president, and appointed the 36 members of the Supreme Executive Committee.

However, the King's boldest political move, and an obvious attempt to regain his standing in the eyes of Palestinians, was his unfolding of plans for a United Arab Kingdom in March 1972. This Kingdom was to federate a Jordanian region, with Amman as its capital and also federal capital, and a Palestinian region, with Jerusalem as its capital. Each region was to be virtually autonomous, though the King would rule both and there would be a federal Council of Ministers.

Outside Jordan there was almost universal criticism of this plan from interested parties—Israel, the Palestinian organizations and Egypt, which in the following month broke off diplomatic relations. Jordan's isolation in the Arab world had never been more complete.

Throughout the rest of 1972 and the first half of 1973 Hussein continued to adhere to his original plans for a United Arab Kingdom, but at the same time he insisted that peace with Israel could be arrived at only within the framework of UN Security Council Resolution 242 (see Documents on Palestine, p. 105) and strongly denied suggestions from other Arab states that he was considering signing a separate peace treaty with Israel.

The internal security of Jordan was threatened in November 1972 when an attempted military coup in Amman by Maj. Rafeh Hindawi was thwarted. In February 1973 Abu Daoud, one of the leaders of al-Fatah, and 16 other guerrillas were arrested on charges of infiltrating into Jordan for the purpose of subversive activities. The latter affair took place while King Hussein was on a visit to the USA requesting defence and financial aid. On his return he commuted the death sentences passed on the guerrillas by a Jordanian military court and previously confirmed by himself, to life imprisonment. In May 1973 Hussein's Prime Minister, Ahmad Lauzi, resigned for health reasons and a new government under Zaid ar-Rifai, who was known as an opponent of the Palestinian guerrillas, was formed.

In September 1973 Hussein attended a 'reconciliation summit' with Presidents Sadat of Egypt and Assad of Syria. This was Jordan's first official contact with the two states since they had broken diplomatic relations, and they were restored after the summit. The meeting was condemned by al-Fatah, Libya and Iraq, but Jordan regained some stature in the Arab world after Hussein's general amnesty for all political prisoners; among those released was Abu Daoud.

During the 1973 October War with Israel Jordan sent troops to support Syria on the Golan Heights but was otherwise not actively involved, and did not open a third front against Israel as in the 1967 war. Jordan was represented at the Geneva talks in December 1973.

In April 1974 Hussein announced that the Arab National Union, which was then the sole political organization in Jordan, was to be reorganized with an executive and council of reduced numbers.

During most of 1974 King Hussein's policy towards the PLO and the status of the West Bank was somewhat ambiguous. He continued to try to preserve the West Bank as part of his Kingdom despite strong pressure from other Arab states and the increasing influence of the PLO. In September 1974 after a meeting between Egypt, Syria and the PLO expressing support for the PLO as the 'only legitimate representative of the Palestinian people', Jordan refused to participate in further Middle East peace talks. However, in October 1974 at the Arab Summit Conference at Rabat (see Documents on Palestine, p. 109), representatives of 20 Arab Heads of State unanimously recognized the PLO as the sole legitimate representative of the Palestinians, and its right to establish a national authority over any liberated Palestinian territory. Effectively ceding Jordan's claim to represent the Palestinians and reincorporate the West Bank, when recaptured, into the Hashemite Kingdom, Hussein reluctantly assented to the resolution. Hussein declared that Jordan would continue to strive for the liberation of the West Bank and recognize the full rights of citizenship of Palestinians in Jordan. The prospect of a separate, independently-ruled Palestinian state was strongly condemned by Israel.

JORDAN AFTER THE RABAT SUMMIT

Following the Rabat Conference Hussein was given more extensive powers in revisions to the Jordanian Constitution approved by the National Assembly in November 1974. He was allowed to rule without the National Assembly for one year, and to reorganize his Kingdom in order to lessen the numbers of Palestinians in the executive and legislative branches of government, his 1972 plan for a United Arab Kingdom now being wholly defunct. The National Assembly was dissolved and a new Government formed in November, with Zaid ar-Rifai remaining Prime Minister. Palestinian representation was decreased, and the question of citizenship of the estimated 800,000 Palestinians on the East Bank became contentious. Elections in Jordan were postponed in March 1975 and when the National Assembly was briefly reconvened in February 1976 a constitutional amendment was enacted to suspend elections indefinitely.

The success of the PLO at the Rabat Conference had, despite internal feuds, considerably strengthened its position. This stance was consolidated when the UN acknowledged the PLO as the sole legitimate representative of the Palestinians by an overwhelming majority in November. The PLO was also granted observer status at the UN.

One of the most notable results of the Rabat Summit Conference, and of Hussein's virtual abandonment of his claim to the West Bank, was an improvement in relations with the Arab world in general, and with Syria in particular. During 1975 various links with Syria were forged and strengthened. Early in the year Hussein visited Damascus, and President Assad visited Jordan in June. A supreme joint committee was set up to co-ordinate military and political planning, with the two countries' Prime Ministers as chairmen. In August a Supreme Command Council, headed by the King and President Assad, was formed to direct military and political action against Israel, and in December 1976 it was announced that a form of political union between the two countries was to be elaborated.

This close relationship, however, was jeopardized by President Sadat's visit to Israel in November 1977, and subsequently threatened by Syria's proposed *rapprochement* with Iraq. Jordan, unlike Syria, was anxious not to condemn Sadat's peace initiative, but did not want to destroy its growing relationship with Syria. King Hussein, therefore, remained uncommitted and tried to act as a conciliator between Egypt on the one hand and the 'rejectionist' states (Algeria, Libya, Iraq, Syria and the People's Democratic Republic of Yemen—PDRY) on the other. Jordan, however, emphatically rejected Israel's peace proposals which were put forward by Prime Minister Begin in December 1977, and maintained its policy of demanding an Israeli withdrawal from Gaza and the West Bank, including East Jerusalem, leaving no Jewish settlements. Jordan also wanted the creation of a Palestinian homeland; the nature of that territory's link with Jordan to be decided by a referendum.

It was these factors which helped to determine Jordan's attitude to the Camp David agreements (see Documents on Palestine, p. 111) in September 1978 and the subsequent peace treaty between Egypt and Israel (see Documents on Palestine,

p. 112) in March 1979. Jordan refused to be drawn into the Camp David talks by the USA, and joined the other Arab states at the Baghdad Arab summit in drawing up a list of sanctions against Egypt.

Immediately prior to the signing of the peace treaty, Jordan showed its commitment to the PLO by welcoming Yasser Arafat on an official visit, and after the treaty was signed Jordan was the first Arab country still having diplomatic relations with Egypt to break them off. In the months that followed the signing of the peace treaty, however, Jordan's hostility to Egypt subsided, and was replaced by the souring of relations with Syria. In spite of Jordanian denials, Syria was convinced that the Muslim Brotherhood (allowed limited freedom in Jordan) was fostering treachery inside Syria. Syria also disapproved of Jordan's support for Iraq in the Iran–Iraq War. These factors led to a build-up of Syrian and Jordanian troops on the frontier in December 1980, and to mediation between the two sides by Saudi Arabia. Relations did not improve in February 1981 when the Jordanian Chargé d'affaires in Beirut was abducted (allegedly by Syrians), and Jordan responded by abrogating a six-year economic and customs agreement with Syria.

Throughout 1981 Jordan continued with its policy of supporting Iraq, and in January 1982 King Hussein announced that he was prepared to take charge of a special 'Yarmouk Force' of Jordanians to give military help to Iraq. In April, however, as Iraq's position in the war with Iran grew weaker, Hussein tried, unsuccessfully, to encourage a negotiated settlement between Iran and Iraq (by 1984, however, Hussein was, once more, offering troops and other military assistance to Iraq). He also supported a revival of Saudi Arabia's Fahd plan for a resolution of the Arab–Israeli question. After the Israeli invasion of Lebanon in June 1982, Hussein found himself a key part of President Reagan's peace plan involving the creation of an autonomous Palestinian authority on the West Bank in association with Jordan (see Documents on Palestine, p. 116). Hussein discussed the matter in Washington, DC, in December, and in January 1983 held talks with the PLO leader, Yasser Arafat, in Amman.

Opinion within Jordan was very sceptical of the supposed advantages that would accrue to Jordan if Hussein associated himself too deeply with President Reagan's peace plan. As well as a military threat from Syria, there was the possibility of the withdrawal of aid from other Arab countries. Talks between Hussein and Arafat again took place in early April 1983, however, when Arafat stressed his commitment to the Fez plan which had been agreed at the Arab summit in September 1982 (see Documents on Palestine, p. 116). By the middle of April the Reagan peace plan seemed dead, when Arafat rejected the draft agreement which Hussein had prepared. In the weeks that followed, Hussein still claimed to support the Reagan plan. Much of his time, however, was spent in taking steps to control emigration of Palestinians from the West Bank in Jordan.

In domestic affairs, Hussein had dissolved the House of Representatives in 1974, but in April 1978 he formed a 60-member National Consultative Council (NCC) appointed by royal decree. The third term of the NCC began on 20 April 1982. In December 1979 Sharif Abd al-Hamid Sharaf replaced Mudar Badran as Prime Minister. Sharaf, however, died of a heart attack on 3 July 1980, and was replaced as Prime Minister by the former Minister of Agriculture, Qassim ar-Rimawi. In August, however, a new Government under former Prime Minister Mudar Badran was introduced, although little change of policy resulted.

THE RECALL OF THE NATIONAL ASSEMBLY

Despite the failure to agree a formula for the creation of a Palestinian state on the West Bank with Yasser Arafat, Jordan gave diplomatic support to Arafat when a Syrian-backed revolt against his leadership of al-Fatah, the major guerrilla group within the PLO, erupted in Lebanon in May 1983. During the last three months of 1983, Jordanian diplomats in several European countries, and targets in Amman, came under attack from terrorists who were thought to be members of a radical Arab group, based in Syria, which was angered by Jordan's call for Egypt to be readmitted to the community of Arab states, by its backing for Arafat and by the prospect of a revival of President Reagan's peace plan which their improved relations raised.

With a view to recovering something from the West Bank before Jewish settlement there produced a *de facto* extension of Israel, King Hussein dissolved the National Consultative Council on 5 January 1984 and reconvened the National Assembly, which had been suspended in 1974, for its first session since 1967. At the same time, he embarked upon a series of talks with Yasser Arafat, dealing with the Palestinian question, which sought to consolidate their good relations and to establish a moderate core of opinion as a counter-weight to the intransigent Syrian, Libyan and extremist PLO position, that a solution could only be achieved by armed struggle. Hussein, moreover, was mindful of the fact that some 60% of his subjects were Palestinians. By recalling the National Assembly, Hussein seemed, effectively, to be creating the kind of Palestinian forum which was detailed in the Reagan plan. This was not, as it turned out, a prelude to a concerted move by Hussein and Arafat towards establishing a Palestinian state on the West Bank. The National Assembly provided a focus for a debate which revealed strong opposition among Jordanian Palestinians to the Reagan plan. As the talks between Hussein and Arafat progressed, they were at pains to stress that they stood by the resolution of the Rabat Summit Conference in 1974, which recognized the PLO as the sole legitimate representative of the Palestinian people.

Israel allowed the surviving West Bank deputies to attend the reconvened House of Representatives (the Lower House), which unanimously approved constitutional amendments enabling elections to the House to be held in the East Bank alone but giving itself the right to elect deputies from the West Bank, without whom the House would have been inquorate. The first elections in Jordan for 17 years, and the first in which women were allowed to vote, took place on 12 March 1984 (although political parties were still banned). The House of Representatives had already, in January, elected seven deputies from the West Bank by majority vote to fill the places of members who had died since 1974, increasing the membership of the House to 52. The 12 March elections filled the remaining 8 seats from the East Bank. Any thought that Hussein, in reviving the National Assembly, might, in the absence of agreement with the PLO on the Reagan plan, seek a mandate from the West Bank deputies to begin talks with Israel on Palestinian autonomy, was set further aside by the election of three Muslim fundamentalists and an Arab nationalist in the eight East Bank by-elections. The extent of the opposition to a solution based on the Reagan plan was apparent.

The nucleus of a moderate body of Arab opinion on the Palestinian question did, none the less, give the impression of being formed around Jordan and Yasser Arafat, with likely support to come from Saudi Arabia, Egypt and the Gulf states. The opposition to these developments of other Arab groups was reaffirmed when the Jordanian embassy in Tripoli, Libya, was burnt down in February 1984. Jordan responded by severing diplomatic relations with Libya. Sporadic attacks on Jordanian diplomats, principally in European countries, continued throughout 1984 and 1985, for which responsibility was claimed by various extremist Arab groups including the Islamic Jihad and the re-emergent Black September organization, which was formed after the expulsion of the PLO from Jordan in September 1970. Jordan suspected Syria and Libya of being behind these attacks.

In January 1984 the Jordanian Cabinet resigned, and a new one, containing a higher proportion of Palestinians and led by Ahmad Ubeidat, as Prime Minister, took office.

RELATIONS WITH THE 'SUPERPOWERS'

At the beginning of 1984 the US Government tried to renew its efforts to gain congressional approval for a $220m.-plan to supply Jordan with arms and equipment for an 8,000-strong Jordanian strike force. King Hussein tried to distance Jordan from any interest or involvement in the creation of such a force. Plans for a Jordanian strike force were abandoned by the Reagan administration in June.

Hussein, frustrated by the unwillingness of the USA to use its influence with Israel to 'freeze' Jewish settlement of the West Bank and unable to buy arms from the USA, began to look to the USSR for diplomatic backing in solving the problem of Palestinian autonomy and for armaments with which to defend his country. In January 1985 Jordan purchased an

air defence system from the USSR, having already made an agreement to buy French anti-aircraft missiles in September 1984. The need to re-equip the Jordanian air force was acute: in 1984 the Jordanians possessed only about 100 effective fighter aircraft, compared with the 630 and 600 aircraft, respectively, of Israel and Syria, according to 1982/83 figures.

Although US President Reagan was advocating the sale of arms worth US $500m.–$750m. to Jordan in 1985, there was still considerable opposition to the proposal, and he was advised not to put it before Congress and risk a Senate veto. Instead, on 12 June, King Hussein was offered extra economic aid of $250m., to be spread over 1985 and 1986, by Secretary of State Shultz, as a token of US support for his efforts to achieve a peace settlement between the Arabs and Israel. Jordan received US aid of $136m. in 1984, and the level of aid in 1985 and 1986 had originally been set at $111.7m. and $117m. respectively. The Senate authorized the aid but spread it over 27 months, not 15, as the Reagan administration had requested.

JOINT JORDANIAN-PALESTINIAN PEACE PROPOSALS

In September 1984, to the anger of radical Arab states, Jordan decided to re-establish diplomatic relations with Egypt, five years after breaking them off in protest at the Egypt-Israel peace treaty of 1979. Hussein rejected the Israeli offer of direct negotiations, excluding the PLO, in October, calling instead for a conference of all the concerned parties in the Middle East, including, on an equal footing with nation states in the region, the PLO. He required Israel to accept the principle of 'land for peace'. Negotiations, according to Hussein, should proceed on the basis of UN Security Council Resolution 242 of November 1967. This last point was the impediment to Jordanian and PLO agreement to a programme for peace talks. Resolution 242 had not been acceptable to the PLO as it referred to the Palestinian Arabs as refugees, implicitly denying the existence of a Palestinian nation and Palestinians' right to self-determination, and recognized Israel's right to exist. The Palestine National Council (PNC), which finally convened in Amman in November 1984, replied non-committally to King Hussein's offer of a joint Jordanian-Palestinian peace initiative, without explicit rejection or acceptance of the principles embodied in Resolution 242, and referred the proposal to the PLO Executive Committee for examination.

On 23 February 1985, in Amman, King Hussein and Yasser Arafat announced the terms of a joint Jordanian-Palestinian agreement on the framework for a peace settlement in the Middle East, which the two leaders had finalized on 11 February. It held that peace talks should take the form of an international conference including the five permanent members of the UN Security Council and all parties to the conflict, including the PLO, representing the Palestinian people in a joint Jordanian-Palestinian delegation. The Palestinian people would in future exercise their right to self-determination in the context of a proposed confederated state of Jordan and Palestine. The Jordanian Government claimed that the agreement was based on a number of UN resolutions and not solely UN Security Council Resolution 242, though the published text of the accord (see Documents on Palestine, p. 116) gave land in exchange for peace, a central tenet of that resolution, as its first principle. The PLO Executive Committee, in approving the terms of the accord (providing that they received full Arab support) on 20 February, complicated the position by stressing that the joint position stemmed, in fact, from a rejection of Camp David, the Reagan plan and Resolution 242 as well. According to King Hussein, Arafat subsequently accepted Resolution 242 as the basis for future peace negotiations, but made no public declaration of acceptance. Argument over the implications of the agreement persisted, and the PLO adopted a new position on the status of the Palestinian representation at future peace negotiations, which, it said, should be within a united Arab, not merely a Jordanian-Palestinian, delegation. Syria and Libya and the rebel PLO factions predictably rejected the Amman agreement.

In March 1985 President Mubarak of Egypt called for talks between Egypt, the USA and a joint Jordanian-Palestinian delegation. The PLO Executive Committee rejected the proposal as it deviated from the accord with Jordan. Israel rejected the idea of preliminary talks and any suggestion that the USA might negotiate with the PLO, as it had always refused to do unless the PLO renounced terrorism and accepted Israel's right to exist. In May King Hussein, still averring that the PLO accepted UN Security Council Resolutions 242 and 338 as the basis for negotiations, put foward a four-stage plan in Washington. Under the terms of the plan, the USA would first meet a Jordanian-Palestinian delegation, not including PLO representatives. Arafat would then be prepared to make a formal declaration of the PLO's readiness to recognize and negotiate with Israel if the USA publicly stated its support for Palestinian self-determination within the context of a Jordanian-Palestinian confederation, as proposed in the 11 February agreement between King Hussein and Arafat. The USA would then hold a second meeting with a Jordanian-Palestinian delegation, including PLO representatives, at which the terms of the third and fourth stages of the plan, an international conference under the auspices of the five permanent members of the UN Security Council, leading to direct negotiations between Israel and a Jordanian-Palestinian delegation, would be discussed. Israel rejected the plan and the call for an international peace conference, and instead proposed enlisting the support of the permanent members of the Security Council for direct talks between Israel and a joint Jordanian-Palestinian delegation including 'authentic Palestinian representatives' from the Occupied Territories who were not members of the PLO or the PNC. In July Israel rejected a list of seven Palestinians, five of whom were members of the PLO loyal to Yasser Arafat or had links with the PNC, whom King Hussein had presented to the USA as candidates for inclusion in a joint Jordanian-Palestinian delegation to hold preliminary talks with the USA. The Israeli Prime Minister, Shimon Peres, later conceded that two of the seven fulfilled his requirements.

The Prime Minister, Ahmad Ubeidat, resigned in April 1985. On 5 April a new Cabinet was sworn in under the premiership of Zaid ar-Rifai, who had served as Prime Minister during the 1970s.

THE COLLAPSE OF THE JORDANIAN-PALESTINIAN PEACE INITIATIVE

King Hussein and Yasser Arafat continued to seek Arab support for their peace initiative, but an extraordinary meeting of the Arab states in Casablanca, in August 1985 (which was boycotted by Syria, Libya, Lebanon, the PDRY and Algeria), merely noted the existence of the Jordanian-Palestinian agreement and reaffirmed Arab allegiance to the Fez plan of September 1982.

Further progress was then hampered by a series of terrorist attacks, carried out by Palestinian organizations. In September three Israelis were murdered by terrorists in Larnaca, Cyprus. Israel blamed the PLO's élite Force 17 and retaliated by bombing the PLO's headquarters in Tunis on 1 October. Later in October an Italian cruise ship, the *Achille Lauro,* was 'hijacked' in the eastern Mediterranean by members of the Palestine Liberation Front (the faction of that name led by 'Abu' Abbas, nominally loyal to Arafat), who killed an elderly American Jewish passenger.

King Hussein was under increasing pressure to advance the peace process, if necessary without the participation of the PLO. In September President Reagan revived a plan to sell US arms worth US $1,900m. to Jordan. The proposal was approved by Congress on the condition that Jordan entered into direct talks with Israel before 1 March 1986. However, a *rapprochement* developed between Jordan and Syria, which made such a development even more unlikely. In February 1986 the administration of President Reagan in the USA indefinitely postponed its proposed arms sale to Jordan (worth $1,500m., with the withdrawal of *Hawk* missiles from the package) when it became clear that it would not be approved by the Senate. King Hussein said that he would look instead to European countries and the USSR for arms supplies.

Relations between Jordan and Syria had been poor since 1979, when Syria had accused Jordan of harbouring anti-Syrian groups. Their policies also diverged in respect of the Iran–Iraq War, in which Syria supported Iran, and Jordan Iraq. In November 1985 King Hussein admitted that Jordan had, unwittingly, been a base for the Sunni fundamentalist Muslim Brotherhood in its attempts to overthrow Syria's President Assad, but stated that members of the group would no longer

receive shelter there. The Prime Ministers of the two countries met in Damascus in November and agreed on the need for 'joint Arab action' to achieve peace in the Middle East. At previous talks in Saudi Arabia in October, Jordan and Syria had rejected 'partial and unilateral' solutions and affirmed their adherence to the Fez plan, omitting all mention of the Jordanian-Palestinian peace initiative. President Assad and King Hussein confirmed the improved state of Syrian-Jordanian relations when they met in Damascus in December.

By pursuing a reconciliation with Syria, which was opposed to Yasser Arafat's leadership of the PLO, King Hussein may have hoped to exert pressure on Arafat to take the initiative in the peace process and finally signal PLO acceptance of Resolution 242. Arafat was also under pressure from King Hussein and President Mubarak of Egypt to promote the PLO's credibility as a prospective partner in peace talks by renouncing terrorism. He responded to their appeals in November 1985, in Cairo, by effectively reiterating a PLO decision of 1974 to confine military operations to the Occupied Territories and Israel. Any credence that this declaration may have won was immediately dispelled by Arafat's aides, who repudiated it. Then, in December, the PLO Executive Committee reiterated its opposition to Resolution 242.

Shimon Peres, although still opposed to the idea of preliminary negotiations excluding Israel, intimated in a speech at the UN in October 1985 that he would not rule out the possibility of an international conference on the Palestinian question. Rumours of a secret meeting between King Hussein and Prime Minister Peres were followed at the end of October by the disclosure to the Israeli press of a document, drawn up by the Israeli Prime Minister's office, which purported to summarize the state of negotiations between Israel and Jordan. The document suggested the establishment of an interim Israeli-Jordanian condominium of the West Bank, granting a form of Palestinian autonomy, and recorded mutual agreement on the need for an international forum for peace talks. Israel would consent to the participation of the USSR in such a forum (on the condition that it re-established diplomatic relations with Israel), and of Syria, but not of the PLO, on whose involvement King Hussein still insisted.

Given Yasser Arafat's persistent refusal to accept UN Security Council Resolutions 242 and 338 as the basis for peace talks, the demise of the Jordanian-Palestinian peace initiative had been forecast for some time. On 19 February 1986 King Hussein publicly severed political links with the PLO 'until such time as their word becomes their bond, characterized by commitment, credibility and constancy'. Arafat was ordered to close his main PLO offices in Jordan by 1 April. The activities of PLO members in the country were henceforth to be restricted to an even greater extent than before, and a number of officers of al-Fatah, loyal to Arafat, were expelled. King Hussein made efforts to strengthen Jordanian influence and create a Palestinian constituency in the Occupied Territories, independent of Arafat's PLO, including: the passing of a draft law by the House of Representatives in March 1986, increasing the number of seats in the House from 60 to 142 (71 seats each for the East and West Bank), thereby providing for greater West Bank Palestinian representation in the House; and the introduction, in August 1986, with Israeli support, of a US $1,300m. five-year development plan for the West Bank and the Gaza strip.

This last measure provoked strong criticism from Yasser Arafat and from West Bank Palestinians, who claimed that it represented a normalization of relations between Jordan and Israel. There was considerable support for Arafat among Palestinians in Jordan and in the West Bank, and this was consolidated after he re-established himself at the head of a reunified PLO at the PNC session in Algiers in April 1987 (when the Jordan-PLO accord of 1985 was formally abrogated). As criticism of King Hussein mounted in Jordan and in the West Bank, the authorities responded by imposing new security measures, arresting dissidents (in particular members of the fundamentalist Muslim Brotherhood and the banned Jordanian Communist Party), tightening press censorship and 'blacklisting' journalists deemed to be too critical of the Government.

After the termination of political co-ordination with the PLO, Jordan continued to reject Israeli requests for direct peace talks which excluded a form of PLO representation. However, Jordan's subsequent efforts to strengthen its influence in Israeli-occupied territories and to foster a Palestinian constituency there which was independent of the PLO, complemented Israeli measures to grant limited autonomy to the Palestinian community in the West Bank, by appointing Arab mayors instead of Israeli military administrators in four towns. In May 1987, after a number of secret meetings with King Hussein, Peres (who was now the Israeli Minister of Foreign Affairs) claimed to have made significant progress on the critical issue of Palestinian representation at a peace conference, and to have the consent of Egypt, Jordan and the USA for convening an international conference, including the five members of the UN Security Council and a delegation of Palestinians (presumably not PLO members) who 'reject terrorism and violence' and accept UN Security Council resolutions 242 and 338 as the basis for negotiations. King Hussein continued publicly to insist on the need for the PLO to be represented, but he appeared to have accepted (contrary to his long-standing official policy) that the conference would have no power to impose a peace settlement, and would be only a preliminary to direct talks between the main protagonists in the Middle East conflict. However, the prospect of an international peace conference remained academic for as long as there was no majority in the Israeli Cabinet in favour of Peres' plan and, therefore, for as long as the Israeli coalition Government of National Unity remained in power. The Prime Minister, Itzhak Shamir, was opposed, in principle, to an international conference, which would negotiate on the basis of an Israeli offer of the return of occupied territory in exchange for peace. He reiterated his alternative proposal to Peres' plan, namely, direct regional talks involving Israel, Egypt, Jordan, Palestinian representatives and the USA.

ARAB LEAGUE SUMMIT IN AMMAN

During 1987 King Hussein pursued his efforts, begun in 1986, to reconcile Syria and Iraq, with the wider aim of securing Arab unity. He was instrumental in arranging the first full summit meeting of the Arab League (excluding Egyptian representation) for eight years, which took place in Amman in November, principally to discuss the Iran–Iraq War. In September Jordan had restored diplomatic relations with Libya, which had modified its support for Iran and now urged a cease-fire. The Arab summit meeting unanimously adopted a resolution of solidarity with Iraq, which condemned Iran for its occupation of Arab territory and for prolonging the war (although Syria obstructed the adoption of diplomatic or other sanctions). King Hussein's appeal for Egypt to be restored to membership of the League was successfully resisted by Syria and Libya, but nine Arab states re-established diplomatic relations with Egypt soon after the summit, and these were followed by Tunisia in January 1988 and by the PDRY in February. President Saddam Hussain of Iraq and President Assad of Syria held two sessions of talks at the summit, and the resumption of co-operation between Jordan and the PLO was announced.

THE INTIFADA AND THE SHULTZ PLAN

In December 1987 a violent Palestinian uprising (*intifada*), against Israeli occupation of the West Bank and Gaza Strip, erupted in the Occupied Territories. Despite intensive and often brutal security measures, Israel was unable to suppress the revolt. Public demonstrations in Jordan in support of the *intifada* were muted, owing mainly to security precautions taken by the authorities to prevent unrest. In April the Palestinian extremist group, Black September, claimed responsibility for a series of bomb attacks in Amman, which, it said, were directed against the 'client Zionist regime in Jordan'.

The intensity of the *intifada* and the world-wide condemnation of Israeli security tactics, and revulsion at the degrading conditions in which many Palestinians were forced to live in the Occupied Territories, alerted the international community to the need for a revival of the efforts to secure an Arab-Israeli peace agreement. At the end of February 1988 the US Secretary of State, George Shultz, embarked on a tour of Middle East capitals, in an attempt to elicit support for a new peace initiative. The Shultz plan, as the initiative came to be known, proposed the convening of an international peace conference, involving all parties to the Arab–Israeli conflict and the five members of the UN Security Council, with the Palestinians represented in

a joint Jordanian-Palestinian delegation, excluding the PLO. This conference would have no power to impose a settlement and would act only as a consultative forum prior to and during subsequent direct talks between Israel and each of its Arab neighbours, and between Israel and a joint Jordanian-Palestinian delegation. The latter talks would determine the details of a three-year transitional period of autonomy for the 1.5m. Palestinians in the Occupied Territories, leading (before the start of the transitional period) to negotiations to determine the final status of government in the Territories. (For full details of the Shultz plan, see Documents on Palestine, p. 117.)

The plan's refusal to contemplate the participation of the PLO, the Palestinians' right to self-determination, and the establishment of an independent Palestinian state in the West Bank (i.e. the principles of the plan formulated at the Arab summit in Fez in 1982), made it impossible for the Arab nations to accept. Jordan, which had initially welcomed a renewal of the USA's commitment to peace in the Middle East, became disillusioned by its failure to apply persuasive pressure on Israel's Prime Minister, Itzhak Shamir, to modify his opposition to the Shultz plan. King Hussein pronounced himself sceptical that Israel would withdraw militarily from the West Bank prior to the transitional autonomy period, as the plan would require it to do, and reiterated his opposition, in accordance with Arab summit resolutions, to 'partial or interim solutions'. He welcomed the USA's acceptance, on 1 March 1988, of the concept of the Palestinians' 'legitimate rights', although he asked the USA to clarify its definition of those 'rights'. However, given the resumption of Jordanian political co-operation with the PLO, the enhanced status conferred on the organization by the *intifada*, and the potentially threatening reaction of Palestinians in Jordan, King Hussein was effectively constrained from supporting the Shultz plan.

An extraordinary summit meeting of the Arab League was held in Algiers in June 1988 to discuss the continuing *intifada* and the Arab–Israeli conflict in general. Addressing the summit, King Hussein gave his unconditional support to the *intifada* and disclaimed any ambition to restore Jordanian rule in the West Bank. He insisted that the PLO must represent the Palestinians at any future peace conference, and repeatedly stressed the PLO's status as 'the sole legitimate representative of the Palestinian people'. The Shultz plan, he claimed, had been launched only because the *intifada* had taken on the appearance of a Palestinian war against Israel.

The summit hailed the 'heroic' Palestinian uprising, and its final communiqué effectively rejected the Shultz plan by endorsing the Palestinians' right to self-determination and the establishment of an independent Palestinian state in the West Bank, and insisting on the participation of the PLO in future peace talks.

JORDAN SEVERS ITS LINKS WITH THE WEST BANK

The effect of the *intifada* had been to increase international support for Palestinian national rights, to heighten Palestinian aspirations to statehood and to reinforce support for the PLO (which was helping to organize the uprising) as the Palestinians' representative in achieving it. From King Hussein's point of view, the *intifada* had created a new set of conditions in which Jordan could no longer realistically present itself as an alternative to the PLO. The King's subsequent actions were entirely consistent with his acknowledgement of the new realities, as expressed at the Algiers summit, yet they were still greeted with surprise.

On 28 July 1988 Jordan cancelled its US $1,300m.-development plan for the West Bank, which had been opposed by the PLO since its launch in 1986 and had remained substantially underfunded. Then, two days later, King Hussein severed Jordan's legal and administrative links with the West Bank, dissolving the lower house of the Jordanian Parliament (the House of Representatives), where Palestinian representatives for the West Bank occupied 30 of the 60 seats. The King explained that his actions were taken in accordance with the wishes of the PLO and with the resolutions of the Rabat and Fez Arab summits in 1974 and 1982, and the positions adopted at the recent Algiers summit, which recognized the PLO as 'the sole legitimate representative of the Palestinian people'.

The extent to which Jordan was actually disengaging from the West Bank was uncertain and it appeared that King Hussein was leaving the way open for the resumption of political co-ordination between Jordan and the PLO in the future. For example, King Hussein stopped short of formally and irrevocably repealing the 'union agreement' of 1950 (Jordan's annexation of the West Bank) uniting the East and West Banks of the Jordan river, while the notion that, by dissolving the House of Representatives and dismantling Jordanian civil institutions, the King was actually transferring administrative responsibility for the West Bank to the PLO was not persuasive: the Jordanian legislature had exercised little or no practical influence over the affairs of the West Bank since the Israeli occupation began in 1967, and Israel soon introduced measures to restrict the activities of Palestinian institutions, in order to prevent the PLO from filling the administrative vacuum left by the dismissal of about 20,000 Jordanian teachers and civil servants who had continued to run public services in the West Bank after the Israeli occupation. It was suggested that, in placing responsibility for the Palestinians in the West Bank and for furthering the peace process in the hands of the PLO, King Hussein foresaw the inevitable failure of the PLO to finance and administer public services, and a political and diplomatic impasse that would demonstrate to Palestinians the necessity of Jordanian involvement if their hopes for self-government were to be realized. For its part, the PLO leadership complained that it had not been consulted prior to the announcement of the removal of Jordanian links, but the move was generally welcomed by the 850,000 Palestinians in the West Bank. According to the Jordanian Government, Palestinians residing in the West Bank were no longer considered to be Jordanian citizens. They were still entitled to hold a Jordanian passport, but this would, in future, only have the status of a 'travel document'.

Jordan's withdrawal from the West Bank appeared finally to make the Shultz plan redundant and to damage the prospects of a victory for Shimon Peres' Labour Party in the Israeli general election, which was scheduled to take place in November 1988. The peace plans of both Shultz and Peres had relied on the Palestinians' being represented at negotiations by a joint Jordanian-Palestinian delegation. Deprived of the so-called 'Jordanian option', the Israeli Labour Party signalled its willingness to negotiate with 'any Palestinians' who renounced the use of violence and recognized Israel's right to exist.

On 15 November 1988 the PNC proclaimed the establishment of an independent State of Palestine and, for the first time, endorsed UN Security Council Resolution 242 as a basis for a Middle East peace settlement, thus implicitly recognizing Israel. Jordan and 60 other countries recognized the new state. In December Yasser Arafat addressed a special session of the UN General Assembly in Geneva, where he renounced violence on behalf of the PLO. Subsequently, the USA opened a dialogue with the PLO, and (although the Israeli Prime Minister, Itzhak Shamir, denounced Arafat's renunciation of terrorism as deceitful) it appeared that Israel would have to negotiate directly with the PLO if it wished to seek a solution to the Palestinian question.

In December 1988 Marwan al-Qassim was appointed Minister of Foreign Affairs, replacing Taher al-Masri, who had been the principal opponent of King Hussein's decision to withdraw from the West Bank and also of the severe economic measures which the Prime Minister, Zaid ar-Rifai, had introduced. In April 1989 riots erupted in several cities in southern Jordan, spreading rapidly to areas near the capital, Amman, after the Government had imposed price rises of between 15% and 50% on basic goods and services. The riots led to the resignation of the Prime Minister and his Cabinet. On 24 April Field Marshal Sharif Zaid ibn Shaker, who had been Commander-in-Chief of the Jordanian armed forces between 1976 and 1988, was appointed Prime Minister, at the head of a new 24-member Cabinet. While King Hussein refused to make any concessions regarding the price increases which had provoked the disturbances (and which had been implemented in accordance with an agreement with the IMF), he had announced, immediately prior to the appointment of the new Prime Minister, that a general election would be held for the first time since 1967.

TOWARDS DEMOCRACY

A general election to the 80-seat House of Representatives took place on 8 November 1989 and was contested by 647 candidates, most of whom were independent, as the ban on political parties (in force since 1963) had not been withdrawn. However, it was possible for the Muslim Brotherhood (MB) to present candidates for election, owing to its legal status as a charity rather than a political party. At the election, in which 63% of the total electorate of 877,475 voted, the MB won 20 seats, while independent Islamic candidates, who supported the MB, won a further 14 seats. It was estimated that Palestinian or Arab nationalist candidates won seven seats and that candidates who were supporters of 'leftist' political groupings won four seats. The remaining seats were won by candidates who were broadly considered to be supporters of the Government. The strength of support for the opposition candidates was regarded as surprising, both in Jordan and abroad, especially since a disproportionately large number of seats had been assigned to rural areas, from which the Government had traditionally drawn most support.

On 4 December 1989 Mudar Badran was appointed Prime Minister by King Hussein. Badran had served as Prime Minister twice previously, during 1976–79 and 1980–84. The new Government did not include any members of the MB who had been elected to the House of Representatives, the MB having declined participation after its demand for the education portfolio had been rejected. Included in the new Cabinet, however, were three independent Muslim deputies and three 'leftists', all of whom were regarded as members of the opposition. The Government received a vote of confidence from the House of Representatives on 1 January 1990. The Prime Minister affirmed continuing support for prevailing austerity measures, and at the end of January announced the abolition of the 1954 anti-communism law.

The discovery of fraud and embezzlement at Petra Bank, Jordan's second largest commercial bank, had led to the seizure of its assets in August 1989 and the subsequent arrest of 22 former employees and business associates of the bank. The scandal spread to the national airline, Alia, and some 37 other companies. Following the 1989 election, King Hussein, under increasing pressure to initiate constitutional reform, promised to allow political parties more freedom and to tighten controls on corruption. In April 1990 he appointed a 60-member Royal Commission to draft a National Charter to regulate political life in Jordan. A former Prime Minister, Ahmad Ubeidat, was appointed to chair the commission, whose members included figures from the country's various political and religious groupings, including left-wingers and religious fundamentalists, and whose influence in all areas of public life became increasingly evident during the course of the year. In October 1990 a National Islamic Bloc was formed by more than one-half of the deputies in the House of Representatives. In a cabinet reshuffle in January 1991 Taher al-Masri, a leading Palestinian who was to be a strong supporter of Iraq's position in the Gulf crisis (see below), was appointed Minister of Foreign Affairs (a post that he had held between 1984 and 1988), in succession to Marwan al-Qassim. Four members of the MB were given portfolios in the new Cabinet.

On 9 June 1991 the National Charter to regulate political life was endorsed by the King and leading political figures. Among other things, the Charter revoked the ban on Jordanian political parties (which had been imposed since 1963) in return for their allegiance to the monarchy. On 19 June the King accepted the resignation of the Government headed by Mudar Badran and appointed a new Cabinet, with Taher al-Masri, the erstwhile Minister of Foreign Affairs, as Prime Minister. Taher al-Masri was Jordan's first Palestinian-born Prime Minister and, in spite of his support for Saddam Hussain during the 1990–91 Gulf crisis, was known for his liberal, pro-Western views. Badran's resignation was attributed to the King's disapproval of his sympathy for the MB, which had urged that *Shari'a* (Islamic) law should govern the new National Charter and whose members were again excluded from the Cabinet. The new Government obtained a vote of confidence in the House of Representatives on 18 July.

On 7 July 1991 the King issued a decree repealing the provisions of martial law which had been in force since 1967, reportedly at the request of the new Prime Minister, who sought to continue the progress towards greater political freedom and democracy.

ARAB LEAGUE SUMMIT IN BAGHDAD

An emergency summit meeting of the Arab League was held in Baghdad on 28–30 May 1990. Convened under pressure from Jordan and the Palestinians to discuss the 'threat to pan-Arab security' that was presented by the mass emigration of Soviet Jews to Israel, the meeting was boycotted by President Assad of Syria, a long-term adversary of Iraq's President Saddam Hussain, and by four other Arab Heads of State. In October 1989 King Hussein had warned against further Jewish colonization of the Occupied Territories, claiming that Israel was seeking to settle the Soviet immigrants there, thus causing more Palestinians to flee to Jordan and effectively transform it into a surrogate Palestinian state. The *intifada* had already resulted in a net movement of Palestinians into Jordan. King Hussein urged other Arab nations to provide economic and military assistance to Jordan, declaring that mass Jewish immigration into Israel and the Occupied Territories posed a threat to Jordan which it could not afford to confront alone. Israel had selected Jordan as 'the point through which to penetrate .... the Arab Nation', he declared. The PLO leader, Yasser Arafat, urged other Arab states, in vain, to impose economic sanctions on countries involved in the transfer of Jews to Arab lands. President Saddam Hussain of Iraq, supported by King Hussein (who rejected the more moderate stance of both Egypt and Saudi Arabia), vehemently denounced Israel and threatened to use weapons of mass destruction against it. In a final statement, issued at the end of the summit, Arab leaders criticized US economic and military assistance to Israel and reaffirmed their commitment to the defence of Jordanian sovereignty and national security. The question of financial aid for Jordan would be a matter for bilateral negotiations. An Iraqi promise of US $50m. on 1 June was followed by further promises of aid from Saudi Arabia ($100m.) and from Kuwait and the UAE ($200m.).

The issue of Soviet-Jewish emigration to Israel figured prominently in discussions between the British Secretary of State for Foreign and Commonwealth Affairs, Douglas Hurd, and Prime Minister Badran during the former's visit to Jordan on 30–31 May 1990. In May 1991 the then Soviet Minister of Foreign Affairs, Aleksandr Bessmertnykh (visiting Amman for talks with King Hussein), emphasized that Israel's policy of building Jewish settlements in the Occupied Territories was obstructing progress towards peace in the Middle East. Later that month King Hussein declared that the Arab–Israeli conflict had reached its most critical point since the formation of Israel in 1948, and he urged the world to act decisively to prevent a drift towards extremism.

JORDAN'S POSITION IN THE GULF CRISIS

Even before Iraq's invasion of Kuwait on 2 August 1990, Jordan's economy was in severe difficulties; the country's foreign debt of US $800m. was equivalent to one-quarter of annual GDP. Of all the Arab states affected, Jordan was probably the nation which was most likely to suffer from the effects of the conflict and the imposition of economic sanctions against Iraq, as stipulated by UN Security Council Resolution 661 of 6 August 1990. The loss of remittances from thousands of Jordanian workers who returned, destitute, from Iraq and Kuwait; the increased cost of importing petroleum products (almost all of Jordan's oil had been imported from Iraq); the threatened loss of as much as one-quarter of the country's exports and its transit trade with Iraq and Kuwait; the sudden decline in activity at the Red Sea port of Aqaba, as a result of the naval blockade and increases in insurance rates for shipping in the war zone; the enormous cost of humanitarian aid to refugees fleeing the conflict through its territory: all these were potentially disastrous for Jordan, which was embroiled in events beyond its control.

Following Iraq's invasion of Kuwait, the Palestinians and the PLO supported Saddam Hussain. Officially Jordan, in its own interests, remained neutral in the conflict. King Hussein 'regretted', but did not condemn, the action of Saddam Hussain in invading Kuwait, and Jordanian public opinion was solidly pro-Iraq for the duration of the crisis. Arab League ministers, attending a meeting of the Organization of the Islamic Confer-

ence (OIC) in Cairo on 3 August 1990, issued a statement, opposed by Jordan, condemning the invasion and demanding Iraq's immediate and unconditional withdrawal. At the emergency summit meeting of the Arab League, held in Cairo on 10 August, Jordan abstained in a vote to denounce the annexation of Kuwait and to advocate the deployment of a pan-Arab force to defend Saudi Arabia and neighbouring states from invasion by the forces of Saddam Hussain. King Hussein welcomed Saddam Hussain's proposal, on 12 August, to link Iraq's occupation of Kuwait with the continued Israeli occupations, and he held talks with the Iraqi leader in Baghdad on the following day. Another Arab League meeting in Cairo (30–31 August) was boycotted by Jordan and other Arab nations which supported Iraq. King Hussein persistently argued in favour of an Arab solution to the crisis and opposed the deployment of a multinational armed force in the Gulf region.

In the West, which had always regarded King Hussein as one of its chief allies in the region, there was much criticism of the King's pro-Iraq stance, though this was tempered with acknowledgement of the extremely difficult position in which he found himself. Talks in the USA between the King and President Bush, at Kennebunkport on 16 August, resulted in promises of US financial assistance in return for Jordanian observance of the economic embargo imposed on Iraq. A report by a UN envoy in October 1990 estimated that the crisis would cost Jordan some 30% of its GDP in 1990 and as much as 50% in 1991.

Following the Iraqi invasion of Kuwait, Jordan was overwhelmed by an influx of refugees, who included thousands of migrant workers from Egypt and the Indian sub-continent, fleeing the conflict. The congestion was such that Jordan was forced temporarily to close its border with Iraq in late August 1990, in an attempt to cope with the accumulation of refugees who could not immediately be transported to the Red Sea port of Aqaba or airlifted to their countries of origin. On 3 September Jordan issued an urgent appeal for international aid, partially to offset the costs of caring for the refugees. By October some 800,000 refugees had passed through the country, at a cost of some $40m. to the Jordanian authorities.

In mid-September 1990 two of King Hussein's former Palestinian opponents, George Habash of the Popular Front for the Liberation of Palestine (PFLP) and Naif Hawatmeh of the Democratic Front for the Liberation of Palestine (DFLP), who had been expelled during the civil war in 1970, were allowed to return to Amman for a pro-Iraqi conference of 'Arab Popular Forces'. The two Damascus-based leaders were received by the King in a display of unity and reconciliation fostered by the Gulf crisis. The conference, which was opened by the Speaker of the Jordanian House of Representatives (although not attended by the King), heard severe criticisms of governments opposed to Saddam Hussain and ended with pledges to wage a *jihad* against foreign forces in the Gulf region if Iraq were attacked. This led to a denunciation of King Hussein by the Saudi Arabian ambassador in Washington, and Saudi Arabia subsequently expelled Jordanian diplomats and many Jordanian immigrant workers. It also halted oil supplies to the Kingdom, claiming that Jordan had not paid for earlier deliveries.

King Hussein invested considerable personal effort in the search for a peaceful solution to the crisis, visiting London, Paris and Washington. In late August 1990 he arrived in Libya at the start of a peace mission among Arab leaders. He continued to advocate an Arab solution to the crisis and, in a televised message to the US Congress and people on 23 September, he urged the immediate withdrawal of the multinational force from the Gulf region. Speaking at the World Climate Conference in Geneva on 6 November, the King warned of the potentially disastrous environmental consequences of war in the Gulf region (a fear which was subsequently realized when Iraq released oil into the waters of the Gulf and ignited Kuwait's oil installations).

Following talks in Baghdad with Saddam Hussain on 4 December 1990, the King proposed a peace plan linking the Iraqi–Kuwait dispute and the Arab–Israeli conflict. He urged the convening of a peace conference on the Middle East, and that all Arab leaders should take part in a dialogue on the crisis, to take place simultaneously with the talks between the USA and Iraq, which had been proposed by President Bush at the end of November.

THE 1991 GULF WAR

The King's diplomatic efforts continued into 1991, when he embarked, in January, on a fresh tour of European capitals in a final attempt to avert war in the Gulf region. Diplomatic ties with Iran, severed in 1981 after the start of the Iran–Iraq War, were resumed in mid-January 1991, and Jordan was later reported to be supporting Iranian proposals to end the crisis. On 10 January Jordan had closed its ar-Ruweishid border post, on the frontier with Iraq, to all except Jordanian refugees. As war became imminent, Jordan feared a further influx of refugees from Iraq and Kuwait, and claimed that it had still not received UN aid promised for the August 1990 exodus. However, after receiving assurances of UN assistance with the cost of caring for the refugees, the border was reopened on 18 January.

Following the outbreak of hostilities between Iraq and a multinational force on 16 January 1991, the Jordanian Government condemned the bombardment of Iraq as a 'brutal onslaught against an Arab and Muslim nation'. Large-scale anti-Western and anti-Israeli demonstrations occurred throughout the country, and overwhelming popular support for Iraq was expressed in all sections of society. Sentiments were further aroused when air attacks on goods vehicles (including tanker-trucks carrying oil) on the Baghdad–Ruweishid highway in late January killed at least six Jordanian civilians. Jordan had been entirely dependent on Iraqi oil since Saudi Arabian supplies were suspended in September 1990. Now these consignments were halted, and Jordan, which introduced petrol-rationing in February, was obliged to obtain more expensive supplies from Syria and Yemen. Oil imports from Iraq were eventually resumed in April 1991.

In a televised address in February 1991, King Hussein paid tribute to the people and armed forces of Iraq, describing them as victims of this 'savage and large-scale war' and claiming that the war was directed against all Arabs and Muslims. The speech was condemned by the US Administration, which accused Jordan of abandoning its neutrality and threatened to review its economic aid. In March the US Congress approved legislation cancelling a US $57m. aid programme. The law was signed by President Bush in April. However, the effects were offset, to some extent, by the announcement of a $450m. Japanese concessionary loan. As the multinational force launched a ground offensive to liberate Kuwait on 24 February, Prime Minister Badran announced that the conflict had at that point cost Jordan some $8,000m.

Fears that Iraq would provoke Israel into entering the conflict, thus making Jordan part of the combat zone, were not realized, owing to the Israeli decision not to retaliate in response to the *Scud* missile attacks launched by Iraq against its territory. At the end of December 1990, Jordan had deployed 80,000 troops in defensive positions facing Israel. King Hussein declared, in mid-January 1991, that Jordan would defend its territory and air space against any incursions. In early February a Jordanian air force officer and a truck-driver were executed, having been convicted by a military court of spying for Israel.

On 1 March 1991, following the liberation of Kuwait and the end of hostilities between Iraq and the multinational force, King Hussein, in a televised address to the nation, advocated regional reconciliation. In late March he travelled to Damascus, for the first time in 12 months, for talks with President Assad, and subsequently sought to improve relations with the West, visiting President Mitterrand in Paris later that month.

MIDDLE EAST PEACE PROCESS 1991–94

US Secretary of State James Baker visited Jordan on 20–21 July 1991, when King Hussein announced his intention to accept an invitation to Jordan to attend a Middle East peace conference sponsored by the USA and the USSR. It was hoped that the conference would be attended by delegations from Israel, Egypt, Syria and Lebanon, and by a joint Jordanian-Palestinian delegation; and that it would thus become the first occasion when Israel, the Palestinians and the Arab nations would participate in direct negotiations. The Jordanian House of Representatives opposed the plan, however, demanding Israeli withdrawal from the Occupied Territories and East Jerusalem as a precondition

for Jordan's attendance, and rejecting Israel's insistence that neither Palestinians from East Jerusalem nor overt supporters of the PLO should be allowed to attend. James Baker visited Amman again in September and October—he had visited the region eight times since the end of the Gulf War—for further rounds of pre-conference diplomacy, and on 12 October King Hussein announced that a Jordanian delegation would attend the conference, in spite of intense opposition from the MB and leftist political groupings. He stated that he had received assurances from the USA that it would do its utmost to ensure that a transitional period of Palestinian 'autonomy' in the Occupied Territories would be negotiated within one year of the opening of the conference; and that he had considered abdicating over the Arab–Israeli confrontation, but believed that attending the conference would increase international pressure on Israel to withdraw from the Occupied Territories. The Central Council of the PLO, meeting in Tunis on 16–17 October, approved the formation of a joint Jordanian-Palestinian delegation, a decision strongly criticized by the leader of the PFLP, George Habbash.

The opening session of the historic Middle East peace conference, convened within the framework of UN Security Council Resolutions 242 and 338, and chaired by President Bush of the USA and the Soviet President, Mikhail Gorbachev, was held in Madrid, Spain, during 30 October–1 November 1991. The joint Jordanian-Palestinian delegation was led by Kamel Abu Jaber, a US-educated professor of political science, who had been appointed Jordan's Minister of Foreign Affairs following the resignation, on 3 October, of Dr Abdullah an-Nusur and two other ministers opposed to Jordan's participation. The delegation included diplomats, civil servants and academics. In his speech, calling for the withdrawal of Israeli forces from all occupied lands, Abu Jaber stated that King Hussein would have preferred a separate Palestinian delegation but 'we have no objection to providing an umbrella for our Palestinian brethren ... the Palestinian people must be allowed to exercise their right of self-determination in their ancestral homeland'. 'Let me speak plainly', he added, 'Jordan has never been Palestine and will not be so.'

Subsequent negotiations in Washington and Moscow between the Israeli and the joint Jordanian-Palestinian delegations remained deadlocked, with regard to substantive issues. However, secret talks between the PLO and the Israeli Government in Norway, which had begun early in 1993, led to an agreement on a Declaration of Principles on 19 August 1993 which involved a degree of Palestinian self-government in the Occupied Territories. The Declaration of Principles (see p. 120) was signed in Washington on 13 September 1993. News of the agreement apparently came as a surprise to King Hussein who had not been informed that negotiations were taking place in Oslo (hence the subsequent reference to the Declaration as the Oslo Accord) and the agreement is reported to have caused grave embarrassment to the Palestinian negotiators in Washington. Despite the King's initial irritation at the Israeli-PLO accord, which presented a socio-economic as well as a political challenge for Jordan, he quickly accepted the Declaration of Principles. On 14 September, the day after the Washington signature of the accord, Jordan and Israel concluded a 'common agenda' for subsequent negotiations between the two countries. The agenda aimed to achieve 'a just, lasting and comprehensive peace' between the Arab States, the Palestinians and Israel. Jordan and Israel agreed to respect each other's security and to discuss future co-operation on territorial and economic issues. The signing of the agenda was publicized as being the first agreement between an Arab state and Israel since the peace agreement between Egypt and Israel in 1979. King Hussein, however, stressed that the agenda was not a peace agreement but an outline of topics to be discussed at future talks. Much of the agenda had already been agreed in 1992 but an official signing was delayed because of objections by the Palestinians.

Within Jordan, news of the Israeli-PLO accord was greeted with considerable cynicism. Opposition to the accord appeared to be strongest in the vast Palestinian refugee camp at Baqaa. Most Islamist and leftist politicians condemned the accord. The agreement between the PLO and Israel in September 1993 initiated a sometimes acrimonious debate on the vexed question of Palestinian identity and the future of Palestinians in Jordan. Since October 1993 Jordan had become increasingly frustrated with the PLO over its failure to implement agreements on closer co-operation. In particular Jordan was concerned that the PLO Chairman, Yasser Arafat, appeared to be unwilling to sign a draft economic agreement that had been drawn up earlier in the year. At the beginning of 1994 King Hussein publicly criticized Arafat because Jordan had not been continuously advised about the progress of talks between the PLO and Israel concerning the implementation of Palestinian self-rule in Gaza and Jericho and economic co-operation. He requested that Arafat stop making references to a future Jordanian-Palestinian confederation because this was an issue on which no decision had yet been made. In the past King Hussein had appeared to favour such an arrangement, but more recently Jordan had decided not to discuss the final relationship with the Occupied Territories. Following the King's criticisms, a PLO delegation led by Farouk Kaddoumi, the head of the PLO's political department, visited Amman and an agreement on economic co-operation, covering tourism, agriculture, infrastructure, investment promotion, and private sector co-operation, was signed on 7 January 1994. Just over a week later, Jordan and the PLO drew up a draft accord on security and the exchange of intelligence information. Jordan was particularly concerned about who would control the bridges across the Jordan river after the establishment of Palestinian autonomy. At a meeting of the Higher Jordanian-Palestinian Committee in February it was agreed that a number of joint committees, originally set up in 1993 to discuss relations between Jordan and the Occupied Territories during the period of transitional Palestinian self-rule, would be reconvened. Jordanian experts were reported to be present as observers at talks between the PLO and Israel in Paris on economic and monetary questions. Yet in spite of a personal visit to Amman by Arafat to brief King Hussein on the Cairo talks with Israel, relations between Jordan and the PLO remained strained. At the end of March King Hussein blamed the PLO for mishandling the negotiations leading up to Security Council Resolution 904 which had allowed the USA to abstain on the paragraph in the preamble concerning Jerusalem. The King argued that the American vote could have been avoided if the PLO had consulted Jordan. There was a relatively low-key reaction from the Jordanian Government to the Cairo accord between Israel and the PLO (see p. 124) signed on 4 May. Arafat visited Amman on 5 May to brief King Hussein on the Cairo agreement but the King remained disillusioned by Arafat's failure to liaise with Jordan in the peace process.

Following a secret meeting in November 1993 between King Hussein and Shimon Peres, the Israeli Minister of Foreign Affairs, there was optimism in Israeli government circles that Jordan would soon sign a formal peace agreement with Israel. These hopes were dashed in late January 1994 when King Hussein insisted that the key issues which lay behind the Arab-Israeli conflict must be discussed before any accord could be signed and that it was unacceptable to leave negotiations until after the signing. Jordan, together with Syria and Lebanon, withdrew temporarily from the current round of bilateral talks with Israel in Washington immediately after the Hebron massacre in February, although the gesture appeared to be largely symbolic and aimed at appeasing public anger at the incident. The King firmly rejected calls made by Islamist deputies for Jordan to withdraw permanently from the peace talks.

The National Assembly requested that the Government link Jordan's resumption of peace negotiations with new arrangements for inspecting ships with cargo bound for Iraq through Aqaba port. There had been growing criticism of the policy of intercepting and searching ships bound for Aqaba in the Tiran Straits by a multinational inspection force led by the US navy. The system of inspection, introduced in August 1991 in order to verify compliance with international sanctions against Iraq, resulted in long delays and loss of revenue to the Jordanian authorities. When the USA failed to respond to Jordanian requests for new arrangements, this was interpreted in Amman as a means of putting pressure on Jordan to finalize a peace agreement with Israel. In late March 1994 King Hussein announced that Jordan would not resume peace negotiations with Israel unless the naval blockade of Aqaba was lifted. However, it was not until the end of April that the USA accepted a Jordanian proposal for a new land-based system of inspection. Prime Minister Majali told the press on 25 April that his

Government was now willing to sign agreements on all individual items on the Jordan-Israel agenda and to participate in all multilateral talks in the hope that the negotiations would lead eventually to a peace treaty. He emphasized that a peace treaty could only be achieved in this way.

THE PEACE TREATY WITH ISRAEL

In May–June 1994 the peace process received a new impetus, after King Hussein unexpectedly decided to proceed unilaterally with talks with Israel. After secret talks between the King and the Israeli Prime Minister, Itzhak Rabin, in London, United Kingdom, at the end of May, negotiations resumed at a meeting of the Jordanian-Israeli-US Trilateral Commission, held on 6–7 June in Washington, DC. At the meeting Jordan and Israel agreed to hold future bilateral talks in Israel and Jordan, and to establish joint sub-commissions on boundary demarcation, security, and water and environmental issues. These sub-commissions began work on 18–19 July, at a meeting on the Jordanian–Israeli border.

At a ceremony at the White House on 25 July 1994 King Hussein and the Prime Minister of Israel, Itzhak Rabin, signed the 'Washington Declaration' ending the state of war which had existed between the two countries since 1948. After years of secret meetings, it was the first time that King Hussein had publicly met an Israeli Prime Minister. The declaration stopped short of a full peace treaty, but US Secretary of State, Warren Christopher, stated that he expected it to speed the process for formal peace agreement 'within a matter of months'.

In Jordan opposition to the Declaration was limited, and there were no large-scale protests. Islamists declared 'a day of sadness and mourning' and at a modest protest meeting at the central mosque in Amman, Bahjat Abu-Gharbiah, head of the Arab-Jordanian Popular Committee Against Normalization, told the demonstrators that the peace was 'an attempt to consolidate the hegemony of the Zionist entity through normalization that allows its cancerous spread until the shores of the Arabian Gulf'. From Gaza, PLO Chairman Arafat sent his congratulations to the Israeli and Jordanian leaders on the declaration and expressed the hope that Syria and Lebanon would also make peace with Israel. However, Palestinian leaders were angered by a statement in the Declaration endorsing the special role of King Hussein as guardian of the Muslim holy places in Jerusalem. They argued that it undermined the Palestinian claim to sovereignty over Jerusalem, and that it contradicted the Israeli-PLO Declaration of Principles, which stated that the final status of Jerusalem would be determined by negotiation between Israel and the PLO. The Syrian press criticized the Washington Declaration, arguing that separate peace deals weakened the Arab cause. Nevertheless, President Assad appeared to be privately reconciled to the negotiations.

Bilateral talks between Jordanian and Israeli delegations continued in August and September 1994. In mid-October, despite reports that problems remained over border demarcation and water resource allocation, the Israeli Prime Minister, Itzhak Rabin, visited Amman, and agreement was reached on a final peace treaty between the two countries. On 26 October the Treaty was formally signed at a ceremony held on the Jordanian–Israeli border, Jordan thus becoming only the second Arab state (after Egypt) to conclude a peace treaty with Israel. The Peace Treaty included agreements on border demarcation, security, water allocation and the restoration of economic relations between the two states. King Hussein's role as guardian of the Muslim shrines in Jerusalem was also reaffirmed. The Treaty was adopted by both houses of the Jordanian National Assembly, and ratified by King Hussein on 9 November. As agreed in the Treaty, full diplomatic relations between Jordan and Israel were established in late November. (However, ambassadors were not exchanged until April 1995, apparently owing to disagreement in the Israeli Government over the ambassadorial appointment.) Also in November the Jordanian–Israeli border was opened to citizens of the two countries, and Israeli troops began withdrawing from some 340 sq km of land occupied since the 1967 war.

Within Jordan little effort had been made to prepare public opinion for the peace agreement. Following a demonstration against the treaty in Amman by some 5,000 people, organized by Islamic groups, the Government banned all public meetings. The IAF and its allies continued to oppose the treaty and began a campaign in the National Assembly against the normalization of relations with Israel. They attempted to prevent the repeal of legislation limiting relations with Israel, including a law (adopted in 1973) prohibiting land sales to Israelis, a 1958 law imposing a total economic boycott of Israel, and legislation from 1953 outlawing trade between the two states. Rumours that Israeli citizens had already bought land in certain parts of Jordan were strongly denied by the Minister of Justice.

Initially, the Peace Treaty did little to improve relations with the Palestinian leadership. The reaffirmation of King Hussein's special role as guardian of the Muslim holy places in East Jerusalem was criticized by the PLO leadership. In September 1994 the Palestinian National Authority (PNA) had claimed responsibility for all Islamic institutions in East Jerusalem, the West Bank and Gaza. In response, Jordan had agreed to relinquish its rights over sites in the West Bank and Gaza, but it refused to renounce its guardianship over the holy shrines of East Jerusalem. A compromise was reached on the issue in late January 1995, when an accord was signed by the two sides. The Palestinians agreed to recognize the Jordanian-Israeli Peace Treaty, thus implying *de facto* recognition of Jordanian rights over the Jerusalem shrines, at least until the city came under Palestinian sovereignty. In return, Jordan reaffirmed its support for Palestinian autonomy and for the future creation of a Palestinian state with East Jerusalem as its capital. The accord also covered economic, cultural and administrative affairs, and included an agreement to use the Jordanian currency in Palestinian territories. The timing of the agreement prompted observers to argue that Arafat was seeking better relations with Jordan, because of Israel's increasingly unco-operative approach on the Palestinian question, and as a response to growing pressure from Islamic groups violently opposed to the PLO-Israel accords.

POLITICAL REFORM AND MULTI-PARTY ELECTIONS

On 6 October 1991 an alliance of 49 deputies in the House of Representatives, from the MB, the 'constitutional bloc', the 'Democratic Alliance', and some independent Islamic deputies, signed a petition in protest at the terms of Jordan's participation in the Middle East peace conference. They urged the resignation of the Government, and on 16 November Taher al-Masri resigned as Prime Minister, having lost the confidence of the House. The King appointed his cousin, Sharif Zaid ibn Shaker, who had led a transitional government in 1989, as Prime Minister, and a new, broader-based government received a vote of confidence on 16 December. Kamel Abu Jaber retained his position as Minister of Foreign Affairs. The MB was again excluded from the Cabinet and 18 of its members voted against the new Government in the confidence motion.

In June 1992 an extraordinary session of the House of Representatives was convened in order to debate new laws regarding political parties and the press. In early July the House adopted new legislation whereby, subject to certain conditions, political parties were formally legalized, in preparation for the country's first multi-party elections since 1956, which were to be held before November 1993. The new legislation was approved by royal decree at the end of August, and by March 1993 nine political parties had received the Government's formal approval of their activities.

In May King Hussein appointed a new cabinet, in which Abd as-Salam al-Majali, the leader of the Jordanian delegation to the Middle East peace conference, replaced Sharif Zaid ibn Shaker as Prime Minister. The new Government was regarded as a transitional administration, pending the country's first multi-party election.

At the beginning of August 1993 King Hussein unexpectedly dissolved the House of Representatives, provoking criticism from some politicians who had expected the House to debate proposed changes to the country's electoral law. Changes in voting procedures at the general election, which was scheduled to be held on 8 November, were subsequently announced by the King in mid-August. Voters were to be allowed to cast one vote only, rather than a number equal to that of the number of candidates contesting a given constituency, as before.

After the announcement of the Israeli-PLO accord in September 1993 King Hussein appeared to be unsure whether or not to proceed with the elections, fearing that they might be dominated by the debate about the peace process. Eventually the King decided to hold the elections as planned on 8 November 1993. The election campaign went smoothly and peacefully. Some 820,000 Jordanians (52% of elegible voters and 68% of registered voters) cast ballots at one of the 2,906 polling stations in the 20 electoral districts. However, the independent New Jordan Research Centre estimated that 70% of Jordanians of Palestinian origin abstained. This low level of participation was attributed to the fact that Jordanians of Palestinian origin did not feel part of the Jordanian political system and also that the prevailing system of electoral districts favoured areas dominated by East Bankers.

In all, some 534 candidates contested the election and one-half of the 20 registered political parties fielded candidates. The majority of candidates, however, stood as independents. The political parties, which had been legal for less than a year, had little time to organize and amass public support. Domestic issues, such as unemployment, were the main issues in the electoral campaign, with traditionalist candidates focusing on local issues and promising to improve the provision of public services in their constituencies. Of the 80 deputies returned, 45 were independents. With the traditions of tribalism deeply rooted in the customs of the country, they won largely because of their tribal affiliations and personal influence.

The Islamic Action Front (IAF), an alliance between the MB and other Islamist groups, won 16 seats, the largest number of any political party, but six fewer than in the 1989 elections. This reversal was largely thought to result from the new electoral law which embodied the one-man one-vote principle. Indeed, the new law was widely interpreted as an attempt to weaken the IAF. Others felt that the Islamists had misjudged the mood of the country and had not devoted enough attention in their campaign to basic issues related to the impact of the economic recession on the lives of ordinary Jordanians. Of the other political parties, leftists and Arab nationalists won eight seats while five conservative and right-of-centre parties claimed a total of 14 seats. Only 14 of the 80 new deputies were of Palestinian origin. Among the new deputies was the first woman to be elected to the Assembly, Toujan al-Faisal, who won one of the seats reserved for the Circassian minority.

Soon after the election a number of political groupings were formed in addition to the IAF. The Progressive Democratic Coalition, consisting of liberal deputies and leftist and Arab nationalists, claimed the support of 22 deputies; the National Action Front (NAF) and the Jordan Action Front (JAF), both groupings of conservative parties and their allies, claimed 18 and 9 seats respectively. The IAF remained the largest single political organization in the country. Some deputies saw the emergence of parliamentary blocs as the first step in a move towards the formation of larger political parties.

Taher al-Masri, widely regarded as the most influential Palestinian in Jordanian politics and a former Prime Minister, was elected Speaker of the National Assembly on 23 November 1993. Al-Masri won an overwhelming victory against his rival, an IAF deputy. (An IAF deputy had held the post of Speaker in the outgoing National Assembly.) Dr Abd as-Salam al-Majali remained Prime Minister and although he made few significant changes to his Cabinet, there was some surprise that, for the first time, the Cabinet did not include any parliamentary deputies. His new Government won a vote of confidence on 8 December after a prolonged debate during which the Prime Minister was criticized for changes to the country's electoral law and for not making an independent statement of government policy but simply adopting the King's speech from the throne at the opening of Parliament.

In another cautious move towards democratization, in March 1994 the National Assembly approved legislation to allow municipal elections in Greater Amman, where some two-fifths of the country's population were living. The Government, no doubt concerned about the strength of Palestinian and Islamist opposition in the capital, had originally proposed that only one-half of the municipal council should be elected, but this was increased to two-thirds by the National Assembly. The remaining one-third of the council, together with the mayor, were to continue to be appointed by the Government.

In early June 1994 Prime Minister al-Majali announced a major cabinet reshuffle. There were no changes in the important portfolios of finance, the interior and information, but 18 new appointments were made to the 31-member Cabinet. Among the new ministers were deputies from the three main political groupings in the lower house, the NAF, the Jordanian National Alliance and the Progressive Democratic Coalition, but none were selected from the biggest parliamentary faction, the IAF. However, one well-known Islamic activist, Abd al-Baki Jammu, was included in the new Government.

In early January 1995 there was a further extensive reorganization of the Government, following the dismissal of al-Majali as Prime Minister. He was replaced by Sharif Zaid ibn Shaker, who had served as Prime Minister in 1989 and 1991–93, and was a close ally and a cousin of the King. Only seven ministers from the previous administration retained their portfolios in the new Government. Among the new ministers were Basel Jardaneh, as Minister of Finance, and Abd al-Karim Kabariti, as Minister of Foreign Affairs. At the same time, Taher al-Masri resigned as Speaker of the House of Representatives, and was replaced by Saed Hayel as-Srour, who represented one of the northern Bedouin constituencies. The new Government easily won a vote of confidence in January 1995, with 54 votes in favour and only 23 against.

Two new political blocs emerged in the National Assembly in early 1995. The Independent National Action Front (INAF), with 17 deputies, was formed by a merger of the NAF and the bloc of independent deputies in the Assembly. The former Speaker of the National Assembly, Taher al-Masri, formed a second new grouping of some 15 liberal and independent Islamist deputies. In early June the authorities arrested six members of an illegal Islamist organization, the Islamic Renewal Group, believed to be active among Jordanians who had returned from Kuwait after the Iraqi invasion of 1990, and claimed to have found weapons and explosives that were to be used in attacks against US interests in Jordan. Early in 1996 the Prime Minister admitted that there had been 36 attempted terrorist attacks in the previous six months aimed at destabilizing the country. In municipal elections held nationwide for the first time in July 1995 Islamic and left-wing groups failed to gain significant popular support, most elected candidates being largely pro-government or independent. The IAF alleged that its poor performance was due to a low level of voter participation, and to government harassment of its members during the campaign. In November King Hussein warned that the country's professional organizations, several of which strongly opposed the normalization of relations with Israel, were becoming too involved in national politics and that this was against the interest of their members. In December Leith Shbeilat, the head of the Jordan Engineers' Association and an outspoken Islamist, was arrested and later jailed for three years, a move regarded by some observers as an attempt to intimidate supporters of the movement against the normalization of relations with Israel.

KABARITI APPOINTED PRIME MINISTER

At the beginning of February 1996 King Hussein appointed the Minister of Foreign Affairs, Abd al-Karim Kabariti as Prime Minister. King Hussein was believed to have clashed with his predecessor, Sharif Zaid ibn Shaker, on the pace of normalization with Israel and the severing of ties with Iraq. Kabariti's appointment was followed by the most radical reshuffle of the Government for many years. He appointed a new Cabinet in which the majority of ministers took office for the first time. Twenty-two of the 31 members, including the Minister of the Interior, were deputies in the House of Representatives, strengthening the new administration's democratic credentials. Negotiations between the new Prime Minister and the IAF leadership failed to achieve agreement, and there was some criticism among Islamist deputies who argued that their leaders should have adopted a more positive line about entering government. The King hoped that the new Government would 'go with all its energy and capability towards full and comprehensive change'. In early March Kabariti's new administration easily won a vote of confidence, in the House of Representatives, gaining the

approval of deputies for its domestic policy. The Prime Minister emphasized the need to promote pluralism and democracy, safeguard public freedoms, and respect human rights. Kabariti announced his commitment to the independence of the judiciary and the media, to increasing public access to information and, eventually, to the abolition of the Ministry of Information. He also outlined plans to reform the Ministry of the Interior and the system of government appointments in order to combat nepotism and corruption, which had become an important political issue in recent years. Kabariti retained the foreign affairs portfolio and was known to be a strong supporter of the King's new policy on Iraq and of strengthening ties with Israel, policies that were likely to prove more controversial than his domestic programme.

The popularity of Kabariti's Government in the House of Representatives and, indeed, in the country as a whole was short-lived. In mid-August 1996 fierce rioting erupted in the south of the country after the Government more than doubled the price of bread. The price rise was part of an economic plan supervised by the IMF to remove the agricultural subsidies that stabilized food prices and thus help reduce the budget deficit in order to meet IMF fiscal targets. About one-third of Jordan's population were believed to be living below the poverty line, and many people feared that the rise in the price of bread, the country's staple food, would lead to increases in the prices of all foodstuffs. The rioting quickly spread to other parts of the country, including the poor suburbs of Amman. The King vowed to employ stern measures to suppress the demonstrations and told the Western media that he believed that the ringleaders had been 'educated in Iraq'. He suspended the legislature and deployed élite units of the army to re-establish control in Karak, the scene of the most severe rioting, where several banks, the local offices of the Ministry of Education and a school were set on fire. The army quickly regained control over the town, which was placed under curfew, before any fatalities occurred, and it was reported that some 190 people had been arrested. After peace was restored, King Hussein visited different parts of the country to meet with civil and tribal leaders in a reconciliation attempt. The curfews were soon lifted, and by November 1996 all those arrested during the demonstrations had been released and charges against them dropped. Price increases, however, were not revoked. The IAF (which had earlier protested vigorously at the price increases), together with a number of smaller opposition parties, urged Kabariti to resign, blaming his Government for the rioting. Several observers argued that, although the demonstrations had been triggered primarily by the Government's austerity programme, the deeply unpopular peace treaty with Israel and the King's dramatic break with Iraq had also contributed to growing discontent in the country. In an attempt to calm political tensions, the IAF had cancelled a mass demonstration against the economic austerity measures, scheduled for 23 August, and withdrew its demand for the Prime Minister's resignation. In response, King Hussein emphasized that the rioters were not members of the IAF. In November the King ordered the release of Leith Shbeilat, a leading Islamist, who had served only six months of his three-year sentence. In January 1997 the shura council of the MB, the dominant group within the IAF, voted against the party's joining a future Government because this would imply recognition of Israel. However, moderates in the IAF opposed the decision, maintaining that it condemned the party to a relatively ineffective role in politics and could lose them electoral support.

King Hussein did not hold his Prime Minister responsible for the August riots, and Kabariti quickly attempted to restore his reputation. It therefore came as a surprise when the King dismissed Kabariti on 19 March 1997 and appointed Abd as-Salam al-Majali to the premiership. There were reports that the King and Kabariti had disagreed over issues relating to the peace process and relations with Israel, as well as rumours of enmity between Kabariti and Crown Prince Hassan. King Hussein's public criticism of the outgoing Prime Minister suggested that he was unlikely to appoint Kabariti to head a future government. The new Prime Minister, a veteran and trusted politician who had been head of government when Jordan signed the peace treaty with Israel in October 1994, appointed a 23-member Cabinet consisting mainly of technocrats; he retained five ministers from the previous administration, including Dr Abdullah an-Nusur, an East Banker, promoted to Deputy Prime Minister, and Dr Jawad al-Anani, a Palestinian with experience as Minister of Labour and Industry in a previous administration, also became a Deputy Prime Minister, with special responsibility for development matters. In his letter of appointment to al-Majali, King Hussein gave priority to internal affairs. The new Government's primary task was to be supervision of the forthcoming legislative elections. In preparation for the elections, the National Assembly voted to continue the 'one man one vote' system adopted for the 1993 elections, rather than return to the previous multi-vote system. The King also urged the new Government to eliminate corruption in public office, to alleviate unemployment and to modify the education system to the needs of society. In May 1997, following increasing media criticism of a number of government policies, a number of amendments were made to legislation governing the press, prompting strong protests from editors, journalists, professional associations and opposition groups. The amendments included a considerable increase in the minimum capital that weekly journals were required to raise as a precondition for publishing, an extension of the range of prohibited subjects to include the armed forces and the security services, and a substantial rise in the fines that could be levied for contravening the press legislation. Opposition activists feared that these measures represented the return of closer state control over the press. Also in May 1997 nine centre parties, including Pledge and the Jordan National Party, announced that they had united to form the National Constitutional Party (NCP), which became the country's largest political grouping. The formation of the NCP, together with the establishment in 1996 of the Unionist Arab Democratic Party (a coalition of three leftist parties), reduced the total number of political parties from 24 to 14. A further political grouping subsequently emerged; the progressive alliance included a number of eminent political figures (among them two former prime ministers, Ahmad Ubeidat and Taher al-Masri, and a former parliamentary speaker, Sulayman Arar). In June King Hussein appointed his close associate and adviser, Zaid ar-Rifai, as Speaker of the Senate.

THE 1997 ELECTIONS AND 1998 GOVERNMENT

In July 1997 the MB declared that it would boycott the forthcoming parliamentary elections, which, King Hussein had announced, were to proceed in November, as scheduled. This decision, which was opposed by some prominent members of the movement, appeared to reflect growing disillusionment with the role of the National Assembly, which was perceived to have little or no influence over important political and economic decisions in the country. After intensive discussions, the IAF endorsed the MB's decision by a large majority. In the two months prior to the elections, discussions between the Government and the opposition parties failed to achieve any significant progress. The IAF, together with nine smaller leftist and nationalist parties, had, in particular, demanded changes in the electoral legislation, arguing that the existing 'one man, one vote' system favoured candidates with strong tribal affiliations over those representing 'ideological' parties; however, King Hussein and al-Majali refused to make any concessions. In September the Government suspended some 13 weekly newspapers for three months (effectively during the electoral period) for failing to comply with the amendments to the press regulations that had been introduced in May.

The elections on 4 November 1997, which were boycotted by many parties, professional associations and respected political figures, attracted little popular enthusiasm. It was estimated that a mere 55% of the registered electorate participated, with a voter turn-out of only 26% in parts of Amman. There were widespread allegations of electoral malpractice, and in a number of regions the security forces were obliged to intervene to suppress clashes between rival candidates and their supporters. Deputies with tribal affiliations dominated the new parliament. Only 26 deputies who served in the outgoing parliament were re-elected, and many leading political figures, such as Taher al-Masri and Abd al-Karim Kabariti, were absent from the new legislature. The NCP, which some sections of the press referred to as the 'party of the regime', presented 11 candidates but won only two seats. Although some opponents of the Government were represented in the new Assembly, including Islamist poli-

ticians Abdullah Akaileh and Muhammad Azaydeh (who contested the election in defiance of the IAF boycott), government claims of a significant opposition presence appeared to be greatly exaggerated. Saed Hayel as-Srour was re-elected Speaker of the House of Representatives. Among the new members appointed by King Hussein to the 40-member Senate was Kabariti (a move which was viewed as marking his political rehabilitation). Zaid ar-Rifai was retained as Speaker of the Senate. Political figures critical of the Government were completely absent from the upper house. King Hussein also confirmed the appointment of al-Majali to the office of Prime Minister.

Elections to the IAF's ruling body, the 120-member shura council, took place in December 1997. Despite the victory of the hard-liners who ensured that the party boycotted the parliamentary elections in November, moderates and centrists succeeded in maintaining their dominant position on the Council, indicating that the party would avoid outright confrontation with the Government. In January 1998 the High Court ruled that the amendments to the press regulations introduced in May 1997 were unconstitutional and that actions taken by the Government under the amendments consequently had no validity. The authorities reluctantly agreed to accept the ruling, and a number of newspapers that had been banned resumed publishing in March. The country's Chief Justice, Farouq al-Kailani, claimed that, owing to his role in the High Court ruling on the press legislation, the Government had forced him to resign.

During the increase in tension between the USA and Iraq in early 1998 (see below) there was widespread support among Jordanians for Iraq and, to a certain extent, for the Iraqi leader, Saddam Hussain. The authorities, however, decided to ban all pro-Iraqi demonstrations and put heavy pressure on the press to adopt the official government policy on the situation. When a grouping of Islamists, leftists and nationalists opposed to US policy in the Middle East attempted to hold a large rally in Amman in mid-February, the police quickly dispersed the meeting, and a number of leading government opponents were assaulted during the disturbances. Later in February there were violent clashes in the southern town of Ma'an when members of the security forces intervened to prevent a pro-Iraqi demonstration; the security forces subsequently denied responsibility for the death of one of the demonstrators. The Minister of the Interior, Nadhir Rashid, claimed that the riots in Ma'an had been instigated by Leith Shbeilat, an outspoken Islamist critic of the regime, who had addressed a meeting in the town that day, and stated that he would be put on trial for his involvement in the disturbances. Supporters of Shbeilat, however, insisted that he had left Ma'an before the violence erupted and was arrested on his return to Amman. Shbeilat was sentenced to nine months' imprisonment, but King Hussein ordered his release later in the year. The situation in Ma'an remained tense for some days after the disturbances, although order was quickly restored. The authorities imposed a curfew on the town for almost a week, during which schools were closed, telephone links suspended and food supplies disrupted. Many arrests were made and some of those detained were not released until the beginning of April. After his release from prison, Shbeilat called openly for the establishment of a constitutional monarchy that would place limits on the King's powers to dissolve the National Assembly and to appoint and dismiss members of the Government.

In early 1998 al-Majali announced a cabinet reorganization, in which five new ministers were appointed, notably Dr Bassam al-Umush, a member of the MB who had been suspended from the movement in 1997. The other new ministers had served with al-Majali when he was premier in the early 1990s. Rashid, who had been criticized for the suppression of the pro-Iraqi demonstrations by the security forces, retained his portfolio, but Samir Mutawi was replaced as Minister of State for Information and his responsibilities assigned to one of the two Deputy Prime Ministers, Abdullah an-Nusuf. Dr Fayez at-Tarawneh, hitherto the Minister of Foreign Affairs, became Chief of the Royal Court, traditionally a move towards the premiership, with Jawad al-Anani assuming the foreign affairs portfolio.

In July 1998 severe water shortages and a deterioration in the quality of existing water supplies in Amman caused public discontent, prompting the resignation of the Minister of Water and Irrigation, Mundhir Haddadin. In August King Hussein (who was undergoing medical treatment in the USA) appointed at-Tarawneh to the office of Prime Minister, replacing al-Majali. Al-Majali's removal was largely attributed to the criticism that the Government had attracted over the continuing water crisis in Amman. Later in August a new Cabinet, which included 10 new ministers, was installed; al-Anani replaced at-Tarawneh as Chief of the Royal Court.

In the months following his appointment as Prime Minister, at-Tarawneh made efforts to establish a dialogue with the opposition but failed to make any significant progress on key issues relating to foreign affairs or greater democratization at home. Meanwhile, the authorities moved quickly to control protests organized in opposition to the Wye River Memorandum signed between Israel and the Palestinians in October 1998 (see chapter on Israel and Documents on Palestine, p. 134), while public demonstrations against the US and British air strikes carried out against Iraq in December (see chapter on Iraq) were also restricted by the security forces. Despite the new Prime Minister's declared commitment to eradicate corruption in public office, those cases that were referred to court appeared to disappear without trace. In November the Minister of Administrative Development, Bassam al-Umush, accused the Government of lacking the will to implement urgently-needed administrative reforms, rendering his ministry powerless to execute the tasks assigned to it. Despite such outspoken criticism, al-Umush retained his post, although his outburst provoked little evidence of government action regarding public sector reforms. The Government also encountered criticism from Jordan's business community; whereas the Jordanian authorities enthusiastically promoted membership of the World Trade Organization and Jordan's association with the EU, the Amman Chamber of Industry favoured prioritizing the further development of existing bilateral agreements with a number of Arab states.

DEATH OF KING HUSSEIN

In July 1998 King Hussein began to undergo treatment in the USA for lymphatic cancer. In August he issued a royal decree which transferred responsibility for certain executive duties, including the appointment of ministers, to his brother, Crown Prince Hassan. On King Hussein's return to Jordan on 19 January 1999, amid considerable public celebration and government assurances that his health had been restored, the King prompted renewed speculation about the royal succession by appointing Crown Prince Hassan as his 'deputy' (a position believed to involve limited authority). On 24 January King Hussein issued a royal decree naming his eldest son, Abdullah, as Crown Prince of Jordan. It was reported that a letter had been conveyed from King Hussein to Crown Prince Hassan, who had been regent since 1965, in which the King had expressed his dissatisfaction with his brother's handling of Jordanian affairs during his six-month absence, in particular his attempts to interfere in military affairs. King Hussein had also accused his brother's supporters of slandering his immediate family, prompting speculation that serious divisions had emerged within the royal family. Many Jordanians were surprised by the harsh tone of Hussein's criticism, since Hassan had always been outwardly loyal to his brother and had been one of his most trusted advisers. Concern was also expressed at the notion of rioting rivalries within the royal family at a time when a united front was considered vital to the country's stability. Meanwhile, some sections of the US press suggested that the Clinton administration had encouraged the replacement of Hassan as Crown Prince, owing to his perceived hostility towards the Palestinian negotiators and willingness to ally himself to the extremist Muslim Brotherhood.

On 26 January 1999 King Hussein left Jordan for emergency treatment in the USA, following a rapid deterioration in his health. However, King Hussein returned to Amman on 5 February, and was pronounced dead on 7 February. The Jordanian public had been given little accurate information about the King's condition by the official media, and were genuinely shocked by the news of his death. Hussein had been the Middle East's longest-serving ruler, controlling the fortunes of Jordan for the greater part of its modern history, during which time the country was transformed from an essentially artificial creation with few resources into a modern state. The funeral of King

Hussein, held in Amman on 8 February, was attended by more than 50 heads of state or government, including US President Clinton (accompanied by three former US presidents), the Israeli Prime Minister, Binyamin Netanyahu, and Syria's President Assad.

A few hours after King Hussein's death, on 7 February 1999 the newly-appointed Crown Prince was sworn in as King Abdullah ibn al-Hussein of Jordan. After formal education in the United Kingdom and the USA, Abdullah had embarked on a distinguished military career, becoming Commander of Special Forces with the rank of major-general. Before Abdullah's designation as Crown Prince, many Jordanians expected that he would eventually take over as Commander-in-Chief of the Armed Forces. Abdullah is reported to have good relations with younger members of the ruling families of the Gulf states, as well as useful contacts within the US political establishment. His wife, Rania Yassin, is a Palestinian, whose family originates from the West Bank, although English, rather than Arabic, is Abdullah's mother tongue. However, although King Abdullah's many connections were seen as advantageous, some commentators expressed concern that the new monarch lacked political experience at a time when Jordan faced serious problems both at home and abroad. Soon after his father's death, the new King made a televised address to the nation, appealing for Jordanian unity and pledging to continue his father's policies. He subsequently named his half-brother, and the youngest son of King Hussein, Prince Hamzeh ibn al-Hussein, as the new Crown Prince of Jordan. The choice of Prince Hamzeh was reported to have been made in accordance with the wishes of the late King.

KING ABDULLAH TAKES CONTROL

Before the official 40-day period of mourning for King Hussein had ended, the new King made a number of key changes at the Royal Palace and in the military high command and also appointed a new Government. In late February 1999 four senior army officers, who were believed to have pledged their loyalty to Prince Hassan shortly before King Hussein's death, were removed from their posts. In mid-March Prince Hassan was appointed to head the Higher Council of Science and Technology, while King Hussein's widow, Queen Noor, became head of the new King Hussein Foundation. While these appointments helped preserve their elevated status, it was clear that henceforth both were expected to confine their activities to these well-defined roles, and had been excluded from positions of power. On 21 March King Abdullah issued a royal decree naming his wife, Rania, the Queen of Jordan. Also in March Jawad al-Anani, Chief of the Royal Court and a close associate of Prince Hassan, was replaced by former Prime Minister Abd al-Karim al-Kabariti, while Adnan Abu Odeh, an aide to King Hussein for many years, returned to the Palace as an adviser.

On 4 March 1999 King Abdullah appointed a new 24-member Cabinet, with Abd ar-Raouf ar-Rawabdeh replacing Fayez at-Tarawneh as Prime Minister. The former Deputy Prime Minister and mayor of Amman was widely considered to be an experienced politician capable of implementing an effective programme of reforms. Ar-Rawabdeh's Cabinet contained eight ministers from the outgoing administration, including the three key portfolios of the interior, finance and foreign affairs. However, several ministers regarded as loyal to Prince Hassan were replaced; they included the Minister of Information, the Minister of Water and Irrigation, and the Minister for Development Affairs. However, the respected Minister of Finance, Michel Marto, also a protégé of Prince Hassan, retained his post. In his letter of appointment to the new Prime Minister, King Abdullah prescribed 'fundamental reforms', including the strengthening of the rule of law and further democratization; he also called on ar-Rawabdeh to address the serious problems of poverty and unemployment in Jordan, and to encourage investment. In his policy statement to the National Assembly, ar-Rawabdeh acknowledged that Jordan had entered a period of recession, and stated that his aim was to accelerate the implementation of economic reforms and to eradicate corrupt practices; however, no details explaining how this was to be achieved were revealed. Nevertheless, the Government won a strong vote of confidence from the National Assembly on 8 April, with 66 votes in favour, 12 against and two abstentions. Those who voted against the Government were left-wing and Islamist deputies, who criticized the new administration for having failed to make provision for political reform in its publicized programme, in particular with regard to the electoral and press laws. However, opposition groups were willing to express cautious loyalty to the new King. The MB immediately sought an audience with King Abdullah, stressing the organization's strong links with the monarchy while continuing to press for changes to the electoral law. The MB called for an open dialogue with the Government, and its political wing, the IAF, indicated that it would participate in municipal elections scheduled for July 1999 (despite having boycotted the 1997 parliamentary elections). However, the IAF did not join the Popular Participation Bloc, a new grouping of 13 leftist, Baathist and pan-Arab parties formed in mid-May 1999 to contest the municipal elections, owing to the failure of negotiations to reach agreement on the quotas of candidates to be fielded by each party.

In early April 1999 all censorship of Arab and foreign newspapers and magazines was removed. In mid-March King Abdullah had met with members of the Jordan Press Association, and Prime Minister ar-Rawabdeh encouraged members to put forward proposals regarding amendments to the controversial Press and Publications Law. It was announced in mid-June that the Government had agreed to amend part of the Law, in order to ease certain restrictions on journalists. Meanwhile, in late March King Abdullah released almost 500 prisoners (including some 20 members of the banned at-Tahrir party) as part of a recent amnesty law, while the Government also ended the security surveillance imposed on the outspoken Islamist, Leith Shbeilat (see above). However, accusations of human rights abuses in Jordan continued in 1999. In its annual report, released in April, the Arab Human Rights Organization in Jordan criticized the Government for a 'considerable increase' in human rights violations, including the arrest of journalists and harsh treatment of prisoners held in detention centres. Moreover, a report by Amnesty International, published in late June, alleged numerous cases of torture in Jordanian prisons. It was reported in mid-July that the Government intended to further restrict the operations of the Palestinian militant Islamist group, Hamas, in order to accelerate the end of its political activities in Jordan. In late August Hamas' offices in Amman were closed down by the Jordanian security forces, following claims by the Ministry of the Interior that the offices were being used for illegal political activities by non-Jordanian groups, despite being licensed for business purposes only. The home of the Hamas chief, Khalid Meshaal, was also raided.

In early July 1999 the Minister of Youth and Sports, Muhammad Kheir Mamsar, announced his resignation following controversy and disagreement over the 9th Pan-Arab Games, which were to be held in Jordan in August. (The announcement followed Mamsar's insistence that Kuwait should not boycott the event, as it was threatening to do, owing to the participation of Iraqi athletes.) On 14–15 July municipal elections were conducted throughout Jordan; during the voting some violence was reported between supporters of rival parties, and two people were killed. The final results indicated that independent and tribal candidates had gained the most seats in the elections, while Islamists too were successful in their traditional urban strongholds of Zarqa, Irbid and Rusayfa. The IAF, which increased its presence in the Amman council, claimed to have won 79 seats on municipal councils and announced after the vote that if there were a change in the electoral law, it would contest the 2001 general election. The overall level of voter participation was reported to be around 59%. On 18 July 1999 King Abdullah issued a royal decree appointing Lt-Gen. Muhammad Yousuf al-Malkawi as Chairman of the Joint Chiefs of Staff, replacing Field Marshal Abd al-Hafez Mar'i al-Ka'abinah, who became the King's own military adviser. A further decree was issued on 1 September effecting a government reorganization. Two ministers joined the Cabinet, including Sa'id Shuqum as the new Minister of Youth and Sports.

RELATIONS WITH THE USA

On 20 June 1991 the US House of Representatives voted to withhold US $27m. in military aid, pending assurances that 'the Government of Jordan has taken steps to advance the peace process in the Middle East'. However, the US Department of State indicated that the Bush administration opposed legisla-

tion to prohibit the sending of US aid to Jordan. In October, following Jordan's acceptance of an invitation to attend the opening session of the Middle East peace conference in Madrid (see above), President Bush announced the USA's intention to resume military aid to Jordan.

In June 1992 the USA postponed a joint military exercise with Jordan in order to express its disapproval of the assistance that Jordan was allegedly providing to Iraq to enable it to circumvent the UN trade embargo. The USA subsequently proposed that UN observers should be dispatched to Jordan in order to suppress the smuggling of goods to Iraq. Jordan rejected the proposal outright as an infringement of its sovereignty. In late August both the Jordanian Government and the House of Representatives condemned Western plans to establish an air exclusion zone in southern Iraq. In January 1993 King Hussein strongly criticized renewed air attacks on targets in Iraq by Western air forces, but did not express support for the Iraqi President, Saddam Hussain. At the same time he emphasized that Jordan would remain on friendly terms with the USA under the newly-elected Clinton administration. In June King Hussein visited the USA, where he held talks, for the first time, with President Clinton. Although relations between the USA and Jordan were described as good, the USA was reported to be continuing to withhold financial aid in retaliation for Jordan's alleged assistance to Iraq during the 1991 Gulf War. Prior to his visit to the USA, King Hussein had stated publicly that he did not support the Iraqi leadership or its policies. At the end of July the USA was reported to have informed Jordan that it must make payments to the UN's Compensation Fund for Kuwait if it continued to receive deliveries of petroleum from Iraq. In mid-September, however, US President Clinton announced that some US $30m. in economic and military aid to Jordan was to be released, in recognition of the country's enforcement of sanctions against Iraq and of its role in the Middle East peace process.

As part of his plans to improve relations with the USA, King Hussein visited Washington in late January 1994 where he met President Clinton and the Secretary of State, Warren Christopher. Their talks included discussions about the Arab-Israeli peace process and future US arms sales to Jordan. During the visit the King stated publicly that he would be willing to meet Itzhak Rabin, the Israeli Prime Minister. For the first time openly, he also met with a group of leading Jewish Americans through Project Nishma, a Jewish organization that promotes peace between the Arab states and Israel. In March, however, new tensions emerged with the USA over Jerusalem and over the US-led naval blockade of Jordan's only port at Aqaba. After the adoption of Resolution 904 by the UN Security Council on 18 March 1994, Jordan protested strongly about the US position on the status of Jerusalem. The USA had abstained on two paragraphs in the preamble, in which East Jerusalem was referred to as part of the Occupied Territories. Jordan was worried about the legal and political implications of what appeared to be an important change in US policy towards Jerusalem. However, most of King Hussein's fury over this reversal was directed towards PLO Chairman Yasser Arafat who was accused of mishandling the negotiations which preceded the adoption of the Resolution by failing to consult with Jordan on its wording.

In an address to the Jordanian National Assembly on 26 October 1994, US President Clinton pledged to cancel Jordan's official debts to the USA, totalling US $702m., apparently as a reward for signing the peace treaty with Israel. Although some $220m. of debt was written off during the fiscal year 1994, the new Republican-dominated US Congress was inclined to be less generous in 1995. President Clinton had requested the cancellation of $270m.-worth of debt in the fiscal year 1995, but the US House of Representatives only agreed to write off $50m. During a visit to Jordan in March 1995, US Vice-President Al Gore pledged that Clinton's original promise would be honoured. However, King Hussein was forced to visit the USA the following month in an attempt to persuade Congress to permit the debt-cancellation plan to proceed. In September an agreement was finally signed by the USA and Jordan, cancelling $420m. of Jordan's outstanding debt. In August 1995, as King Hussein broke openly with Iraq (see below), President Clinton immediately promised to support Jordan if any threat was made to its security. Joint manoeuvres were held between US and Jordanian armed forces, although Jordan maintained that these had been arranged some time before. Nevertheless, efforts by the USA to persuade Jordan to sever all of its economic links with Iraq were rejected. In January 1996 the US Secretary of Defense announced that the USA would supply Jordan with 12 F-16A and four F-16B fighter aircraft, and in late February President Clinton authorized the supply of military equipment worth $100m. as a grant to Jordan. After King Hussein visited Washington, DC, in March, the USA announced that military co-operation between the two countries would be expanded, a move interpreted by some as a warning to other states in the region not to attempt to destabilize Jordan. In April 34 US F-15 and F-16 fighter aircraft were stationed in Jordan for an indefinite period in order to undertake flights over southern Iraq.

Some observers interpreted Jordan's *rapprochement* with Saudi Arabia and the Gulf states and the break with Iraq as part of a plan orchestrated by the USA to redraw the political map of the region, with the aim of further isolating Iraq, politically and economically, and linking the Jordanian economy more closely with that of Israel. In April 1996, when it was revealed that Turkey had signed a secret military agreement with Israel in February, some analysts argued that a new strategic partnership was emerging in the region to replace the long-promised Middle East peace accords, bringing together the USA, Israel, Turkey and Jordan in a military alliance designed to protect Israeli and US interests in the region and to isolate those states opposed to them. In May US and Jordanian forces carried out joint military exercises in the south of the kingdom.

In June 1996 King Hussein was the first Arab leader to visit Washington, DC, after the right-wing Likud victory in the Israeli elections. Discussions focused on the Middle East peace process and on Jordan's strategic relationship with the USA. Soon after the King's visit another series of joint military manoeuvres were carried out in southern Jordan, and at the end of the month the Chairman of the US Joint Chiefs of Staff, General Shalikashvili, visited Jordan to strengthen the military relationship between the two countries. In October, after violent clashes between Israelis and Palestinians following Israel's decision to open a tunnel in Jerusalem close to Muslim holy places (see below), President Clinton invited King Hussein, the Palestinian leader, Yasser Arafat, and the new Israeli Prime Minister, Binyamin Netanyahu, to Washington in order to reduce tensions. Little progress was made at their meeting, although it was agreed that direct talks would be resumed between Israel and the Palestinian National Authority on the redeployment of Israeli troops in Hebron. Before the meeting, King Hussein held private talks with Prime Minister Netanyahu. In November President Clinton announced that Jordan was being granted special military status, thus making the kingdom eligible for increases in US military aid. In December Jordan received the first US $100m. instalment of a $300m.-package of military equipment as part of a US commitment to help modernize the Jordanian armed forces. In early March 1997, when the US vetoed a UN Security Council resolution criticizing Israel's plans to build a new housing complex on the outskirts of Arab East Jerusalem, King Hussein protested and claimed that the veto had damaged the credibility of the USA as an honest broker in the Middle East. Nevertheless, joint exercises between Jordanian and US forces continued, and the first group of F-16 fighter aircraft, pledged under the rearmament agreement that had been signed with the USA at the end of 1996, arrived in December 1997, with the rest of the aircraft scheduled for delivery in early 1998. In September 1997 the US Secretary of State, Madeleine Albright, met King Hussein for discussions in Amman, as part of her first visit to the Middle East since taking office. The talks in Jordan were very cordial; however, Albright's visit to the region failed to resolve the deadlock in the Middle East peace process. In October the US Government accorded Irbid in northern Jordan, where there were a number of Jordanian-Israeli joint ventures, the status of 'qualifying industrial zone', thereby allowing all goods exported from it duty-free access to the US market. In November Jordan dispatched a high-level delegation, headed by Jawad al-Anani, to the US-sponsored Middle East and North Africa economic conference in Doha, Qatar, while both Egypt and Saudi Arabia decided to

boycott the meeting, owing to Israeli participation. Despite the close alliance with the US Government and the suppression of pro-Iraqi demonstrations during the increased tension between the USA and Iraq in early 1998, Jordan indicated that it would not allow its territory or airspace to be used for an attack on Iraq. During his visit to Washington in March King Hussein was reported to have requested that the US Government increase aid to Jordan and exert pressure on Israel to make concessions over the West Bank. There was a limited response from US officials to the King's suggestion that Jordan assist in the organization of discussions between the Governments of the USA and Iraq. A senior Jordanian naval officer was present at a joint exercise between the naval forces of the USA, Israel and Turkey (the first time that the three countries had co-operated in a military exercise).

In July 1998 King Hussein arrived in the USA for further cancer treatment and remained there for almost six months. The King's mediation at the US-brokered peace summit which took place between Israel and the Palestinians at the Wye Plantation, Maryland, in October was crucial to the signing of the Wye River Memorandum (see chapter on Israel and Documents on Palestine, p. 134). In December, after renewed US and British air strikes against Iraq (see chapter on Iraq), the Jordanian authorities allowed pro-Iraqi demonstrations by the public, but ensured that they were contained and policed.

On 8 May 1999 the new King of Jordan, Abdullah, began a three-week tour of the USA and several European capitals. Prior to the visit, Abdullah had announced that, in anticipation of a summit of G-8 leaders, due to be held in Germany in June, he would be seeking US support for an agreement by Western countries to write off as much as 50% of Jordan's debt. He achieved some success when, on 20 May (two days after an interview with President Clinton) the 'Paris Club' of international donors agreed to reschedule some US $800m. of Jordan's debt, in the context of its economic reform programme. In late June the G-8 summit leaders recommended a debt-reduction proposal for Jordan, and Abdullah subsequently thanked the USA for the part it had played in the decision.

RELATIONS WITH ARAB STATES

Since the end of the 1990–91 Gulf War, Jordan has continued to distance itself from Saddam Hussain's regime in Iraq and has tried to improve relations with the Gulf states. In 1992 King Hussein spoke publicly of the need for change in Iraq, but denied that he had discussed ways of removing the Iraqi leader with the director of the CIA. Jordan protested at the harassment of Iraqi refugees in Jordan by the Iraqi secret service and at the execution of Jordanian merchants in Iraq accused of economic crimes. Jordan welcomed the decision of Iraq, in November 1994, to recognize the sovereignty and territorial integrity of Kuwait. However, Jordan continued to favour the international rehabilitation of Iraq, including the relaxation of UN sanctions. In June 1995 King Hussein was openly critical of US policy towards Iraq. After a visit to Amman later that month by Viktor Possovalyuk, the Russian Deputy Minister of Foreign Affairs, both Jordan and Russia agreed to co-operate to end UN sanctions against Iraq.

At the end of November 1993 King Hussein made his first official visit to Egypt since the Gulf crisis. Relations with Egypt had slowly improved after diplomatic efforts by the King who made an unofficial visit to Cairo in October 1992 to offer condolences just after the Egyptian capital suffered a serious earthquake. During a visit to Amman by the Egyptian Minister of Foreign Affairs in October 1993 it was agreed to reconvene the Higher Jordanian-Egyptian Joint Committee which had not met since the Gulf crisis. In January 1995 President Mubarak of Egypt made his first official visit to Jordan since the Iraqi invasion of Kuwait, and in February Jordan, together with representatives of the PLO and Israel, attended a summit meeting in Cairo, in an attempt to avert a breakdown in the peace process. In March the Higher Jordanian-Egyptian Joint Committee convened in Cairo, where it was agreed to co-ordinate the activities of the two countries' respective interior ministries, a decision apparently aimed at increasing co-operation against the threat of Islamist extremism.

Following visits by Crown Prince Hassan to Doha in late 1993 and by Sheikh Hamad bin Jaber ath-Thani, the Qatari Minister of Foreign Affairs, to Amman at the beginning of 1994, normal relations between Jordan and Qatar were restored after being strained by Jordan's support for Saddam Hussain in the Gulf War. In March 1994 King Hussein made his first visit to Doha since the Gulf crisis. However, the normalization of relations with Qatar did not include the resumption of financial aid to Jordan from the emirate. King Hussein also visited Oman, where discussions included the efforts by both countries to mediate between the two factions in Yemen, but visits to Bahrain and the UAE were cancelled.

In November 1994 a three-year programme of bilateral co-operation in education, science and culture was agreed with Qatar, and in January 1995 King Hussein made a private visit to Oman for talks with Sultan Qaboos. There were also signs of some improvement in relations with Bahrain and the UAE. After the coup in Qatar in June 1995 in which Sheikh Hamad bin Khalifa ath-Thani deposed his father, King Hussein offered his congratulations to the new Amir, who had been largely responsible for the policy of improving relations with Jordan. During the second half of 1995 relations with Yemen were also strengthened.

In 1994–95 there was some improvement in relations with Kuwait, which had been severely strained since the Iraqi invasion of Kuwait in 1990. A senior Jordanian diplomat visited Kuwait in September 1994, and it was later announced that the Jordanian embassy in Kuwait would reopen and that Kuwait had agreed to allow several thousand Jordanians who had been expelled in 1991 to return. Nevertheless, relations remained difficult.

In late 1994 and 1995 relations with Saudi Arabia began to improve, despite the personal animosity believed to exist between King Fahd and King Hussein. The refusal of King Fahd to meet King Hussein in March 1995, when the Jordanian monarch was performing the *umra* (minor pilgrimage), was defused by the Jordanian leadership, anxious not to escalate tensions with its powerful neighbour. In addition to the serious rift in relations caused by the Gulf crisis, it is believed that the Saudi monarch may have a particular animosity towards King Hussein because of the long rivalry between the Hashemites and the House of Sa'ud. Nevertheless, tentative signs of a *rapprochement* were evident in late 1994. In September co-operation on border issues resumed. A ban on granting residence permits to the dependants of all Jordanians and Palestinians working in Saudi Arabia, which had been imposed since the Gulf crisis, was partly revoked in March 1995, when residence permits were granted to the families of those Jordanians employed in 'vital positions'. After a visit to Riyadh by the Jordanian Minister of Foreign Affairs in July there were signs that Saudi Arabia was ready to restore diplomatic representation with Jordan to ambassadorial level.

BREAKDOWN IN RELATIONS WITH IRAQ

In early August 1995 King Hussein granted political asylum to Hussain Kamel al-Majid, his brother Saddam Kamel and their wives after they fled from Baghdad to Amman. Hussain and Saddam Kamel had been senior figures in the Iraqi regime and were married to daughters of Saddam Hussain, the Iraqi leader. Their defection marked a sharp deterioration in relations between Jordan and Iraq. At a press conference shortly after arriving in Jordan, Hussain Kamel appealed for the removal of Saddam Hussain and spoke of his hopes of leading an Iraqi opposition movement to rescue Iraqis from their worsening plight. Later that month King Hussein delivered a speech in which he praised Hussain Kamel as a great patriot and strongly criticized the Iraqi leader, although he stopped short of seeking the fall of the Iraqi regime. He also denied speculation, especially rife in the Egyptian and Syrian press, that he was seeking to revive Hashemite claims to Iraq. In response, Iraq denounced Hussain Kamel as a traitor and a US agent, but carefully avoided attacks on King Hussein. Despite the political rupture, economic co-operation continued, with Iraq remaining Jordan's main source of oil supplies. Jordan continued to provide Iraq with a vitally important link with the outside world. In October King Hussein renewed his attack on the Iraqi regime, denouncing the presidential elections in Iraq as a farce. He also established contact with Iraqi opposition groups in London, United Kingdom, and promoted the idea of holding a congress

in Amman to bring the different factions together in order to discuss political change in Iraq. However, the proposed congress drew criticism, especially from Syria, and the idea was abandoned. The King was also criticized for appearing to favour a federal approach to Iraq's political future as this might have threatened the country's unity. In any case, his support for Hussain Kamel was short-lived. It quickly became clear that Kamel had few supporters in Iraq, while his appeals to the Iraqi opposition-in-exile were firmly rejected. By the end of 1995 his presence in Jordan had become something of an embarrassment. When Hussain Kamel and his brother decided to return to Iraq in February 1996, after Iraq announced that they had been pardoned, rumours circulated that the Jordanian authorities may have encouraged them in their decision. Nevertheless, the brutal murder of the two men by order of Saddam Hussain only days after their return was strongly condemned by Jordan.

In April 1996, after US aircraft were stationed at Azraq to enforce the air exclusion zone in southern Iraq, the Jordanian Government insisted that it would not permit the country to be used as a base for attacks against Iraq. Nevertheless, King Hussein met with Iraqi opposition leaders in London, United Kingdom, in March and gave permission for the Iraqi National Accord (INA) to open an office in Amman. In March there was another high-level defection from Iraq when Gen. Nizar Kazraji, a former Chief of Staff of the Iraqi army, arrived in Jordan and associated himself with the INA. In late March, amid speculation that Iraqi agents operating in Jordan might be seeking to target Jordanians, the first expulsion of an Iraqi diplomat from Jordan occurred, although no explanation for it was made public. In retaliation, Iraq expelled a Jordanian diplomat. At the end of June it was reported that US, British, Saudi Arabian and Jordanian intelligence officers meeting in Saudi Arabia in January had agreed that Amman should become the centre of operations for the Iraqi opposition. They had agreed to support the INA, which claimed to be in contact with high-ranking officers in the Iraqi armed forces, and which favoured a swift *coup d'etat* that would remove Saddam Hussain from power but leave the country intact. It was also reported that US President Clinton had authorized a grant of some US $6m. to finance the INA's operations in Amman, with additional funds being provided by Saudi Arabia, Kuwait and several other Arab countries. Speaking in Washington, DC, in June, the Jordanian Minister of Information stated that Jordan preferred to support the INA because its rival, the Iraqi National Congress (INC), had no credibility in either Iraq or Jordan.

Jordan's new policy on Iraq was welcomed by Saudi Arabia and relations between the two countries continued to improve. Shortly after Hussain Kamel's defection, the Jordanian Minister of Foreign Affairs was invited to visit Riyadh where he was received by King Fahd. Full diplomatic relations were restored with the appointment of a new Saudi Arabian ambassador to Amman in November 1995. In January 1996 the Saudi Arabian Minister of Foreign Affairs visited Jordan, the first visit by a senior member of the Saudi Arabian regime since the 1990–91 Gulf crisis, and offered to resume supplies of some 40,000 b/d of crude oil (cut off in September 1990) to Jordan. Relations with Bahrain, which, like Saudi Arabia, had taken a hard line on relations with Jordan since 1990, also improved after Jordan's political rupture with Iraq. In November 1995 two high-level Jordanian delegations visited Manama and there was speculation that Jordanian assistance in Bahrain's internal security was one of the main topics of discussion. In early 1996 Jordan's new Prime Minister reaffirmed the country's support for the Bahrain Government and did not exclude the dispatching of Jordanian troops to assist its security forces. During the second half of 1995 relations with Qatar and Oman were further strengthened. King Hussein visited Doha and Muscat in August, and in September the new Amir of Qatar visited Amman. Jordan's efforts to improve its relations with the Gulf states were rewarded when the GCC countries agreed to take part in an economic summit meeting held in Amman in October. However, relations with Kuwait remained uneasy. The Jordanian Minister of Foreign Affairs met his Kuwaiti counterpart in Cairo in September 1995, but was told that it was still too early for normal diplomacy between the two countries to resume. In December, however, the Kuwaiti Minister of Foreign Affairs urged the resumption of diplomatic relations with Jordan following the political break with Iraq and the improvement in Jordan's relations with other Gulf states. In a public disagreement, the Kuwaiti Prime Minister opposed the move, arguing that public opinion in Kuwait was still against normalization. In order to resolve their differences, telephone and postal links were restored, but Jordan was informed that the re-establishment of diplomatic relations would require the agreement of the Kuwaiti Government, its people and its press.

Jordan's new policy towards Iraq caused disquiet in Egypt and Syria, which feared that it could lead to a new, US-backed strategic reorientation in the region. The Egyptian and Syrian press accused King Hussein of pursuing his own ambitions in Iraq. The King had talks with President Mubarak of Egypt in Washington, DC, at the end of September 1995 during the signing of the Israel-Palestinian Interim Agreement on the West Bank and Gaza Strip (see Documents on Palestine, p. 127), and in late December President Mubarak visited Amman. At the end of his visit to Jordan the two leaders issued a joint statement in which they emphasized the need to ensure the unity of Iraq and to allow the Iraqi people to decide their own future. Nevertheless, while King Hussein appeared to have gone some way towards reassuring the Egyptian President, relations between the two countries remained uneasy owing to Egypt's sensitivities about its regional status. In contrast, Syria's attitude provoked strong criticism from Jordan, and resulted in a further deterioration in relations which had been poor since Jordan signed a separate peace agreement with Israel. At the end of June 1996 President Mubarak of Egypt attempted to mediate between the two countries during the emergency Arab League summit meeting in Cairo, encouraging King Hussein to hold talks with President Assad of Syria to try to resolve their differences. Jordan had accused Syria of sponsoring terrorist organizations in order to destabilize the kingdom, while Syria had denounced Jordan for working with Israel and Turkey to undermine President Assad's regime. Jordanian officials claimed that some progress had been made during the talks, and further contacts between the two leaders in July indicated an improvement in bilateral relations.

After the right-wing Likud victory in the Israeli elections, King Hussein urged other Arab leaders not to judge the new Prime Minister, Binyamin Netanyahu, until his policies concerning the peace process were announced. In order to review the new situation, King Hussein held talks with President Mubarak of Egypt and the Palestinian leader, Yasser Arafat, in Aqaba in early June 1996, but was not invited to the mini-summit between the leaders of Egypt, Syria and Saudi Arabia in Damascus. At the full Arab League summit in Cairo during 21–23 June, King Hussein joined other moderate Arab leaders to ensure that the final communiqué to be adopted was more restrained than many had predicted.

The tense relations that had existed with Iraq since August 1995 improved slightly in December 1996, when the Iraqi Ministers of Trade and Foreign Affairs held talks in Amman with senior Jordanian officials, marking a resumption in high-level contacts between the two countries. It was reported that King Hussein had been opposed to any relaxation of sanctions against Saddam Hussain's regime, but, after Baghdad accepted UN Security Council Resolution 986 allowing Iraq to sell limited quantities of oil in order to purchase food and medicine, he was willing to adopt a less confrontational stance to protect Jordan's economic interests. In addition, the invasion of Iraqi Kurdistan by Saddam Hussain's forces in August 1996, and the destruction of the Iraqi opposition based there, may have convinced the King that an early removal of the Iraqi leader was extremely unlikely. The Jordanian Government deliberately refrained from commenting on the Iraqi invasion, but voiced concern over the US missile attacks against Iraq. The Jordanian National Assembly, in contrast, strongly condemned the American action. The Iraqi National Accord (INA) was allowed to keep its office in Amman, despite reports that the group had been infiltrated by Iraqi agents, but the Jordanian Government repeatedly asserted that Jordan would not be used as a base for operations against the Iraqi regime.

In December 1997 relations between the two countries once again became strained, after the Iraqi authorities executed four Jordanian nationals who had been convicted of smuggling offences. King Hussein condemned the executions, expelled a

number of Iraqi diplomats from Amman, and recalled the Jordanian chargé d'affaires from Baghdad. In an attempt to improve relations, Iraq announced that it would commute the death sentence of a fifth Jordanian convicted of smuggling and release a number of Jordanians held in Iraqi prisons. The killing of Iraq's chargé d'affaires in Amman in January 1998 prompted rumours that Iraqi government agents may have been responsible. In May, however, the Jordanian Minister of the Interior announced that a number of Jordanian nationals had been arrested in connection with the killing, which, he insisted, had not been politically motivated and did not involve 'neighbouring countries'. During the Gulf crisis in early 1998 there was widespread popular support for Iraq in Jordan, but the authorities banned pro-Iraqi demonstrations. Despite Jordan's close alliance with the US Government, however, the authorities indicated that they would not allow Jordanian territory or airspace to be used for air strikes against Iraq, but they urged the Iraqi Government to comply with all UN resolutions and allow UN weapons inspectors access to all suspect sites. Jordanian support for the Arab League's efforts to resolve the crisis by diplomatic means contributed to an improvement in relations with some other Arab states, notably Egypt. Although relations with Iraq remained uneasy, economic co-operation continued, and in February 1998 the two countries renewed the 1991 oil agreement. Most ordinary Jordanians remained strongly pro-Iraqi and, although they were strictly controlled by the Jordanian authorities, public demonstrations were allowed in protest at US and British air strikes against Iraq in December 1998 (see chapter on Iraq). The Jordanian Government also strongly condemned the attacks. At the end of December an emergency meeting of the Arab Parliamentary Union was held in Amman at which Crown Prince Hassan, acting as regent during the absence of King Hussein, called for the lifting of sanctions against Iraq. However, comments made by Hassan regarding the need for greater democracy in Iraq, and his demands for the release of all Kuwaiti prisoners of war held there angered the Iraqi delegation. In early 1999 the Jordanian National Assembly voted to end the embargo imposed on Iraq by the UN.

During the second half of 1997 there were indications that King Hussein wished to achieve an improvement in relations with Syria. Speaking at Irbid, in northern Jordan, the King praised President Assad, but also urged the Syrian Government to reciprocate by ceasing to support some Jordanian opposition parties and professional associations. For their part, the Jordanian authorities ordered the head of the Syrian branch of the MB's information office in Amman to leave the country.

Although relations with Syria appeared to improve during the early part of 1998, by the end of the year they had deteriorated once again. In October Mustafa Tlass, the Syrian Minister of Defence, claimed that Jordan was 'Judaizing' its people, and accused the authorities there of having refused to allow army units from Saudi Arabia to assist Syria during the Arab–Israeli War of 1973 (see above). In November 1998 the Jordanian authorities were outraged when a Syrian participant in a popular television 'talk' show denounced Jordan for conspiring with Israel since 1948, and referred to the Hashemite kingdom as an 'artificial entity'. Nevertheless, on the death of King Hussein in early February 1999, the Syrian Government immediately announced three days of official mourning and President Assad attended the King's funeral at the head of a high-level Syrian delegation. Some commentators suggested that Assad's presence at the funeral marked a clear indication to the new King that Damascus wished to improve relations with its southern neighbour and that closer links with Syria might offer an alternative to Jordan's current reliance on good relations with Israel and the USA.

Further evidence of an improvement in bilateral relations emerged when, in early May 1999, it was announced that Syria would supply Jordan with water, in order to ease Jordan's drought over the summer months. Syria began to supply the water in mid-May and was to continue for four months. In late June Jordan refused to participate in joint Turkish–Israeli naval exercises, scheduled for the following month; in 1998 similar exercises had created a diplomatic crisis with Syria. Jordan and Syria also agreed to proceed with the long-standing Yarmouk dam project, and to seek financing jointly. In late July, following the election of a new Israeli Prime Minister (see below) Abdullah made an unannounced visit to Syria, amid Jordanian concerns that any peace agreement concluded by Israel and Syria could damage the Palestinians' position and effectively isolate them in future peace negotiations. In early August the joint Jordanian-Syrian Higher Committee began talks in Amman—the first time in almost 10 years that a senior Syrian delegation had visited the Jordanian capital. The meeting resulted in a bilateral agreement which officials hoped might double the volume of trade between the two countries. It was reported later in the month that Syria had agreed to allow the free circulation of Jordanian newspapers and publications, ending a 10-year ban.

The normalization of relations with Saudi Arabia was sealed in mid-August 1996 by a visit by King Hussein and a senior delegation to Riyadh, where the Jordanian monarch held his first talks with King Fahd since the 1990–91 Gulf crisis. Their discussions covered issues including the Middle East peace process and co-operation against terrorism. Both leaders agreed to strengthen bilateral relations, and agreements were concluded on the employment of Jordanians in Saudi Arabia and on resuming Jordanian agricultural exports to the kingdom. In July 1996 a meeting of the Jordanian-Qatari Higher Committee, attended by the foreign ministers of the two countries, and visits by other senior officials indicated a further consolidation of relations between Jordan and Qatar. In December King Hussein made his first visit to the United Arab Emirates since the Gulf crisis and held talks with the UAE President, Sheikh Zayed bin Sultan an-Nahyan. Relations with Kuwait remained problematic, and a dispute over Jordanian prisoners held in Kuwait since the Iraqi invasion threatened to destroy the limited progress that had been made to reconcile the two countries. In January 1997 the Jordanian press reported that Jordanian prisoners in Kuwait were being ill-treated. The press criticized their own Government for not taking action. Tension mounted after official exchanges on the issue, but the crisis was defused when the Amir of Kuwait included 10 Jordanians in a group of prisoners released to mark the Id al-Fitr celebrations in the following month. In June the Kuwaiti Minister of Foreign Affairs declared that Kuwait was prepared to normalize relations with Jordan, Sudan and Yemen, the three Arab states which it had accused of supporting Iraq during the 1990–91 Gulf crisis. In the following month the Kuwaiti Government indicated that it favoured the normalization of relations with Jordan proceeding at a faster pace, but emphasized that the Jordanian press would have to modify its strongly critical attitude towards Kuwait. Relations with Saudi Arabia continued to improve, with a visit by the Saudi Arabian Minister of Foreign Affairs to Amman in June, while good relations with the other Gulf states, especially Oman and Qatar, were consolidated. A high-level Jordanian delegation attended the Middle East and North Africa economic conference in Doha, the Qatari capital, in November, and Jordan benefited from increased economic co-operation with Qatar.

The Saudi Arabian Minister of Defence visited Amman in January 1999 to deliver a message of congratulations from King Fahd to Prince Abdullah on his designation as Crown Prince. At the beginning of March Jordan's embassy in Kuwait was reopened, following the restoration of full diplomatic relations between the two countries (which had been severed after Iraq's 1990 invasion of Kuwait). The new King, Abdullah, was reported to enjoy good relations with the younger members of the royal families in several Gulf states, and this was expected to reinforce the improved ties between the states and Jordan, possibly leading to a resumption of financial assistance for Jordan. On his accession, Abdullah immediately made efforts to strengthen relations with the Arab world. His first major foreign visit was to Egypt for talks with President Mubarak in mid-March. During April Abdullah visited Saudi Arabia, Libya, Morocco, the UAE and Kuwait. During three days of talks with King Fahd on 5–7 April, Abdullah was reported to have called for greater economic co-operation between Jordan and Saudi Arabia, and for the two countries to adopt a unified approach to peace talks with Israel.

RELATIONS WITH ISRAEL AND THE PALESTINIAN NATIONAL AUTHORITY

In May 1995 the Government banned a conference (organized by the IAF) to oppose the normalization of relations with Israel,

claiming that it posed a threat to national security and to the image of the country. In June 1995 Israel began to pipe 30m. cu m of drinking water per year from Lake Tiberias to Jordan as agreed in the peace treaty signed by Jordan and Israel in October 1994. The project aims to help Jordan overcome a growing shortage of drinking water and was promoted by the Jordanian authorities as one of the dividends of the peace process. However, there was some embarrassment when Israel indicated that the flow of water to Jordan could not be guaranteed in the event of shortages in Israel owing to drought. Opposition within many sections of Jordanian society to the peace treaty with Israel continued. In July, under the terms of the peace treaty, Jordan finally annulled laws banning Jordanians from having contact with, doing business with or selling land to Israelis, but only after several weeks of angry debate in the House of Representatives. After the assassination of the Israeli Prime Minister, Itzhak Rabin, in early November, King Hussein made his first visit to Jerusalem since 1967 in order to attend the funeral, at which he delivered an emotional oration. Clearly shocked by Rabin's murder, the King emphasized the need to continue the peace process. In December Jordan expelled an Iranian diplomat and there was speculation that he may have been involved in planning an attack on Israeli tourists visiting the country. In order to strengthen bilateral relations, Shimon Peres, the new Israeli Prime Minister, visited Jordan in December, and King Hussein made a state visit to Israel in January 1996. A transport agreement was signed in January establishing direct road and air links between the two countries. King Hussein and senior members of the Government condemned the spate of suicide bomb attacks which were carried out in Israel during February and repeatedly criticized the actions of Hamas militants. Claims by some Palestinian sources that the attacks might have been organized from Jordanian territory were immediately rejected by the Jordanian Minister of Information. King Hussein attended the anti-terrorism summit meeting in Sharm esh-Sheikh, Egypt, in March, which was held in response to the suicide bomb attacks in Israel, and it was subsequently reported that the Jordanian authorities had adopted a tough line with Hamas representatives and had carried out new arrests of Hamas sympathizers.

Relations with Palestinian leader Yasser Arafat continued to improve during 1995. Arafat received a warm reception when he visited Amman in May, and King Hussein used the opportunity to express his firm support for the Palestinian leader, who was under pressure from his opponents because of serious setbacks to the peace accord with Israel, and to reject claims that he was forming an alliance with Hamas. At the beginning of June the Jordanian authorities expelled two members of Hamas' political bureau who had been based in Jordan. The Jordanian authorities welcomed the Israel-Palestinian Interim Agreement on the West Bank and the Gaza Strip (see p. 127) signed in Washington, DC, on 28 September. Conscious of the tensions that had arisen between Jordan and the PLO during earlier negotiations between the Palestinians and Israel, Arafat visited Amman to inform the Jordanian leadership about the main provisions of the new accord and thanked King Hussein for his support during the long negotiations.

After the surprise victory of Likud in the Israeli elections at the end of May 1996, and the creation of a new right-wing Israeli Government, King Hussein declared that the implications of this did not worry him. He was the only Arab leader to have met Netanyahu when he led the Israeli opposition and had maintained contacts with the Likud leader for some two years. An Israeli source indicated that the new Israeli Prime Minister expected the process of normalization with Jordan to continue, and revealed that Dore Gold, Netanyahu's political adviser, had visited Amman several times in recent months in order to assure King Hussein that the new Likud Government would seek to promote Jordan's role in the West Bank. Other analysts also argued that Netanyahu's victory had revived talk of the so-called 'Jordanian option', provoking fears among Palestinians that Israel would encourage Jordan to share in the administration of the West Bank, leaving the Palestinian National Authority in full control of only the vulnerable Gaza Strip. King Hussein's optimism about the new Israeli administration soon transformed into despair and frustration at the intransigence of Netanyahu's Government with regard to the peace process. The Israeli Government did not inform Jordan in advance about its decision in September to reopen an ancient tunnel in East Jerusalem, a decision that resulted in violent clashes between the Israeli security services and Palestinian demonstrators. King Hussein tried to defuse the crisis by requesting an international inquiry to examine whether the opening of the tunnel had damaged nearby Muslim religious sites and urged Israel to resume peace talks with the Palestinians. After his discussions with Netanyahu in Washington, DC, in October, the King attempted to persuade the Israeli Prime Minister to adopt a more constructive position on the redeployment of Israeli forces on the West Bank, set out in the Declaration of Principles but not yet implemented. As the peace process appeared to be expiring, protests against the normalization of relations with Israel intensified and succeeded in delaying the opening of the first Israeli trade fair in Amman by several weeks. The eventual opening of the fair, in January 1997, was attended by a demonstration organized by a 'national committee' consisting of political parties and trade unions, in which more than 2,500 Jordanians participated. Also in January 1997 King Hussein intervened to support US efforts to secure an agreement between Israel and the Palestinian leadership on the issue of redeployment outlined in the Declaration of Principles. The King apparently persuaded Yasser Arafat to compromise on the timing of the second redeployment of Israeli forces from rural areas in the West Bank in order not to jeopardize the deal already made on Hebron. Israel's rapid redeployment of most of its forces from Hebron was welcomed by the Jordanian Government, and the release of three Jordanian prisoners held in Israel also helped to reduce tension between the two countries. At the end of February Prime Minister Netanyahu visited Amman to discuss bilateral relations, but the Israeli Prime Minister's decision to continue with the construction of a large new Jewish settlement at Jabal Abu Ghunaim (Har Homa) on the outskirts of Jerusalem, plunged relations between the two countries into a new crisis: the completed Har Homa project would result in Arab East Jerusalem becoming virtually surrounded by Jewish settlements, thereby prejudicing the future status of the city which is due to be discussed when 'final status' negotiations between Israel and the Palestinians begin. After the visit, in an exchange of letters, King Hussein stated that Netanyahu's policies threatened to destroy the peace process and could lead to violence. Shortly afterwards Crown Prince Hassan cancelled a visit to Israel where he had been due to attend a ceremony in memory of Itzhak Rabin. On 13 March, two days after the publication of the King's outspoken letter, a Jordanian soldier opened fire on a party of Israeli schoolgirls at Nayarayim, on the border with Jordan, killing seven of the girls and wounding six others. King Hussein, who cut short a visit to Spain to return to Amman, and Crown Prince Hassan immediately expressed their sorrow and distress at the killings and promised a full investigation. Three days after the attack the King, together with Prime Minister Netanyahu, visited the relatives of the deceased to offer their condolences. Some Israelis argued that the King's letter had provoked the massacre of the schoolgirls, an allegation strongly denied by the Jordanian King who insisted that he had written more in sorrow than in anger and pledged to continue to work for peace in the region. The perpetrator of the attack, Ahmad Dakamsa, went on trial at the end of May and his case was taken up by those Jordanians opposed to the normalization of relations with Israel. Several committees were established to support the soldier and his family. A military court later sentenced Dakamsa to 25 years' imprisonment.

Despite the increasing strain on political relations between the two countries, an agreement was reached in May 1997 on the transfer of drinking water from Israel to Jordan (under the provisions of the 1994 peace treaty), following talks between King Hussein and Netanyahu in Aqaba. At the end of August the two countries signed an accord to divert international flights from the airport serving Israel's Red Sea resort at Eilat, which is heavily congested, to nearby Aqaba airport in Jordan. Jordan's Minister of Transport stated that the agreement established the foundations for further co-operation in the future, and there was speculation that, if the arrangement proved successful, it could lead to the first jointly-managed airport in the region. In July Israel's Chief of Staff, Lt-Gen. Amnon Lipkin-Shahak, visited Jordan, the first official visit by the head of Israel's armed

forces to an Arab country. The two countries were reported to have extended their co-operation in the fields of security and intelligence. However, the attempted assassination of Khalid Meshaal, the head of the political bureau of Hamas, in Amman in late September by agents of the Israeli secret service, Mossad, created further tension between the two countries. The attack was apparently ordered by the Israeli Prime Minister and was only agreed to reluctantly by Mossad leaders. King Hussein demanded and secured the release of Sheikh Ahmad Yassin, the spiritual leader of Hamas, and a number of other Palestinians who had been imprisoned in Israel, in exchange for the return of the two Mossad agents. There were reports that King Hussein threatened to suspend diplomatic relations if the Israeli authorities failed to meet his demands. Following the attack on Meshaal, there were few high-level political contacts between the two countries for some months, although economic co-operation continued. After the resignation of the Mossad chief, Danny Yatom, in February 1998 and his replacement by Ephraim Halevy, who had been closely involved in the negotiations which had resulted in the 1994 peace treaty between Israel and Jordan, relations between the two countries improved. In early March Ariel Sharon, the Israeli Minister of National Infrastructure, and the senior Israeli responsible for relations with Jordan, visited Amman, followed by the Israeli Minister of Trade and Industry. Also in March a high-level Jordanian delegation, led by Crown Prince Hassan, visited Israel. Crown Prince Hassan held talks with Netanyahu and the Israeli Minister of Defence, Itzhak Mordechai, during the visit. Shortly afterwards, however, Ariel Sharon angered the Jordanian authorities by stating, in an Israeli news broadcast, that Israel was still determined to kill Khalid Meshaal. Abdullah an-Nusur, then the acting premier, condemned the statement and reminded Israel that Meshaal was a Jordanian national. Sharon subsequently wrote to Crown Prince Hassan, claiming that his comments had been misinterpreted and insisting that he respected Jordan's sovereignty. There was further embarrassment for the Jordanian authorities when Israeli radio reported that King Hussein had donated US $1m. to the families of the Israeli schoolgirls killed by a Jordanian soldier in March 1997 (see above). (In view of the strong opposition in Jordan to the normalization of relations with Israel, King Hussein had requested that no publicity should be given to the donation.)

In October 1998, whilst undergoing treatment for cancer in the USA, King Hussein attended the US-sponsored peace talks between Israel and the Palestinians at Wye Plantation, Maryland. His participation was crucial in securing the two sides' agreement to the Wye River Memorandum (see chapter on Israel and Documents on Palestine, p. 134). Following the signing of the Memorandum, Prime Minister at-Tarawneh warned Hamas activists in Jordan not to resort to violence in an attempt to undermine the agreement. On the death of King Hussein in early February 1999 numerous tributes were paid to the late monarch by prominent Israeli politicians and statesmen. President Weizman, who referred to the King as one of the great leaders of the 20th century, led a large Israeli delegation, including Prime Minister Netanyahu, to Hussein's funeral on 8 February.

Jordan's new ruler, King Abdullah, immediately assured Israel that he was committed to continuing his father's support for the Middle East peace process. Although little immediate progress was made in strengthening relations between the two countries, regular contacts between senior officials continued. The Israeli Government's decision in early 1999 to take steps to reduce trade barriers between Jordan and both Israel and the emerging Palestinian autonomous areas appeared to have been prompted by concern over stability in the Hashemite kingdom following the death of King Hussein. In late February Netanyahu's first official visit to Amman to meet the new King was largely overshadowed by comments made by the Israeli Prime Minister a few days earlier expressing the belief that Jordan might be about to strengthen its links with Iraq at the expense of a greater normalization of relations with Israel. In mid-March bilateral relations were further strained when Israel indicated that it would only be able to supply Jordan with some 60% of water supplies agreed under the 1994 peace treaty, as it was experiencing its own drought. King Abdullah and ar-Rawabdeh, anxious to avoid a water crisis like that experienced during 1998, were uncompromising in their opposition to this announcement, and in mid-April it was reported that Israel would, in fact, agree to supply Jordan with its full share of water. In mid-July King Abdullah held talks with the new Israeli Prime Minister, Ehud Barak; discussions were reported to have focused on ways to revive the peace process, as well as other bilateral concerns.

King Abdullah welcomed the unexpected reactivation of the stalled Wye River Memorandum following the signing of the Sharm esh-Sheikh Memorandum on the Implementation Timeline of Outstanding Commitments of Agreements Signed and the Resumption of Permanent Status Negotiations (Wye Two—see chapter on Israel and Documents on Palestine, p. 136) by Yasser Arafat and Ehud Barak in Egypt on 4 September.

As the Jordanian leadership became increasingly critical of the Netanyahu Government, its relations with the Palestinian National Authority (PNA) improved. At his meeting with Yasser Arafat in Aqaba in June 1996, King Hussein emphasized that under no circumstances would Jordan seek to replace the Palestinian leadership in negotiations with Israel over the 'final status' of the West Bank. When King Hussein visited Washington in the same month, the Jordanian Minister of Information stressed that Jordan's role was to assist negotiations between the Israelis and the Palestinians and not to supplant the PNA. President Arafat visited Amman at the end of December when the Jordanian leadership reiterated its full support for Palestinian independence. In November the two sides had reached agreement over the controversial issue of responsibility for the holy sites in East Jerusalem. It was agreed that Jordan would retain formal jurisdiction over the sites until the 'final status' negotiations between Israel and the Palestinians had been successfully completed. The management of the sites, however, would be transferred from Jordan's Ministry of Awqaf and Islamic Affairs to the PNA.

The summit of the OIC, which took place in Teheran in December 1997, unanimously recognized Jordan's role in preserving Jerusalem's Muslim identity. Also in December al-Majali held discussions with President Arafat in Ramallah, on the West Bank; the Jordanian Government angered the Israeli authorities by suggesting that Jewish West Jerusalem, as well as occupied Arab East Jerusalem, should be discussed during 'final status' negotiations between Israel and the Palestinian leadership. On the occasion of his visit to Israel in March 1998 Crown Prince Hassan also met Arafat, although the meeting was viewed as one of courtesy rather than an opportunity for substantive talks.

Economy

Revised for this edition by ALAN J. DAY

Having twice been completely disrupted by war between the Arab states and Israel (first in 1948, and then in 1967), Jordan's economy was again severely affected by a regional conflict during the Gulf crisis and hostilities of 1990–91. This latest dislocation of established patterns of trade, aid and labour migration had a negative short-term impact on the vulnerable Jordanian economy, but failed to produce the sustained downturn that was widely predicted at the height of the crisis. By 1992 a strong recovery was under way, and it was clear that the restored Kuwaiti Government's expulsion of large numbers of Palestinians in 1991 had (because these 'returnees' were relatively affluent) provided Jordan with a timely economic stimulus. For its part, the Jordanian Government had, by adhering closely to IMF-approved economic policies, exerted a strong stabilizing influence throughout the crisis and its aftermath. From September 1993 onwards, Jordan's planners had to modify all medium- and long-term forecasts to take account of the implications of the PLO-Israel peace agreement. A further radical reappraisal was prompted by the Jordan-Israel peace treaty of October 1994, the potential economic consequences of which were a major topic of discussion in Jordan in 1995. However, initiatives to strengthen regional economic co-operation were generally scaled down in 1996 and 1997, following the re-emergence of regional political tensions. By 1998 it was widely acknowledged that Jordan had derived only limited economic benefit from the peace process. Although its macroeconomic position remained strong, initial government claims of healthy economic growth in 1996–98 were revised sharply downwards in 1999.

In the 1948–49 Arab–Israeli War, Jordan acquired some 5,600 sq km of new territory—the vast salient which juts out into Israel west of the Jordan river, and the country's population increased more than threefold. Before the war broke out, the country's population was perhaps 400,000. The number of those living on the West Bank of the Jordan river in the territory acquired in 1948 was well over 800,000. This territory was occupied by Israel in 1967, and perhaps 350,000 of the inhabitants fled to non-occupied Jordan. Jordan's 1979 census gave a total population for the East Bank of 2,100,019, which implied an annual growth rate between 1961 and 1979 of 4.8%. Natural increase accounted for 3.8% and immigration for 1.0%. The rate of growth in the mid-1980s was estimated at 4%. By the end of 1986 the population of the East Bank was officially estimated to have risen to 2,796,100 and by 1992 to 3.9m., the annual rate of increase in 1980–90 being 3.7%, compared with 4.3% in 1965–80. Of the present population, 32% reside in the capital Amman, and a further 15% in the cities of Zarqa and Irbid. The World Bank assessed the urban population proportion as 61% in 1990, in which year the crude birth rate was 43 per 1,000 (compared with 53 per 1,000 in 1965) and the crude death rate, 6 per 1,000 (compared with 21 per 1,000 in 1965). These levels of population increase are making themselves felt particularly in the major towns, where water shortages are becoming one of the most severe of the country's economic problems. The World Bank estimated Jordan's 1992 GNP per caput at $1,130 on a conventional exchange-rate basis or $4,220 using an 'international dollar' calculation based on a current Jordanian rating of 18.3 in the World Bank's 'purchasing power parity' (PPP) index (USA = 100). The World Bank's estimates for 1994 were a GNP per caput of $1,390 on the conventional basis and $4,290 on the PPP basis. Jordan's estimated GDP at current prices in 1996 totalled $7,300m. ($1,721 per caput).

The total workforce was estimated at 535,444 in 1986 by the Government's Department of Statistics, with a further 276,000 working in Arab countries and 52,000 elsewhere abroad. As of the end of 1986 it was reported that there were about 180,000 non-Jordanians working in the country and 80% of those were Arab nationals. At the end of 1987 the Jordanian Government announced that it was to stop issuing work permits, in order to stem the growth in unemployment. The rate of unemployment was unofficially estimated at 17% of the workforce in September 1987 and at just under 20% in August 1990, when Iraq occupied Kuwait.

The absorption of the refugees of 1948 and of 1967 caused problems which were accentuated by ethnic, cultural and religious differences. Jordanians before 1948 were mainly Bedouin and mostly engaged in pastoral, and even nomadic, activities. They therefore had little in common with the Palestinians, many of whom established themselves in Jordan as traders and professional men. In June 1999 there were 1,463,064 Palestinian refugees registered with the United Nations Relief and Works Agency (UNRWA) in Jordan, and a further 555,057 in the West Bank. The vast majority of the country's inhabitants are Sunni Muslims, but about 6% are Christians, mostly Greek Orthodox. Jordan's December 1994 census enumerated a population of 4,095,579 in the East Bank area. The authorities did not release statistics on the number of Palestinians within this total, stating that it would not be in the national interest to do so. The categories listed in the published census results were 'Jordanians' (92.4%), 'Gulf returnees' (5.2%) and 'foreigners' (2.4%). The average rate of population growth between 1952 and 1994 was 4.7% per annum.

The loss of the West Bank of Jordan to Israel in the summer of 1967 created a whole series of new economic problems. The result was the loss not only of some efficiently farmed agricultural land, but also of a large part of the important and growing tourist industry, and the large sums in foreign exchange received from the people who annually visited the old city of Jerusalem and Bethlehem. Some of the immediate problems caused by the war of 1967 were met by aid from Arab countries, but Jordan's economic future, in the long term, obviously depended on the evolution of the Arab–Israeli dispute and of regional relations generally.

During 1979 and the early part of 1980, Jordan moved closer to Iraq in both political and economic terms. The war between Iran and Iraq, which began in September 1980, further strengthened this alliance, notably by increasing trade for Iraq through Aqaba. Towards the end of 1980, Iraq and Jordan signed agreements to confirm their closer economic links, which were strengthened by various trade and aid protocols in 1981, in which year Jordanian exports to Iraq increased to US $186.8m. (compared with $42.3m. in 1979). Owing to war-induced cutbacks in Iraq, Jordanian exports declined to $180m. in 1982 and to $72.9m. in 1983. At Jordan's proposal, an oil-for-goods barter system was instituted. This facilitated a rise in Jordanian exports to $176.5m. in 1984 and, after a further downturn in 1986–87 (owing to lower world oil prices and the continuing Iran–Iraq War), a further rise, to $216m., in 1989.

Jordan, its economy underpinned by foreign aid and by remittances from Jordanian workers abroad, enjoyed sustained economic growth from the mid-1970s into the early 1980s, although difficulties were encountered thereafter. Between 1974 and 1984 it had one of the highest growth rates in the world, with the East Bank region's GDP expanding, in real terms, at an average annual rate of more than 8%. In spite of the problems brought about by the conflicts with Israel and the uncertainty caused by the Iran–Iraq War, real GDP increased by 17.6% in 1980 and by 9.8% in 1981, but the growth rate slowed to 5.6% in 1982, 2.5% in 1983 and 0.8% in 1984. A major cause of this deceleration was the non-receipt of three-quarters of the special development aid of $1,250m. per year that was promised to Jordan at the 1978 Baghdad Arab Summit Conference, which had condemned the Camp David accords between Israel and Egypt: of the seven Arab states party to the pledge, only Saudi Arabia honoured its commitments to Jordan in full. In consequence, the targets of Jordan's 1981–85 Development Plan were not attained, while in 1981 Jordan recorded its first current account deficit for five years and continued to record deficits in 1982–85. These shortfalls, combined with Jordan's customary trade deficit (generally in excess of $2,000m. per year during the 1980s), obliged the Government to obtain new foreign development loans, which, in turn, assisted a partial recovery of

GDP growth to 2.7% in 1985, 2.4% in 1986 and 1.9% in 1987. Meanwhile, the annual rate of inflation had fallen steadily, from 12% in 1981 to 0% in 1986, but then rose steeply to 14% in 1988, in which year the national budget deficit increased to 24% of GDP. Moreover, the current account balance, having recorded a small surplus in 1986, showed deficits of 7% and 6% of GDP in 1987 and 1988 respectively. Against this background, the Government submitted to the disciplines of the IMF in mid-1989, agreeing to a five-year structural adjustment programme aiming, by 1993, to bring inflation down to 7%, to reduce the budget deficit to 5% of GDP and to eliminate the current account deficit (see Finance, below).

Immediate slippage on these targets included, in 1989, a rise of inflation to 25% and a budget deficit still around 20% of GDP, compared with the IMF target of 12.4%. Nevertheless, the current account recorded a surplus of US $335m. in 1989 and the Government was able to conclude interim debt-rescheduling agreements with its major foreign creditors. Jordan's foreign debt remained high, at $8,400m. in early 1990, but by then the Government believed that economic prospects had improved; inflation was running at only 8%, the budget deficit was on course to fall and substantial GDP growth was expected. Moreover, exports, particularly of vegetables, were buoyant, while remittances and foreign aid were expected to exceed budgeted figures. This relatively hopeful scenario was, however, changed dramatically by the onset of the new Gulf crisis in August 1990.

AFTERMATH OF THE 1990–91 GULF CRISIS

At the time of Iraq's occupation of Kuwait, in August 1990, Iraq was Jordan's principal trading partner, taking at least 23% of Jordan's exports and supplying more than 80% of Jordan's petroleum. Total adherence by Jordan to the UN sanctions against Iraq, imposed by UN Security Council Resolution 661 on 6 August, therefore threatened the whole basis of Jordan's already troubled economy. On 25 August the Jordanian Ministry of Transport issued a circular stating that Jordan adhered to UN Security Council Resolution 661, but Jordan continued to import oil from Iraq by road tanker. Indeed, following the cessation of Saudi Arabian oil deliveries in late September, Jordanian imports from Iraq increased, until the outbreak of hostilities in the Gulf, in mid-January 1991, forced Jordan to find alternative suppliers and also to introduce petrol rationing (see Industry and Mining, below).

Loss of trade with Iraq was not the only problem facing Jordan's economy as a result of the Gulf crisis. Remittances from Jordanians working in the Gulf states (estimated at JD 470m. in 1989) dwindled to almost nothing as activity in Kuwait slowed or ceased, and business in the other Gulf states became affected. Moreover, many of these Jordanians returned to Jordan, as did thousands of Palestinians with Jordanian passports, raising the level of unemployment to 30%, increasing the population by 10% and putting an additional strain on health and education budgets. A further problem was the passage of thousands of migrants through Jordan, many of them attempting to return to the Indian sub-continent and South-East Asia. According to Jordanian officials, about 470,000 foreigners fled to Jordan in the five weeks following the Iraqi invasion of Kuwait on 2 August 1990. Many of these, particularly non-Arab Asians, remained stranded in overcrowded camps on the Iraqi-Jordanian border, suffering severe privations (including shortages of food, water and medical supplies), while awaiting repatriation. Conditions improved in early September, as new camps were established and chartered aircraft carried some of the refugees to their countries of origin. Moreover, fears that the outbreak of hostilities in January 1991 would lead to a furthur massive influx of refugees proved to be unfounded: although confirmed figures were scarce, it appeared that not more than a further 20,000 refugees were processed through Jordanian border camps in January–February.

Official Jordanian statistics showed that other negative effects of the crisis included a rise in inflation to more than 16% in 1990 as a whole and a nominal GDP growth rate of only 1.1%, which, according to the IMF, amounted to a fall in real terms of 7.9%, while GNP fell by 4% in nominal terms and by 17% in dollar terms. According to a UNICEF survey published in March 1991, nearly one-third of the Jordanian population were living in poverty (defined as a family income of less than JD 86 per month), compared with 20% before the crisis. Because of the crisis, disbursements to Jordan, under the IMF stand-by facility and under an associated US $150m. World Bank structural loan, were suspended from September 1990. Subsequent negotiations resulted in a new agreement with the IMF in October 1991, through which Jordan was to undertake a seven-year economic reform programme (1992–98) and as part of which the 1992 budget envisaged a reduced deficit and GDP growth of 3% compared with 1% in 1991 (see Finance, below).

A 'worst-case' forecast, produced by the Jordanian Ministry of Finance in October 1990, predicted the country's possible crisis-related losses in the 12 months from August 1990 to be US $2,144m., itemized as follows: exports to Iraq and Kuwait, $280m.; exports to other countries, $160m.; budget support from Kuwait and Iraq, $185m.; repayment of Iraqi loans, $169m.; transit business, $250m.; tourism, $230m.; remittances from Jordanians in Kuwait, $320m.; increased import bill, $220m.; oil imports, $180m.; increased freight and insurance premiums, $120m.; emergency relief for evacuees, $30m. By the beginning of 1991 new estimates had inflated the potential loss over the same period to as much as $8,300m. (equivalent to twice Jordan's GDP), by assuming much higher oil import costs and allowing for a total write-off of the assets of Jordanians resident in Kuwait. By March 1991 pledges of special aid for Jordan in 1991, channelled mainly through the Gulf Financial Crisis Co-ordination Group (GFCCG), totalled $1,230m., of which $470m. had already been received. Having weathered the 1990/91 crisis and its immediate aftermath with the help of external emergency aid, Jordan experienced an unexpectedly strong recovery in 1992, prompting a radical, reappraisal of the medium-term economic outlook. The effective fiscal deficit, estimated to have equalled 14% of GDP in 1991, was cut to about 6% of GDP in 1991 (when domestic revenue exceeded current expenditure for the first time in Jordan's history), while GDP increased by 10.1% in real terms in 1992, as against 1.6% in 1991. The return of some 300,000 Palestinians, expelled by Kuwait in 1991, brought new capital resources into Jordan and helped to boost construction activity to 220% of its 1990 level by 1992, with consequential growth in many related areas of the economy. As UN sanctions against Iraq continued into a third year, it was clear that Jordan's external trading position had not been undermined to the extent that many 'worst-case' scenarios had predicted.

While acknowledging in mid-1993 that serious structural problems remained, including an external debt burden equivalent to 140% of GDP (down from 200% of GDP in the late 1980s) and an unemployment rate of around 25%, Jordanian ministers and business leaders were generally optimistic about the prospects for continued progress in meeting IMF economic targets. The IMF subsequently extended substantial new assistance to support the process of structural reform, while Jordan's main creditors arranged a major debt rescheduling package. In addition, a new Five-Year Economic and Social Development Plan, drafted for the period 1993–97, provided for a major extension of the private sector through the privatization of state enterprises (see Planning and Development, below).

The unemployment rate was officially stated to have fallen from a high of 18.8% in 1991, to 13% in 1997. Official figures also estimated the GDP growth rate in 1996 and 1997 as 5.2% and 5.3% respectively (above the regional average). However, in the first half of 1999 official figures were revised downwards to put growth at 1% in 1996, 1.3% in 1997 and 2.2% in 1998. Unemployment was estimated to be between 16%–20% in 1998, with as much as 30% of the population living on or below the poverty line. The budget deficit reached 9.7% of GDP in 1998 and was to be reduced to 7.5% of GDP in 1999. The 1999 IMF programme and debt-rescheduling package is intended to support a recovery in real GDP growth to 3%–4% per year. Since the mid-1993 revision (which coincided with increased concern that privatization progress was too slow) some state assets have been sold and other projects have progressed although there is still a considerable lobby against the foreign ownership of Jordanian industries. In 1997 GNP, measured in current prices, was US $7,000m., equivalent to $1,570 per head. The East Bank's gross domestic product (GDP) increased, in real terms, by an annual average of 2.6% during 1980–90, and by 7.2% in 1990–97.

THE REGIONAL PEACE PROCESS

A wide-ranging economic co-operation agreement between Jordan and the PLO was signed in Amman on 7 January 1994 to provide a framework for future approaches to specific issues 'as the peace process progresses'. It was agreed in principle that trade, investment, industry, agriculture, energy, water, electricity, telecommunications and private-sector enterprises were all fields of activity in which Jordan might be expected to co-operate closely with a developing PLO administration. It was predicted that Jordan could develop new trade flows of the order of US $250m. to $500m. per year if Israel relinquished its dominant role in the Palestinian market.

On an issue of immediate concern to Jordan, the agreement in principle confirmed the Jordanian dinar as legal tender in the West Bank, gave the Central Bank of Jordan (CBJ) supervisory powers over Jordanian banks operating in the West Bank, and set up a joint Jordan-PLO committee to co-ordinate financial policy in the Occupied Territories.

A follow-up meeting in May 1994 re-examined the outlook for Jordanian-Palestinian co-operation in the light of a recently signed Israeli-Palestinian economic agreement which gave the Palestinian economy a measure of independence from Israel. The latter agreement's provision for the creation of a Palestine Monetary Authority (PMA) had raised many questions in Jordan about the PMA's role and intended relationship with the CBJ. Jordan maintained that CBJ supervision of banking in the Occupied Territories was essential as long as the Jordanian currency was in use, in order to preserve control over the expansion of credit and ensure proper regulation of the money supply in Jordan. However, economists at the Palestinian Economic Council for Development and Reconstruction insisted that the PMA must assume a genuinely influential position within the regulatory process, and that key issues of bank licensing, currency management and payments administration should be examined in great detail before any binding agreements were concluded. Other topics discussed at this inconclusive meeting included trade, tariffs, tourism, transit rights and private Jordanian investment in the occupied territories.

In June 1994 Jordanian and Israeli delegations held two days of talks in Washington as part of the US-sponsored peace process, resulting in agreement in principle that all aspects of the emerging economic arrangements for the area needed to be discussed constructively between Jordan and Israel (and later in a tripartite forum with Palestinian representatives) with due regard for the long-term interests of all parties involved.

In January 1995 a Jordanian-Palestinian co-operation protocol was signed under which agreements were to be drawn up in areas of economic policy, trade, finance, banking, education, cultural affairs, transport, telecommunications, information and administration. Under the protocol the Palestinian National Authority (PNA) undertook to accept the Jordanian dinar as legal tender in all official and private dealings and to use it 'to the fullest degree possible, pending the issue of the new Palestinian currency'. Neither Jordan nor the PNA would 'under any circumstances enforce any sudden unilateral monetary policy that would undermine the monetary stability and the economic security of either country'.

In March 1995 the PMA and the CBJ completed guidelines for an agreement on banking supervision in the West Bank and the Palestinian self-rule areas. Drawn up in consultation with the IMF, the guidelines confirmed the CBJ's predominant supervisory role in the self-rule areas until such times as the PMA developed its own expertise, while in the West Bank the CBJ's role would become liable to review in the context of any future Israeli-Palestinian agreement on a transfer of power. By the end of May 1995 seven Jordanian banks were operating a total of 32 branches in Gaza and the West Bank and others were in the process of establishing a presence. The level of direct local lending was as yet relatively low, partly because it was difficult for banks to organize loan security in the absence of a land registry and an established judicial framework, and it remained common practice for Palestinians with access to collateral in Jordan to obtain loans from bank branches within Jordan. In March 1996 the CBJ agreed to allow the PMA to invest about JD 55m. of its Jordanian dinar holdings in short-term debt instruments on the Amman market. In April 1996 the Jordanian Government set a target of US $900m. for Jordan's foreign currency reserves, partly to allow for any future decision by the PMA to issue its own currency. At the time the target was announced Jordan's foreign reserves totalled around $500m., while a total of between $500m. and $800m. of savings in Jordanian dinars was believed to be held in the Palestinian territories.

In May 1995, as 'a first step towards a free-trade agreement', a detailed Palestinian-Jordanian trade accord was signed after three months of talks in which officials had had to heed the terms of an Israeli-Palestinian accord of April 1994 limiting the number of products the Palestinians could import from Jordan. The May 1995 accord covered trade in about 50 products, including cement, steel and electrical products. The Palestinians were permitted to export 25 categories of product to Jordan free of customs duties and import fees and another 25 free of customs duties only, all the products being ultimately subject to Jordan's sales tax. About 50 Jordanian product categories were exempted from Palestinian customs duties but were subject to the levies payable on locally produced products. In the first two months after the signing of the accord, Palestinian-Jordanian trade was worth about US $8m. In June 1995 Jordan and the PNA signed an agreement guaranteeing freedom of movement by land and air for nationals and vehicles from both sides (although in practice control over the border between Jordan and the West Bank remained in Israel's hands at this time).

The Jordan-Israel peace treaty signed on 26 October 1994 included a number of economic provisions. Each country recognized the other's 'rightful allocation' of water resources from the Jordan and Yarmouk rivers and the Araba groundwater source and agreed to co-operate in the management and development of existing and potential water resources. Economic relations were to be normalized by removing discriminatory barriers and ending economic boycotts, and talks 'aimed at establishing a free trade area' were to be organized at an early date. There was to be free cross-border movement of nationals and vehicles, and talks were to be held about the building of a highway between Egypt, Jordan and Israel near Eilat. Arrangements on freedom of navigation and access to seaports were to be normalized, a civil aviation agreement was to be drawn up, and an international air corridor was to be negotiated. Both countries would work for the creation of a Jordan Valley development master plan. Talks would be held on the joint development of the towns of Aqaba and Eilat, including the interconnection of their electricity grids. Co-operation agreements would be drawn up covering tourism, posts and telecommunications, environmental issues, energy, health and agriculture.

Agreements on border crossings, tourism and security were initialled in February 1995 and agreements on agriculture, energy and the environment in May 1995. Topics covered by the draft energy agreement included the transit of neighbouring states' oil and gas, trade in oil and gas products, and exchange of information on oil exploration. Negotiations on trade were deadlocked in mid-1995 because Jordan and Israel disagreed over the wording of a preferential trade agreement. Israel favoured an agreement incorporating a stated goal of free trade within 12 years, whereas Jordan did not at this point wish to commit itself to a specific timetable for achieving free trade, preferring to defer a decision until a preferential trading system had been in operation for three years.

An annex to the October 1994 treaty specified that Jordan should receive 215m. cu m of water per year from resources currently controlled by Israel and outlined means of achieving this aim. A joint Jordan-Israel water committee began to meet weekly from November 1994, when it agreed to prioritize the building of a 3.3-km-pipeline to transfer up to 30m. cu m of water per year from Lake Tiberias in Israel to the King Abdullah canal in Jordan. The newly completed pipeline was brought into operation on 20 June 1995. It was agreed in February 1995 to initiate a feasibility study for a dam on the Yarmouk river which would restrict the annual flow of water to Israel from this source to 25m. cu m, leaving the remainder available to Jordan. Also under consideration was a scheme to build a storage facility and conveyer system at the confluence of the Yarmouk and Jordan rivers. In 1996 Israel delivered a total of 31.5m. cu m of water (1.5% of Israel's water supply) to Jordan. A commitment to build a desalination plant to the west of Lake Tiberias to treat salty spring water remained unfulfilled in 1998

because of difficulties in drawing up an agreement on the division of financial contributions and operational responsibilities. Under an interim arrangement introduced in May 1997, Israel began pumping fresh water to Jordan in lieu of the projected supply from the delayed desalination plant. Jordan reportedly claimed an entitlement to 30m. cu m per year under this arrangement, whereas Israel maintained that the arrangement covered a maximum of 25m. cu m per year.

Israel and Jordan signed a transport agreement on 16 January 1996 which included provisions for the direct transfer of goods from Jordan to the Palestinian territories and for Palestinian access to the port of Aqaba. Agreements relating to the normalization of other aspects of Jordanian–Israeli economic relations (including definition of the maritime boundary at the Gulf of Aqaba) were signed on 18 January 1996. Commercial air services between Jordan and Israel began in April 1996, as did tourist bus services, with public bus services starting up in the following month and road haulage of goods in late June. It was, however, apparent in early July that Israel was in breach of an undertaking to grant visas to Jordanians within five days of receiving their applications. In 1996 Israel exported US US $12.25m. worth of goods to Jordan and imported $7.75m. worth of goods from Jordan. Israeli and Jordanian ministers met in June 1997 to discuss border-crossing problems and other obstacles to trade. In September, in a measure which was designed to reduce non-tariff barriers between the two countries, Israel announced a doubling of its quota of cement imports from Jordan, to 30,000 tons per year.

At further high-level meetings in March 1998 Jordan and Israel agreed to expand co-operation in the development of water resources and storage facilities in the Jordan Valley, to accelerate plans for the inter-connection of the electricity grid between Aqaba and Eilat, and to develop joint solar and wind energy projects. The two sides also agreed to examine joint tourism projects in the Wadi Araba and Umm Qais regions, and the feasibility of a canal between the Red and Dead Seas. In 1999 it was reported that the delayed desalination plant was to proceed. Bilateral trade between Jordan and Israel in 1997 was valued at US $31m. by Jordan, and at $32.5m. by Israel. In 1998 bilateral trade was estimated at $40m. and the value of joint ventures at $300m.

AGRICULTURE

The loss of the relatively fertile West Bank in the 1967 war, and subsequent events on the East Bank, caused major disruption to the agricultural sector, which was compounded by severe drought conditions from 1974 to late 1979. In the 1980s, however, major investment in irrigation, particularly in the Jordan Valley, began to show results, and agricultural output increased by an average of 6% per year in 1980–88, owing mainly to the rapid expansion in the output of vegetables and of dairy and poultry products, much of it exported. Whereas the 1981–85 Five-Year Plan had originally envisaged a decline in agriculture's share of GDP from 8.5% to 7.2%, non-attainment of industrial growth targets in that period, combined with greater emphasis on agricultural expansion in the 1986–90 Plan, in fact resulted in agriculture's retaining an average 10% share of GDP through the 1980s, although the proportion later fell to 8% in 1990, and to less than 7% in 1991 and 1992. Under the 1986–90 Plan, increases in the output of cereals, red meat and dairy produce were the major targets, and spending on agricultural projects was estimated at JD 337m. (about 10% of total investment), supplemented by JD 130m. for dam construction and JD 105m. for irrigation. A specific objective was to reduce the share of food imports (mainly cereals) in domestic consumption, which in the late 1970s had risen to 66% and in the late 1980s remained above 50%. In the 1980s migration away from the agricultural sector reduced its importance as an employer within the economy: in the late 1970s approximately 18% of the labour force were employed in agriculture, but by the late 1980s the proportion had declined to 10%. An estimated 12.3% of the labour force were employed in the sector in 1997, while agriculture (including forestry and fishing) contributed an estimated 5.4% of Jordan's GDP in 1996. During 1990–97 agricultural GDP decreased by an annual average of 2.8%.

A contrast can be drawn between the rain-fed upland zone (comprising about 90% of the cultivable land) and the irrigated Jordan Valley, which, since 1973, has been subject to its own development plan. As a result of irrigation and the production of high-value crops, the productivity of the Jordan Valley is far higher than that of the uplands, where cultivation is concentrated mainly on wheat and barley. Before the Jordan Valley Development Plan, only about 10% of the country's land was considered suitable for cultivation because of the low rainfall and vast areas of desert or semi-desert. The Jordan Valley, with its more favourable sub-tropical climate and available water, has been intensively exploited by small farmers who, using plasticulture and drip irrigation, obtained huge increases in production (particularly of fruit and vegetables). The development of irrigation in the Jordan Valley began in 1958, and between then and 1963 work on the East Ghor canal, carrying water from the Yarmouk river and running parallel to the Jordan, added about 120,000 ha to the country's irrigated area. The installations were severely damaged by Israeli bombardment in 1967 and repairs were not carried out until after the 1970–71 civil war. Stage I of the Jordan Valley Development Plan, funded by a great variety of foreign aid bodies, finished at the end of 1979. Irrigation projects centred mainly on the extension of the East Ghor canal and the Zarqa river complex. The King Talal dam was constructed between 1972 and 1978, the East Ghor canal extended between 1975 and 1978, and the Zarqa Triangle Irrigation Project finished in 1978. Other irrigation works include the Hisban Kafrein project, constructed between 1976 and 1978, and the North-East Ghor complex. Many of the irrigation projects undertaken in the second stage of the Plan have been completed or are under implementation. Projects under way include the construction of the Wadi al-Arab dam, the raising of the King Talal dam, the extension of the 98-km East Ghor main canal, and the irrigation of 4,700 ha in the Southern Ghor (see below). The Jordan Valley Development scheme is, however, more than just a complex of irrigation projects, and includes the development of transport links, grading, packing and marketing centres, the development of schools and health centres, and also a housing programme. In 1981 the Jordan Valley Authority (JVA) was responsible for 22,000 ha of irrigated land. The use of plastic tunnels, greenhouses and drip-irrigation has greatly expanded within the valley and by 1978 6,000 dunums (1 dunum = 1,000 sq m) had plastic tunnels and 741 dunums had greenhouses. Most of the JD 42m. allocated to agricultural development in the 1976–80 Five-Year Plan was to be used for development of the valley. As well as irrigation, crop-raising has also been improved by the introduction of special strains of seed, inorganic fertilizers and mechanization.

Attempts to alleviate the critical problems of water supply, most recently highlighted by severe drought in 1984 (the worst for 37 years), have been given high priority by the Government. Developments begun by the JVA in 1983 include the beginning of the second phase of the Southern Ghor project, costing JD 30m., which involves the construction of a diversion weir on the Mujib river and the building of a 3.5-km canal to irrigate 4,000 ha. A dam is to be constructed in Wadi Hasa, at Tanur, to store water which will be used to irrigate the upland area to the east of the Jordan Valley. In 1983 work started on the US $50m. project to raise the height of the King Talal dam by 16 m to 108 m. This has increased the capacity of the dam to 85m.–90m. cu m and, in addition to the construction of a 2.5-MW hydroelectric power station, has enabled 8,200 ha to be irrigated. Following the discovery of a major artesian well, estimated to be capable of producing 75m. cu m of water per year, at al-Muhaibeh in the north during 1982, an 11.6-km canal was rapidly constructed to take the water to join the East Ghor canal at Adasiya. This was opened in March 1983 at a cost of JD 3m. South Korea's Hanbo Corpn, who built this canal, are also constructing a dam of 20m. cu m capacity in the Wadi al-Arab, which will cost JD 17m. The dam is part of the Wadi al-Arab irrigation project, which began in early 1986 and is planned to increase the irrigated area between Wadi al-Arab, the Yarmouk river and the Jordan Valley by 2,800 ha. Elsewhere in the country, the National Resources Authority drilled 54 wells in 1982 in its search for new supplies of water. In 1989 the Ministry of Water and Irrigation announced plans to invest $20m. in a water exploration project in southern Jordan. It was estimated that

by the year 2000 daily consumption of water per person (for all purposes) would rise to 300 litres.

The largest of 18 new agricultural projects to be started is a scheme to develop 830,000 dunums in the Zarqa river catchment area, at an estimated cost of JD 18.6m. The Water Authority of Jordan was established in 1984, and JD 521.7m. of the 1981–85 Development Plan budget was allocated to increase the irrigated area by 180,000 dunums. One of the major schemes for the 1980s was to have been the construction of the Maqarin dam and an associated hydroelectric power station on the Yarmouk river. However, plans for the dam were deferred. Under the 1986–90 Plan, an additional 114,000 dunums (11,400 ha) were to be brought under irrigation in the Jordan Valley, the Southern Ghor and the Wadi al-Arab. The Maqarin dam project was revived in 1988 as the al-Wahdeh ('Unity') dam and hydroelectric power station scheme, a joint Jordanian-Syrian venture to build a dam 100 m high on the Yarmouk river, to store 225m. cu m of water for drinking, irrigation and electricity generation. Plans were finalized in September 1988. Concern was expressed that the cost of building the dam was to be borne exclusively by Jordan but water stored therein was to be used to irrigate both Jordanian and Syrian land and 78% of the electricity to be generated by the dam was to be taken by Syria. The official estimate of the project's cost is US $230m., compared with $450m. allocated in the 1975–80 Plan, and independent estimates of $300m.–$500m. In mid-1990 Jordan was seeking assistance from Arab and Islamic organizations in financing the al-Wahdeh dam.

Programmes initiated in 1991 included the North Ghor Conversion Project, involving the conversion of 7,300 ha in the Jordan Valley from surface to pressurized irrigation (with a consequential 20% water saving) at an estimated cost of US $25m.–$30m., of which 80% was to be provided by Japan. Final preparations were under way in 1993 to implement a programme to raise the storage capacity of the Kafrein dam on the Jordan river, from 4.3m. cu m to 7.5m. cu m, and to construct new dams at Walah, Mujib, Karameh and Tannour. The overall goal of this programme was to create a total of 115m. cu m of additional storage capacity by 1996, at an estimated cost of over $200m. The Kafrein dam project, and an associated scheme to reduce leakage from irrigation canals, was expected to bring an additional 1,830 ha of land into cultivation.

In early 1992 a series of contracts for water projects included the Marhib wells scheme, involving the pumping of water from the wells to the existing Marhib and Awaja reservoirs and to a projected new reservoir at Berain. There was a further project to research water-harvesting at Muwaqar, east of Amman.

Describing the water supply outlook in early 1993, the Secretary-General of the Water Authority of Jordan said that 60% of current supply came from groundwater reserves, mainly in the desert areas in the east of the country; that farmers currently used two-thirds of Jordan's total water supply; and that the total supply was expected to increase from 550m. cu m per year to 700m. cu m per year during the decade 1990 to 2000, over which period the underlying level of annual demand was expected to rise from 900m. cu m to 1,600m. cu m, necessitating increasingly harsh restrictions on water use (already rationed for up to seven months of the year). He added that there was considerable scope for improving the efficiency of water use in the agricultural sector (e.g. by discouraging diversification into water-intensive crops like bananas, which currently provided farmers with higher profit margins than crops requiring far less irrigation).

Details of Jordan's water development strategy to the year 2011, which was published by the Government in November 1997, listed 61 projects, involving total investment of some US $5,000m. The strategy was based on a projected growth in water consumption from 1,451m. cu m in 1995 to 1,720m. cu m in 2010, of which agriculture would account for a constant share of 1,088m. cu m. A figure of $5,000m. would need to be invested in new projects to relieve the water deficit which was estimated to rise from 501m. cu m in 1995, to 559m. cu m. by 2000 and 620m. cu m by 2010. New projects cover the entire water chain. The Southern Ghors integrated project is the largest scheme to improve water collection, costing $139m.; the three-dam project (Mujib, Tannur and Wala) and the weir diversion at Mujib will provide water for Dead Sea industrial and tourist projects and irrigation in the southern Jordan Valley. The Government sought international companies to work on a second project, expected to cost $625m., to build a 325 km-conveyor to bring 100m. cu m of water per year to Amman from the Disi aquifer in the south (estimated completion in 2003). The management of Greater Amman's water and wastewater networks (which cater for over 35% of Jordan's population) was contracted out to the private sector in April 1999. The World Bank is lending $55m. to double the capacity of the existing plant and Japan is providing a $63m.-grant to expand the Zai water treatment plant. Other projects are under way to upgrade the water and wastewater systems in the Jordan Valley and the south. The Government declared a state of drought in January 1999; it was reported in June that the extent of the drought was unprecedented. Some gains were made under the 1994 peace agreement with Israel to generate new water supplies and the two countries are to proceed with the scheme to produce desalinated water in the Jordan Valley (see above). Israel has agreed to pay $50m. of the expected $150m. cost, which would produce 50m. cu m of water per year. Two further projects are the Red Sea-Dead Sea canal (to generate 851m. cu m of water per year, with 580m. cu m for Jordan) and the Syrian-Jordanian Wahdeh Dam project, both of which would have to overcome financial constraints and political difficulties.

Cereals, fruit and vegetables are the mainstays of Jordan's agriculture. Production levels vary widely, depending on the prevailing weather conditions. For example, after 1974 (a record year) yields of wheat and barley (which is used as animal fodder) were severely reduced, owing to drought, so that by 1979, despite similar areas being under cultivation, wheat production on the East Bank fell to what was then a record low of only 16,500 tons. As a result of the rains in November 1979, there was a great increase in the cultivated area and, following the excellent harvest produced in 1980, the government banned imports of wheat, barley and lentils, and paid farmers almost double the normal price for imports. Field crop production rose appreciably from 32,400 tons in 1979 to 204,000 tons in 1980. In January 1980 the King Talal dam was full for the first time since its completion in 1978. In addition, the heavy rainfall also replenished depleting groundwater resources. Towards the end of 1980 grain storage was also greatly improved with the opening of new silos at Aqaba, with a storage capacity of 50,000 tons. The 1981 harvest, though, was 60% down on that of 1980, with a wheat production of 50,600 tons and barley, 19,200 tons. The 1982 harvest was generally worse and production in subsequent years continued to fluctuate as conditions alternated between rainfall and drought. Following favourable winter rains, annual production of wheat reached 80,000 tons in 1987/88 and in 1988/89. Although this was a relatively high yield, compared with the all-time low of less than 10,000 tons in 1983/84, it was still less than one-quarter of Jordan's annual requirement of 450,000 tons, which by 1990 had risen to 500,000 tons. The barley crop reached 40,000 tons in 1988/89, compared with an all-time low of 3,500 tons in 1983/84. Jordan continued to rely heavily on imports of food, which cost about US $400m. per year (JD 155.7m.—$450m.—in 1987). Wheat consumption reached 627,000 tons in 1993 (50% higher than in 1988), owing partly to the increase in population after the Kuwait crisis and partly to Jordan's low bread prices.

The loss of the West Bank had a serious effect on cereal production, but its effect on fruit and vegetable cultivation was disastrous, removing some 80% of the fruit-growing area and 45% of the area under vegetables, and depriving Jordan of an important and expanding source of some of its major export commodities. Production of fruit and vegetables on the East Bank fluctuated widely in the 1970s, partly because of the weather and partly as a result of political instability. However, the general trend recently has been for increases in fruit and vegetable production, particularly in citrus fruits, tomatoes, melons and cucumbers. Between 1973 and 1986, overall vegetable production increased by 149%, fruit production by 546% and field crops by 88%, according to the US Agency for International Development. Under the 1986–90 Plan, up to 200,000 dunums (20,000 ha) of government land in southern and eastern Jordan were to be cultivated for the first time to produce cereals, forage and red meat, while output of fruit was set to increase as areas planted since 1979 began to produce. Increases in fruit

and vegetable production, however, were not matched by a corresponding development in the areas of sales and marketing. The country was also faced with the problem of excessive production of tomatoes, cucumbers and aubergines, which cost the Ministry of Agriculture substantial sums each year in support for growers who could not sell their produce. In early 1985 the Ministry introduced an optional cropping system for irrigated vegetable growing. Under the system, farmers could be fined if they exceeded their allocation of tomato production, and the maximum production of tomatoes for 1985 was fixed at 242,000 tons, 158,000 tons less than production in 1984. Emphasis has been placed on the growing of other crops and Jordan is now self-sufficient in potatoes and 80% self-sufficient in onions. The establishment of a government-owned public marketing organization (the Agricultural Marketing and Processing Co) to handle agricultural produce, which had been decided on in March 1983, was achieved in 1984.

Production of fruit and vegetables increased in the late 1980s, as did exports, especially after the devaluation of the currency in 1988. Moreover, the signature of the Iran–Iraq cease-fire agreement of August 1988 led to a rapid expansion of deliveries to Iraq, Kuwait and other gulf markets. A record 522,000 tons of vegetables were exported in the 1989/90 season, and a further record of 650,000 tons had been anticipated in 1990/91, before trade was disrupted by the latest Gulf crisis in August 1990. The value of vegetable exports in 1991 was JD 43.5m., compared with JD 36.8m. in 1990 and JD 27.9m. in 1989.

In a crisis-induced move to increase domestic agricultural production, the Government decided in November 1990 to offer unused state-owned land for lease at a rent of JD 1 per dunum. Another measure affecting farmers was the enactment, in December 1990, of a law specifying that women could inherit only half as much land as their brothers could, rather than an equal share. The Government explained that equal shares for women, which had been guaranteed under legislation dating from the Ottoman period, was contrary to Islamic law.

The Jordanian Minister of Agriculture said in January 1993 that dependence on uncertain rainfall patterns had helped to engender a 'low-risk' approach to farming, and that higher levels of productivity could be achieved if Jordan improved its standards of resource management. Endorsing the findings of a policy study drawn up with FAO assistance, he accepted that there had been excessive state regulation of agriculture in the past, and that farmers' interests would be better served if the Government devoted itself more to broad policy-making and co-ordination. He advocated a further shift from cereals into the growing of 'off-season' vegetables for export; criticized the spread of restrictive trade policies in many export markets; and proposed an expansion of local food-processing capacity to provide new market outlets for farmers, particularly those producing highly perishable commodities.

The aggregate value of agricultural output rose from JD 213.3m. in 1995 to JD 232.9m. in 1996, and to JD 250.5m. in 1997. Among field crops, production of wheat increased to 58,500 tons in 1995 but fell to 42,700 tons in 1996, while barley production fell to 29,200 tons in 1996 (from 31,700 tons in 1995). Of the vegetable crops, production of tomatoes fell sharply from 439,700 tons in 1995 to 291,300 tons in 1996, whereas output of melons, potatoes and cucumbers remained relatively stable in 1996, at 106,400, 95,200 and 74,200 tons respectively. In the tree fruits' category, citrus fruits remained the most important, with production of 133,100 tons in 1996, followed by olives, at 88,600 tons. Under the livestock heading, output of eggs totalled 726m. in 1996 (compared with 871m. in 1994 and 715m. in 1995); milk production increased to 165,100 tons (from 147,000 tons in 1995); and poultry-meat output fell to 100,000 tons (from 107,000 tons in 1995). The value of Jordan's exports of agricultural produce (including oil and fats) rose from JD 224.5m. in 1996 to JD 268.0m. in 1997, with live animals and vegetables forming the two largest categories. Imports of agricultural produce (including oil and fats) were valued at JD 636.3m. in 1997, significantly less than the 1996 value of JD 759.6m.

INDUSTRY AND MINING

Manufacturing industry, which is almost entirely of recent origin, is concentrated around Amman (following the loss of the Nablus industrial centre on the West Bank in 1967). During the 1976–80 Plan period, it experienced an average growth rate of 13.6% per annum, which was only one-half of the planned rate. Moreover, the targets of the 1981–85 Plan period, during which manufacturing and mining were, together, expected to achieve an annual growth rate of 17.8%, fell even further short of being achieved. By 1996, according to World Bank figures, industry (including mining, manufacturing, construction and power) still contributed only 26% of GDP (compared with 66% from services and 8% from agriculture). Industry provided an estimated 29.5% of GDP in 1996. During 1990–97 industrial GDP rose by an annual average of 10%. Industrial investment in 1993 totalled JD 271m., up from JD 161m. in 1992, and remained buoyant in the first half of 1994, helping to allay Jordanian concern about the possible diversion of new investment to the West Bank and Gaza. The majority of factories produce food products, clothing or consumer goods but the major industrial income derives from the three heavier industries—phosphate extraction, cement manufacture and petroleum refining.

In a country which is short of natural resources, Jordan's mineral wealth lies predominantly in its phosphate reserves, which are estimated at more than 2,000m. tons, providing the country with its main export commodity, accounting for 24.5% of export value in 1987. The proportion was 40% in 1983 but later returns were affected by the low world price for phosphates. Jordan is the fifth largest producer of phosphate rock, after the USA, the countries of the former USSR, Morocco and the People's Republic of China, and the third largest exporter, after Morocco and the USA. The mining and marketing of phosphate is handled by the Jordan Phosphate Mines Co (JPMC). The expansion of the phosphate industry has been a major element in successive Development Plans. Quantities of uranium and vanadium are now known to be mixed in with the phosphate reserves. There are also known to be deposits of good-quality copper ore at Wadi Arabeh. Other minerals include gypsum, manganese ore, abundant quantities of glass sand and the clays and feldspar required for manufacturing ceramics. Foreign investors have been found to finance the establishment of companies to produce ceramics and sheet glass and also to exploit potash deposits in the Dead Sea. The Arab Potash Co (APC), formed in 1956 as one of the earliest Arab joint ventures, is 57% owned by the Jordanian Government. The company was reconstituted in 1983 and produced 486,868 tons of potash in 1984, its first full year of operation, selling 450,000 tons, worth US $36.4m. In 1986 production reached 1.1m. tons, compared with 932,000 tons and revenue of $77m. in 1985. In 1990 the APC recorded its first profit (of JD 39.6m.) since it began commercial operations in 1983. In 1996 the annual capacity of the APC's Ghor as-Safi extraction plant on the Dead Sea totalled 1.8m. tons, comprising 1.4m. tons of hot leach capacity and 400,000 tons of cold crystallization capacity. It was planned to add a further 200,000 tons of cold crystallization capacity by 1999. In 1996 the APC made a net profit of JD 34.2m. on sales of JD 131.3m. Production in 1996 totalled 1.76m. tons. The company's main markets in 1996 were India (27.5% of sales); the European Union (19.7%); Korea (9.3%); and Malaysia (9%). In 1998 the APC reported a net profit of JD 24.1m. (42.4% more than in 1997) on sales of JD 119m. Production rose by 7.7% to 1,527m. tons in that year.

Diversification plans under active consideration by the APC in 1993 included a salt plant on the Dead Sea. The Jordan Dead Sea Salt Company (Jodico, an APC subsidiary) started production in mid-1997 with a capacity of 1.2m. tons of industrial salt and 31,000 tons of table salt per year. In 1999 APC started a four-stage expansion project to increase its basic potash production capacity to 2.4m. tons per year by 2004. A new 100,000-tons- per-year industrial potash plant began production in early 1999, preceding the commission of a new granular potash plant. Other projects include Jordan Bromine, a 50:50 joint venture with Albermarle Holdings of the USA, to establish a $120m.-plant at the Dead Sea (the world's richest bromine lake) to produce bromine-based products. Another joint venture was finalized in June with Finland's Kemira Agro for a $100m.-facility to produce 150,000 tons per year of potassium nitrate and 75,000 tons per year of dicalcium phosphate at Aqaba. APC's subsidiary, Jordan Magnesia Company, has

signed an $80m.-contract with a Canadian/Turkish joint venture for turnkey construction of a magnesium oxide plant at Numeira. The APC holds a 20% interest in a joint-venture project set up in 1993 in partnership with a Japanese consortium (60%) and the JPMC (20%). The project involves the establishment of plant at Aqaba to produce 300,000 tons of compound fertilizers and ammonium phosphates per year, the fertilizers to be produced using 80,000 tons of potash and 50,000 tons of imported ammonia.

Rich beds of phosphates exist at Rusaifa, a few kilometres north-east of Amman, and, from 1963 onwards, were exploited by a local company financed partly by the Government. Other deposits in the Wadi Hasa area, south of Amman, have been developed by US and Italian interests, and phosphates are also produced at Wadi al-Abyad. For many years production was centred on these three sites. However, in mid-1985 the JPMC was forced to close its Rusaifa mine because of falling demand for low-grade phosphate. In the longer term, the industry will focus on a major new, low-cost, mine at Shidiya, near Ma'an, in the south-east, which the JPMC is developing in two stages. The World Bank is contributing US $31m. to the $71m. first stage and a further $25m. loan was announced in February 1990. The Shidiya mine has proven phosphate reserves of 1,200m. tons, and started production in the second half of 1988.

In 1968 the country's total production of natural phosphates was 1,162,000 tons, more than five times the production in 1956. By 1976 annual production exceeded 1.76m. tons. Export earnings from phosphates, constant in 1974 and 1975 at JD 19.5m., dropped to JD 19.2m. in 1976. This was due to a fall in the international price of phosphate rock and prompted Jordan in 1976 to join with Morocco, Tunisia and Senegal in an association of phosphate exporters. In 1985, when the Rusaifa mine was closed, output totalled 5.92m. tons. At the beginning of 1986 the JPMC secured a 10-year contract with Thailand to supply 650,000 tons of phosphates per year. Phosphates output rose to 6.25m. tons (exports 5.2m. tons) in 1986 and 6.7m. tons (exports 5.7m. tons) in 1987. Production in 1988 was 6.5m. tons (exports 5.5m. tons). Revenue from exports of phosphates amounted to US $262m. in 1988, compared with $176m. in 1986. In 1989 the JPMC exported 6.4m. tons of phosphates and reported profits of JD 107.2m., but in 1990 exports decreased to 4.9m. tons and profits to JD 41.4m. (compared with a target of JD 108m.). While the Gulf crisis contributed to this decline in 1990, its major cause was a sharp fall in demand in Eastern Europe, exports to which were only 580,000 tons, compared with 2m. tons in 1989. By 1992 the JPMC's phosphate exports amounted to only 4.26m. tons (out of its total production of 5.2m. tons), although the company's share of the shrinking world market was, at 15.2%, slightly higher than before. The value of exports in 1992 was JD 206.1m. ($300m.), while the JPMC's net profit was JD 16.1m. In 1993 the JPMC recorded a loss of JD 20m., but was able to achieve a profit of JD 2.3m. in 1994 after reducing stock levels and introducing cost-cutting measures. In 1995 the company made a profit of JD 4.1m. on sales of JD 237m. Its largest phosphate export markets in 1995 were India (1.2m. tons), Indonesia (543,000 tons) and the Netherlands (448,000 tons). In 1996 the JPMC made a net profit of JD 15.8m. on sales of JD 254m. In April 1997 JPMC shareholders approved a plan to raise $100m. through the international capital markets in order to finance part of the cost of a $250m. expansion programme at the Shidiya mine. In 1998 JPMC reported a net profit of JD 5.1m. on total sales of JD 255m., compared with a net profit of JD 4.1m. on total sales of JD 245m. in 1997. The increase in sales came despite the downturn in the Asian economies, and the largest market was India, taking 33% of exports. JPMC produced 5.82m. tons of rock phosphate (of which 3.74m. tons were exported in 1998.

Allied industries form an important part of Jordan's industrial development programme. A US $400m.-phosphate fertilizer plant south of Aqaba began production in June 1982. The 1981–85 Five-Year Plan allocated JD 15m. to the development of the plant. It was designed to produce 750,000 tons of diammonium phosphate and 105,000 tons of phosphoric acid per year, but has failed to produce to more than 65% of its phosphoric acid capacity. The original project, which was managed by the Jordan Fertilizer Industries Co (JFIC), cost $410m. and included an aluminium fluoride plant with an annual capacity of 12,000 tons, which entered production in mid-1984. The JFIC made a JD 12.9m. loss in 1984, its first full year of trading, owing to a slump in world fertilizer prices; production reached 568,968 tons, of which 524,900 tons were sold. However, in 1986 the JPMC bought the JFIC (which had accumulated losses of JD 40.3m. by the end of 1985) for JD 60m. A loss of JD 1.3m. ($1.9m.) at the Aqaba plant in 1992 was attributed by the JPMC partly to depressed world prices (blamed on dumping by US and Russian producers), and partly to the plant's high staffing level.

The JPMC's plans for future 'downstream' development are centred on joint ventures with foreign partners who would provide investment funds and guarantee long-term export markets. The ventures would be designated as 'free-zone' industries in order to allow foreign majority participation. The Indo-Jordan Chemicals Co (60% owned by Southern Petrochemical Industries Corpn of India, 40% by JPMC), established in 1993, set up a plant at Shidiya to produce phosphoric acid which reported sales of US $82m. in 1998. The European Investment Bank provided a loan in June 1999 to part finance the expansion of JPMC's phosphate production capacity to 7m. tons per year. The Hydro Agri Jordan project (a $600m.-$700m. joint venture formed in 1998 with Norway's Norsk Hydro) includes production of 440,000 tons per year of phosphoric acid at the Shidiya mine site and 1.2m. tons per year of NPK fertilizer at a second fertilizer plant in Aqaba, together with a purpose-built berth and all off-site facilities (a $25m. contract having been awarded to a private consortium for the jetty construction in March 1999). Green Technology Group Jordan (GTGJ, a local/US joint venture), the first private company to obtain a mining licence in Jordan, is to invest $4m.-$5m. in mining projects.

Jordan is almost wholly dependent on imports of crude petroleum for its energy needs. Its main sources, before the onset of the Gulf crisis in August 1990, were Iraq and Saudi Arabia, the former having replaced the latter as Jordan's main supplier in the late 1980s. Output of petroleum products from Jordan's only oil refinery, at Zarqa, increased steadily from 445,800 tons in 1970 to 748,000 tons in 1974, and to 1,114,600 tons in 1976. Production capacity was scheduled to reach 3.5m. tons per year by the end of 1979. This would have been more than sufficient to satisfy Jordan's domestic requirements. In 1980 the refinery, in fact, produced only 1,760,000 tons, but by 1982 it had an output capacity of 3m. tons per year (60,000 b/d). Between 1982 and 1984, maximum daily throughput was raised to 12,300 tons (about 86,000 b/d), an annual capacity of about 4.3m. tons, probably enough to satisfy domestic demand until 2000. In 1985, when the refinery's capacity was raised to 5m. tons (100,000 b/d), output rose to 2.6m. tons, compared with 2.3m. tons in 1984. Of this total, 1.8m. tons came from Saudi Arabia, 698,600 tons from Iraq and 2,800 tons from Jordan's Hamzah oilfield. In addition, 10,000 tons of LPG and 395,000 tons of fuel oil were imported from Iraq for domestic needs. The country's oil import bill was US $8m. in 1974, but higher prices and greater domestic consumption caused the cost to increase to $540m. in 1983, and to $610m. in 1984. Under an agreement designed to relieve pressure on reserves of foreign exchange, Jordan imported from Iraq, in payment for goods, about one-sixth of its crude oil requirements in 1984 and 395,000 tons of fuel oil in 1985. Imports of crude petroleum amounted to 2.5m. tons, averaging 48,743 b/d, in 1988. Of this, 33,415 b/d was imported from Iraq and 15,000 b/d from Saudi Arabia.

In an attempt to reduce petroleum imports, attention has been given to the possibility of exploiting the estimated 40,000m. tons of shale oil deposits in the south of the country. Consequently, in September 1980 an agreement was signed with Technopromexport of the USSR for an oil-shale survey at Lajjoun. By the end of 1983 15 of the 55 wells to be drilled, to extract the oil from the shale, were reported to have been finished. In 1998 the Government agreed to two private power projects to exploit shale oil reserves: one with Shell Oil to construct a pilot plant in central Jordan, and the other with the USA and Russia to build a 35,000-tons-per-year extraction unit to provide gas to run a 150-MW power plant. Shale oil reserves at Lajjoun were estimated at 1,200m. tons in mid-1999. In March 1984 the Qarma One oil-well, in the field near Azraq, was reported to be producing at a rate of 600 b/d. In November 1984 a Ministry of Energy and Mineral Resources was created, and in the following month the Government announced a plan

to double investment in oil exploration, following promising oil strikes in the Azraq area on the border with Iraq and Saudi Arabia, and to reduce oil consumption by cutting oil subsidies and by increasing the prices of electricity and petroleum-based products. However, no commercial oil discoveries were made in the late 1980s, while production from the Azraq area declined to 315 b/d in 1988 and to only 40 b/d by mid-1990. Over this period, the cost of imported oil declined in relative terms, owing to reductions in world prices and to the availability of Iraqi oil at preferential prices.

The deferment, in 1985, of plans to construct a pipeline to convey crude petroleum from Iraq to Aqaba contributed to the decision to renew an agreement to receive Saudi Arabian crude petroleum, via the Trans-Arabian Pipeline (Tapline), at the Zarqa refinery. Tapline had been due to close in November 1983 and, again, in 1985. Transit dues rose threefold, however, and the total annual cost of the agreement to Jordan was calculated at US $26m. In mid-1985 the Jordanian Ports Corpn awarded a $20m.-contract to Sosema Matex (a consortium of international firms) for the construction and management of an oil terminal at Aqaba port. The terminal consists of a permanently docked oil tanker, capable of exporting 7,000 b/d–10,000 b/d, and became operational before the end of 1985. In July 1990 Jordan opened talks on the construction of a new pipeline linking the Iraq-Saudi Arabia Petroline with Tapline, which would save Jordan the $50m. per year that it spent on importing Iraqi oil by road tanker. However, the subsequent Gulf conflict resulted in the suspension of this plan, at least temporarily.

At the outbreak of the Gulf crisis in August 1990, Jordan was importing more than 80% of its oil requirements from Iraq, with almost all the remainder coming from Saudi Arabia. When Jordan, in late August, announced its acceptance of the UN trade embargo on Iraq, Saudi Arabia pledged itself to supply at least half of Jordan's oil needs through Tapline. However, Jordan's reluctance to apply the UN embargo resulted in Saudi Arabia's suspension of all oil supplies to Jordan in late September (the official reason given was non-payment of outstanding oil bills of US $46m.). Jordan accordingly became entirely dependent on Iraqi supplies by road tanker, which rose to some 60,000 b/d by mid-January 1991. The start of hostilities then resulted in the virtual cessation of such supplies, obliging Jordan to impose petrol rationing and to conclude emergency agreements to import oil from Yemen and Syria (at a higher price than the preferential rate charged by Iraq). In April 1991 it was announced that Iraqi supplies to Jordan would be resumed, but the after-effects of the war in Iraq were expected to inhibit normal trade for some time. Official Jordanian figures, issued in April 1991, showed that Iraq had supplied 86% (2.3m. tons) of Jordan's oil imports in 1990, and Saudi Arabia 13.2%, and that the Zarqa refinery had processed 2.7m. tons in the year, an increase of 11% over the 1989 level. Jordan's domestic oil production remained minimal, although it rose to 120,000 barrels in 1990, compared with 75,000 barrels in 1989. In mid-1993 the only commercial oil exploration activity was being carried out by Hanbo Corpn of South Korea. Some state-funded exploration was being undertaken by the Natural Resources Authority.

In March 1995 the Government approved the establishment of a National Petroleum Co to be owned by the Jordan Investment Corpn (JIC). The JIC would contribute JD 2m. of working capital, while the new company would take over ownership of JD 18m.-worth of oil and gas exploration and production equipment from the National Resources Authority. Half of the Government's US $10m. per year revenues from the ar-Risha gas field would be used to fund the new company's initial activities. The company would function as an independent entity, with no government involvement in day-to-day management, and would be free to co-operate with foreign oil companies. State investment in hydrocarbon exploration in Jordan in the period 1980 to 1994 had amounted to $300m. In March 1996 two US companies, Andarko Petroleum Corpn and Trans Global Resources, signed agreements to explore for oil and gas in Jordan. In February 1997 another US company, Union Texas Petroleum, reached an agreement with Andarko to take a 50% interest in Andarko's 4.2m.-acre Safawi exploration block in north-eastern Jordan. Proposals were announced in the first half of 1995 to develop a 250,000 b/d-export refinery at Aqaba, to be located in a free zone and financed and operated by foreign investors, with the Government receiving a royalty on exported oil and a discount on prices of any refined products supplied to Jordan. Following the withdrawal of a US company which had signed a preliminary agreement in 1996, new bids were invited in 1997 for a modified scheme with 210,00 b/d of capacity, to be developed on a 'build-own-operate' basis. The Jordan Petroleum Refining Co, whose monopoly rights to supply refined products within Jordan were valid until 2008, was drawing up plans in 1997 to upgrade and expand its Zarqa refinery. It was estimated that an investment of $500m. would be required to diversify the refinery's product range and increase its total capacity to 140,000 b/d by 2002.

The discovery of reserves of natural gas at locations around ar-Risha in north-east Jordan in 1987 and 1988 encouraged speculation that the deposits would be sufficient to satisfy a significant proportion of Jordan's energy requirements in the future. By 1989 gas from the new discoveries was fuelling a 60-MW electricity generating plant at ar-Risha, employing two 30-MW gas turbines (ultimately to rise to six, producing 180 MW), which is connected to the main grid by a 220-km high-voltage transmission line. The plant was supplying 15% of national power requirements by 1990, when plans were announced to transfer to it two turbines from the South Amman station, with the aim of increasing its capacity to 25% of national power requirements. Domestic gas production in 1990 rose to 340m. cu m (compared with 160m. cu m in 1989). Production capacity at the ar-Risha field was due to reach 475m. cu m per year in mid-1993. A plan to import 300m. cu m of gas per day from Egypt through a $400m.-pipeline was postponed in May 1999, following reports of new natural gas discoveries at ar-Risha. Nepco (see below) already operates four 30-MW gas turbines at ar-Risha to generate 771 gWH of electricity, but the finds could enable Jordan to draw on its own resources rather than import gas from Egypt.

Jordan also has a thermal power station at Aqaba, which currently consists of two 130-MW oil-fired steam units, and is undergoing a US $75m.-expansion with the addition of two more 130-MW units capable of burning coal as well as oil, which will give a potential reduction in operating costs of 28% when the scheme is completed. A 400-kV transmission line, extending for 320 km, has been constructed, joining the power plant to Amman. In April 1996 the Government announced a 12% increase in electricity charges for consumers using more than 160 kWh of electricity per month. A link between the Egyptian and Jordanian electricity grids (the first phase of a regional inter-connection project supported by the Arab Fund for Economic and Social Development) was completed in March 1999, at a cost to Jordan of $80m. Meanwhile, a link between the Jordanian and Syrian grids was due to become operational by the end of 1999. In September 1996 the Jordan Electricity Authority was superseded by the state-owned National Electric Power Company (Nepco), established with a share capital of JD 230m. The assets transferred to Nepco had an estimated value of JD 270m. Nepco returned a net profit of JD 26.8m. on revenues of JD 183.76m. for 1997, and had total assets of JD 1,029m. Aqaba II, the JD 200m.-project to install three 130-MW turbines, is due to be completed in 1999 and will increase Jordan's total installed generating capacity to 1,658 MW (from 1,268 MW in 1998). Nepco was divided into three separate companies (for generation, transmission and distribution) in January 1999 under the 1996 Electricity Law. The Law also provided for an industry regulatory body and for the encouragement of private sector participation in future power generation projects. Two bids were received in July 1999 for the construction of Jordan's first major independent power project. The 300-MW–450-MW build-own-operate (BOO) station would be built at As-Samra, north of the industrial city of Zarqa, and would begin operation in 2002.

Cement production reached 964,300 tons in 1981. Within the 1981–85 Plan, 37% of the money allocated to mining and manufacturing was set aside for four cement projects, including the construction of a cement works in the south, at Rashidiya. The existing plant at Fuheis, near Amman, owned by the Jordan Cement Factories Co (JCFC), has undergone an expansion, bringing its capacity up to 4.2m. tons per year. By the end of 1983 the first production line at the South Cement Co (SCC)

works at Rashidiya was completed, and the second line was finished in the autumn of 1984, giving a total plant capacity of 2m. tons per year. The production of cement, having declined to 793,400 tons in 1982, rose in each of the subsequent three years, reaching 2,023,000 tons in 1985. Local demand rose by 5% in 1987, to 1.6m. tons. In 1987 and 1988 Egypt agreed to buy 750,000 tons of cement annually from Jordan. Total exports, which reached 800,000 tons in 1987, increased to 1m. tons in 1988. The struggling SCC merged with the JCFC in September 1985. The discovery in the Tafila area of gypsum reserves totalling an estimated 1.5m. tons, sufficient to satisfy demand for 10 years, was announced in March 1985. In 1990 the JCFC achieved record exports of 1.4m. tons of cement and clinker, and also sold 1.5m. tons of cement in the domestic market.

Construction was the fastest growing sector of the economy in 1993, when its share of GDP reached 8.3% (up from 7.6% in 1991). Stimulated mainly by the influx of 'returnees' from Kuwait, new building projects totalled 5.9m. sq m in 1992, as against 4.4m. sq m in 1991 and 2.7m. sq m in 1990. In 1994 domestic demand for cement declined, but a 19% increase in cement exports (to 887,000 tons, shipped mainly to Saudi Arabia and Yemen) enabled the JCFC to maintain total production at the 1993 level of 3.4m. tons. JCFC production in 1995 was 3.1m. tons. RMC Jordan (a wholly-owned subsidiary of the British company RMC) opened its first plant in 1996. Situated near Amman, the plant had a capacity of 100 cu m of ready-mixed concrete per hour. In October 1996 the state-owned Jordan Investment Corpn (JIC), which held 49.5% of the shares in the JCFC, invited bids for 22% of JCFC shares. A total of 16 international cement companies submitted bids, but none was accepted. The JCFC had made a net profit of JD 9.8m. on sales of JD 104.3m. in 1995. In April 1997 the Government approved an increase in Jordan's basic cement price (held at JD 44 per ton since 1992) to JD 48 per ton. In June 1997 the JIC indicated its intention to make a 50% increase (from 22% to 33% of JCFC shares) in the number of shares to be offered when it next invited bids from interested companies. In November 1998 the Government sold a 33% stake in the company, valued at US $101m., to the Lafarge Group (of France), which reduced JIC's shareholding to 16.3%. A group of Arab investors acquired an 8.5% stake in February 1999. The fall in pre-tax profits, from JD 11.7m. in 1997 to JD 9.1m. in 1998, was attributed to a decline in exports due to Israeli impediments, since local sales rose by 3% to JD 81.3m. In June 1997 the JIC invited bids for all of its minority shareholdings in four companies: Jordan Tanning Co (a 15% holding), Jordan Worsted Mills (14.1%), Jordan Himmeh Mineral Co (34.7%) and Jordan Paper and Cardboard Factories (19.6%). The JIC has continued to reduce its holdings in listed companies and is expected to sell its shares in 15 industrial and service companies in 1999, ultimately retaining 10-12 key stakes (out of 50).

In 1981 construction began on the 225-ha Sahab industrial estate, 18 km south-east of Amman, which is being built at a cost of JD 18m. The first phase of the estate, covering 85 ha, was opened at the end of 1982, and will include 15 ready-built factories and 15 other factories that are being built by the companies which are to use them. Work on the second phase of the Sahab industrial estate began in 1985. Nevertheless, the main focus of the 1981–85 and 1986–90 Plans appeared to be decentralization, putting emphasis on locating industries in geographically underdeveloped areas, especially the Soputj. An example of this is the Encouragement of Investment Law, which was enacted in February 1984. This divides the country into the following three zones: (a) Amman and its suburbs; (b) the other major cities; and (c) the remainder of the country. The Government hopes to encourage dispersal of investment by regulating the amount of assets required by companies setting up in each zone, with the minimum requirement of fixed assets for zone (a) being almost three times that for zone (c). The 1981–85 Plan, with a centrepiece in the construction of the US $1,000m.-Yarmouk University (which received its first students in 1985), concentrated on manpower, technology transfer and regional development. Export industries were also to be promoted. The industrial plans for the region around Irbid (where an industrial estate is to be built at a cost of $20m.) and the Ma'an-Aqaba area will form magnets for attracting benefits away from the industrial core of Amman. However, plans to build an iron and steel plant at Irbid were postponed in November 1990. The Middle East Complex for Engineering, Electronics and Heavy Industry—a conglomerate formed in 1994 through the merger of three companies with manufacturing and trading interests in electrical equipment, household goods and related products and components—announced in late 1996 that it had reached an agreement for the local assembly of four-wheel-drive vehicles supplied in kit form by Ssangyong Motor Company of South Korea. Output of Musso and Korando models was planned to rise from 1,000 units per year in 1997 to more than 4,000 units per year from 2000.

In an effort to boost Jordan's role as an entrepôt, a free-trade zone was introduced at Aqaba in 1976, and a second free-trade zone was opened at Zarqa in February 1983. The amount of goods which passed through these zones totalled 350,000 tons in 1984. In March 1985 it was announced that two more duty-free zones would be established, at Queen Alia international airport and at the port of Aqaba. There is another free-trade zone at Ramtha, on the Syrian border, while an industrial free zone was planned for the Shidiya phosphates-producing area (see above). All the zones are operated by the Free Zones Corpn under the aegis of the Ministry of Finance. In 1995, when 668,000 tons of goods passed through the zones, the Corporation made a profit of JD 4.7m. In May 1997 the Government agreed that the Aqaba region should be converted into a fully fledged free zone offering special incentives for the development of manufacturing and service industries in addition to the existing free-trade facilities. It was reported in May 1999 that a study conducted for the Aqaba Regional Authority affirmed the feasibility of a project to transform the Aqaba region into a free-trade zone.

Qualifying Industrial Zones (QIZ) were first designated in November 1997. Companies qualifying for QIZ status are required to have a Jordanian and Israeli manufacturer, each contributing a minimum of 20% of total production costs; alternatively Jordanian and Israeli manufacturers must contribute one-third each of 35% content of goods produced, in order to qualify for duty and quota-free access to US markets. Jordan's Century Investments Group (CIG) has eight joint ventures in operation and others under development in the Al-Hassan Industrial Estate. CIG was reported to be developing its own estate (having applied to the World Bank for a possible US $10m.-loan) and to be planning a $100m.-QIZ fund to acquire under-performing US companies in order to transfer their manufacturing capabilities to Jordan and take advantage of the QIZ lower production costs. The success of the QIZ concept has encouraged other investors: for example, the Hong Kong-based Boscan International Company is investing $100m. in manufacturing designer label luggage and clothing. The Jordan Gateway Projects Company (a joint venture with Israeli interests) qualified as a QIZ in April 1999 to develop a new estate on both the Jordanian and Israeli banks of the Jordan river.

By mid-1998 a number of major state-owned enterprises had been designated for complete or partial privatization. A 33% stake has since been sold in Jordan Cement Factories; the water and electricity industries are being restructured (Jordan is to have its first independent private power station); a private consortium is ready to build a new pipeline to bring gas from Egypt (see above); and work is progressing on the restructuring of Royal Jordanian Airlines, the private management and expansion of Aqaba Railways Corporation and the construction of a new Light Rail System (see below). However, delays have resulted from uncertainty over the Government's precise intentions as to desired post-privatization arrangements, on which conflicting statements were made by officials. There was also opposition to the disposals within some of the enterprises concerned, backed by a sizeable contingent of parliamentary deputies, who feared that privatized concerns would be acquired by wealthy and well-connected businessmen rather than a wider share-owning public. Another concern was that strategic Jordanian industries would pass into foreign ownership.

TRANSPORT AND COMMUNICATIONS

The transport sector has contributed around 15% of Jordan's GDP since the early 1970s, and provided direct or indirect employment for over 20% of the private-sector workforce in the early 1990s.

Jordan's only seaport is situated at Aqaba on the country's 20-km Red Sea coastline. Cargo-handling facilities expanded rapidly during the 1980s, an important factor being the re-routing through Aqaba of much Iraqi trade when the Iran–Iraq War of 1980–88 severely dislocated trade through Iraq's own Gulf outlets. In 1989 Aqaba handled 2,446 vessels and 18.7m. tons of cargo, of which 8.7m. tons were Jordanian exports and 2.5m. tons were Jordanian imports. In mid-1990 the port had over 20 berths, one container terminal, two 40-ton gantry cranes and 299,000 sq m of storage facilities. A new industrial jetty was under construction at the port of Aqaba in the late 1990s.

Aqaba's transit trade was severely affected by the imposition of UN sanctions against Iraq from August 1990. According to the Jordan Shipping Agents Association, the cumulative loss of transport revenues (including government port fees) amounted to US $570m. by the end of 1992. The total cargo loaded at Aqaba in 1992 was 13.4m. tons, of which only 2.1m. tons was transit cargo (mainly Iraqi government imports of basic foods). Iraqi exports via Aqaba, which had amounted to about 1.15m. tons a year before the imposition of sanctions, ceased entirely. The estimated reduction in Aqaba's Iraq-bound imports as a result of sanctions was about 3.5m. tons per year, while up to 2.85m. tons of transit cargo for countries other than Iraq were being re-routed to non-Jordanian ports by shippers who did not wish to suffer the delays and inconveniences of UN monitoring of Aqaba-bound cargoes. For the same reason, some shippers were also routing part of Jordan's own import trade via Mediterranean ports in Syria and Lebanon. Although the number of ships calling at Aqaba in 1992 was, at 2,430, only 16 fewer than in 1989, the proportion of cargo vessels in the total fell from 64% in 1989 to 52% in 1992, while the number of shipping lines calling regularly at Aqaba fell from 41 to 26.

The US-led naval patrol responsible for enforcing the UN monitoring of shipping at Aqaba was discontinued in late April 1994 in favour of land-based inspections by agents of Lloyd's Register of Shipping. The change occurred after repeated and vigorous protests to the US Government by King Hussein, citing estimates that diversions and delays caused by the naval blockade had cost the port about US $440m. in lost revenue in 1993. A US spokesman acknowledged in April 1994 that only six of the 460 ships turned away from Aqaba by the naval patrol had been carrying embargoed goods, while the remainder had merely lacked correct documentation. Between 1993 and 1994 Aqaba's annual trade volume declined from 11.63m. tons to 10.47m. tons, leaving about 50% of the port's capacity unused in the latter year. There was an 11% increase in the tonnage of cargo passing through Aqaba in 1995. From June 1996 the port authorities implemented cuts of 20% to 25% in overall handling fees; an additional 5% reduction in port fees on goods in transit; a 50% cut in fees for any cargoes transshipped from Aqaba to Eilat; and (by arrangement with Egypt's Suez Canal Authority) discounts on Suez Canal tolls of 20% for Aqaba-bound container vessels and 10% for Aqaba-bound bulk-cargo vessels. In 1996 the volume of cargo passing through Aqaba increased from 11.8m. tons to 12.2m. tons. The number of containers handled rose from 55,783 in 1995 to 75,333 in 1996. Design work was under way in 1997 for an expansion of port capacity (to include a new 400-m industrial wharf for vessels of up to 50,000 tons) to keep pace with the planned growth of Jordan's mineral exports. In mid-1997 the port authorities announced new cuts in Aqaba's handling fees, designed, in part, to stimulate the growth of transit trade.

A ferry service between Aqaba and the Egyptian port of Nuweibeh, opened in 1985, is one of the main low-cost passenger links between North Africa and the Gulf region (and as such carried most of the Egyptian workers who left Kuwait and Iraq in August 1990). In 1992 this service carried a total of 1.2m. passengers (many of them en route to Saudi Arabia), and its operator (the Arab Bridge Maritime Co) made a record profit of US $9m.

The Jordanian section of the narrow-gauge Hedjaz railway runs from the Syrian border, via Amman and Ma'an, to the Saudi border. A 115-km link to a phosphate export terminal at Aqaba was added in the 1970s. A further 68 km of track, including a 48-km link to the Shidiya phosphate mines, was to be added in the mid-1990s. Freight (mainly phosphates) accounts for virtually all Jordan's current rail traffic, but future diversification into passenger services has not been ruled out. Plans to build a 1,000-km standard-gauge railway from Aqaba to Baghdad were approved in principle in 1989 but were shelved in the following year when Iraq's development plans were overtaken by political events. An express rail link between Amman and the Syrian capital, Damascus (using a section of the Hedjaz railway), was launched in August 1999. Proposals to build a 41.7-km light rail link between Amman and Zarqa were being drawn up in 1996 with a view to seeking foreign investment in a 'build-own-operate' or 'build-operate-transfer' project. The Ministry of Transport invited bids in 1999 for the operating concession and the construction (at an estimated cost of JD 28m.) of an electrified light rail system to carry 140,000 passengers per day between Amman and Zarqa. The Aqaba Railway Corpn (ARC, established in 1972 to manage the rail transport of rock phosphate and related products) made a net loss of JD 11.6m. in 1995, and carried accumulated losses of US $98.7m. in 1998. In December the Government opened negotiations with a US-led consortium for a 25-year concession to operate ARC and to invest $100m.-$200m. to connect the existing railway network with JPMC's Shidiya mine, situated near the Saudi Arabian border. It was reported in August 1999 that a $130m.-deal had been reached between the Government and the international consortium.

The Jordanian road system includes a number of major national and international transit routes, among which the main north-south desert highway from Amman to Aqaba had, by 1993, been upgraded along all but 71 km of its 330-km length. Improvements to the dilapidated section of the highway, between Ras an-Naqb and Wadi Yutm in a mountainous area in the south, were scheduled for completion by the end of 1996. Even after the suspension of much of Iraq's trade through Aqaba, an estimated 300,000 trucks were using the port in 1991, due in part to the fact that all of Jordan's potash exports, and about half of its phosphate exports, are transported to Aqaba by road. An estimated 22,000 Turkish trucks used Jordan as a freight transit route in 1992, while Jordan's own sizeable haulage fleet was increasingly active on routes to North Africa, Turkey and Eastern Europe to replace export business lost through the UN embargo on Iraq and a decline in some Jordanian markets in other Gulf states. The Iraqi-Jordanian Land Transport Co, operating exclusively between these two countries, cut its fleet from 900 to 336 trucks in 1992. In 1997 the Government announced plans to privatize the Public Transportation Corpn (responsible for bus services in Amman). However, following accumulated monthly losses, accountants were appointed to liquidate PTC in October 1998. Private companies will take over the operation of its bus routes in Amman.

The national airline, Royal Jordanian, operates passenger and freight services from Queen Alia international airport at Zizya, 40 km south of Amman. It carried 44,520 tons of freight in 1992 (compared with a peak of 55,170 tons in 1990 and a decline to 41,637 tons in 1991 as a result of the Gulf crisis). Passenger numbers in 1992 totalled 1,109,000, compared with 798,000 in 1991 and a recent peak of 1,226,800 in 1988. The airline's operating profit reached a 5-year peak of JD 37.9m. in 1992, but its (unpublished) net profit position was believed to reflect an annual debt service requirement of around US $40m. (which would have been even greater had the airline not cancelled an option on four additional European Airbus aircraft in 1991). Plans to privatize Royal Jordanian, first put forward in 1987, had still to be finalized in 1993, when a consultants' report recommended a major increase in capital to resolve cash-flow problems. A financial restructuring plan was understood to be nearing completion in mid-1995. Revenue in 1994 totalled around $400m. following a 3.9% increase in passenger numbers (to 1.22m.) and a 1.3% increase in freight (to 55,000 tons), but operating profits fell by 36% to JD 26.63m. ($38m.). In early 1995 the airline raised about $30m. through sales of shares in its hotel and duty-free shopping interests. The airline signed agreements in 1998 with two consortia to advise on its restructuring and privatization. Royal Jordanian will present a financial restructuring package to the Government and has settled $30m. in debts to local banks. It is expected to clear a further $60m. before the end of 1999, prior to the eventual sale of a 40%-60% stake. In 1998 the airline carried 1.4m. passengers and 70,700 tons of freight.

A telecommunications law enacted in August 1995 provided for the licensing of private-sector competitors to the state-owned Telecommunications Corporation. During 1996 private companies were granted licences to develop new mobile communications, data communications and public payphone systems, although the Telecommunications Corporation remained the sole provider of basic fixed-line services. With effect from January 1997 the Telecommunications Corporation was restructured as the Jordan Telecommunications Company (JTC), with a share capital of JD 250m., and advisers were appointed to organize the proposed sale of part of the company's equity to the private sector. The share offer was expected to attract major telecommunications companies with international interests. The sale of a 40% stake (worth US $400m.) to an international strategic shareholder was postponed in autumn 1998. The US Southern Bell Corporation withdrew from the bidding following the Government's decision to review the strategic partner's 4:3 majority on JTC's executive board, leasing Cable & Wireless of the United Kingdom as the sole bidder. However, under the terms of the IMF agreement, Jordan is required to have a strategy for privatization in place and was reported to be in discussion with several major foreign companies in mid-1999 (regarding the sale of a possible 40% stake in JTC). There was also controversy over JTC's award of Jordan's second mobile-phone network licence. The private operator, Fastlink (owned by Motorola and, since May 1999, by Orascom Technologies of Egypt) whose monopoly expired in October 1998, argued that the second licence, should be put out to tender. The installation of JTC's mobile phone network, estimated to cost $30m.-$40m., was due to be completed by the end of 1999. In 1995 Jordan's basic fixed-line telephone network comprised 335,000 exchange lines (about 80 per 1,000 people) and met about three-quarters of current demand. An expansion programme was in progress in 1996/97 with the aim of raising basic network capacity to 615,000 lines by 1998.

EXTERNAL TRADE

For a long time, phosphates have dominated Jordan's exports but, in spite of increasing in overall value, they fell in relative importance, accounting for only 22.6% of total export earnings in 1981 and 1982, compared with 43.6% in 1979. The proportion rose to 32.2% in 1983 (though this was principally due to a 40% fall in total export earnings), but fell to 26.6% (JD 69.6m.) in 1984 and 25.9% (JD 66.1m.) in 1985. It rose again to 28.7% (JD 64.8m.) in 1986 but fell to 24.5% (JD 61m.) in 1987. Phosphates and potash together accounted for 38.5% (JD 146.9m.) of the value of total exports in 1988 and 35.2% (JD 224.9) in 1989. In 1992, phosphates valued at JD 206.1m. (24.9% of total exports), and potash valued at JD 95.3m. (11.5% of exports), together accounted for 36.4% of Jordan's export earnings. The overall contribution of mineral resources to exports in 1992 was estimated to exceed 60% after taking account of processed derivatives (fertilizers and fertilizer inputs). Jordan's exports of phosphoric acid and other derivatives were forecast to increase substantially after the mid-1990s, when joint ventures with several Asian importers were scheduled to come into production. Cement, tomatoes, vegetables and fruit are other important exports.

Saudi Arabia was Jordan's principal supplier between 1979 and 1985. Saudi Arabia's share of imports rose to a peak of 20.4% in 1982, when it sold goods to Jordan worth JD 233.5m. The proportion declined to 5.8% in 1986, when sales to Jordan were valued at JD 49.7m. and the USA became Jordan's principal supplier, though its share of total imports in that year declined from 11.9% (JD 128m.) in 1985 to 8.9% (JD 75.5m.). The USA's share rose to 10.2% (JD 93.4m.) in 1987, but Iraq became Jordan's leading supplier with 10.9% (JD 99.4m.) of total imports. Other leading suppliers are, traditionally, Germany, Italy, Japan and the United Kingdom. Iraq overtook Saudi Arabia as the largest purchaser of Jordan's exports in 1980, when it accounted for 23.6% of the total. Iraq's share rose to 26% (valued at JD 63.5m.) in 1981 and declined slightly to 25.2% (worth JD 66.6m.) in 1982. Jordan's exports to Iraq slumped to only 16% (JD 26m.) of the total in 1983, and Saudi Arabia once more became the principal customer for Jordanian exports, though only for one year, as Iraq accounted for 26% (JD 67.8m.) of Jordanian imports in 1984 and 25.8% (JD 65.9m.) in 1985. Iraq's share declined to 18.8% in 1986 and rose to 24.1% in 1987. Iraq, Saudi Arabia (with 10.5% of the total, in 1987) and India (8.9%) are by far the most important purchasers of Jordanian exports.

Iraq's position as Jordan's main trading partner made it inevitable that the UN sanctions against trade with Iraq, imposed after Iraq's occupation of Kuwait in August 1990, would be fulfilled only with reluctance by Jordan. In 1989 Jordan exported approximately JD 147.9m. worth of goods to Iraq (about 23% of its total commodity exports), while imports from Iraq totalled approximately JD 221.8m. (mainly petroleum). More than 80% of Jordan's petroleum is normally imported from Iraq. By the end of August 1990 transit trade with Iraq through the port of Aqaba had virtually ceased (see Transport, above), and the outbreak of hostilities in January 1991 resulted in the virtual cessation of Iraqi oil deliveries. Following the end of hostilities, Iraq declared in April that it wished to resume normal trade with Jordan, which it proposed to make its main channel to the outside world. However, while some Jordanian food exports resumed to Iraq, a restoration of full bilateral trading links depended on the repeal of the UN embargo.

In mid-1993 Jordan's full oil import requirement was supplied by road from Iraq under a bilateral arrangement (then in its third year) which was deemed by Jordan to fall outside UN sanctions because it involved no financial transfers. Just over half of the supply was free of charge, while the remainder (valued at US $16 per barrel, inclusive of transport) was counted as a repayment of Iraqi debt to Jordan. The agreement, which was understood to cover 55,000 b/d of crude oil in 1993, was informally monitored by UN sanctions administrators but did not have the formal approval of the UN sanctions committee. Following widespread reports in early 1993 that there was a growing barter element (mainly involving the supply of Jordanian food to Iraq) in this trade, the US Government began to exert pressure on Jordan to contribute 30% of the value of its oil imports to the UN-administered compensation fund for claims arising out of the Iraqi invasion of Kuwait. (This was the percentage levy which the UN intended to impose on UN-supervised oil exports from Iraq under a scheme which Iraq had so far declined to implement.) Iraq continued to supply all of Jordan's oil imports in 1994 and 1995, and it was announced in April 1995 that Jordan and Iraq planned to build a 590-km. pipeline to supply up to 70,000 b/d of Iraqi crude to Jordan's Zarqa refinery by about 1998 (although Jordan would not begin to operate the proposed pipeline while Iraq remained subject to UN sanctions). Import costs via such a pipeline were expected to be at least 50% less than the current trucking cost of $10 per ton. In January 1996 the Government announced its intention to reduce Jordan's annual exports to Iraq (latterly worth $400m.) to $200m. 'in the interests of reinforcing Jordan's foreign currency reserves'. Jordan's total exports to Iraq from 1989 to 1995 were estimated to be worth JD 1,525m. ($2,170m.), comprising mainly foodstuffs and detergents.

Jordan's trade with Egypt has increased annually since the two countries resumed diplomatic relations in 1984. Trade protocols with Egypt set bilateral trade at US $250m. in 1988, compared with JD 150m. in 1985. In 1989 Jordan and Egypt joined Iraq and the Yemen Arab Republic to form the Arab Co-operation Council. Although this organization effectively disintegrated during the Gulf crisis of 1990–91, Jordan and Egypt remained committed to increased bilateral trade in the 1990s. In June 1996 Jordan and Saudi Arabia signed a trade protocol abolishing tariffs on over 160 products making up most of the trade flow between the two countries. In 1995 Jordan had a trade deficit of $30m. with Saudi Arabia (exports $99m., imports $129m.).

Jordan's traditionally large trade deficit is offset, somewhat variably, by expatriate remittances, re-exports, international aid and tourism. In 1985 import duties were raised by between 11% and 50% in an effort to cut the import bill by US $30m. Exports declined by 2.2% in 1985 to JD 255.3m., and imports rose by 0.3%, to JD 1,074,445m., giving a visible trade deficit of JD 819.1m. In 1986 exports declined by 11.6% to JD 225.6m., and imports declined by 20.9% to JD 850.2m., a deficit of JD 624.6m. In 1987 the trade deficit narrowed to JD 596.9m. (exports JD 315.7m., imports JD 912.6m.), but in 1988 it widened again, to JD 638.5m. (exports JD 381.5m., imports

JD 1,020m.). In 1989 a rise in exports of phosphates and chemicals was largely responsible for narrowing the trade deficit to JD 576.5m. (exports JD 637.6m., imports JD 1,214.2m.). Devaluations of the Jordanian dinar in 1988–89 made Jordanian exports more competitive and restricted Jordanian consumers' ability to buy imported goods. From a deficit of JD 1,008.6m. in 1990, the visible trade balance improved slightly to a deficit of JD 994.1m. in 1991, when exports totalled JD 770.7m. and imports JD 1,764.8m. In 1992 imports rose sharply to JD 2,291m. ($3,363.2m.), mainly because of additional demand generated by 'returnees' from Kuwait, leaving a visible trade deficit of JD 1,461.7m. ($2,144m.) after taking account of exports worth JD 829.3m. ($1,217.4m.). In 1993 the visible trade deficit reached JD 1,593m. (imports totalling JD 2,234m. while exports totalled JD 641m.).

In 1994 import spending totalled US $3,543m. (3.9% less than in 1993) and export earnings totalled $1,437m. (14.7% more than in 1993), leaving a visible trade deficit of $2,106m. Customs tariffs, whose weighted average rate had already been cut from 35% to 21% in two years as part of the Government's economic restructuring programme, were further adjusted in May 1995 to eliminate or reduce the import duties on many industrial raw materials and intermediate products, although at the same time many agricultural products became subject to higher duties. In 1995 Jordan recorded a visible trade deficit of $1,518.2m. and an overall current-account deficit of $258.6m. (compared with a current-account deficit of $550m. in 1994). In mid-1996 the Ministry of Supply, which for the previous 22 years had acted as the monopoly importer of basic foodstuffs, with responsibility for controlling the retail prices of 25 food items, announced plans to open the import trade in rice and sugar to the private sector as the first stage in the phasing-out of its monopoly. The ministry was responsible for JD 320m. of food imports in 1995. The trade deficit widened to $2,001m. in 1996, with imports of $3,818m. and exports of $1,817m., producing a current-account deficit (net of grants) of $221.9m. The 1997 account showed a reduced trade deficit of $1,813m. (imports $3,649m., exports $1,836m.) and a current-account surplus of $29.3m. The 1998 figures produced a reduced trade deficit of some $1,613m. and a current-account surplus of $1,799m. Jordan's most important trading partner in 1997 continued to be the European Union (EU), although the single biggest exporter by value remained Iraq, by virtue of its supply of oil products.

In January 1997 Jordan and Iraq signed a protocol covering their bilateral trade in the coming year. Iraqi petroleum supplies to Jordan were to total 25m. barrels of crude oil and 7m. barrels of refined products, the agreed value of these supplies being US $611.2m. Within this total, $300m. represented oil supplied free of charge, $225m. represented payment for Jordanian goods and services to be supplied to Iraq, and the remaining $56.2m. represented a partial repayment of Iraq's accumulated debt to Jordan. In addition to the goods supplied under the terms of the bilateral protocol, Jordanian exports to Iraq in 1997 included humanitarian supplies within the framework of the UN 'oil-for-food' programme which came into operation in December 1996. In the first 180-day phase of the UN programme, Jordanian firms obtained UN approval for an estimated $146m.-worth of humanitarian exports to Iraq. A Jordan-Iraq trade protocol for 1998 provided for the supply of 4.8m. tons of Iraqi petroleum and petroleum products (an increase of 12% compared with 1997), in exchange for Jordanian goods valued at $255m. In July 1998 Jordan and Iraq agreed to resume talks on the feasibility of an oil pipeline from Haditha in Iraq to the Zarqa refinery and Aqaba in Jordan, to transport supplies currently moved to Jordan by road, and to provide Iraq with a Red Sea outlet for its crude oil. Jordan and Iraq reviewed their trade protocol for 1999, which provides for the supply of 4.8m. tons of Iraqi crude oil (50% provided free), in exchange for Jordanian goods valued at $200m. The trade protocol is reduced in value from $255m. in 1998 in line with the decline in world oil prices. In 1997 Jordan's exports to Egypt were valued at only $20.3m., and its imports at $36m. In mid-1998 the two countries signed an agreement providing for the establishment of a free-trade zone by the year 2005 (a 25% reduction in taxes and customs duties taking effect in January 1999, to be followed by a 15% reduction for three years and a 10% reduction over a further three years). In 1998 Jordan's exports to the USA were valued at $353m. ($402m. in 1997) and its imports at $17m. ($26m. in 1997). Jordan signed two economic agreements with the USA in March 1999. The first designated the Jordan Gateway as a QIZ (see Industry and Mining, above) and the second established a Trade and Investment Framework Agreement (TIFA). Jordan and Algeria ratified a 1997 trade agreement in 1999 exempting each other's agricultural and industrial products from customs duties.

In April 1997, following two years of negotiations, Jordanian and EU representatives initialled an association agreement providing for the progressive liberalization of trading arrangements over a 10-year period. If ratified on schedule, the agreement was expected to take effect from January 1999. A Jordanian application for membership of the World Trade Organization was under negotiation in 1997–98, when the agenda included aspects of Jordanian copyright and patents law which were not consistent with current international standards. The first round of negotiations were concluded in March 1999 (Jordan will be expected to implement trade reforms, which include a reduction in the maximum import tariff to 35%).

FINANCE

Today, Jordan's main exports are phosphates, potash and fertilizer, but before 1967 net earnings from the tourist trade and income from private donations constituted the only important invisible export. After 1967 income from tourism and private transfers fell dramatically. In 1974, however, the Jordanian Government decided to allow its visitors to cross over the West Bank and the number of tourists arriving in the country that year rose by 79% on the 1973 total to reach 554,913, nearly regaining the 1966 level of 617,000, while income from tourism exceeded it, reaching JD 17.3m., compared with JD 11.3m. Tourism continued to expand during the 1970s and 1980s, reaching 2,677,021 in 1985. Earnings from tourism reached a record JD 310m. (US $546m.) in 1989, when the number of European long-stay visitors totalled 130,000. In 1990 the Gulf crisis effectively ended all tourism from September onwards, while a slow recovery in the latter part of the following year took total European arrivals to 57,000 in 1991. In 1992, when European arrivals rose to 121,000, a strong revival of tourism (at least among non-Arab visitors) generated estimated net receipts of around $300m.

Strong overseas marketing campaigns by the government, private-sector tour operators and the national airline, Royal Jordanian Airline, produced significant increases in tourism from 1993 to 1996, but from 1997 the number of visitors began to decline, reportedly owing to fears concerning Islamic fundamentalism and rising Israeli-Palestinian tensions. A main aim of government tourism development policy for the 1990s has been to provide a varied range of attractions in different parts of the country, while taking steps to prevent over-development of Jordan's world heritage site at Petra. In 1994 a total of 696,760 visitors generated an estimated JD 443m. of tourism revenue, representing increases of 12% in visitor numbers and 13.6% in revenue compared with 1993. Moves towards a regional peace settlement greatly enhanced Jordan's appeal to overseas tourists, while the opening of the border with Israel prompted a significant influx of Israeli tourists from late 1994 onwards. Income from tourism in 1995 was estimated as JD 568m. (US $800m.). At the end of the year 23 new hotels were under construction and many more were plannned. Total visitor numbers in 1995 exceeded 1m., of whom 400,000 were classed as leisure and culture tourists. An estimated 100,000 Israelis visited Jordan in 1995, while tourist arrivals from Japan and Korea began to feature significantly in the tourism statistics for the first time. The re-emergence of regional political tensions in 1996 led to a significant decline in visitor numbers, with some hotels reporting occupancy rates as low as 10% at some points in that year. The number of European and US visitors totalled 444,600 in 1996, declining to 429,700 in 1997 and showing no sign of recovering in 1998. Nevertheless, the Ministry of Tourism and Antiquities pursued an expansion of tourist facilities, including hotels, on the basis of a $44m. development programme announced in May 1997. In November, moreover, the Government announced the establishment of a new Jordanian Tourism Board as a public-private venture to promote

Jordan as a tourist destination. Major new private tourism projects initiated in 1998 included a 6,000-bed hotel complex at Aqaba, at a projected cost of $452m., and a 540-sq km national park, which was part of an overall $44m. World Bank-financed project to develop Jordan's main tourist areas in Aqaba, Petra and Wadi Rum. The Jordan Valley Authority (JVA) is putting in the infrastructure for the development of the Dead Sea coast as a major tourist resort based on curative tourism. Three large hotels were under construction in 1999, in addition to the new 230-room Movenpick Hotel, which opened in March of that year.

An important source of foreign exchange in recent years has been remittances from Jordanians working abroad. In 1979 these totalled JD 180.4m. (including transfers through the banking system but not those through 'black market' money changers or by hand, which, it is estimated, would increase the total by at least 50%) and by 1981 had risen to US $987m. In real terms the income from foreign remittances fell in 1982, but rose by 5% (JD 20m.) to JD 402m. ($1,040m.) in 1983. In 1984 remittances from the 340,000 Jordanians working abroad were worth JD 475m. ($1,228m.). However, the world oil glut and a fall in oil prices have adversely affected the economies of oil-producing countries in the Middle East, in particular the Gulf states where 85% of expatriate Jordanian workers are employed, and this, in turn, has affected the level of remittances. These fell, accordingly, by 17%, to JD 403.5m. ($1,204m.) in 1985. Although they recovered to JD 414.5m. ($1,243.5m.) in 1986, they declined to JD 317.7m. ($953.1m.) in 1987. The decline in Gulf economies also added to the number of the unemployed as workers returned from abroad. Remittances rose to JD 335.7m. in 1988, and to an estimated JD 470m. in 1989. Statistics issued by the Central Bank in May 1993 gave remittances in the years 1990, 1991 and 1992 as JD 331.8m., JD 306.3m. and JD 573.1m. respectively. The 1992 total was believed to include a large element of deferred transfers by workers who had returned to Jordan from Kuwait in 1991. Total remittances rose to JD 720.7m. in 1993, JD 763.7m. in 1994, JD 871.7m. in 1995, JD 1,094.8m. in 1996 and JD 1,173.5m. in 1997. The steady growth reflected the reopening of job opportunities for Jordanian nationals in the oil-rich Gulf states; in June 1998 the Government gave initial approval to the establishment of Jordan's first private employment agency, specializing in placing applicants in the Gulf.

For many years, Jordan's trade deficit has been offset, mainly by capital imports and subventions. Before 1967 these came principally from the United Kingdom and the USA, but since 1967 there have been similar payments from Saudi Arabia and other Arab states. These subventions enabled the country's exchange reserves to be maintained and even increased. At the end of 1979 net foreign assets stood at JD 363.9m., compared with JD 177.4m. at the end of 1976, and international reserves (excluding gold) were US $1,140m., compared with $458.9m. at the end of 1976. The JD 57.4m. balance-of-payments surplus in 1979 was increased to a surplus of JD 144.9m. in 1980. However, aid from Arab states fixed at the Baghdad summit meeting in 1978 was not maintained at the agreed level (see below). The first balance-of-payments deficit for five years was recorded in 1981, followed by further small deficits in 1982, 1983, 1984 ($219m.) and 1985 ($260.5m.). These deficits led the Government to seek new loans. In 1984 and 1985 it obtained Euroloans of $200.8m. and $215m., respectively, both with eight years' credit, and in 1987 one of $150m., with seven years' credit. Consequently, the burden of debt financing was expected to increase over the next few years. The level of government debt and government guaranteed foreign debt rose to JD 1,100m. in 1986. By May 1987, as a result of debt servicing and reduced aid from other Arab countries, reserves of foreign exchange held by the Central Bank had fallen to JD 51m. ($153m.), sufficient to cover the cost of imports for less than one month. In 1986, owing to an increase in the level of remittances and Arab grant aid, a surplus of JD 35m. ($104.6m) was recorded in the balance of payments. Total foreign aid, however, declined from JD 377m. ($1,127m.) in 1985 to JD 304m. ($908m.) in 1986. The continuing decline in Arab aid, remittances from Jordanians working abroad, and low world prices for phosphates and potash contributed to a balance-of-payments deficit of JD 42.4m. ($140m.) in 1987.

Jordan's economic problems created a lack of confidence in the Jordanian dinar on the currency market and the dinar declined in value from US $1 = JD 0.33 in May 1988 to US $1 = JD 0.39 in June. On 4 June, in support of the dinar, the Government established a special committee to consider new foreign exchange regulations. Two days later, a fixed exchange rate system was introduced, with a commercial bank rate of US $1 = JD 0.356/0.360 and a rate of $1 = JD 0.370/0.375 for money-changers. Foreign currency reserves rose to $36m. in May and an aid instalment of $60m. from Saudi Arabia helped to calm the market. New regulations, introduced in June, permitted Jordanians working abroad to bring back as much foreign currency as they wished and to dispose of it as they chose; allowed citizens to import any amount of local or foreign currency; and increased the amount that local residents were allowed to hold in foreign currencies, from JD 30,000 to JD 50,000.

In early November 1988 the combination of a shortage of foreign currency reserves, a decline of more than 30% in the value of the dinar since mid-October, and the deteriorating balance-of-payments position prompted the Government to introduce various austerity measures. Bans were imposed on the import of several luxury items, and customs duties on non-essential items, airport tax and fees payable for work permits were increased. The Government hoped to save at least US $350m. by the measures. In February 1989, amid increasing pressure on the currency, the Government cancelled all licences for money-changers.

In March 1989 representatives of the IMF visited Jordan to discuss the Government's efforts to revive the economy and reschedule its foreign debt, which was estimated at US $6,500m. The Government had reportedly been reluctant to enter into negotiations with the IMF, but had concluded that an agreement with the IMF was the only means by which it could maintain its reserves of foreign exchange and finance its budget deficit. The cost of servicing the foreign debt in 1989 was estimated at $900m., including interest payments of $500m. As a result of these negotiations, the IMF granted Jordan a stand-by credit of $125m. in mid-July 1979, conditional upon the implementation of a five-year economic adjustment programme, drafted in consultation with the Fund. The adjustment programme aimed to reduce Jordan's budget deficit from 24% of GDP in 1988 to 5%, to reduce the annual rate of inflation from 14% to 7%, and to achieve a current account surplus. In order to achieve this, the Government agreed to reduce state expenditure, to increase revenues and to reduce imports. In late April, however, the Government's announcement of substantial increases in taxes and in the prices of some commodities (staples such as bread, milk and rice were not affected) led to widespread rioting throughout the country and to the resignation of the Prime Minister, Zaid ar-Rifai, and his Cabinet. Nevertheless the new Government, under the leadership of Field Marshal Sharif Zaid ibn Shaker, remained committed to the programme agreed with the IMF.

Although the former Prime Minister, Zaid ar-Rifai, had assured bankers that the agreement between Jordan and the IMF would not affect the value of the dinar, a further devaluation, of 5.5%, was announced in May 1989, bringing the total devaluation of the dinar against the US dollar since October 1988 to 42.5%. It was announced that the value of the dinar would henceforth be determined against a 'basket' of currencies, although the dollar would remain the most important of these currencies. At the same time, it was reported that as much as one-third of the Central Bank's gold reserves had been exchanged for foreign currency in 1988, and the Governor of the Bank, Muhammad Said Nabulsi, confirmed reports that Jordan's foreign debt amounted to US $8,100m.

On 31 July 1989 the Central Bank introduced a two-tier exchange rate for the dinar, formalizing a system that had already been operating informally. While the Government continued to provide dollars at a fixed rate for imports of basic commodities, commercial banks were permitted to trade dollars at free-market rates for other foreign currency requirements.

By September 1989 a renewed influx of financial aid from Arab states, together with the intervention of the Central Bank, had enabled the dinar to stabilize at around US $1.20, and it was hoped to be able to maintain its value at about $1.60 by

the end of 1989. On 11 September the Ministry of Finance announced that the 'London Club' of commercial bank creditors had agreed to reschedule $575m. of Jordan's debts, which were due to be repaid between the beginning of 1989 and mid-1991. Reserves of foreign currency were reported to have risen to $500m. by September. In July the 'Paris Club' of creditor countries had agreed to the rescheduling of Jordan's debt for 1989 and 1990 ($656m. and $622m. respectively) over a 10-year period. As a result of these financial measures, and increased aid from abroad, Jordan recorded a JD 223m. surplus on its current account for 1989, although the annual rate of inflation increased to 25%, and little impression was made on the budget deficit.

The Jordanian Minister of Finance, Basil Jardaneh, visited London in April 1990 to work for the completion of Jordan's debt-rescheduling arrangements with the 'London Club'. Foreign debt had by then reached US $8,400m. and there was a probable deficit of $95m. on foreign reserves. The country's problems were subsequently exacerbated by the onset of the latest regional crisis in August 1990. Having immediately stopped all repayments on its foreign debts, Jordan had to cope with the suspension, from September 1990, of disbursements to it under the 1989 IMF agreement. When it became clear, in December 1990, that the original 1993 target for completion of the structural adjustment programme was not feasible, a two-year extension to 1995 was provisionally agreed with IMF negotiators. However, rescheduling of foreign debt due for repayment by mid-1991 was contingent upon a formal reactivation of the IMF agreement, with revised content and timetable. An agreement was concluded in October 1991, involving an IMF stand-by credit of SDR 44m. over 18 months in support of an economic and financial reform programme covering the seven-year period 1992–98. Elements of the new IMF agreement included cuts in state subsidies of food and other basic commodites and a progressive reduction of the budget deficit. This enabled Jordan, in early 1992, to reach new debt-rescheduling agreements with both the 'Paris Club' and the 'London Club', involving in the former case the deferral of payments due in 1991–93 on total foreign debt estimated at $7,200m.

Jordan's balance of payments showed a current-account deficit of JD 148.2m. in 1990, a surplus of JD 269m. in 1991 and a deficit of JD 520m. in 1992. The main factor in the 1991 surplus was a sharp dip in outgoings on the invisibles account, while the main factor in the 1992 deficit was the steep rise in spending on visible imports (see External Trade, above). External debt was reduced to US $6,600m. by the end of 1992, when the country's foreign exchange reserves exceeded $800m.

Jordan's persistent financial problems in the 1980s had culminated in a budget deficit of 24% of GDP in 1988, but thereafter, in accordance with IMF prescriptions, efforts were made to improve matters. Budget proposals for 1989 envisaged total expenditure of JD 1,035.0m. (a reduction of 16% compared with the budget for 1988, due mainly to the decline in the value of the dinar), incorporating development spending of JD 346.5m., compared with JD 451.5m. in 1988, a reduction of 23%. The budget deficit was originally projected at JD 122.3m., but the Government subsequently introduced measures to reduce the budget deficit by 4.5% of GDP in 1989. Budget estimates for 1990 envisaged expenditure at JD 1,105.8m. and revenue at JD 906.7m., resulting in a deficit of JD 199.1m. Capital and development expenditure was reduced to only JD 253.3m., compared with JD 346.5m. in 1989. Projected current expenditure was subsequently reduced by JD 15.1m., before the budget proposals received legislative approval. A further revision in the course of 1990 reduced total budgeted expenditure to JD 1,033.7m. and increased forecast revenues to JD 938.7m. resulting in a deficit of JD 182.4m. after loan repayments of JD 87.4m. up to August 1990. The 1991 budget, as adopted by the House of Representatives, envisaged total expenditure of JD 1,109.2m. and loan repayments of JD 135.2m., compared with revenues of JD 902.5m., resulting in a projected deficit of JD 341.9m. It was noted, however, that the expenditure total excluded certain debit items (notably oil subsidies), which, if included, would produce a deficit of at least 16% of GDP. The Government also presented a separate emergency budget of JD 120m., intended to assist the economy to overcome the effects of the Gulf crisis, its implementation being dependent on receipts of special aid (see below).

The 1992 budget proposals reflected the terms of the October 1991 IMF agreement; government subsidies being cut by 30%, and new consumption taxes imposed, in order to reduce the deficit to JD 107m. In the event, there was an overall budget surplus of JD 149m. in 1992 (due mainly to additional revenue from 'returnees'), total domestic revenue (JD 1,098m.) being higher than current expenditure (JD 932m.) for the first time in Jordan's history. The 1993 budget envisaged an excess of domestic revenue over current expenditure of JD 87m. and an overall budget deficit of JD 55m. Despite the achievement of a budget surplus in 1992, the effective fiscal deficit for the year (as cited in discussions with international financial institutions) was put at about 6% of GDP. Total GDP was JD 3,189m. (US $4,600m.) in 1992, up 10.1% in real terms on 1991 after allowing for inflation of 3%. Pledges of $380m. in aid to close Jordan's 1993 financing gap were made by international donors at a meeting organized by the World Bank in January 1993.

Of the structural reform measures proposed in the 1993 budget, price increases on selected oil products (including fuel for electricity generation and aviation fuel supplied to Royal Jordanian) were implemented in June. However, a new sales tax, which should have superseded existing consumption taxes in May 1993, was deferred following strong protests from private businesses which claimed that they would be subject to an unfair burden, notwithstanding the Government's intention to raise only an extra JD 30m. per year, as against JD 100m. when the sales tax was first proposed. In the event the Government amended the scope of the consumption tax system to raise an additional JD 3.5m., a step that was accepted by the IMF as 'a temporary alternative'.

The 'London Club' of commercial bank creditors signed a debt rescheduling agreement in December 1993 covering US $740m. in principal and $150m. in interest owed by the Jordan Government to more than 80 lenders. The details of the agreement had been negotiated in July of that year.

The 1994 budget provided for revenue of JD 1,488m. (including domestic revenue of JD 1,311m.) and expenditure of JD 1,488m. (JD 1,124m. on current account and JD 364m. on capital account). Excluded from the budget were an unspecified amount of military spending, to be met by 'friendly Arab states', and the cost of servicing Jordan's foreign debt, which would have to be covered by fresh domestic and foreign borrowing to raise some JD 300m. In addition to the normal budget, the Government drew up an emergency budget providing for JD 66m. of development expenditure if sufficient foreign grants and/or soft loans could be raised. The controversial sales tax, after being strongly attacked during parliamentary debates, was finally approved on 14 May 1994 and took effect at the beginning of July 1994.

The parliamentary passage of the sales tax legislation paved the way for the IMF executive board to announce on 25 May 1994 its formal approval of a three-year extended Fund facility (EFF) to support the next stage of the Government's structural adjustment programme. Worth SDR 127.8m. (US $178.9m.), the EFF would be used to further a programme whose main 1994 objectives were stated as real GDP growth of 5.5%, an annual inflation rate held at 5%, a reduction of the current-account deficit to 9.7% of GDP (compared with 12.5% in 1993), and an increase in the Central Bank's foreign exchange reserves to $665m. or the equivalent of 2.4 months' import cover. The aim of fiscal policy should be 'to enhance efficiency and revenue-elasticity' through tax reform. Areas of structural change which the Government should address more convincingly included the formulation of action plans for the agriculture and water sectors. The IMF said that the Government's on-target achievements in 1993 had included real growth of 5.8% of GDP, an inflation rate of 4.8% and a fiscal deficit of 6.4% of GDP.

The IMF agreement paved the way for successful negotiations with the 'Paris Club' of official creditors, culminating in an agreement on 29 June 1994 to reschedule US $1,215m. of debt payments over 20 years, including 10 years' grace. Jordan's Prime Minister described the terms as very favourable and designed to alleviate pressure on the Jordanian economy during the EFF period. World Bank statistics for 1992 gave Jordan's total debt as $6,914m., of which $3,454m. (including $2,704m.

in concessional loans) was owed to official bilateral creditors. Prior to the IMF and 'Paris Club' announcements, the Government had, on 18 May, obtained $200m. of aid from the Jordan consultative group of donors to finance the 1994 balance-of-payments deficit.

The IMF augmented Jordan's EFF allocation by SDR 25m. (about US $37m.) in September 1994 and by a further SDR 36.5m. (about $54m.) in February 1995. A favourable IMF review of the economy in June 1995 showed that Jordan was on course to achieve 6.2% economic growth in 1995, with inflation of less than 4% and a current-account deficit equal to 5% of GDP, bettering its planning targets in each case. In 1994 the real GDP growth rate had been 5.7% (virtually unchanged from 1993) and the end-1994 foreign debt (totalling $5,644m.) had been equivalent to 91.8% of GDP, compared with a debt to GDP ratio of 109% at the end of 1993. Net foreign reserves in the banking system totalled $2,430m. at end-1994, compared with $2,280m. at end-1993.

In July 1994, when Jordan and Israel first committed themselves to an early peace agreement, the World Bank advocated substantial foreign debt relief for Jordan to strengthen its economic position during the early stages of the peace, thereby reinforcing popular support for the peace process and providing a more attractive climate for foreign investment. While early Jordanian hopes of a major debt forgiveness initiative worth up to US $3,300m. proved to be groundless, some further relief was secured through bilateral agreements with various creditor countries.

The full writing-off of some US $700m. of debts owed to the USA was approved by the US Congress in July 1995. As most of these debts had already been rescheduled through the 'Paris Club', Jordan did not gain an immediate cash-flow benefit from this development. The United Kingdom agreed in July 1994 to convert $92m. of loans into grants to support Jordan's peace initiatives. In mid-1995 Jordan's outstanding debts to the United Kingdom totalled $531m., of which $348m. had been rescheduled (including $267m. rescheduled under the terms of the June 1994 'Paris Club' agreement). Germany agreed in November 1994 to restructure $101.3m. of Jordanian debt under the 'Paris Club' agreement and to cancel $32.9m. of debt, half of this through a debt-equity swap to provide investment funds for environmental projects. In August 1994 France cancelled $4.6m. of Jordanian debts and provided a $5.6m.-line of credit for Franco-Jordanian joint ventures. In October 1994 France agreed to reschedule $200m. of Jordanian debt under the 'Paris Club' agreement and to finalize a debt-equity swap programme worth $100m. Jordan's total debt to France (excluding outstanding aircraft leasing payments) totalled around $600m. in 1994. Jordan's largest bilateral creditor, Japan, was owed around $1,800m. at the end of 1994. In mid-1995 Jordan requested $500m. of balance-of-payments support loans for 1995/96 and an increase in Japanese grant aid to $50m. per year from 1996. In October 1995 Japan extended a $135m.-balance-of-payments support loan to Jordan. In the same month the World Bank made an $80m.-economic reform and development loan, while a further $20m. was loaned by France. In December 1995 Japan signed agreements to loan $80m. to Jordan in support of its economic reform programme and to reschedule $101m. of government debt and $51m. of commercial debt, bringing the total amount of Jordanian debt rescheduled by Japan since 1989 to $400m.

Jordan's 1995 budget provided for expenditure totalling JD 1,674m. (JD 1,231m. on current account and JD 443m. on capital account). Debt servicing of JD 300m. was not included in this total. The budgeted revenue totalled JD 1,624m., including domestic revenue of JD 1,400m. A supplement to the main budget provided for JD 390m. of spending on development projects, dependent on the availability of international assistance. The 1996 budget provided for total spending of JD 1,798m. (of which JD 1,328m. was recurrent expenditure and JD 470m. was capital expenditure) and total revenue of JD 1,635m. (of which JD 1,575m. was classed as local revenue and JD 60m. as repaid loans), leaving a deficit of JD 163m. to be covered by foreign grants and loans.

In February 1996 the IMF approved a Jordanian request for new credits totalling SDR 200.8m. (about US $195m.) to support the Government's economic and structural reform programme over the period 1996 to 1998. This new EFF arrangement replaced the previous arrangement approved in 1994, which the IMF regarded as broadly successful. The Government's economic targets for the period to 1998 included average GDP growth of at least 6% per annum (with an initial target of 6.5% growth in 1996); achievement of low inflation rates similar to those in industrialized countries (with an initial target of less than 3.5% inflation in 1996); a reduction in the balance-of-payments deficit on the current account to less than 3% of GDP (with a 1996 target of less than 4% of GDP); the accumulation of sufficient gross official reserves to cover about three months' expenditure on imports; and the reduction of the budget deficit to no more than 2.5% of GDP by 1998 (compared with 4.8% of GDP in 1995 and a target level of 3.8% for 1996). The IMF recommended that maintenance of a tight monetary policy should be combined with the use of 'flexible interest rates geared to maintaining the relative attractiveness of dinar-denominated assets'. The ongoing process of structural reform was to include further reductions in public subsidies, including in 1996 the subsidies on water charges, wheat prices and animal feed prices. A wide-ranging privatization programme was to be introduced, with five major sales of government shareholdings planned for 1996. The top rate of customs levy on all imports except cars, alcohol and tobacco was to be cut to 30% by 1998. (From the beginning of 1996 the maximum levy on goods other than cars, alcohol and tobacco, inclusive of any fees and taxes imposed in addition to customs duty, was reduced to 50%, with many categories of goods becoming subject to a ceiling of 40%.)

A 1996 IMF report on Jordan's economic strategy included an overview of the main fiscal trends in recent years. From the mid-1970s to 1988, about 12% of GDP had been made up of grants from oil-producing countries, while an average 10% of GDP was devoted to servicing foreign debts and a further 10% to military spending. Over the period 1976 to 1994, deficit budgeting had inhibited economic growth by an estimated 2% per annum after allowing for foreign grants of budgetary aid (without which growth would have been inhibited by 5% per annum). Between 1988 and 1994, the Government had cut the budget deficit from about 18% of GDP to less than 6% of GDP through a 65% cutback in expenditure and a 35% increase in revenue (notably from postal and telecommunication services). Public-sector employment had risen by 15% between 1991 and 1994, while the public-sector wage bill increased by 40% in real terms and accounted for about 25% of total budget expenditure in 1994. However, overall government spending was equal to only 35% of GDP in 1994, compared with 47% of GDP in 1989. The report concluded that the Government's 'remarkable fiscal adjustment in recent years' had greatly improved the kingdom's investment climate and growth prospects.

Jordan's 1997 budget provided for total spending of JD 1,753m. and total revenue of JD 1,651m., leaving a surplus of JD 102m. In February 1997 the IMF increased the total amount of credit available to Jordan under the current (1996–98) extended fund facility by SDR 37.2m. to SDR 238m. (US $330.5m.). In 1996 the 'Paris Club' creditor group had agreed to reschedule $308m. of Jordanian official debt ($250m. of principal and $58m. of interest) falling due between July 1996 and May 1997. Repayment over 15 years would begin in June 1999. In 1997 the 'Paris Club' agreed to reschedule $450m. of Jordanian debt falling due between June 1997 and September 1999. The repayment period would be 22 years (with 10 years' grace) for bilateral debt and 20 years (with 5 years' grace) for export credits. In September 1997 the USA agreed to cancel Jordan's remaining US debt of $63.4m., following two earlier agreements under which $1,100m. had been cancelled. Jordan's total foreign debt at the end of 1997 was $6,469.7m. (81.7% of GDP), of which about $4,000m. was owed to bilateral creditors. A rescheduling agreement, signed with Germany in March 1998, provided for the cancellation of about $22m. if Jordan spent half of that amount on poverty-alleviating or environmental projects. The 1998 budget provided for expenditure of JD 1,950m. and a net deficit (after aid receipts) of only JD 37m. In April of that year, Jordan's official foreign-currency reserves stood at JD 1,110.9m., equivalent to 4.8 months' export cover.

In April 1999 the IMF approved loans totalling SDR 161.98m. (US $220m.) to support the Government's economic and structural reform programme for 1999–2001. The loans are divided

between a Compensatory and Contingency Financing Facility (CCFF) of SDR 34.1m. ($46m.) to offset a shortfall in exports, and a new EFF credit of SDR 127.88m. ($174m.). The new EFF programme targets GDP growth of 2% in 1999, rising to 2.5% in 2001 and 3.5% in 2002, and a strengthening of reserves to $1,191m. by the end of 1999 and $1,691m. by 2001. The dinar would continue to be pegged to the US dollar at its current rate (709-711 fils). The IMF recommended a faster pace of structural reform in 1999 and has identified as major targets the reform of the tax system, and the introduction of a new banking law to improve regulation and supervision and establish a deposit insurance scheme. In May 1999 the 'Paris Club' agreed to reschedule $800m. of Jordan's debt service payments due between March 1999 and April 2002, to support the economic reform programme agreed with the IMF. The repayment period would be 20 years. The rescheduling would affect a significant portion of Jordan's total debt, which is expected to reach $7,920m. in 1999 (from $6,170m. in 1997). In December 1998 Germany agreed to a new debt-swap agreement worth $29m., in exchange for environmental protection projects (earlier conversions signed in 1998 and 1995 having brought the total amount covered by debt swaps to $100m.). Germany agreed to provide $38m. in aid in 1999, an increase of 8% over 1998. Jordan's 1999 budget provided for total spending at JD 2,160m., 5% higher than the revised 1998 figure. Most of the increase was to come in the capital expenditure budget, which was expected to reach JD 477m. Current spending was expected to rise by only 3.8%. Total revenues, including aid, were forecast at JD 1,925m., 9% higher than the revised 1998 figure. The JD 435m. budget deficit, representing 7% of GDP in 1999, would be part-financed by aid.

Jordan's banking sector grew with the economy, but recent changes in the country's economic fortunes have enforced a new caution. The number of institutions grew nearly three-fold to 36 between 1973 and 1983. In January 1984 the Central Bank announced measures to 'Jordanize' foreign banks operating in Amman. They were given three (later extended to five) years to comply with regulations requiring that 51% of their equity be held by Jordanian nationals. The only foreign bank to respond was the Arab Land Bank. However, in April 1985, the new Government of Prime Minister Zaid ar-Rifai abandoned the regulation, though this did not affect another requirement for all banks to raise their capital from JD 3m. to JD 5m. in line with local commercial banks. ('Jordanization' would have taken the capital of foreign banks above the new minimum requirement.) In July Said Nabulsi resigned as Governor of the Central Bank of Jordan, a decision thought to have been influenced by the Government's rejection of his measures to 'Jordanize' foreign banks. The Chase Manhattan Bank decided to withdraw from Jordan in 1986, rather than comply with the direction to increase its capital. In February 1984 new Central Bank regulations stated that all banks must invest at least 4% of their total deposits either in government bonds or in government-guaranteed public corporation bonds, together with a further 4% in treasury bills. In addition, banks must now also invest at least 15%, but not more than 75%, of paid-up capital and domestic reserves in public shares. In July 1990 the financially-troubled Petra Bank went into liquidation, as did the Syrian-Jordanian Bank in May 1991, only 12 years after its creation as a joint venture of the Damascus and Amman Governments.

In January 1986 the Government lifted most of the restrictions preventing non-Jordanian Arabs from investing in the Jordanian economy. The only restriction to remain in force was that permitting a 49% maximum shareholding for non-Jordanian Arabs in retail trade, banking, finance and insurance companies. The change of policy was seen as an attempt to attract private capital to Jordan to offset the decline in Arab aid.

In December 1984 insurance companies were instructed to raise their capital to JD 600,000 by the end of 1986 or to merge with other companies. The regulation affected nine of the country's 21 insurance companies. Two mergers, between the Arab Belgium Insurance Co and the United Insurance Co, and the National Insurance Co and Al-Ahlia (Jordan) Insurance Co took place between October 1985 and August 1986. Six new insurance companies were established between 1996 and 1999. As a result, extreme levels of competitiveness on pricing exist in the sector, and tighter regulations (including the establishment of an independent Insurance Regulatory Commission) were due to be introduced in 1999.

In August 1991 the Central Bank imposed new credit ceilings in accordance with the IMF-decreed reforms. These included a 9% per annum limit on the increase in commercial credit and a specification that, in extending credit, commercial banks should not exceed ten times their capital and reserves, or 90% of total customer deposits. In May 1993 an overall ceiling of JD 400m. was imposed on the growth of bank credit in the current year. This followed a surge in lending as banks sought to make profitable use of the strong inflow of deposits from 'returnees' over the previous two years. By the beginning of July the 1993 loan total already exceeded JD 300m. The Central Bank had earlier imposed restrictions on bank lending to finance customers' share purchases following signs that the Amman stock market was overheating in mid-June 1993 (when daily trading volumes of JD 16m. were recorded, compared with the normal average of JD 4m.).

At the beginning of 1993 the Central Bank ordered commercial banks to increase their bad debt provisions on around JD 2,200m. of outstanding loans. This move (which occurred at a time when bank profits were at record levels) effectively paved the way for the writing off of nearly JD 400m. of bad debts dating from the late 1980s. The banks had until 1995 to bring their loan cover up to new minimum levels. In January 1995 the Central Bank set an end-1996 deadline for 16 small banks to increase their capital to JD 20m. (US $28m.), making it clear that it would prefer banks to achieve this through mergers rather than increases in individual capital. At the same time Jordanian banks were warned that a July 1993 law limiting loans to 70% of total deposits was to be more strictly enforced than hitherto.

A new investment law introduced at the end of 1995 permitted foreign investors to buy shares on the Amman stock market without applying for government permission. A limit of 50% was set on the proportion of an existing listed company's shares that could be owned by foreign interests. In the case of companies whose shares were being publicly floated for the first time, foreign buyers could purchase holdings of up to 100% with the government's permission (which was required for any bid for foreign ownership of more than 50% of a newly floated company's shares). The minimum level for foreign investment through the stock market was reduced from JD 5,000 to JD 1,000. The minimum level for direct foreign investment in Jordan was set at JD 50,000. A limit of 25% was imposed on foreign participation in local printing and publishing companies (previously prohibited under Jordanian law). In mid-1997 the Higher Council for Investment recommended that the 50% ceiling on foreign ownership of shares be abolished in selected sectors, including banking and insurance. The proposal was made in order to encourage sustained foreign interest after the Government abolished a 15% tax on capitalized reserves in May 1997. The 1997 Securities Law divided stock exchange activity between three bodies: the Jordan Securities Commission (an independent regulatory body), the Depository & Transfer Centre to settle and clear stock, and the privately-run Amman Bourse (which replaced the Amman Financial Market in March 1999). Turnover on the market rose by 32% in 1998, although the AFM index rose by just 0.53% on 1997. Net foreign investment in the market reached US $174.9m. (from $80.4m. in 1997) and non-Jordanian ownership stood at 44% (from 38% in 1997). At the end of June 1997 the authorities abolished exchange-control restrictions, allowing free movement of currency for the first time in Jordan. In early July the Central Bank reduced interest rates for the first time since 1989.

In July 1998 the inaugural meeting was held of the Jordan Investment Trust (Jordinvest), which had been established by the Kuwait-based Gulfinvest International investment holding company to provide investment and financial services to local and foreign investors in the Jordanian economy. With initial paid-in capital of some US $22m. (including $5m. raised through a public share offering), Jordinvest was to specialize in recapitalizations and mergers of local banks and companies.

DEVELOPMENT

Jordan's first Five-Year Development Plan, for 1962–67, aimed to invest JD 137m. in the economy, to raise GDP to JD 144m.

This plan, however, was superseded by a Seven-Year Plan that was due to run from 1964 to 1970. In its turn, this was disrupted and abandoned after the loss of the West Bank in 1967, and a new Three-Year Plan, covering the period 1973–75, was introduced, with a total proposed expenditure of JD 179m. The three largest items of expenditure were transport, housing and government buildings and mining and industry. The 1976–80 Plan, which followed the 1973–75 Plan, envisaged total expenditure of JD 756m., with the public and private sectors contributing in equal proportions. The Government felt that the Jordanian economy was too heavily biased towards the services sector, and one of the chief aims of the plan was the development of the commodity-producing sector and its increased contribution to GDP. In the event, although GDP failed to rise at the planned rate of 11.9% per annum, by 1980 it had risen by a substantial 62% compared with its 1976 value.

During the 1976–80 Plan period, the growth of agriculture was below target, but the 1981–85 Five-Year Plan still set goals. Agriculture was planned to have an annual growth rate of 7.5%, mining and manufacturing 17.8%, electricity and water supply 18.9% and construction 12.6%. These compare with an annual industrial growth rate of 13.6% during the 1976–80 Plan. In contrast, investment during the period 1976–80 overshot planned levels by 150%, largely owing to high levels of private investment. The initial planned investment for the 1981–85 Plan was JD 2,800m. (US $8,446m.). Industry was to account for 21%, water and irrigation 18%, transport 18% and housing 11%. By October 1981, however, Iraq had promised financial support of JD 500m., and this led to an increase in the planned level of investment to JD 3,300m., of which JD 1,162m. was to be from overseas assistance. Over the period there was planned to be an annual growth rate in GDP of 10.4%, compared with the 8.5% rate of the 1976–80 Plan. However, the targets of the 1981–85 Plan were not met.

Under the 1986–90 Plan, expenditure was set at JD 3,115m. (US $9,727m.), 52% of which was allocated to projects in the public sector and 48% to the private sector. Of total expenditure, 33% was to be provided by foreign borrowing. The Plan aimed for real economic growth of 5% per year and, with 39% of total investment to be allocated to the services sector (compared with less than 30% in the previous Plan), it was hoped that as many as 100,000 jobs would be created during its term. Agriculture was allocated 10% of total investment, compared with 5% and 7% in the previous two Plans, and agricultural production was expected to increase at an annual rate of 7%–8%. The phosphate industry was to be expanded with development plans focusing on the Shidiya phosphate deposits (see Industry and Mining), while potash mining and other important export industries were also to be developed with the aim of increasing the value of exports by an annual rate of 8.3%. At the same time, it was planned to reduce the annual growth of imports to 2.8% for goods and 3.6% for services. These measures were intended to reduce the deficit on the current account of the balance of payments—one of the Plan's key objectives. However, major slippages on the Plan's targets were compounded towards the end of its term by the onset of the 1990–91 Gulf crisis. According to World Bank figures, Jordan's GDP increased, in real terms, by an annual average of 4.2% in 1980–88, in which period agricultural output increased by 6% per year, industry by 3.6% and services by 4.4%.

A Five-Year Development Plan for the Occupied Territories (1986–90) was launched in November 1986. With total required investment of JD 461.5m. (US $1,292.3m.) for projects in the West Bank and the Gaza Strip, the aim of the plan was to enable the 1.3m. Palestinians living in these areas to achieve a greater degree of economic independence; creating 20,000 jobs, constructing 8,500 homes and limiting the movement to Israel and, more especially, to Jordan (where immigrants might contribute to social, economic and political problems) of Palestinians deprived of work and opportunities. (About 850,000 West Bank Palestinians are entitled to Jordanian citizenship.) About 654,000 residents of the Occupied Territories left or were forced to leave between 1967 and 1984 (most of them to Jordan), and more than 100,000 Arab workers from the Territories, about one-third of the labour force, work in Israel. Israel took measures to facilitate the implementation of the Plan, such as the appointment in September 1986 of Arab mayors in four West Bank towns, and agreeing to the opening of four branches of the Cairo-Amman Bank, which were to provide the main channel for the transfer of funds to development projects. The Plan had singularly failed to attract sufficient investment from abroad and appeared to be struggling for financial viability when, on 28 July 1988, it was abandoned by King Hussein on political grounds (see History, above). On 31 July King Hussein severed Jordan's legal and administrative links with the West Bank. The practical effects of this were that 5,300 teachers and civil servants, and other government workers employed by Jordan in the West Bank before the Israeli occupation in 1967, and fully paid by Jordan, were retired on full pension; subsidies from the Jordanian Government, including salaries, to some 10,000 teachers and 5,000 civil servants, employed since 1967, were removed (although most of these received a salary from Israel and only a monthly bonus from Jordan). An additional 2,000 employees, working in departments of religious affairs and Islamic law, were to continue to be employed in order to preserve an Islamic cultural identity in the area. It was estimated that the removal of subsidies would save Jordan $60m. per year. The PLO undertook to compensate all former Jordanian employees for the loss of their jobs but, owing to the restrictions imposed by Israel on the movement of funds into the Occupied Territories, this promise has proved difficult to honour.

Following the 1990–91 Gulf crisis, Jordan's 1991 budget estimates included an allocation of JD 230.2m. for capital expenditure, as well as an emergency budget of JD 120m., intended to assist the recovery of important economic sectors such as industry, transport, agriculture and tourism. Substantial additional aid commitments from external sources (see Finance, above) made it possible to implement this emergency budget, but the Government came under domestic criticism for using the extra aid to reduce the budget and external deficits, as required by the IMF, rather than to compensate the sectors that had been damaged during the recent crisis.

In May 1991 Jordan signed its fourth financial co-operation protocol with the EC, which undertook to provide a total of 126m. ECUs in development grants and loans over a five-year period from November 1991. Under the three previous protocols, covering the period 1977–91, Jordan had received a total of 203m. ECUs.

In conjunction with IMF-decreed structural adjustment, the Government in 1993 introduced a further Five-Year Economic and Social Development Plan, covering the period to 1997. Allotting a major role to the private sector through the disposal of stakes in government-owned concerns, the plan also aimed to encourage export-oriented investment and production; to stabilize the exchange rate of the dinar; to increase Jordan's foreign currency reserves to at least three months' export cover; to shift revenue generation from income to consumption, while eliminating taxation on investments and savings; to remove market distortions arising from price-fixing agreements and monopolies; to reduce and restructure subsidies; to dismantle trade and investment barriers; and to alleviate the associated problems of poverty and unemployment. Following the completion of the 1993–97 plan period, the Government drafted a rolling National Economic and Development Strategy, capable of being adjusted on a year-by-year basis.

In 1996 James Wolfensohn, President of the World Bank, visited some of the poorest areas of Jordan. In 1997 it was reported that the Government was collaborating with the World Bank to establish a two-phase programme to improve living conditions for the poor and to create jobs for impoverished Jordanians and for skilled middle class workers. The first stage, expected to last three years, includes the enlargement of the National Aid Fund (NAF), which provides direct financial aid to the poor; expansion of basic infrastructure; provision of credit for small enterprises through private and commercial banks; development of private work placement agencies; and the establishment of training for former armed services and civil services personnel for future employment in the private sector.

In January 1999 the Government announced plans for the introduction of a national health service, scheduled for completion in 2010.

Directory

The Constitution

The revised Constitution was approved by King Talal I on 1 January 1952.

The Hashemite Kingdom of Jordan is an independent, indivisible sovereign state. Its official religion is Islam; its official language Arabic.

RIGHTS OF THE INDIVIDUAL

There is to be no discrimination between Jordanians on account of race, religion or language. Work, education and equal opportunities shall be afforded to all as far as is possible. The freedom of the individual is guaranteed, as are his dwelling and property. No Jordanian shall be exiled. Labour shall be made compulsory only in a national emergency, or as a result of a conviction; conditions, hours worked and allowances are under the protection of the state.

The Press, and all opinions, are free, except under martial law. Societies can be formed, within the law. Schools may be established freely, but they must follow a recognized curriculum and educational policy. Elementary education is free and compulsory. All religions are tolerated. Every Jordanian is eligible for public office, and choices are to be made by merit only. Power belongs to the people.

THE LEGISLATIVE POWER

Legislative power is vested in the National Assembly and the King. The National Assembly consists of two houses: the Senate and the House of Representatives.

THE SENATE

The number of Senators is one-half of the number of members of the House of Representatives. Senators must be unrelated to the King, over 40, and are chosen from present and past Prime Ministers and Ministers, past Ambassadors or Ministers Plenipotentiary, past Presidents of the House of Representatives, past Presidents and members of the Court of Cassation and of the Civil and *Shari'a* Courts of Appeal, retired officers of the rank of General and above, former members of the House of Representatives who have been elected twice to that House, etc.... They may not hold public office. Senators are appointed for four years. They may be reappointed. The President of the Senate is appointed for two years.

THE HOUSE OF REPRESENTATIVES

The members of the House of Representatives are elected by secret ballot in a general direct election and retain their mandate for four years. General elections take place during the four months preceding the end of the term. The President of the House is elected by secret ballot each year by the Representatives. Representatives must be Jordanians of over 30, they must have a clean record, no active business interests, and are debarred from public office. Close relatives of the King are not eligible. If the House of Representatives is dissolved, the new House shall assemble in extraordinary session not more than four months after the date of dissolution. The new House cannot be dissolved for the same reason as the last.

GENERAL PROVISIONS FOR THE NATIONAL ASSEMBLY

The King summons the National Assembly to its ordinary session on 1 November each year. This date can be postponed by the King for two months, or he can dissolve the Assembly before the end of its three months' session. Alternatively, he can extend the session up to a total period of six months. Each session is opened by a speech from the throne.

Decisions in the House of Representatives and the Senate are made by a majority vote. The quorum is two-thirds of the total number of members in each House. When the voting concerns the Constitution, or confidence in the Council of Ministers, 'the votes shall be taken by calling the members by name in a loud voice'. Sessions are public, though secret sessions can be held at the request of the Government or of five members. Complete freedom of speech, within the rules of either House, is allowed.

The Prime Minister places proposals before the House of Representatives; if accepted there, they are referred to the Senate and finally sent to the King for confirmation. If one house rejects a law while the other accepts it, a joint session of the House of Representatives and the Senate is called, and a decision made by a two-thirds majority. If the King withholds his approval from a law, he returns it to the Assembly within six months with the reasons for his dissent; a joint session of the Houses then makes a decision, and if the law is accepted by this decision it is promulgated. The Budget is submitted to the National Assembly one month before the beginning of the financial year.

THE KING

The throne of the Hashemite Kingdom devolves by male descent in the dynasty of King Abdullah ibn al-Hussein. The King attains his majority on his eighteenth lunar year; if the throne is inherited by a minor, the powers of the King are exercised by a Regent or a Council of Regency. If the King, through illness or absence, cannot perform his duties, his powers are given to a Deputy, or to a Council of the Throne. This Deputy, or Council, may be appointed by Iradas (decrees) by the King, or, if he is incapable, by the Council of Ministers.

On his accession, the King takes the oath to respect and observe the provisions of the Constitution and to be loyal to the nation. As Head of State he is immune from all liability or responsibility. He approves laws and promulgates them. He declares war, concludes peace and signs treaties; treaties, however, must be approved by the National Assembly. The King is Commander-in-Chief of the navy, the army and the air force. He orders the holding of elections; convenes, inaugurates, adjourns and prorogues the House of Representatives. The Prime Minister is appointed by him, as are the President and members of the Senate. Military and civil ranks are also granted, or withdrawn, by the King. No death sentence is carried out until he has confirmed it.

MINISTERS

The Council of Ministers consists of the Prime Minister, President of the Council, and of his ministers. Ministers are forbidden to become members of any company, to receive a salary from any company, or to participate in any financial act of trade. The Council of Ministers is entrusted with the conduct of all affairs of state, internal and external.

The Council of Ministers is responsible to the House of Representatives for matters of general policy. Ministers may speak in either House, and, if they are members of one House, they may also vote in that House. Votes of confidence in the Council are cast in the House of Representatives, and decided by a two-thirds majority. If a vote of 'no confidence' is returned, the ministers are bound to resign. Every newly-formed Council of Ministers must present its programme to the House of Representatives and ask for a vote of confidence. The House of Representatives can impeach ministers, as it impeaches its own members.

AMENDMENTS

Two amendments were passed in November 1974 giving the King the right to dissolve the Senate or to take away membership from any of its members, and to postpone general elections for a period not to exceed a year, if there are circumstances in which the Council of Ministers feels that it is impossible to hold elections. A further amendment in February 1976 enabled the King to postpone elections indefinitely. In January 1984 two amendments were passed, allowing elections 'in any part of the country where it is possible to hold them' (effectively, only the East Bank) and empowering the National Assembly to elect deputies from the Israeli-held West Bank.

The Government

HEAD OF STATE

King ABDULLAH IBN AL-HUSSEIN (succeeded to the throne on 7 February 1999).

CABINET*

(September 1999)

Prime Minister and Minister of Defence: ABD AR-RAOUF AR-RAWABDEH.

Deputy Prime Minister: MARWAN ABD AL-HALEEM AL-HMUD.

Deputy Prime Minister and Minister of Information: AYMEN AL-MAJALI.

Deputy Prime Minister and Minister of Planning: Dr RIMA KHALAF AL-HUNAIDI.

Legislature

MAJLIS AL-UMMA

(National Assembly)

Senate

The Senate (House of Notables) consists of 40 members, appointed by the King. A new Senate was appointed by the King on 18 November 1993.

Speaker: ABD AL-HADI AL-MAJALI.

House of Representatives

General Election, 8 November 1993

Party	Seats
Independent centrists	44
Islamic Action Front	16
Independent Islamists	6
Independent leftists	4
Al-Ahd	2
Jordanian Arab Democratic Party	2
Others	6
Total	80

Speaker: SAED HAYEL AS-SROUR.

Political Organizations

Political parties were banned before the elections of July 1963. In September 1971 King Hussein announced the formation of a Jordanian National Union. This was the only political organization allowed. Communists, Marxists and 'other advocates of imported ideologies' were ineligible for membership. In March 1972 the organization was renamed the Arab National Union. In April 1974 King Hussein dissolved the executive committee of the Arab National Union, and accepted the resignation of the Secretary-General. In February 1976 the Cabinet approved a law abolishing the Union. Membership was estimated at about 100,000. A royal commission was appointed in April 1990 to draft a National Charter, one feature of which was the legalization of political parties. In January 1991 King Hussein approved the National Charter, which was formally endorsed in June. In July 1992 the House of Representatives adopted draft legislation which formally permitted the establishment of political parties, subject to certain conditions. In the same month a joint session of the Senate and the House of Representatives was convened to debate amendments to the new legislation, proposed by the Senate. The political parties which achieved representation in the general election in November 1993 were: the Islamic Action Front (Sec.-Gen. Dr ABD AL-LATIF ARABIYAT); al-Mustaqbal; the Jordanian Arab Socialist Baath Party (Sec.-Gen. MAHMOUD AL-MA'AYITAH); al-Yakatha; al-Ahd; the Jordan National Alliance; the Jordan People's Democratic Party (Leader TAYSIR AZ-ZABRI); the Jordan Social Democratic Party; and the Jordanian Arab Democratic Party. In early May 1997 nine centre parties, including Pledge and the Jordan National Alliance, announced that they had united to form the National Constitutional Party (NCP), which became the country's largest political grouping. The formation of the NCP, together with the establishment in 1996 of the Unionist Arab Democratic Party (a coalition of three leftist parties), reduced the total number of political parties from 24 to 14. In July 1997 the establishment of new Jordanian political party, the Popular Democratic Pan-Arab Movement, was announced. In May 1999 the Popular Participation Bloc was established to contest the municipal elections, held in July; it was a new gouping of 13 leftist, Baathist and pan-Arab parties.

Judicial System

With the exception of matters of purely personal nature concerning members of non-Muslim communities, the law of Jordan was based on Islamic Law for both civil and criminal matters. During the days of the Ottoman Empire, certain aspects of Continental law, especially French commercial law and civil and criminal procedure, were introduced. Due to British occupation of Palestine and Transjordan from 1917 to 1948, the Palestine territory has adopted, either by statute or case law, much of the English common law. Since the annexation of the non-occupied part of Palestine and the formation of the Hashemite Kingdom of Jordan, there has been a continuous effort to unify the law.

Court of Cassation. The Court of Cassation consists of seven judges, who sit in full panel for exceptionally important cases. In most appeals, however, only five members sit to hear the case. All cases involving amounts of more than JD 100 may be reviewed by this Court, as well as cases involving lesser amounts and cases which cannot be monetarily valued. However, for the latter types of cases, review is available only by leave of the Court of Appeal, or, upon refusal by the Court of Appeal, by leave of the President of the Court of Cassation. In addition to these functions as final and Supreme Court of Appeal, the Court of Cassation also sits as High Court of Justice to hear applications in the nature of habeas corpus, mandamus and certiorari dealing with complaints of a citizen against abuse of governmental authority.

Courts of Appeal. There are two Courts of Appeal, each of which is composed of three judges, whether for hearing of appeals or for dealing with Magistrates Courts' judgments in chambers. Jurisdiction of the two Courts is geographical, with the Court for the Western Region (which has not sat since June 1967) sitting in Jerusalem and the Court for the Eastern Region sitting in Amman. The regions are separated by the Jordan river. Appellate review of the Courts of Appeal extends to judgments rendered in the Courts of First Instance, the Magistrates' Courts, and Religious Courts.

Courts of First Instance. The Courts of First Instance are courts of general jurisdiction in all matters civil and criminal except those specifically allocated to the Magistrates' Courts. Three judges sit in all felony trials, while only two judges sit for misdemeanour and civil cases. Each of the seven Courts of First Instance also exercises appellate jurisdiction in cases involving judgments of less than JD 20 and fines of less than JD 10, rendered by the Magistrates' Courts.

Magistrates' Courts. There are 14 Magistrates' Courts, which exercise jurisdiction in civil cases involving no more than JD 250 and in criminal cases involving maximum fines of JD 100 or maximum imprisonment of one year.

Religious Courts. There are two types of religious court: The *Shari'a* Courts (Muslims): and the Ecclesiastical Courts (Eastern Orthodox, Greek Melkite, Roman Catholic and Protestant). Jurisdiction extends to personal (family) matters, such as marriage, divorce, alimony, inheritance, guardianship, wills, interdiction and, for the Muslim community, the constitution of Waqfs (Religious Endowments). When a dispute involves persons of different religious com-

munities, the Civil Courts have jurisdiction in the matter unless the parties agree to submit to the jurisdiction of one or the other of the Religious Courts involved.

Each *Shari'a* (Muslim) Court consists of one judge (*Qadi*), while most of the Ecclesiastical (Christian) Courts are normally composed of three judges, who are usually clerics. *Shari'a* Courts apply the doctrines of Islamic Law, based on the Koran and the *Hadith* (Precepts of Muhammad), while the Ecclesiastical Courts base their law on various aspects of Canon Law. In the event of conflict between any two Religious Courts or between a Religious Court and a Civil Court, a Special Tribunal of three judges is appointed by the President of the Court of Cassation, to decide which court shall have jurisdiction. Upon the advice of experts on the law of the various communities, this Special Tribunal decides on the venue for the case at hand.

Religion

Over 80% of the population are Sunni Muslims, and the King can trace unbroken descent from the Prophet Muhammad. There is a Christian minority, living mainly in the towns, and there are smaller numbers of non-Sunni Muslims.

ISLAM

Chief Justice and President of the Supreme Muslim Secular Council: Sheikh Muhammad Mhelan

Director of Shari'a Courts: Sheikh Subhi al-Muwqqat

Mufti of the Hashemite Kingdom of Jordan: Sheikh Muhammad Abdo Hashem

CHRISTIANITY

The Roman Catholic Church

Trade and Industry

DEVELOPMENT ORGANIZATIONS

Amman Development Corporation: POB 926621, Amman; tel. (6) 5629471; telex 22133; f. 1979; development of services in the Amman municipality by constructing and running real estate; industrial and other complexes; Dir Gen. SAMI AR-RASHID.

Jordan Valley Authority: POB 2769, Amman; tel. (6) 5642472; telex 21692; projects in Stage I of the Jordan Valley Development Plan were completed in 1979. In 1988 about 26,000 ha was under intensive cultivation. Infrastructure projects also completed include 1,100 km of roads, 2,100 housing units, 100 schools, 15 health centres, 14 administration buildings, 4 marketing centres, 2 community centres, 2 vocational training centres. Electricity is now provided to all the towns and villages in the valley from the national network and domestic water is supplied to them from tube wells. Contributions to the cost of development came through loans from Kuwait Fund, Abu Dhabi Fund, Saudi Fund, Arab Fund, USAID, Fed. Germany, World Bank, EC, Italy, Netherlands, UK, Japan and OPEC Special Fund. Many of the Stage II irrigation projects are now completed or under implementation. Projects under way include the construction of the Wadi al-Arab dam, the raising of the King Talal dam and the 14.5-km extension of the 98-km East Ghor main canal. Stage II will include the irrigation of 4,700 ha in the southern Ghor. The target for the Plan is to irrigate 43,000 ha of land in the Jordan Valley. Future development in irrigation will include the construction of the Maqarin dam and the Wadi Malaha storage dam; Pres. MUHAMMAD BANI HANI; Sec.-Gen. AVEDIS SERPEKIAN.
